TURNER (JOSHUA), Ph.D.
Privat-Dozent der Theologie an der Universität zu Heidelberg; Geheimer Regierungsrat.

TURNER (STANLEY HORNBY), M.A., D.Litt.
Fellow of the Royal Economic Society; Deputy Chief Inspector for Scotland to the National Health Insurance Commission; formerly Lecturer in Political Economy in the University of Aberdeen.

WAGGOTT (PHILIP NAPIER), M.A. (Oxford and Camb.).
Of the Society of St. John the Evangelist; Curate of St. Peter's Church, Cambridge; Select Preacher, Oxford (1902-1904), Cambridge (1903 and 1912); author of Religion and Science (1904), The Scientific Temper in Religion (1906).

Walsh (W. Gilbert), M.A.
London Secretary of Christian Literature Society for China; James Long Lecturer; author of Confucius and Confucianism, Ways that are Dark; editor of China.

Watson (David), D.D.
Minister of the Church of Scotland at Glasgow; Vice-Convener of the Church of Scotland Social Work; author of Social and Moral Problems and the Church's Duty.

Walther (HUGO), M.A., B.D.
Minister of the United Free Church at Bearden, Stirlingshire.

Wells (Leonard St. Alban), M.A. (Oxford).
Missioner of St. Andrew's Church, Salisbury; formerly Chaplain and Lecturer of the Clergy College, Ripon; author of Choice of the Ages (1911), Paul the Apostle (1913); sub-editor of the Oxford edition of Apocrypha and Pseudepigrapha.
Gospels (Apocryphal).

Wheeler (RRON DAVIS), M.A.
Curate of Freasham, Surrey.

Whitworth (OWEN WALTER), M.A. (Lond. and Camb.), D.D. (Aber.).
Theological Tutor, Cheshunt College, Cambridge; Examiner in Hebrew in the University of London; Geheimer Kirchenrat.

Secretary of the Baptist Historical Society; formerly Principal of the Baptist College of Victoria, and Secretary of the Victorian Baptist Foreign Mission.
Friends of the Temple, Huguenots, Huntingdon's (Countess of) Connexion, Hutchinsonians.

Wild (ALFRED), Dr. Phil. et Litt. h.c. (Louvain); Litt.D. h.c. (Dublin).
Ordentlicher Honorar-Professor der altrömischen Geschichte und Aegyptiologie an der Universität zu Bonn.

Wilde (GEORG), Dr. jur. et phil.
Ordentlicher Professor an der Universität zu Halle; Geheimer Regierungsrat.

Wills (GEORGE), Dr. jur. et phil.
Ordentlicher Professor an der Universität zu München; Geheimer Regierungsrat.

Woodbridge (FREDERICK J. E.), A.M., LL.D.
Johnsonian Professor of Philosophy, and Dean of the Faculties of Political Science, Philosophy, Pure Science, and Fine Arts, in Columbia University, New York.

Woodhouse (WILLIAM), M.A.
Professor of Greek in the University of Sydney, New South Wales.

Woods (MURRAY), Dr. Phil.
Ordentlicher Professor der Klassischen Philologie an der Universität zu München.

Würth (JULIUS), Dr. phil.
Professor of Greek in the University of Sydney, New South Wales.

Human Sacrifice (Roman).

LISTS OF ABBREVIATIONS

I. GENERAL

A.B. = Anno Hijrae (A.D. 622).
Akk. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apo. = Apocalypse, Apocalypsis.
Ar., Apoc. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assy. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.V. = Anno Yezidi (A.D. 636).
Bab. = Babylonian.
c. = circa, about.
Can. = Cypriote.
cf. = compare.
c.t. = contrast.
De = Deuteronomist.
Elohist. = editions or editors.
Eyg. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
F. = first verse or page: as Ac 10th.
fr. = first verse or page: as Mt 11th.
Fr. = French.
Germ. = German.
Gr. = Greek.
H. = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Hym. = Hymnary.
Ir. = Irish.
I. = Iran.
I. = Israelite.
J = Jahwist.
J = Jehovah.
Jer. = Jerusalem.
LXX = Septuagint.

Rom. = Roman.
RV = Revised Version.
RV = Revised Version margin.
Sab. = Sabean.
Sem. = Semitic.
Sept. = Septuagint.
Syr. = Syrian.
Syr. = Syrian.
T. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort’s text.

II. BOOKS OF THE BIBLE

Old Testament.

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Rt = Ruth.
1, 2, 3, 4 = 1 and 2 Samuel.
1, 2, 3 K = 1 and 2 Kings.
1, 2, 3 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ez = Ecclesiastes.

Apoxyphora.
1 Es, 2 Es = 1 and 2.

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2.
P = Philippians.
1 P, 2 P, 3 P = 1 and 2 Peter.
1, 2, 3 Jn, 3 Jn = 1, 2, and 3 John.
Col = Colossians.
Ph = Philemon.
He = Hebrews.
Corinthians.
Gal = Galatians.
Jude.
Rev = Revelation.
LISTS OF ABBREVIATIONS

III. FOR THE LITERATURE

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = Beiträge zur sem. Religionsgesch., 1888.
Benzing = Heb. Archäologie, 1894.
Darmstaedter-Siglo = Dict. des ant. gr. et rom. Rechtsprechens, 1893.
De la Saussaye = Lehrbuch der Religionsgesch., 1896.
Dentinger = Enrichissement Symbolicum, Freiburg im Br., 1911.
Deussen = Die Philosophie der Perser (2 vols. 1890).
Dougherty = Arabia Deserta, 2 vols. 1888.
Grimm = Deutsche Mythologie, 3 vols. 1875–1877.
Hamburger, Akad. für Bibel u. Talmud, i. 1870 (1890), ii. 1883, suppl. 1886, 1891 f., 1897.
Hölder = Altsächsische Sprachgesch., 1891 ff.
Howitt = Native Tribes of S. E. Australia, 1915.
Jubainville = Cours de litt. celtique, l–xii, 1883 ff.
Legrand = Études et monuments religieux égyptiens, 1904.
Lane = An Arabic–English Dictionary, 1839 ff.
Lepsius = Denkmäler aus Ägypten u. Äthiopien, 1842 ff.
Lichtenberger = Enzy. der sciences religieuses, 1786.
Lidzbarski = Handbuch der nordischen Epigraphik, 1898.
Mair = Sanskrit Texts, 1859–1872.
Mawardi = A Concise Dict. of the Assyrian Language, 1894 ff.
Pawley-Winslow = Realencyc. der klassischen Altertumswissenschaft, 1896–1896.
Parrot-Chipiez = Histoire de l'art dans l'antiquité, 1878 ff.
Peller = Römische Mythologie, 1898.
Réville = Religion des peuples non-civilisés, 1885.
Riehm = Handwörterbuch d. bibl. Altertums 1, 1893–1894.
Robinson = Biblical Researches in Palestine, 3 vols. 1849.
Roth = Lex. d. gr. u. röm. Mythologie, 1884.
Schürer = GJV, 3 vols. 1898–1901 [JVP, 5 vols. 1890 ff.]
Schwally = Leben nach dem Tode, 1892.
Siegfried-Stade = Heb. Wörterbuch zum AT, 1898.
Smith (G. A.) = Historical Geography of the Holy Land, 1889–1890.
Smith (W. R.) = Religion of the Semites, 1894.
Spencer = Principals of Sociology, 1858–1863.
Spencer-Gillen = Native Tribes of Central Australia, 1896.
Spencer-Gillen = Northern Tribes of Central Australia, 1904.
Swete = The OT in Greek, 3 vols. 1895 ff.
Tylor (E. B.) = Primitive Culture, 1891 [1903].
Wesenberg = Geschichte der Beschreibung des Grabes und seiner Berechnung, 1897.
Wiedermann = Die Religion der alten Ägypter, 1899 (Eng. tr., revised, Religion of the Anc. Egyptians, 1897).
Wilkinson = Manners and Customs of the Ancient Egyptians, 3 vols. 1878.
Zimmern = Geschichte der Völker des AltenTestaments, 1892.

2. Periodicals, Dictionaries, Encyclopedias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAU = American Antiquarian and Oriental J. of Language.
ABA = Archiv für die Literatur.
ABE = Archiv für Ethnographie.
AG = Archiv für Geschichte der Wissenschaften.
AGP = Archiv für Geschichte der Philosophie.
AH = American Historical Review.
AHTR = Ancient Hebrew Tradition (Hommel).
AP = American Journal of Philology.
AR = American Journal of Psychology.
ARPE = American Journal of Religious Psychology.
ART = American Journal of Semitic Languages and Literature.
AT = American Journal of Theology.
AM = Annales du Musée Grégoire.
APES = American Palestine Exploration Society.
APF = Archiv für Papyrologie.
ARP = Archiv für Religionswissenschaft.
ARW = Archiv für Textwissenschaften.
AS = Acta Sanctorum (Bollandus).
ASG = Archiv für Geschichte der Wissenschaften.
ASL = Archiv für Geschichte der Philosophie.
ASW = Archeological Survey of W. India.
AZ = Allgemeine Zeitung.
BAG = Beiträge zur allgemeinen Geschichte.
BCJ = Bulletin de Correspondence Hellenique.
BE = Beiträge zur Geschichte der Wissenschaften.
BG = Bombay Gazetteer.
BJ = Bullen Judaeicum (Josephus).
BL = Bulletin Lectures.
BLE = Bulletin de Littérature Ecclésiastique.
BORG = Beiträge zur Geschichte der Wissenschaften.
BSA = Bibliotheca Sacra.
BSA = Bulletin de la Soc. de Sociologie.
BSAA = Bulletin de la Soc. de Géographie.
BTS = Bulletins de la Soc. des Antiquaires, etc., Paris.
BSG = Bulletin de la Soc. de Géographie.
BW = Biblical World.
BZ = Bibliotheca Sacra.
LISTS OF ABBREVIATIONS

CAIBL = Comptes rendus de l'Académie des Inscriptions et Belles-Lettres.
OBT = Calcedon Buddhist Text Society.
CE = Catholic Encyclopedia.
CIF = Childhood of Fiction (MacCulloch).
CGS = Cultus of the Greek States (Farnell).
CIS = Census of India.
CIL = Corpus Inscriptionum Atticarum.
CILS = Corpus Inscriptionum Graecarum.
CILS = Corpus Inscriptionum Latinarum.
Cincinnati Seminary.
COET = Cuneiform Inscriptions and the OT (Eng.
t. of KAT*; see below).
CR = Contemporary Review.
CRZ = Celtic Review.
CSE = Classical Review.
CSE = Church Quarterly Review.
CSJ = Corpus Script. Eccles. Latinarum.
DC = Dict. of Christian Antiquities (Smith-
Chestem). DCH = Dict. of Christian Biography (Smith-
Wace).
DCS = Dict. of Christ and the Gospels.
DI = Dict. of Islam (Hughes).
DP = Dict. of National Biography.
DPA = Dict. of Psychology and Psychiatry.
DWH = Denkschriften der Wiener Akad. der Wissenschaften.
EB = Encyclopaedia Biblica.
EBR = Encyclopaedia Britannica.
EEK = Encyclopaedia Islamica.
EER = Encyclopaedia of Islam.
EXP = Expositor.
EXP = Expository Times.
FHG = Fragmenta Historiorum Graecorum (coll. C. Müller, Paris, 1885).
FL = Folklore.
FLJ = Folklore Journal.
FLR = Folklore Record.
GA = Gazette Archéologique.
GB = Golden Bough* (Frazer).
GD = Göttische Gelehrte Anzeigen.
GIP = Grundriss d. iranischen Philologie.
GV = Geschichte des Jüdischen Volkes.
GV = Geschichte des Volkes Israel.
HAI = Handbook of American Indians.
HDB = Hastings' Dict. of the Bible.
HE = Historia Ecclesiastica.
HGC = Historical Geography of the Holy Land (G. A. Smith).
HI = History of Israel.
HL = Hibbert Journal.
HJ = History of the Jewish People.
HN = History Naturals (Pilay).
HV = Handwörterbuch.
IA = Indian Antiquity.
ICCR = International Critical Commentary.
ICOR = International Congress of Orientalists.
ICRB = Indian Census Report (1901).
IG = Inscrip. Graecae (Pll). under auspices of Berlin Academy, 1873 ff.
IGA = Inscrip. Graecae Antiquissima.
IGI = Imperial Gazetteer of India* (1885); new edition (1898-1909).
IJE = International Journal of Ethic.
IIT = International Theological Library.
JASI = Journal of the Anthropological Institute.

[A small superior number designates the particular edition of the work referred to, as KAT², LOT², etc.]
FICTION (Primitive, Oriental, and Greco-Roman).—By the term 'fiction' in the literary sense we understand any tale or narrative—whatever its length and whether in poetry or prose—told or written for amusement or for instruction. This rough working definition must, however, receive considerable modification, for the fables and the parable (p. 42) are scarcely fiction in the usual acceptance of the term; nor does the definition seem to account for the origin of fiction, but to apply solely to its later forms and developments.

1. Origin. — The origin of fiction is impossible to determine with certainty. In its earliest known form it may be divided, as by MacCulloch, into sagas and Māorihana.

(a) The Saga. — This type, represented most familiarly by the bulk of Old Icelandic literature, and also seen, for example, in the Nibelungenlied, the Arthurian cycle (see ARTHUR, ARTHURIAN CYCLE), the Irish Táin Bó Cuailnge, the Pākehā Rāa Rūa, the European Chéruheug, the Oriental Alexandre the Great, etc., is probably historical in origin. There is here, in other words, doubtless a kernel of real events, about which the mythopoetic tendency common to the entire human race has clustered events which may or may not be historic. In the latter case they may have been performed by others than the characters to whom they are ascribed, and to which—in view of changed beliefs and outlook upon life—motives, assisting and thwarting agencies, and even results may be assigned that are radically different from, or even diametrically opposed to, those which were in the original form of the saga in question. Thus, the saga constitutes the earliest type of history, and it is possible, in great part, to reconstruct a large portion of real history by the excision of material obviously fictitious. Such history can in no case (except where, as in the Alexander cycle, authentic historical materials are elsewhere given) be regarded as other than a mere or less close approximation to the course of events as they actually took place; and the conclusion of the most conscientious investigators will perform differ widely as regards the historicity of alleged events of prime importance to the credibility of the saga. Conspicuous examples of this type are the Malay Sejarah Melayu (tr. Leyden, Malay Annals, London, 1851; cf. W. Gerlach, Androcles, der Naturwunder, Leipzig, 1860–77, v. i. 108–119) and the Maori epics (Gray, Polynesia. Mythol. and Ancient Trad. Hist. of the New Zealand Races, London, 1855), where the historical basis is readily discernible, despite the legendary accretions. Indeed, there is practically no people which does not possess at least one saga as to its origin and history. But, being designed primarily to preserve history, the saga cannot properly be classed as fiction.

(b) The Māorihana. — With the Māorihana the case is different, although the two are often confused, so that, as MacCulloch says (loc. cit.): 'What is told as a saga in one country occurs as a Māorihana in another place. Possibly Māorihana are the deteriorated form of sagas; on the other hand, a saga may merely be a Māorihana to the personages of which definite names have been given. Hence, we can hardly affirm yet which is the earlier of the two; nor is there any good reason for supposing that both forms of the folk-tale may not have been invented separately. But, judging by most collections of folk-tales, the earliest stories must have had more or less of the saga form, more especially if we consider saga and myth to be closely related. We have seen how many European folk-tale incidents exist as separate stories among sagas, but told of this or the other traditional personages. These are sagas or myths. They may, however, be told occasionally of no one in particular; then they are savage Māorihana. Moreover, where a more or less elaborate story told by savages can be proved to have reached them by diffusion or borrowing, almost invariably the actors in it have become the well-known heroes or divinities of the tribe. In other words, a story told in Europe as a Māorihana becomes a saga when it is adopted by savages.'

The Māorihana is normally shorter than the saga, and it very frequently has a didactic purpose which is foreign to the essence of the saga; we may even say that, in its didactic aspect, the Māorihana is the parent of the fable, the main difference being that in the latter the 'moral' is clearly indicated, while in the former it may be drawn or not, if present, or may be altogether lacking, or may have different morals in different versions. As an instance we may take a story whose earliest known form is found in the Paśupatahrī (iii. 4). Here a Brāhmaṇa secures a goal for sacrifices, and is seen by three rogues, who plan to get the animal. Standing at intervals...
along his road, the first acts him why he carries a dog, the second a dead child, and the third an anan. The Betham, thinking his gun has gone down and run away, while the rogue enjoy a feast. The moral here given is: 'Rogues gifted with much understanding, with good discretion, and with ability to deceive, are very dangerous.' In the Faerie Queene (iv. io) the moral is: 'He who, with himself for a standard, judges a knight to be a knave, is justly to be pitied by him'; and in the Kathaeramante (xv. vi. 61—80) that: 'Numbers conquer in this world.' In this story, in which the rogue makes Odysseus believe that he is with child, and conspire with a physician to procure him for an abortion; no moral is given. In the Gaia Romannus (xxxix.) three physicians so convince their rival that he has leprosy that he contracts the disease, the three physicians being 'the lust of the flesh, the lust of the eyes, and the pride of life; or the world, the flesh, and the devil, who often corrupts the good physician, i.e. a priest or confessor, so that he is driven from the church for further punishment.' In Shakespeare, in Macbeth, Petrarch, Torquato Tasso, Laclamere, 1826, 1827; Gaia Romannus, ed. Custerly, p. 753.)

Many of the Mârchen, as is clear from MacCulloch's masterly CF, are the stéréotypes of older sagas; and a still greater number are distinctly celticological in character, as in our familiar story of how the robin got its red breast, although the latter category more properly comes under the rubric of myth and folklore (ø.v.c.) and a third class represents primitive religious beliefs, as in Finn in Boots, Beauty and the Beast, Bluebeard, Jack and the Beanstalk, etc. In all these cases—historical, mythological, and survivalistic—the original motive was profoundly serious. Indeed, the present writer is inclined to believe that primitive man did not derive his ideas from mere amusement (cf. above, vol. iv. p. 866). Yet this statement obviously demands much caution, as it may be profoundly in earnest, and yet the necessity for relaxation and the capacity for enjoyment of it are innate in primitive man, as in the most highly developed of modern human races. Just as we may read fiction of the most superlative character for the sake of recreation, or may turn to a psychological or problem novel or to a historical romance for delineation of character or for a reconstruction of bygone times, and derive a true Aristotelian catharsis and elevating stimulus and joy from the reading or the hearing of the tale, so it doubtless was with primitive man. And, just as children delight in hearing stories to-day, so early man (and early child) found joy, after the day's work was done, in similar recitals. Only, what to us are fairy stories and palpable fictions were to him very real and entirely possible. Thus, then, amusement and recreation, if not the prime factors, soon came to be potent agencies in the development of fiction; nor is there any reason why amusement and recreation should not be combined with history, myth, and folk-belief. Indeed, there must be some element of pleasure if the tale is to survive, this pleasure being of every type, from mere amusement or frank ribaldry to the highest intellectual catharsis or minute dissection of character. In the early stage the hero must be the embodiment of all the popular virtues, and must be victorious over every obstacle; later, as in the Novus d'Archer, temporal success is unessential, more stress being laid on nobility of soul; finally, in some types of fiction it becomes possible for the hero not only to defeat, but also to be characterized by ignoble qualities, so that the novel becomes a study of degeneration, not of progress, as in Harold Fredeic's Damnation of Tharon Wares (1890); known in Britain under the title of Thesmophoria. Yet the latter type of fiction can scarcely hope to be popular; for the middle classes, whose mental attitude represents the national standard, are insufficiently developed to appreciate a novel which is wholly 'unpleasant'; although it can scarcely be doubted that such fiction, when seriously undertaken, is perfectly legitimate, and that the horror which it excites arouses an ethical resolve to endeavour to avoid becoming such a person as is portrayed. Whether, at the first, there was 'make-believe' seems questionable, and yet at a very early time there must have arisen a fund of anecdote which formed the genesis of a short form of fiction—of which all traces have long since vanished—precisely as so much of our own fiction is more or less drawn from real types, so that we must say, if it is to meet with approval, se non è vero, è ben trovato.

(c) Diffusion.—The problem of the diffusion of fiction-incidents is extremely involved. The story-telling instinct is universal, and the widely divergent national types—to which attention will be devoted below—show that various peoples have independently developed their own classes of fiction in accordance with their distinctive modes of thought. It is possible, however, that the question is somewhat more complicated than it seems. Attention has been called by Mrs. Florence Steel and Sir Richard Temple (Wide-awake Stories, 387 f.) to the fact that, 'since the incidents are more apt to retain their stock forms than the stories which make up the most important portion of a tale from the investigator's point of view.' In some instances the incident is so unusual that borrowing would be the first thought, were not the difficulty of the way of such an hypothesis so great as practically to forbid it (cf., also, CF, 23, 486 ff.). Elsewhere the process of borrowing is evident, as in the African story of Epr Rabit and Taysk (Harris, Uncle Remus, his Songs and his Sayings, New York, 1881, pp. 33—25), which appears, with the substitution of a Frenchman for Epr Fox, in a Biloxi (Louisianian) tale (At Bull. BE [1919], pp. 15—15). While we must recognize that intercommunication was probably more extensive than is commonly believed (cf. Hir, Ingulischer, Strassburg, 1906—07, pp. 317 ff., 396 ff.), and that in this way there was a very general transmission of folk-tale incidents, it is safest, in our present state of knowledge, to adopt a conservative attitude, and to hold, unless there is positive evidence or very strong probability to the contrary, that these incidents are derived from the same source or from the essentially uniform psychology common to the entire human race.

(d) Earliest form.—The ordinary speech of man is in prose, and we may accordingly be certain that the most primitive Mârchen, as recorded, for instance, among the N. Amer. Indians, was also in prose. The same was probably the case with the saga. Yet, while prose is easier for normal conversation, it is less easy to recollect and repeat accurately than poetry. Accordingly we find that there was a tendency, when the sages and such Mârchen as were deemed of greater importance developed to considerable length, to recite them in verse. In other cases, as in Old Irish, or in the Pahbelt Râsta Rastit cycle, there is a commingling of prose and verse, the cante-fable, in which the speeches of the principal characters, quasi-summary of the tale, and indications of especially important situations are given in verse, and the bulk of the narrative being in prose. As a matter of fact, the co-existence of poetic (bardic) and prose (folk-tale) versions of the same theme may be found in N. India to-day, and it is well known that the former type preserves the text much more faithfully than the latter, while the resultant record is usually the form most in vogue. In the case of

of Sinbad the Sailor, the origin of which goes back to the palmy days of trade in the east and the Indian Ocean, and which was probably composed at Basra during the tenth century, and it is most likely that the origin of the Romance of the Arabian nights is the result of the steady stream of new stories being added to it, thus creating a new literary genre in India; and, if this fact be born in mind, it is evident that the Arabic romance writers preserved the literary merit, special stress should be laid on his descriptions. They are, most of them, excellent, though the length of the story is itself extraordinary, and, if this book be born in mind, it is evident that the Arabic romance writers preserved the literary merit, special stress should be laid on his descriptions.

4

**FICTION (Primitive, Oriental, and Grecoroman)**

The national Roman, however, is the Romance of *Astar*, which, in its present form, dates from the period of the Crusades. It is in simple style, and is of value for its pictures of the life of the desert (cf. *Caesar de Persia*, J. A. xii. [1883] 97-123, xiv. [1884] 317-347; and *Leaves from Eastern Life*, London, 1887, pp. 108-144, where the Arabic romances are summarized and estimated: partial Eng. tr. by Hamilton, 4 vols., do. 1883. Here must be included also the great cycle of the Romance of *Basir* (summary by Hust, 400-407), the Romance of *Safir al-Fasiya* (Fr. tr. by Al Bey, Constantinople, 1847), and the Romance of *Tayy* (d). *Syria*, etc. — In this literature, besides the story of Alhajr (q. v.), the department of fiction may be regarded as including the romances of Judiae and Agnon. (Johann, 1800); the Romance of Treasures (ed. tr. Besold, Leipzig, 1888); and the cycle of the Seven Sleepers (cf. Gudin, *Testi orientali sopra i sette dormitori di Bugia*, Rome, 1892). In *Babylonia and Ethiope* no works of fiction are recorded, and the instances of *Marec* in the *Chronicle* of *Babylonia* (Eng. tr. by J. W. F. Riggs, 1893, 1. vii. 73—Am 59, Ex 16, I 5, 5); *Homaia* can be assigned unquestionably to this class. In the NT some of the parables of the *Sermon on the Mount* have been taken by Him from *Marec* (e.g. Mt 18:28-32; Lk 10:33); and to the same category may belong a number of the Talmudic and Midrashic parables and illustrative Sayings. At the same time, it is obvious that the lack of written fiction does not imply that *Marec* and sages were not current in great numbers; Armenian literature, for instance, is devoid of the romance, but the folk-tale is very popular (cf. Chalatian, *Armen. Marec* and *Sogian*, Leipzig, n.d.).

(c) *India*. — The *Marec*-literature of India is enormous, and is represented in Sanskrit by such collections as the *KathaShiripravara* (Eng. tr. by Travey, Calcutta, 1894-97), *Kathakol* (Eng. tr. by J. S. Williams, London, 1898), and *Kamasastra* (Ger. tr. by Schmidt, Kiel, 1884, Stuttgart, 1898). The oldest formal Indian romance is Dachini's *Dakshaswadaksha* (Ger. tr. by Meyer, Leipzig, 1882), a capital romance of romance, written about the 6th cent. A.D., and the only Sanskrit romance which can lay claim to general interest. Following this, every device of the highly artificial Sanskrit *Katha* style was called into requisition by Subandhu (between A.D. 500 and 600) in his *VedaSundara* (Eng. tr. by Gray, New York, 1912) and he was quickly imitated by his avowed rival, Bana, the author of the equally artificial *Kadambari* (Eng. tr. by C. M. Ridding, London, 1896), and *Harapanava* (Eng. tr. by Cowell and Thomas, do. 1897). In these three romances matter is everywhere sacrificed to form; learned allusions, elaborate personages, and well-nigh cloying descriptions of scenes, phenomena abound, and there is neither analysis of character nor interest in action. The majority of Sanskritists utterly condemn the Indian romance, but the present writer ventures to find certain melodious, mystic, and majestic beauty which can never be equalled even in Sanskrit; and the above is merely a hint that all these are not rare in the Indian romance. The present writer ventures to find certain melodious, mystic, and majestic beauty which can never be equalled even in Sanskrit; and the above is merely a hint that all these are not rare in the Indian romance.

*true melody in the long, rolling compounds, a mystic splendour which can never be equalled even in Sanskrit; and the above is merely a hint that all these are not rare in the Indian romance.

to Persia, where it was incorporated in The Thousand Nights and One Night, ultimately appearing in the Occident in the Dresser's version of Boccaccio. The adventures narrated in Dajin's romance, however, bear no resemblance, either in plot or in episode, to the incidents of KambaK and his kinsfolk. In the spirit of the fables and of the Greek romances is as divergent as the audiences of scholars on the one side and the general reader of the other, for whom they wrote: nor can any real affinity, much less any direct connection, be traced between the romances of India and of Greece and Persia.

(5) Persian.—To the Pahlavi period, besides the lost version of the Hoshi Afsana, the immediate source of The Thousand Nights and One Night, belongs the single extant Middle Persian romance, the Kadhah-kh 4 Artazsir-e Pahlevi, dating from about the 8th century. (Eng. tr. by Darab Peshotan Sattari, Isphahan, 1892; and tr. by the Rev. Robert D. Bussaner's Reise in der des indogermanischen Sprachgebietes zur Kunde der indogermanischen Sprachen, iv. (1879) 22-89.)

In modern Persian the romance begins with Firdausi, Jami, Tant ' 2 Eisad, and the anonymous (1510) Qavam o Nathan, and is continued by such poets as Nizami (Ladli o Majzun, Eng. tr. by Atkinson, 1830; and Jami o Majzun, Fr. tr. by Chayen, Paris, 1890). Among the modern writers may be mentioned Muhammad Kamin (Qasib o Kasr, tr. by Franklin, London, 1898), the anonymous (1801) Numa (analyzed by van Koen, Romana von Misir, Leyden, 1898), and Qosib o Batin Taj (Eng. tr. by Forbes, London, 1890). There are a host of other Persian romances, unprinted and even unedited (for a convenient survey, see Eth. Gise, ii. (1894) 228-284, 317-324); and for specimens, see Cevadn, A Group of Eastern Romances and Novellas, from the Persian, Taim, and Urdu, London, 1898.

Though frequently profuse and repetitions, the Persian romance is less attractive than the Indian romances; rather, it is the best that the Orient has ever produced. Among the literatures whose romance has been deeply influenced by Persian should be mentioned the Georgian (Fink, in Kultur der Ostspanien, ii. (1908) 308; Wardrop, Geordische Pahel Tales, London, 1894).

(g) Malay.—The Malay literature is derived mainly from Indian, Persian, Arabic, and, with an admixture of Javanese and Polynesian elements. The difficulty, already noted, of distinguishing between fact and fiction meets us again in such Malay works as the Sagara Malayu (to which reference has been made above), Bhakti Debut, Javanese Yatisa, Toja al-Sattal, and especially the Hong Week (on this class of works, see especially Holandt, Handelingen bij de boevenizing van der land. en volkenbunde van Nederland. Oost-Indisch, Breda, 1861, i. 154 ff.); Newbold, A count of the Brit. Settlements in the Straits of Malacca, London, 1826, ii. 317 ff.).

(5) Chinese.—The novel was introduced into China in the Mongol period, although its real origin is unknown. It probably came from Central Asia, the paradise of storytellers, in the wake of the Mongol conquest. Three centuries had to elapse before the highest point of development was reached. Fables, anecdotes, and even short stories had already been written by the Chinese in the first centuries, but between these and the novel proper there is a wide gulf which so far had been satisfactorily bridged. Books, indeed, have maintained that the novel was developed from the play, pointing in corroboration of their theory to the Ist Hsing Chi, or Story of the Sages, which on its first printing under four heads, as dealing (1) with satirization and plotting, (2) with love and intrigue, (3) with succession, and (4) with brigandage or lawless characters generally (Gies, Hist. of Chinese Lit., London, 1901, p. 785).

The Chinese romance—begins with Lo Kuan-Chung's San kuo chih yeh, based on the wars of the Three Kingdoms for supremacy in the 3rd cent. B.C., and includes the Lieh Kuo Chi'ao, covering the period between the 8th and 17th centuries, and the union of China under the first Emperor. The romantic novel is represented by the Yü Chiao Li, written in the 17th century. (Fr. tr. by Régnier, Les Deux royaumes, Paris, 1859; and Eng. tr. by Julian, Les Deux jeunes filles lettres, 2 vols., Paris, 1860); and the 17th cent. Huang Long Ming (Eng. tr. by Hsiu, Li-lui, by Joly, Hongkong, 1828). To the third class belongs the interesting Hsi Yu Chi, 'Record of Travels in the West,' based on the Indian travels of Hsiian Tsang and translated in a Japanese adaptation by Kikutei Bakin in 1838; and the fourth, or 'picaresque,' type finds illustration in the Shihi Hu Chi, ascribed to the 18th century, Shih Nalun; while the 18th or 17th cent., Eel Yu Mei, 'Twice Flowering Plum-Tree,' may be described as 'a novel with a purpose, being apparently designed to illustrate the beauty of filial piety, the claims of friendship, and duty to one's neighbour in general' (Giles, p. 304).

There are, moreover, numerous collections of novelties, such as the Cheh Fu Ch'ih, Kao, 'Marvellous Tales, Ancient and Modern,' and Po Sung-tang's Liao Chai Chi Ch' 1 (Eng. tr. by Giles, Strange Stories from a Chinese Studio, 2 vols., London, 1820). Among other Chinese romances of which translations are accessible, mention may be made of the Mou Yu Lung Yen Ton Hen Hsien (Fr. tr. by Schlegel and Han, d'Arly, Lo Romanesque, Paris, 1842), and the Po Ch'e Tsang Ki (Fr. tr. by Julian, Blanché et Urt, in les cines sauvages, 1884). With the Pavia published a Chosen de conte de nouveautés (1815), and d'Hervey-Saint-Denys, Trois nouvelles chinoises (1852). The number of Chinese novels in non-literary style is very large.

Chinese fiction is exceedingly profuse, and has scant regard for probability; and much of it is morally objectionable. It is held in contempt by the cultured, who, however, read it with avidity, and its value for a knowledge of Chinese life and thought cannot easily be over-estimated (see, further, Candlin, Chinese Fiction, Chicago, 1899).

(5) Japanese.—Unlike Chinese fiction, the romance in Japan is highly esteemed, here occupying a place analogous to that which The Romance of the Three Kingdoms holds in India. Japanese fiction begins about the 10th century with the Rikuhon-like Katsuki Monogatari, 'Story of the Bamboo-Healer' (Eng. tr. by Dickins, J.R.A.S., 1887, pp. 1-66), in which there are many Chinese elements, together with strong Buddhist and Taoist influences. To the same period—probably in part by the same compiler—belongs the similar Ubiso Monogatari. The next step in fiction to attract attention in Japan was the realistic novel of popular life, represented by the Ies Monogatari, dating from the same period as the two Monogatari just considered, and soon imitated in the Inferior Yamato Monogatari; the Genji Monogatari, by a lady known as Murasaki no Shikim, (early 11th cent.), which is one of the works which mark the highest point attained by the literature of Japan (Eng. tr. of the first 17 chaps. by Kinichiro Suyetan, London, 1903), and which was imitated in the 11th century. Some of the Monogatari of the authors Daihe 2 Kanrei, the 18th century, Inaka Genji of Tanshiko, and the 11th century, Hisayosuji Monogatari: Jippensha Ikku's Hara-akira (1802-22), and the 19th century, Mume Kyosai and Shunsoku Tantrami no Sono of Tanngeki Shunsai. The development of the historical novel was very late in Japan,—not until the 14th century, the chief specimens being the Daka Seidan and Shunsai's Edo Bunke, a version of the favourite
FICTION (Primitive, Oriental, and Greco-Roman)

Japanese cycle of the revenge of the forty-seven Rōnin (Eng. tr. by Salto and Greely, New York, 1884). To the end of the century belong imaginary travels, best represented in Japanes by the Kikokushi (1774; Eng. tr. of the main portion by Chamberlain, T.S.J, viii. (1879)), and by Bakun's Kikokusho Nihon Monogatari (Eng. tr. by Morin, Yokohama, 1881). To the earlier period of Japanese fiction belong such collections of Mōrōs as the Uji Monogatari of Minamoto no Takakuni (also known as Uji Dainagon), who died in 1077; and in 1810, Bakun, in his Shikigoya no Kuruma, 'Pawbroker's Store,' gives an interesting box arrangement, in which each of the pawbroker's pledges tells its own story.

In the older fiction of Japan, as in India, the authors were of the higher classes, some of them, such as Murasaki no Shikibu, Daini no Sammi, and Minamoto no Takakuni, belonging to the Court circles, while the Yamato Monogatari is ascribed by some authorities to the Mikado Kwaza. But in course of time fiction degenerated, and was eclipsed between the 11th and the 17th century. When fiction was revived, its entire spirit was changed. The audience sought no longer the higher classes, but the common people; and, as Aston says (Hist. of Japan. Literature, London, 1861, p. 207 l.), "from the Tokai in (1080-1087) the city populations enjoyed great material prosperity, but their moral standards were low. This naturally quick-settled, and accorded up to a point which may fairly be described by our own slang phrase, that they had little real culture or refinement. The many-headed beast had, however, learned to read, and demanded an intellectual jubilation suited to its tastes." In like manner, the older novels were no longer of men of culture, but the off-scourings of the population, such as Ibara Seikaku (i. 1683), Santo Kōden (1714-1721), and Hikai (1721). Apart from collections of children's tales, like The Cat's Wedding, The Battle of the Alps and the Crab, The Old Man who made Trees to Blossom, and The Hero's Revenge (for the tr. of many of these stories see Mitford, Tales of Old Japan, new ed., London, 1890), only too large a portion of the Japanese fiction of this period is pornographic and discreetly immoral in tone, as in the 17th cent. Hokusai Monogatari. The reason for this flood of pornography was, as Aston points out (p. 304), that the social relations of the sexes were very like those of ancient Athens.

'There was no social intercourse to speak of between men and women. Women of the higher classes of the lower classes. Wherever young girls and young men did not stand in the way, the women lived a very secluded life, surrounded by woman-like relations. The marriage arrangements were arranged for them, and romantic attachments were extremely exceptional. The manners and customs of the respectable classes of society were therefore not a promising field for the writer of fiction. He preferred the free atmosphere of the brothels, to the no less tiresome and handsome buildings, with the showy education and gay costumes of their inmates, but a superficial appearance of elegance and refinement. The element of romance in the lives of these women was perhaps small, but it exists; and it was far more natural to credit them with romantic adventures and passions than their more immediate sisters. And if the novelists' description of these places as the home of wit and beauty, and the natural resort of all young men of spirit and fashion, had a tendency to corrupt public morals, it is also to be remembered that the class of readers whom they addressed were not particularly in these matters.

The great contribution to Japanese fiction of the later period was the romantic novel, inaugurated by Kijéden, among whose many works special mention may be made of the Madoshi Hōiki and the Hōichi Subodai. Kijéden was, however, completely eclipsed by the most famous of all the novelists of Japan, Kikuchi Bakun (1857-1898), the author of many countless other works, of the Yamashiki-takü (1805), the Okuma (Fr. tr. by Regamey, Paris, 1883), the Kuma no tayuma no ayako (Eng. adaptation by Greely, A Compendium of Love, 1872). In the Nihon-kan, 'Story of the Eight Dogs' (1814-1914).

About 1879, European influence began to make itself felt in the romance, as in the political novels of Sudô Nanase, three novelists of the New Style (1887). The worst defect of the Japanese romance, apart from its pornographic and immoral tone, is its gross improbability (which it shares with Chinese fiction) and to Europeans—its inordinate length and repetition.

(i) Greek.—The Greek romance begins, properly speaking, with the Opitias of Xenophon, for in this alleged account of Cyrus the Great the author's real purpose was to set forth the character of the ideal ruler and the nature of the ideal State. This romance is descriptive as being, in reality, an amplification of the Utopia ideal presented in Plato's concept of Atlantis, the Meropis of Theopompos (4th cent. B.C.), the Hyperboreas of Eclesius of Athens (a contemporary of Alexander the Great), the Panchaia of Euenhemus of Messene (3rd cent. B.C.; cf. art. EUPHemerism), and the mythical travels of Iambulus—a category which was unexpectedly ridiculed by Lucian of Samosata in his True History. We have, moreover, in this type of Greek fiction the combination of discontent with things as they were with the vague knowledge of foreign lands gained from travellers' and merchants' tales. The element of romantic love is, however, lacking in these works, as it is, indeed, at least as a main factor. In older Greek literature as a whole. Yet love was, of course, present in fact; and in course of time the influence of this passion, whether for good or (as in the poets) for worse, was bound to gain public recognition. This recognition became possible largely through the breakdown of the old Greek State and of the aristocratic mode of life, with its rigid exclusion of women from the outer world. Furthermore, the merchant classes became dominant; and there was a resultant demand—very much so—that the later period of Japanese fiction—for a type of literature which should appeal to the bourgeoisie. It was, indeed, probably the women of the middle classes for whom the Greek novelists primarily wrote, and they very wisely contrived to unite the theme of love with the older romance of travel. At the same time, there was still an considerable amount of exclusion of women; and, as Warren (Hist. of the Novel previous to the Seventeenth Cent., New York, 1860, p. 44 f.) remarks: "That the novelists' reasonings is clear from the conventional way in which they first bring their couple together, their meeting takes place by chance, in a temple, as the only spot where both sexes could properly meet. And when the wanderers begin, it is almost always on account of some accident or chance that the girl is exposed to the adventures she undergoes. . . . But, the proprieties being once satisfied, and the heroine's adventure being no longer a matter of whimsy or accident, the girl is free rein to his fancy and puts their reputation as travellers on the same plane as the tame of his horse. But these continuo pergruations must have been unnatural except with women of degraded life, and there are many instances in the novels where the heroine is reduced to slavery, or at best to a kind of servitude, and she is held in very light esteem by her captors and persecutors, escaping the common consequences of their contempt only by the display of extraordinary talents, or by the sudden appearance of the hero. So it is quite plausible to suppose that in this reduplication of dangers surrounded by members of the great and the middle class, was a deliberate purpose on the part of the novelist cater to the prejudice of his public, and that], these histories of a lower social class had in mind the disinherited families of the great merchants, and indulged the seceded readers of their times with the idea of vengeance, of freedom for those who had suffered and their reliance on her own talents and energy. . . . The wives of the commercial princes of Syria and Egypt share the same freedom which their fictitious adventures granted them in common with their male counterparts." This combination of love and foreign adventure, which is the distinctive characteristic of the Greek novel, finds its earliest formal expression in the Ta ki Seis Komikyō furon of Antonius Diogenes (before the second half of the 14th cent. A.D.) and the 24 books, an outline of which is preserved by Photheus
FICITION (Primitive, Oriental, and Greco-Roman) 7

[Text continues with paragraphs discussing the evolution and impact of Greek fiction, mentioning notable works and authors such as Homer, Archilochus, and other classical writers.]
In the medieval period, Latin fiction consists solely of short *Märchen*, frequently collected for the purpose of edification, elaborate morals being very often appended, as in the famous *Deutero Romanorum* (ed. Oesterley, Berlin, 1872; Eng. tr. by Hooper, London, 1894), other collections being the *Romania* of Petrus Albus (c. 1270), *Historia regum*, *Deutero Romanorum* (ed. Schmidt, Berlin, 1872), the *Historia septem regum* (ed. Buchner, Erlangen, 1889), the *Dolomentes* of Johannes de Aita Silva (ed. Oesterley, Strauburge, 1879), the *Romania* of Jacques de Vitry (ed. Crane, London, 1890), and the *Tractatus de diversis materiae predicatoribus* of Etienne de Bourbon (Leges de la Marche, Appendices historiques, legenaric et apologica, . . . à Etienne de Bourbon, Paris, 1877; for a good general collection of specimens of this literature, see Ulrich, *Proben der Lit. Neulit. des Mittelalters*, Leipzig, 1908). But to all intents and purposes we pass, with the close of the Greek romance, directly to the fiction of medieval and modern Europe.

**FICTION (Medieval and Modern).—**There is no place in the course of the art, and in the bibliography appended to the following article, suitable from the Chinese and Japanese romances are given by Glasse, in the works mentioned above, and expository summaries and analyses of the Greek romance are to be found in Bobles, Daniele, and—more recently—Louis H. Gray.

**FICTION (Medieval and Modern).—**When we pass from the ceremonial romance to the earliest castes in fiction among the modern nations, or, at least, the earliest which have been preserved to us, we find the great majority of them first sung, and then written in verse; no book, as we arbitrarily did in the history which has been so often referred to in modern discussions of the novel, exclude metrical narratives from our survey. In the new world, was no place the story of the ill-assisted line, as to content and spirit, between tales in verse and tales in prose. It was not until the Renaissance had re-discovered the ancient models that the prose-tale developed, formally and artistically, away from prose, with methods and standards of its own.

The oldest extant works of fiction which come to us from the Dark Ages belong to the Teutonic races; the Romance languages were slow to develop pure literature in the vernacular, because Latin was so familiar to those who cared for literary form. The primitive beginnings of fiction among the northern tribes can only be conjectured. We can only believe that this recital of the warlike exploits of a tribal hero to half-conscientious, untrained exaggeration of them; and then, when the warrior's victory over all human foes had become so much a matter of course as to pall upon the hearers, the story-teller had recourse, in the oldest extant specimen of Teutonic narrative, going back probably to the 6th century—in the *Beowulf*—to the introduction of superhuman foes to be conquered by sheer strength and courage. The plots are scarcely more than a succession of events; of emotional expression there is little, of character, study almost none, except in the episode of Wiglaf (possibly, for that reason, of later date). But the very exaltation of purely magic elements leads in a modern direction; and, far removed from the rude barbarism of the setting is from courtly knighthood, the description of the old king rejoicing, as he dies, because he has won great treasure not for himself but for others, who already contains the most essence of chivalry.

In a number of the northern sagas, and most fully of all, perhaps, in the *Nibelungenlied*, an unconscious advance towards the unity which more civilised standards of art require is the result of the gloomy fatalism of the northern nations. Over all the action broods the shadow of Fate, Werd, hurrying inexcusable; the hero is doomed, his destiny is predetermined (see *DOOM, DOOM MYTHS*). In the *Nibelungenlied* the tragic end is kept in view with an almost Sophoclean consistency. Here again the singer or singer, by an unhappy turn of thought, using it chiefly for omen and unneeded warnings of doom, and told a simple tale of the tragedy of human life, more or less as far as the traditional outline of the story allowed, as men and women would be likely to do.

2. Although the best French scholars, such as Gaston Paris (Renaissance, xiii. (1864) 419) and Leopold Gantier (in *Petit de Julleville, Hist. de la langue et de la litterature franceses*, Paris, 1896-99, f. 53), admit that the French epic is of Germanic origin, the French were the acknowledged masters of the metrical romance in its later form. The oldest monument of their fiction, the *Chanson de Roland*, is composed of elements that do not differ very widely from those of the Norse sagas; but the long series of verse-tales, which for two or three centuries delighted courtly audiences, interwove, in a way which must have been highly entertaining at the time, the three great interests of the Middle Ages—battle, love, and religion. Love had scarcely suggested itself to the earlier makers' as offering scope for literary treatment; fighting and love were in the men's chief employments in those days, and the staple of their songs; even in the 11th cent. *Cham- son de Roland*, that precious relic of chivalrous heroics, is a tale of love in the fall of Troy, the exploits of Charlemagne and his peers, or the fortunes of Arthur and the Round Table, all alike visualized their heroes—Greek or Trojan though they might be—as knights of their own day.

3. After the grave, majestic, national epic, with something of the sterner aloofness of its spiritual, came (about the beginning of the 12th cent.) the light, bright, courtly romance, delighting in the description of journeys and pageants, and full of the spirit of adventure, which so often figures in the adventures of women, an inspirer of tales, and all chivalrous qualities for men. The whole story of the *Grail* (e.g., of Christian and *Troyes*, or as it was worked over by Wolfram von Eschenbach in his German *Parzival*—was full of suggestion of a wistful longing for superhuman beauty and beauty, which made it an excellent example for those who gave it such devout reverence. When, in the 16th cent., the purblind *Eschenbach* (Schoeneaster, bk. I) could see nothing but 'open man slaughter and bold braviery in Malory's as quaintly beautiful prose version of the Arthur story (finished about 1467, first printed by Caxton in 1485) it only showed how the Renaissance standards had blinded the eyes of their enthusiastic converts to the simple beauty of medieval life. The moral sweetness of the best of these romances of native English workmanship, *SirGawain and the Green Knight* (13th cent.), is one of its many special charms.

4. The medieval habit of vivid personification of virtues and vices as unseen allies and adversaries in the spiritual combat led, in the spirit of allegory, to the rise of allegory. The most famous and notable type of this in the great *Roman de la Rose* (begun c. 1255 by Guillaume de Lorris, finished c. 1276 by Jean de Meung). Those who cannot appreciate this work need never hope to understand the spirit of the Middle Ages. About the time, a century later, when Chaucer was translating it into English, William Langland was using the same sort of
Fiction (Medieval and Modern)

9

allegorical machinery to deliver his message to the common people in *Pièro Plueman*. The 15th cent. also saw the rise of a considerable body of prose romances—material—besides the literary style of the nascent modern nations, owing to the cosmopolitan or "universal" character of the education of those who had the development of letters in their hands. But the case is different

when, in our historical survey, we reach *Amadis de Gaule*, the first and best of the great body of *novelas de caballerías*, or romances of chivalry, which formed for a century or more the most popular literature of the Spanish people and stood in the direct line of descent towards the modern novel. Whatever its primitive sources, it goes back certainly to the 14th century—it took its final shape in the hands of Garcia Ordóñez de Montalvo, probably between 1492 and 1504, though it is not known to have appeared in print before 1618. Although this famous story and the class which it heads are not of Spanish origin, and although they inherit their material and take their spirit from the rather universal chanson de geste, through the romance d'ascenseurs, yet it was in Spain, and as stamped with a Spanish character, that they acquired their importance in the development of prose fiction. Montalvo's prototype was followed by a long series of successors and another almost equally famous family, that of the Palmersins, the best known of these being the *Palmiers de Jagarros*, only written by Luis Hurtado of Toledo. Most of these romances are anonymous or of uncertain authorship; they were really the creation of the age which favoured them so eagerly—almost as if they were created by them, for most only a few worn copies exist to-day.

That, as has been often said by those who take Cervantes' half-humorous boast too seriously, these romances were ended by Don Quixote, would really be disproved. It was precisely because their popularity was already waning, and because by the end of the 16th cent., their reproduction in the mass was not without some admirers, of the short prose tale in which the French were almost univalently so high rank. The great

lopes in prose (composed 1520) became the definite type in France of these chivalrous tales, which they followed until, in the 15th cent., printing gave them a new lease of life.

5. Before we pass to the development which the romance of chivalry had in Spain, it will be well to realise that, as happened in that country in the 15th cent., so in France, before the close of the Middle Ages, the common people, wearying of a type of fiction which seemed to touch so little the life of the interluders, they best, created, by their demand for other kinds of tales, a new style of literature. That such people are not necessarily aware from reading about the doings of those above them in the social scale of the most arsenic, existing in those enjoyed by stories of the type offered in England by the *Family Herald*, and in America by the novels of several writers whose public is found exclusively among the interluders, and so by degrees, especially as the tenor of their stories became more numerous, they asked for a livelier, more numerous treatment of life on its lower levels. The romantic and historical tendencies, to which the name of fabliaux is applied in its stricter or more modern sense—short tales in verse dealing, for the most part from the comic point of view, with the coarse life, moving, on the one hand, into moral apologetics and, on the other, into sentimental legends. Their usual characteristic of unvarnished realism has been attributed, by the various satirical and moralising character of the stories, to the necessity felt by their Western adapters of studying the manners of thought and speech prevalent among their audiences. The fabliaux are, as a rule, intended to come to laughter, which sprang up easily in the Middle Ages: frequently cynical, sometimes satirical, usually coarse. This was the type of story which, immediately appearing after the manners of Aesop; growing out of them there is the interesting class of animal stories of *Puncher Fuchs* and the French *Rameaux de Rossé*, their types, resembling, in their satirical and their shrewd philosophy, rather the stories of *Breve Fox* and *Breve Rabbit*, which have delighted a recent generation, than the somewhat belated echo of R. Bostad's *Chamber*; and in Italy, especially there is a large number of short stories, then and there called *novelle*, carrying on (much in the spirit of the fabliaux of the present day) much of the Romantic tradition and imagination in favour of observation as the source of their material, they gave to realist fiction both its method and its point of view, and after the French people, only the Continental followers—Le Sage, Balzac, Tolstoi—saw, like their literary ancestors, chiefly the evil in the world of every day; it was reserved for some happy, healthy Englishmen (Fielding, Thackeray)
to paint the triumphs as well as the trials of the common man.

The first of his epoch-making series of picaresque romances (Spañ. pícaro, 'rogue') was the Vida de Lazarillo de Tormes (author uncertain; first known edition 1553). Extending to no more than fifty pages of ordinary print, it was a small thing to produce such marked results; but it soon had a host of imitators. The next was larger, the Gus-

The Naturalist—The Unfortunate Traveller, which has been
called, from another point of view, the first English historical novel. J. S. Jusecand (The
English Novels in the Time of Shakespeare, p. 247) goes even further, and says that Nash first pointed out the road that was to lead to the true novel, in that he was the first 'to endeavour to relate in prose a long sustained story, having for its chief concern the truth.' The time was scarcely ripe, however, for the picaresque novel in England; and, when Defoe took up this model, it was Le Sage who taught him.

While his French contemporaries were looking towards England, Le Sage, as a loyal subject of Louis xiv., forgot that the Pyrenees existed, and reproduced the Spanish setting so exactly that some critics of that nation have even set up a theory that he was a Spanish imitator. But, though his characters wear the Castilian costume, they have a French wit and vivacity—and the passions of humanity. The master of Defoe and of Fielding, and the inspirer of Dickens, Le Sage shows in Gil Blas (1715—54—55) absolute truth to human nature, as distinct from truth to this or that national characteristic; and it is precisely this that he brought into novel writing that constitutes his principal claim to high rank as a contributor to the development of prose fiction.

8. We have now traced one line of descent down to the realist Fielding, and it will be necessary to go back and follow the course of another, parallel in time, though not in direction, since it leads to quite a different conclusion. This is the pastoral romance, which had its origin in Italy, though it, too, attained its most characteristic and influential form in Spain. Two feminine Italian works—both mingled prose and verse—stand out prominently among the models: Boccaccio's L'Ameto, written in 1564 or 1565; and Sannazaro's Arcadia (1564). Although both to both the pastoral form was a venerated inheritance through Vergil from Theocritus and the other Greek idyllists, there is a marked difference in the appeal which it makes to each. Boccaccio, writing in 'the first five careless rapture of the Renaissance, was as full of hope for the perfection of humanity as was Sir Thomas More in his Utopia (whose date, 1516, is not far from corresponding with the effective beginning of the English Renaissance in the same proportion as Boccacio's with that of the Italian); by the time Sannazzaro wrote, the dawn-foresh of hope had died away, and the dis-

sion turned to the simple pastoral mind as an escape from unpleasant reality, charmed by the contrast, as were Louis xvi. and Marie Antoin-
ette when they escaped from Versailles to play shepherd and shepherdess at the Trianon. It is in this spirit that Sidney's Arcadia (1580; begun 1579, when he was an exile from court) is written. In the allegorical pastoralists, from Vergil to Spengnoli, the note of longing for escape to an ideal life is scarcely heard; in Sannazzaro the desire of

the most important contribution made by Spain to the pastoral romance was the Diana of Jorge de Montemayor (c. 1560), which not only furnished a model to Sidney and a plot to Shakespeare's As You Like It (Gentlemen of Verona), but holds a place in the evolution of the modern novel second in importance to that of Amadis of Gaul alone. Here the ad-

herence to the round of actual life is closer than in Italy; it is modified to some extent by elements borrowed from the older chivalric tra-

dition; and it leads directly along the road to the fashionable pastoral of France. Of this the most consummate example is Honoré d'Urfé's Astres (1612). Literature still was, in the main, the pos-

session of the privileged classes; and, the move-

ment in France towards a greater refinement of speech and manners which, not long after the public-

ation of d'Urfé's romance, centred in the Hôtel de Rambouillet was a kind to make fashionable throughout the century the high-flown sentiment of such writers as Mme. de Lafayette and Mille. de Scudéry. The outcome of this succession was slow in making itself apparent.

9. The conventional grace of the pastoral could offer no material to the realistic novel; but, when the tide of sentimentalism at last broke through the restraining barriers—when, after two generations of Cartesiansm and scepticism, the emotional soul of Jean Jacques Rousseau was aroused to action by the kindred sentimentality which went out to meet him from the pages of the Astres—the true career of the Spanish pastoral had begun. The melan-

choly of unanswerable questions, the longing of Sireno, are repeated in the longings of Saint-

Preux and in the despair of Werther. The sen-

situality of Diana developed into the sensibility of La Nouvelle Héloïse.

The influence of the Puritan middle class in Eng-

land had a marked effect on the 18th cent. history of fiction there. Imbued with the idea of the para-

mount importance of the soul, its authors were driven to novels that substituted the difficulties of the task, they thought it best a sin-

ful waste of time to read tales of amorous or martial adventure for mere diversion; and the Eng-

lish story-teller of the early years of that century, Defoe, was obliged to conform to this prejudice by giving his tales a colour of truth. His success may be judged by the uncritical criticism of a contemporary who speaks of 'the little art he is so truly master of, of forging a story and imposing it on the world for truth' and how long this remained the unreasoning belief in the story, as held by those who will recall the frequent occurrence in novels of the first half of the 18th cent. of the foot-

note 'A fact,' which was still supposed to add value to the incident related. Defoe, then, wrote fictitious biography with a lifelike reality never surpassed; the element of plot was at hand in the love-stories drawn from contemporary life which formed the staple of the popular drama; and Addison was already, in the Spectator, showing himself a master in the subtle delineation of character. It is not surprising, therefore, that, before the century was half over, Richardson had pro-

duced the first English novels in the full or strict sense of the word—perhaps we may say the first

novels, dismissing the claims made by the French, with pardonable patriotic pride, for Prévost and Marivaux—Pamela (1740), Clarissa Harlowe (1748), and Sir Charles Grandison (1755). In his object, which he declared to be 'to promote the cause of religion and virtue,' Richardson was in line with the Puritan tradition; and of his notable achievement one of the most striking, in the first time of a work of non-dramatic prose fiction guided throughout its course by a single motive, in which all the incidents serve to bring about a definite result, he does not seem to have been conscious himself. He calls Clarissa 'a dramatic narrative;"
and, since here, as in the other two books, the entire story is told by means of letters, the characters speaking for themselves as on the stage, we may understand that what he really intended to do was to write the novel in a more private and personal way, but to write what should be practically a pocket play. Hence the presence of a plot, which, from the time of Dryden, was treated as one of the indispensable elements of his art. Also known how to offer, all the while that the romances were as loose and formless as ever. Fielding, a more conscious artist (he speaks of himself in Tom Jones as 'in reality the founder of a new province of writing'), calls the novel a comic epic in prose; as the epic is an enlarged tragedy, so this new form of his is an enlarged comedy. Among the principles he lays down for it is that it is to show real life, in contrast to the old romances at which he jeers, and that it must aim to show people the folly as well as the wickedness of all dishonesty.

The time was now at hand when a more decided place than ever before was to be given to emotion or passion. Emotion had been deliberately suppressed by the Neo-Classics and their leaders; in Horace's vivid phrase (Ep. 1. x. 34), they had thrown it out with apitchfork—and the hour was now approaching when, as he predicted, it should return by the back door of the spirit of education which explains the extent of Richardson's fame in his own age—a fame that was not confined to England. He was the first in whose work Diderot described him as with Euripides and Homer, and to Germany, where the greatest writers seized on his design. The reaction from the conventional suppression of feeling swung to the opposite extreme. Stendhal, Rousseau, and Goethe unchained sentiment and allowed it to rush into every imaginable excess. La Nouvelle Heloise (1760), Tristram Shandy (1760); these were the declarations of the romantic spirit; and carried it further. The Sentimental Journey (1768) speaks in its very title of the quest of feeling, not merely the surrender to it; and Goethe's melancholy hero was the idol of an enthusiastic young generation, reproducing himself west of the Rhine in Chateaubriand's morbid Renard (1810).

A similar reaction to that which brought about the reign of sentiment accounted for the popularity of the medieval or Gothic romance in the latter part of the 18th century. The first specimen worth noting was Horace Walpole's Castle of Otranto (1765), in which he tried to paint the life of the manor-house as agitated by the action of supernatural machinery such as the superstitious of the time might have accepted. The classical age had thwarted out the supernatural too, or at least kept it rigorously in its place; and now it also was revenging itself. Beckford's Vathek (1784), Mrs. Radcliffe's Mysteries of Udolpho (1794), and Lewis's Monk (1796) are the most famous of this class.

The last named professed no other purpose than the amusement of their readers; but there was another side of the Romantic Movement which employed the novel for quite other ends. The earliest notable example of what we now call the novel of purpose is Caleb Williams (1796), in which the revolutionary philosopher Godwin set forth his principles of social justice. It was to have a number of greater successors—although, perhaps from the difficulty of giving a definitely didactic purpose a work of fiction, the number is not large. But that the kind exists as a recognized class is significant of the immense broadening of the scope of the novel which constituted the most obvious change between that of the 18th and that of the 19th century. The greatly increased complexity of life was one reason why the drama could no longer be, as in the Elizabethan age, the characteristic literary form. Something more flexible was needed, and something which with the vast growth in the number of those who demanded mental food could be carried into a million homes remote from cities and theatres. The novels of the 18th, or even of the early 19th, cent. did not dream of the expansion which their form was to acquire. To realize the extreme to which the genre had come, it is only necessary to imagine the puzzled amazement with which Sir Walter Scott would read one of Mrs. Humphry Ward's sociological novels, such as Marcella or Sir George Trencavel.-The spirit of the novel has been written principally by English and American authors, and in the last half-century by the Russians; while, in his novels dealing with the Modernist controversy, Foscolo in Italy reminds us again of Mrs. Ward's Robert Elsmere and its sequel of thirty years later.

As Caleb Williams the forerunner of Uncle Tom's Cabin and Oliver Twist, so the extravagant mystery tales of Walpole and Mrs. Radcliffe developed, with the growth of a more accurate knowledge of the life of the past, into the historical novel. The first successful practitioner in this form (after vain efforts which may be said to have gone on for two thousand years, if we stretch the definition to include Xenophon's Cyropaedia) was, by common consent, Sir Walter Scott. Avoiding the stiff pedantry of reproducing with antiquarian accuracy the exact speech and mannerisms of the period in which his scene was laid, and the obvious absurdity of using those of his own day, he created, with the instinct of genius, a symbolic medium which should give the flavour of the old republic to the ordinary reader by its unfamiliarity. The thing done, a host of others followed along the same road. In English the height was reached in Thackeray's Henry Esmond (1820) and The Student of the Cathedral (1841); in France, the great American achievement of Dumas was, by his own confession, made possible only by the example of Scott. The Germans, represented, for instance, by Georg Ebers, have had a tendency to display too much of that devotion to scientific accuracy which so honourably characterises their work in other fields, and to allow their facts to be fused too little in the fire of the imagination.

Towards the middle of the 19th cent., as a conscious theory first in France, realism came to the front. It was partly no doubt a development of the idealism of the 18th 

"5 as a consequence of the scientific evolution of the age; it continues and completes the work of the physiologist..."
FICTION (Medieval and Modern)

The literature of our scientific era, as classical and romantic literature corresponded to an age of skepticism and theology (Le Roman experimenté, p. 25).

But, with all his pride in his theories, Zola did not see that he had made more a myth than he had said (Le Naturalisme au théâtre, 1881, p. 111): "The realistic novel is a corner of Nature seen through a temperament and through a formula which any reader can repeat; it is the result of an observation made by the author. He sees in humanity simply la bête humaine—the beast in all its transformations, but only the beast. This rather common characteristic of what is called 'realistic fiction' may, one supposes, be explained by the fact that we are more easily convinced by the verisimilitude of evil than by that of good: if a rain is described from exact observation, the reader will be instinctively inclined to credit the description to the idealistic imagination of the writer.

The term 'realism,' of course, has been used in various senses—now as opposed to conventionalism, now to idealism, now to the imaginative treatment, and again to sentimentalism. Bierce's definition may be quoted: 'Realistic fiction is that which does not shrink from the commonplace or from the unpleasant in the effort to depict things as they are, life as it is.' (J. Stevenson's The Merry Men, p. 295.) If literature is to be a transcript of actual existence, if books are not to be, as the invalid Stevenson said of them, a worthless mock of real life, and if the universal order of natural law is to be maintained, then it is much to be said for truthful portraiture; and it cannot be denied that much of the effect of the most famous works of English prose fiction, Robinson Crusoe, comes from its wealth of exact and vivid detail.

In the broadest sense of the question, from the point of view of literature, which is more than the purely technical 'must of necessity be that of the present article, there seems little doubt that the realistic treatment, with reasonable limits, is to be commended. If we are not ready to accept for more of the present and the future the sentiments of the realists of the last quarter of the century.

The case of Russia is somewhat different from the others. The first novel in that language was published only in 1789, but a generation later began, with Gogol, the sudden efflorescence which had started and of fiction has almost vanished, and the circle of readers has widened to include those who are most in need of encouragement for their better impulses. It cannot be questioned that the kind of reading which provides them with high examples is the best in its effect. The lady who wrote under the name of 'Ouida' used to be considered eminently unsuitable for admission to School-society libraries; yet there is a very definite sense in which at least the greater part of her many books may be called far less immoral than most of Dickens', in whom a young man might search long before he found another to whom the same example of life so lofty and edifying as the (perhaps unduly handsome and impressive) hero of Under Two Flags. So, in the Waverley Novels, 'life is seen at its bravest and its best; and the young man who takes them as his guide to conduct stands a small chance of playing cripple or coward in human affairs.' We may not be fortunate enough to number among our acquaintances so noble a gentleman as Colonel Newcome, but the same will not be the case with the most careful reader of the novel as a 'human document,' which might more truly have said this. But Thackeray undervalued his own powers—or else his vision was able to penetrate beneath the superficial appearances in a way that the realist seldom does. It is the ability to do this which makes the work of the idealist so much more alive and has made the opposite school. They who depend (in Coleridge's judicial phrase) on 'the mere manners and modes of one day' and their the mere facts are much more interesting and as that of Dickens has waned—when people are no longer able to be amused by recognizing the minute veracity of their portraiture. Thus we dismiss an old photograph after a cursory glance, and return to spend hours in gazing at the Sistine Madonna, true to the highest part of human nature after four hundred years. Thus Ben Jonson is read only by professional students of literature, while Shakespeare enters into the daily life of the whole English-speaking race.

15. Yet after the Romantic Movement, itself a reaction, had spent its force, it was only natural that naturalism should set in as a protest against the exaggerated idealism into which the Romanticists sometimes ran. Still, in the first quarter of the 19th cent. Jane Austen had begun her career as a novelist by opposing to the extravagant sentiments and impossible situations of the 'Gothic' novel the stories of everyday life as she saw it. And so throughout Europe, from the middle of the century, the French influence has been felt, and many of the best known authors have been thoroughly 'naturalistic.' In Spain, Pérez was the father of the movement; Juan Valera, though not technically a realist, was no less real; Emile Zola, with his earliest master of English, the novel, and the later Valéry have followed the same path. In Italy, Fogazzaro, Matteo Serra, and d'Annunzio have been the most widely known representatives of realism. The Scandinavian north, Bjørnson and Strindberg have won their renown under the same banner; while another, Svedo, Angrisati (1856), had already written in the same spirit. In the rest of the world, as a matter of fact, though most of the results we have been considering were of French origin, Gogol had distinctly formalized the theory of the human document before the days of the Goncourt. One reason why Turgenev and Dostoevski and Tolstoi have made so deep an impression outside their own country is that the Russian novel is the novel of uncivilized people giving us their impressions of civilization, trying to find out the meaning of life as if no one had ever thought about the matter before; but a reason deeper still is the burning charity for suffering humanity which pervades their books. None of them has purely literary aims—they seek truth and justice; the difference between them and some French realists is the difference between the curious peeping visitor to a hospital and the man who comes asking to bring comfort and healing to the sufferers.

Into Germany, realism came from both sides, from France and from Russia; but the unconquerable idealism innate in the German character made this no thoroughly congenial soil for its growth. Max Kretzer promised to be the leading German realist, but supernaturalism took hold of him. Even Sudermann has not been consistently realistic; Sudermann, in spite of some pieces of brutal naturalism, has shown a tendency, which has also appeared in other quarters, to regard phenomena (found unsatis-
FIJI

...lying in themselves) merely as symbols of deeper spiritual realities which are just as true and even more worthy of study.

15. In the fiction of the last fifty years, a special note must be made of the way in which some of the greatest writers of fiction have used the deeper, or at least more scientific, study of man and his ways. It was no accident that the moderns gave rise to the psychological novel. It was this which gave to Browning's poetry a part at least of its great value; but a wider use has been made by the novelists. George Eliot wrote her novels even more with her psychology than with her ethics, and attained a vividness in portraying the inner life which the novel had not yet seen. But she did not stop with the individual analysis; she strove to make her case typical, and to show the working of the laws of the spiritual world, as immutable as those of the physical. The character-plot has tended to become the favourite form of the serious literary novel. Most of the noted writers of recent years, Turgenev and Tolstoi and Dostoievski in Russia, Meredith and Hardy in England, Henry James and Howells in America, Bourget in France, Bjørnson and Sudermann in the north, have preserved their principal effect by the penetrating subtlety of their character-studies.

77. Yet in the fiction of the last twenty-five years there has been a significant reaction against the attempt to limit the purpose of the novel first to a painstaking study of phenomena and then to a deep analysis of the causes of the phenomena. Meredith's Harry Richmond, exactly a century ago Stevenson's Prince Otto gave the signal for a new exodus into the ' new life' which was born of romantic fiction, followed soon by Anthony Hope with his Zenda stories, and then by a host of minor romancers. Their number and their power have grown. There is now a reaction back to the subjects to the days 'when knighthood was in flower' or have laid their scene in some imaginary principality, are sufficient evidence of the existence of a new novel, a novel of the people, a novel of the present, a novel of the modern scene. The flexibility best adapted to deal with the complexity of modern life, and as a pre-eminently social form of literature answering to the general tendencies of the age, has become the prevailing and characteristic literary form of our period; making its way against prejudice, and without assistance, it has supplanted the epic and the romance, has taken precedence over the drama, over lyric poetry, and over the essay. When Dante mirrored the world of the Middle Ages in the Divine Comedy, says Arthur Symons (Studies in Prose and Verse, London, 1904, p. 6).

'poetry could still represent an age and yet be poetry. But the way to do this was not by the cost of things; it has been taken from the terrible improvements of civilization in a divine medium, where it lies, disregarding the many voices of the street. From society, offering the infinite capacity for detail; and is it by the infinity of its detail that the novel, as Balzac created it, has become the modern epic. The increasing democratization of literature, allowing many a man to write with a slender equipment of education in the French sense, and offering any outlet of the world, English, and giving a thirst for reading to thousands with almost none of either, constitutes a grave danger. The money rewards of the successful novelist allure to the profession not a few men destitute of any sense of responsibility for the use of their gifts; and the fact that these rewards are often to be won by pandering to the unrefined or actually base tastes of the multitude throws a temptation into the way which some of these otherwise well-endowed writers have not been able to resist. But in the right hands the novel, by the very fact of its being so closely in touch with actual life, has the opportunity to take a large share in moulding the thought of the new age. It will do well if it listens to the suggestion of Matthew Arnold's oft-quoted definition of poetry, and takes as its mission the offering of a constructive criticism of life.
their abundant leisure from the business of food-producing was occupied in incessant warfare, which led to the formation of powerful confederations under a single chief, the weaker tribes enrolling themselves as objects in return for protection. As ancestor-worshippers they deserted their own discredited ancestor-gods in favour of those of their protector, whom they regarded as the incarnation of the parties able to protect them from injury. But as these expeditions were always followed by cannibalism; the bodies of the slain were offered to the gods before being eaten, and there appears to have been a religious significance in the act, which raised it almost to the status of a rite. But, with all their ferocity in war, the Fijians are a courteous and amiable people, hospitable to strangers, anxious to please, ceremonious in their manners. They have a strong feeling for aristocratic institutions, which even the introduction of Western civilization has failed to eradicate.

The islands came somewhat late into the field of colonization. Though they were sighted by Tasman in 1643, it was not until the middle of the 19th cent that Europeans acquired much influence. By 1874 the majority of the natives had nominally adopted Christianity, either as Wesleyans or as Roman Catholics. In that year the most influential chiefs, acting under the pressure of claims for compensation by the United States, ceded the group to Great Britain, and Fiji became a British Colony. Unfortunately this cession had scarcely been proclaimed when an epidemic of measles swept away 40,000 natives out of a total population of 200,000. Since that date the population has decreased by about a total of 27,000 in 1911. It now seems to be stationary. The natives are sharing, not altogether to their moral advantage, in the material prosperity of the islands, having learned the art of sugar-cane cultivation. Their isolation before the arrival of the missionaries, for there is a humorous song in which Uto, his descendant, is represented as living for pleasure, without regard to the god's portion, and returning with the useful intelligence that nothing but the under-shell of the turtle was allotted to him.

In some versions, Ndengel appears as the creator of mankind; but he has no emotions, sensations, or appetites, except that of hunger. Others have it that his son, Rokomantu, created the land; he created fish and food, and the fowling garment trailed across it, there were sandy beaches; where his skirt was looped up, the coast was rocky. It was he who taught man to make fire. The people of Rakiraki thought that the missionaries had come to teach them some variant of their own cult: 'Ndengel,' they said, 'is the true God, and, if Jehovah is also the true God, then Jehovah is another name for Ndengel.' Many years afterwards, during the heathen relapse under Navosvakandus, the same argument was used to show that his teaching did not clash with that of the mission, but was merely a new revelation.

The great saga of Ndengel is too long to give within the limits of this article; it recounts how the god, then merely an irascible old man, as no doubt he was in his earthly career, had a tame pigeon which used to awaken him from slumber; how his two grand-nephews, from whom he had taken the bird, killed it with a bow and arrow and defiled him to punish them; how they took refuge with Rokola, the chief of the Carpenter clan; how there was war in the mountains; the Carpenter clan were besieged by Ndengel in the fortress of Kaukavura; how, after many stragglers, in the court of the chief, it is conjectured flooded. It is conjectured that the two young men escaped the deluge in a canoe, and sailed away to the far West. Fijian myth has it that some day they will come again, bring-
The shark-god, who is the tutelary divinity of many tribes unrelated to one another, probably had his origin in totemism. Waterhouse gives the following list of names under which he is invoked: 'He-who-is-inside-the-Canoe'; 'Cirrumpnavigator-of-Yandua'; 'Feeder-of-Fishes'; 'Lover-of-Canoe-Spares'; 'Waylayer'; 'Rover-of-the-Mangroves'; 'Expectant-Follower'; 'Ready-for-Action'; 'Sail-Cleaner'; 'Lord-Shark-that-Calls'; 'Tabu-white'; 'Tooth-for-Raw-Flesh.' Tribes that worshipped the shark under the same title had a common origin, but those who knew him by different names acknowledged no such bond. Thus, a tribe that called him 'Outside-the-Canoe' recognized no tie with those who invoked the 'Cirrumpnavigator-of-Yandua.' As in other totemistic systems, the shark-god is beneficent to his worshippers, who, in their turn, are forbidden to eat his flesh.

Marae, a native of Eoe, whose name means 'outside the canoe,' to serve him, and to make him safe to land by his back fin. During the invasion of Naneva in 1884, a shark jumped across a war-canoe, turned over to show the cutting on his belly, and laid open its belly, that the marae might eat its flesh.

The attention paid to the shark-god almost entitles him to rank as a KaloVa, he is probably no more than a totem, like the hawk, the eel, the lizard, and the prawn—all recognised as having a tutelary position with certain tribes, who nevertheless had erected temples to ancestors of gods (Kalo-Yalo). Totemism in Fiji did not affect the social system in any way; it had no influence on the marriage laws or on the belief in a future state.

3. The Kalo-Yalo. It has been explained that most of the tribes in Fiji admitted a more or less close relationship to a tribe that worshipped the same ancestor-god; the tie was called fossau (the same root). (See EEF 1: 463.) It does not follow that the god to whom the tie of fossau was traced had a temple and a priest in both the communities. In most cases, some later chief of strong character had monopolised the religious instinct of his descendants, and much depended upon the priest, for the chief exercised no ascetic function himself, but was content to stand aside, and leave this rather menial office to the professional priesthood.

The origin of the temple was to be found in the story of a totemist in VanuaLevu, where the first act of the insurgen was to weed the grave of the late chief and present relics to his spirit, imploering his aid in the revolt; the next was to kill and eat a native government official, ominously having a religious significance. From weeding a grave it was but a step to building a temple for the shelter of the spirit.

The practical application of the Fijian religion lay in the oracle; there was no ritual except in the presentation of offerings, and everything depended upon the support of the high chiefs. Whether they believed in the incarnation of the priest, or whether the priest believed in their own inspiration, it is not easy to say, but there was certainly an understanding between the two orders: the priest depended for subsistence upon the offerings made to the god, and the priest whose oracles were unfavourable to the chief's policy saw his temple fall into disrepute, which was harder empty. On the other hand, unfavourable oracles, especially in time of war, had so depressing an influence upon the common people that the chief had the best reason for keeping the priest in
good humour; both knew that neither could stand firm without the support of the other.

Williams (in his Fiji and the Fijians) relates how the king of 

Thakadrenaloo, on the eve of a warlike expedition, allowed one of the gods to be put off with a single paddling, instead of the usual three. The reason was that the king had expected in the division of the 

fate. That night the god visited the priest, and foretold de-

taste. The next day, at the sacrifices, the king decided to abandon the 

expedition. In another case, however, matters took a different turn. - "I asked the old man angrily; 'Who is your 
god? if you make a stir, I will eat you.'

The priesthood itself was hereditary, though any chief's son could simulate inspiration and make a lucky forecast of events which might obtain re-

ognition. He had, however, to brave the opposition of the hereditary priests, who looked very 

oldly upon the novice. The priests were not always the chief's tools, sometimes they gave 

expression to popular discontent at some act of tyranny: 'The famine is devouring you, because 
you have put Tonga instead of to Mbaun; 'This hurricane was sent to punish you because you refused the princess to the king of 

Rewa.'

The priests ranked according to the importance of the 
god to whom they ministered; they were generally of humble birth, though in Rewa, a few years before the treaty, the church of the missionaries, the 

chiefs had found it necessary to disestablish the whole of the priestly caste on account of their 

arrogance, and to pretend that members of the ruling family had themselves received instruction. The 

disestablished priests immediately fell into their proper place, a very humble one. 1

4. Gods of the after-world.—Besides the Kalon-

Ve and the Kalou-Yale, there was a class of gods 

who had neither temples nor priest. They haunted 

well-known spots on the road by which the shades 

came, and the roads themselves; but, as they left 

the living unmolested, there was no need for pro-

pitiatory offerings (see EREI. 446). The following is a 

translation of a fragment of the poem of which the 

poet gave a rehearsal. It is in prose style and consists of 

mouth of the shades newly arrived in the presence 

of the gods at Nakauvanda:

"My Lord, in ill fashion we are buried, 

Buried standing up into heaven, 

We see the sun lying over the sky, 

We are worn out with the fast stamping in the earth, 

The rafters of our house (the ribs) are torn asunder, 

The eyes with which we gazed on one another are destroyed; 

The nose with which we kissed has fallen in; 

The breast to which we embraced is ruined; 

The thighs with which we clasped have fallen away; 

The teeth with which we smiled are decayed; 

The teeth with which we have showered down; 

Gone is the hand which threw the tripe stick, 

Bones that were the hawks' stones (toothcuffs), 

Bolled away are the blunders of races (the pigs were 

shaved)."

Hark to the lament of the mosquito:

"Well it is that they should die and pass onward, 

But alas for my conch-shell (the ear) that they have taken away!"

Hark to the lament of the fly:

"Well it is that they should die and pass onward, 

But alas for the eye from which I drank!"

Hark to the lament of the black ant:

"Well it is that they should die and pass onward, 

But alas for my wife's teeth (the male organs, the most 

vulnerable point of attack for that issue when a native 

dies, down) that they have taken away!" 1

The Fijian's dislike of their own burial custom of 

stamping the earth into the grave was shown in the case of the chief of Lakemba, who begged the 

missionaries to give him a wooden coffin to be buried in, that his body might not be trampled on. 

With all its charm and simplicity, the story of the 

Story of Solomon (the Path of the Shades) is not 

without beauty and pathos. There is, it may be 

remarked, a suggestion of Greek myth in the 

glimpse of the islands in the Waters of Solace, by 

which the Fijians, whose emotions are transient, 

excuse the shortness of their mourning for the dead. 

1 For the manner of approaching the gods, see Common 

2 For saleo-ru and sualebi, see Commonw and Darby (Fijians).
FILIAL PIETY

claims his reward by attending the funeral with a blackened face; and bold indeed would be the employer who dared to withhold the promised pay.

In some cases, the bewitched person obstinately refused to accept the secret murder, and the body was simply left to be eaten and carried by the operations of massage to drive this invisible spirit into one of the extremities, from which it can be drawn out by the fingers and finger nails.

Beside the wounded they purified the deceased as a spirit, and the name of the deceased was told his name. This would cause the name to be uttered that of the thief. If the name belonged to the same village, all known in the village, and knew all the names of the village, the body began to twitch convulsively, and himself would call out the name of the thief. If he was hustled into an abbey, upon the right man——and an intimate knowledge of his fellow-tribesmen often set him upon the right track——the offender would confess, for a bribe or a threat of a debt against the evil doer. So well known was the process, and so great fear was imposed, that no Pijian could aspire to it. The proper course for a person wrongfully accused by a wizard was to pay a fee to a rival seer to press for the free spirit; as for a spirit, it was entitled to be those whose souls have been stolen away.

The earliest method of detecting crime was by 

FILIAL PIETY

1. Definition and scope.

FILIAL PIETY. —1. Definition and scope.

FILIAL PIETY. —1. Definition and scope.

By taking into account the view that the Fijians are essentially religious, and the idea that filial piety is a form of ancestor-worship, it is apparent that the practice of filial piety is closely related to the practice of ancestor-worship. This is evident in the belief that the spirits of ancestors play a significant role in the lives of the living, and that the proper way to honor them is through acts of piety. This is particularly evident in the practice of ancestor worship among the Fijians, where the dead are revered and their spirits are believed to have a direct influence on the living.

(1) Amongst many savage peoples, filial piety can hardly be said to exist, the aged being simply put to death, or forced to commit suicide, as having survived their usefulness (see art. ABANDONMENT AND EXPOSURE, OLD AGE). Leaving such barbarity out of account, however, we generally find filial piety allied with ancestor-worship. The dead ancestor is revered as a spirit; and, while the worship of the dead not seldom originates in the idea of doing honor to the dead, the desire of enjoying their company in the after-life, or in the wish to keep them at a distance, we must, nevertheless, not ignore the other side, viz. belief in the interest and sympathy of the departed, the desire of winning their favor, and the hope of securing their aid. That the ancestral spirit frequently coalesces with the death-god needs no explanation, nor is it any need for the fact that he sometimes becomes the hero whom his tribesmen have revered, the objects of filial piety.

The object of such piety is the ancestor, who is as much respected as the hero of the tribe or family, and is regarded as a higher being, to be treated with all reverence. Here we see a synthesis of religious and piety, and similar conceptions will be found everywhere, even in the highest forms of religious life. The manner in which piety towards ancestors is found amongst the various peoples is as varied as the character of the peoples themselves. On the lower planes of thought, religious reverence and reverence for the head of the family are not as yet disengaged from each other, and piety at this stage rests upon natural feeling rather than upon distinct conceptions. But, as soon as the idea of a comprehensive order makes itself felt in the religious consciousness, ancestor-worship and family piety are each assigned a place in this order, and are clearly differentiated.

(2) In Egypt there existed a widely diffused worship of the dead, which, however, was distinguished from piety towards parents, the latter being strongly emphasized as a duty falling under the law promulgated by the priests.

(3) In China the law of superordination and subordination is deemed to be the supreme law of heaven, and finds its specific expression in the Confucian (q.v.), which, indeed, insists so strongly upon the cardinal importance of piety, more particularly as shown towards parents, that he values ancestor-worship simply as a means of fostering it. This
piety is itself a form, in fact the chief form, of subordination. Cf. ETHICS AND MORALITY (Chinese) and FAMILY (Chinese).

(4) Among the Brahmans a special motive for marriage is the desire to bring up a son who shall one day be able to make the appropriate sacrifice to the mases of the father. The main responsibility in the matter of filial regard thus rests with the male, for he is specially enjoined in the closest connexion with worship of the dead.

(5) Among the Persians, a very different view of things appears in the later Hindu. Among the supreme duties of believers are reckoned the service of Ahura Mazda and the worship of the Earth, the mother who bears mankind—a point of oriental stinginess, since this mother-worship is addressed to the head of all women. This view is intimately allied with the idea that the life-giving power as represented in motherhood, and the reverence and homage accorded to it, form one of the most effective means of overcoming the daevas, or demons.

(6) Among the Romans, filial piety was based upon different grounds altogether. They likewise, in turn, worshipped the mases; but the reverence by which they accorded to the paterfamilias had really a legal basis. According to the XII Tables, the father had absolute authority over his children, and it was this legal relationship that provided the foundation for filial piety. Even a son of mature age was still under paternal jurisdiction in family affairs, and could not be changed or acquired, anything that he did on his own account so long as his father lived. The father had the right to sell his children; he had even the 'power of life and death'—a prerogative, however, which was subsequently curtailed.

(7) In Greece, the father in his old age had a claim upon his son for support, except in the case of his having criminally neglected the education of the latter. Next to the worship of the gods, and to the obligations towards the dead and the fatherland, the honouring of one's parents was generally accounted the highest of duties. In Athens those who were about to enter on office were required to show that they had discharged the duties of children towards parents, as it was believed that unfilial persons were incapable of offering such sacrifices as would be acceptable to the gods. A son was certainly entitled to appeal against his being disinherited by his father, and so weak-minded, but the moral judgment of the public appears to have been adverse to such appeals. Though filial obedience was not exacted in the case where a father made an unjust demand, it was, nevertheless, regarded as seemly that children should be silent as to the errors of their parents. Finally, these views in instances of piety towards the father, in the sense of obedience, being accorded a higher place than affection for the mother.

(8) The sentiment of filial piety was strongly developed also among the Semitic races. Nothing in the nature of worship of the dead, indeed, is found amongst either Jews or Muhammadans; and, as piety towards parents is here associated with religion, there is a direct link between piety and obedience to which wins God's blessing, as disobedience evokes His wrath. In Islam, moreover, and more decisively still in Judaism, piety towards the mother is specially enjoined in the closest connexion with worship of the dead.

3. Christian.—Christianity, in giving love the central place, wrought a change in the conception of filial piety. The new relation between man and God which Christianity made possible assured the form of that between child and parent, and this in turn reacted upon the natural relationship itself. Though the attribution, of such a love respect to their fathers, and children must be obedient to their parents. The life of the Aryan, however, deprives this formal obedience of any proper emphasis. In Judaism, however, filial piety is a commandment, obedience and disobedience to which have the sanctions of promise and curse respectively; but respect for one's parents, as also reverence before God, assume here a more emotional character. Thus, while it is decreed that the son who manifests a disobedient and obstinate spirit towards his parents shall, upon their accusation, be stoned to death by the elders of the city (Dt 21.18), the normal relationship of the child to the parent is not one of bare servile constraint, but one of affection, as, for instance, finds a beautiful illustration in the Book of Ruth; and fidelity conjoined with reverence to parents, like fidelity to the covenant God, was viewed as the very essence of righteousness. 

4. Modern.—In modern times, and especially in the United States, the tie of filial piety is fast losing its old weight. The father, as the head of the household, is no longer regarded as the ruler, but as the confidant of his children and the protector of their rights. The tendency towards individualism is so great that filial piety is practically negligible. The weakness of the tie is shown by the failure of the children to render due respect to their parents. The divorce of property from personal influence is the cause of this, and is also the cause of the change in the conception of filial piety, as we have seen. Piety towards God is now regarded as the highest virtue, and the tie of filial piety is considered of secondary importance. 

5. Conclusion.—In conclusion, it may be said that filial piety is a virtue that is not only important in the development of the individual, but also in the development of society. It is a virtue that is based on love, and love is the foundation of all virtues. The development of filial piety is, therefore, the development of love, and the development of love is the development of all virtues.
point, however, which does justice to the individual person, involves also a transfiguration of the instinctive love of child to parent, in virtue of the definite bent now given to the filial spirit. The childlike spirit being locked upon the condition of entrance into the Kingdom of God, filial piety itself assumes a new dignity, inasmuch as love to God may manifest itself in reverential love to parent. In later generations, especially in the historical sense, as in ancestor-worship, while the autonomy of the individual is always preserved. Thus, however, arises a new problem, which, in the process of Christian development, has increasingly pressed for solution—the problem, namely, of reconciling filial piety with personal freedom. The difficulty is not so much one of the age of the young as during their adolescence and eventual maturity. In the less responsible years of children, the filial respect for the moral personality, i.e., for their child as intrinsically a child of God, excites an influence—vaguely felt at first, but with time more and more distinctly realized—upon the young mind, so that mere submission gives place to an obedience freely rendered and animated by love.

Filiation is not always of the same type. It varies, for one thing, in its relation to religion. Thus we find in its early stages an identification of the ancestor, or the head of the family, with the Deity and the human parent, and the recognition of man's ethical personality, as having the result that the liberty of the individual, expanding with the years, became a problem. Again, however, piety per se is of various kinds. It may be the immediate expression of a natural feeling of devotion to the father; or it may be the more prominent mode by which the Divine order of the world finds expression in the social hierarchy—or essentially a subordination based upon a legal establishment; it may be a phase of the belief that rests upon authority; or, finally, a spontaneous and love-begotten reverence. We must not exclude any one of these various types. The natural basis of filial piety with reverence in the Christian, on the other hand, must at length become permeated with the qualities of free affection, reverence, and devotion. As in general Christianity, and in particular in the attitude of Christ, the natural side of the relation between child and parent was often strongly disparaged in comparison with the religious interest. Christ seems to set little store by the ideal of the relation of the two parts of family life (Mt 10:37, 12:50, Jn 2:15, Lk 2:55), and it was this tendency which, ostensibly making for the disregagement of the moral and religious establishment of the father, was always present, but never asserted itself during the Middle Ages. The monk severed himself from his family, and so did the spiritual dignitary, even, as in the Copts, giving up his house and wife. Here we find the tendency withdrawing himself from family bonds in order to gain admission to a higher fellowship. At the

Reformation, however, this separation of the ethical from the natural was vigorously combated, and the moral life was once more established upon the substructure of nature. Especially did Luther urge the importance of family life, maintaining that in relation to children, parents are the representatives of God, and must as such receive due honour. In opposition to the extreme individualism of the tenets of the Reformers, moreover, he often witnessed the vigorous advance of the view that the place of every man in the grand process of human history is due to his parents, that each is a link in the chain of generations, and must so utilize what has come down from the fathers as to make it his own—a view which cannot but foster piety towards the persons in age.

The conception of piety as an expression of the universal order was likewise less prominent in primitive Christianity; for the personal relation of man to man must always take the central place where the infinite value of personality is so forcibly insisted upon. The conception in question, while in no sense repugnant to the Christian view, first won full recognition in modern times, when men began to speak of a cosmic order, whether natural or ethical. It was not promulgated, of course, in the forms given to it in the ethics of Confucius, according to which moral life is possible for man only as a member of the social hierarchy; the subjective and individual aspect is now too strongly emphasized to permit the old form of a commandment and ordinance of God; while, finally, as reverent love to God, it likewise becomes the wellspring of filial piety in the stricter sense; but the differentiation between the Deity and the human parent, and the recognition of man's ethical personality, have as their result that the liberty of the individual, expanding with the years, becomes a problem. Again, however, piety per se is of various kinds. It may be the immediate expression of a natural feeling of devotion to the father; or it may be the more prominent mode by which the Divine order of the world finds expression in the social hierarchy—or essentially a subordination based upon a legal establishment; it may be a phase of the belief that rests upon authority; or, finally, a spontaneous and love-begotten reverence. We must not exclude any one of these various types. The natural basis of filial piety with reverence in the Christian, on the other hand, must at length become permeated with the qualities of free affection, reverence, and devotion. As in general Christianity, and in particular in the attitude of Christ, the natural side of the relation between child and parent was often strongly disparaged in comparison with the religious interest. Christ seems to set little store by the ideal of the relation of the two parts of family life (Mt 10:37, 12:50, Jn 2:15, Lk 2:55), and it was this tendency which, ostensibly making for the disregagement of the moral and religious establishment of the father, was always present, but never asserted itself during the Middle Ages. The monk severed himself from his family, and so did the spiritual dignitary, even, as in the Copts, giving up his house and wife. Here we find the tendency withdrawing himself from family bonds in order to gain admission to a higher fellowship. At the
and may be compelled to recognize their liberty. This view has been extensively adopted throughout the civilized world. These conclusions become clearer still when we consider the case where piety is based upon the authority of the parents. That there is a legitimate side to this is self-evident. In relation to this view, the deocratic idea was taken by primitive Christianity, as on the one hand, it enjoined the obedience of children, even as Jesus himself taught (Lk. 18:21), while on the other, it conferred upon the adult the full liberty of responsible manhood, which Jesus laid claim to in plenary measure, and which Paul consecrated to the Christian (1 Co. 15:25). When Christianity, however, at length took the form of a religion of authority, freedom disappeared, and the parents will frequently set itself in opposition to the free development of the child, or was sometimes superseded by the power of the confessional, as specially developed among the Jesuits, who discussed caustically even the case of the parent. The fact that the Reformers were well-disposed towards the natural relationships had at first merely the result that parental authority was once more established upon the parents being regarded as representing God. But the liberation of the individual in the interests of his salvation was certain in the end to bring about the recognition of his independence re-fall, and that it is in due and timely consideration of the end involved in womanhood. More and more does the common notion gain ground as some piety must be harmonized with the status of an independent moral personality.

Nevertheless, fairly considered, it is impossible to see why women should be deemed less responsible for their conduct than men. A tyranny still inflicted in many homes upon the daughters, who, perhaps, from the excellent motive of safeguarding them against evil, are watched over like children, even when there is no temptation to violate a breach of personal responsibility; and, if such a surveillance, which as a rule does more harm than good, should appear necessary, it is a sign that our education of girls is at fault, and that it is time in due and timely consideration of the end involved in womanhood. More and more does the common notion gain ground as some piety must be harmonized with the status of an independent moral personality.

4. Modern aspects. — Filial piety is a virtue placed in the larger economy of moral life as a whole. In more recent times it is being brought under the theory of development. On the one side stands tradition, which must eventually become fully accountable, and while youth, holding a brief for the future, stands for other views than age, yet, precisely on the ground of a mutual recognition of ethical freedom, a certain mutual toleration is also possible. We must also bear in mind the riper experience of the parents, and all else that gives them a claim to the gratitude of their children. The relation of subjection which belongs to immaturity may thus pass into one of friendship, qualified on the children's part by gratitude and reverence, and, on the parents', by considerate kindliness and loving sympathy with the children's welfare and interests. Should the children feel themselves hampered by their parents, it indicates on their own part some mismeasure of that perfect freedom which is so sure of itself that it can respect views that would obstruct it, or some deficiency in that necessary breadth of view which can put itself in another's place, or in the will to follow the well-regarded counsel of those whose right and duty it is to give counsel; or else, on the other hand, there is in the parents a lack of that tolerant wisdom which is often infringed by a solicitude, well-meaning and kindly indeed, but defective in its regard for independence. Confidence on either side, and especially on the side of the parents, is the foundation of true piety. Such is the riper view, which wals piety and freedom into unity.

It would appear, accordingly, that from an instinctive attachment and dependence, an inchoate feeling of duty towards parents, which is still vaguely blended with the religious emotion, there is evolved a filial piety, which, as an unconstrained virtue, transfigures its natural foundation; a virtue which inevitably disengages itself from reverence to the Deity, and yet goes hand in hand with religion; which, precisely because of the substratum of loyalty which is the bulwark of personal freedom, itself becomes all the more vital, and which maintains personal responsibility in the face of more authority, yet without violating respect, gratitude, or reverence; and which, the more that a society is ever more expansive and ever the more intense.

A survey of the historical development of the quality shows us that piety, in the form of obedience, has been regarded as much more incumbent upon women than upon men. This seems to be so far justifiable, as the home is much more the focus of female than of male activities. Goethe has said:

"Nach Freiheit strebt der Mann, das Weib noch nach Liebe," and again:

"Dieses lerne das Weib, durch Diesen kommt sie zum Herrnchen.

Nevertheless, fairly considered, it is impossible to see why women should be deemed less responsible for their conduct than men. A tyranny still inflicted in many homes upon the daughters, who, perhaps, from the excellent motive of safeguarding them against evil, are watched over like children, even when there is no temptation to violate a breach of personal responsibility; and, if such a surveillance, which as a rule does more harm than good, should appear necessary, it is a sign that our education of girls is at fault, and that it is time in due and timely consideration of the end involved in womanhood. More and more does the common notion gain ground as some piety must be harmonized with the status of an independent moral personality.
FILIAL PIETY

the old, or in reluctance to put existent conditions to the test, but rather in the respect which we accord to the labours of our forefathers, and which really involves a recognition of a spiritual character can be mechanically appropriated: spiritual things can be assimilated only and ultimately by the individual, and must express a reverence in such a case. This is a thoroughly satisfactory view of the matter, and is precisely in this conception that true piety stands revealed, just as parental advice is really respected when it is said to be founded on the wisdom of the past, or when it is said to be informed by the experience of those who have preceded us in the path.

Moreover, though every generation has its own task, and yet fundamentally one and the same process is common to all. Each generation confronts an older, to which it owes a dutiful regard, and which it must in all reverence criticize; but it likewise begets a younger, from which it obtains a dutiful regard, and must express a reverence in such a case. This is the source of many misunderstandings between old and young may be gathered from the life-stories of nearly all great men. In the discussions which thus ensue, the young sometimes let their piety take the sinister form of humours the old, of disseminating a little with them, and passing them on, so to speak, with a show of respect. But the kind manifestly fails to do justice either to the dignity of age or to the obligation of reverence, and is justified to the state of insipient torpor, and set themselves, without sympathy or intelligence, against every new movement. It must, nevertheless, always remain the mission of every generation to produce such an understanding, as there is a much higher degree of genuine piety in a moderately expressed opposition to the opinions of the aged than in an ignorance of them altogether; while, again, the very endeavor to reach an understanding implies a partial recognition of the older view. Every single generation of men is an end in itself, a point in the history of its race, not a stage of transition to its successor. Just as children must not be treated as purely dependent beings, but as responsible personalities, who, as ends in themselves, have a specific right to free self-expression; so too are parents ends in themselves, and fail in their duty when they omit to bring—along with and in their parental love—their own standing as ends in themselves to the notice of their offspring. This prerogative, indeed, must be fully recognized by the younger generation, just in order to conserve their fill’s piety, even amid diversity of opinion and tendency. To parents is due, not only gratitude for all that they have been and done on the children’s behalf, but also respect, as ends in themselves, and as having the same claim to deferential recognition of their standpoint as the children have in regard to theirs. It is precisely the profound sense of the worth of personality that begets the mutual recognition of the right of unfettered judgment, while this again carries with it the true piety; so that the young who possess this quality still recognize, amid all zeal for their own convictions, the equal right of parents to theirs, since, as a matter of fact, had the parents not possessed such convictions, the children could never have won their own, and this recognition, moreover, they naturally combine with sentiments of gratitude and reverence.

In this discussion, the individual factor must certainly not be ignored. In the first place, human beings do not all develop at the same rate, and the transition from simple obedience to spontaneous piety is by no means a natural process. Again, men are variously constituted by nature, some having a predilection merely to carry on what has been begun, the young people, on the other hand, often thinking of the ancient and the traditional, others being naturally inclined to criticism, or gifted with creative power. Now, the former class, as compared with the latter, will discharge the duties of piety all but instinctively, simply because the development of a spiritual character can be mechanically appropriated; spiritual things can be assimilated only and ultimately by the individual, and must express a reverence in such a case. This is a thoroughly satisfactory view of the matter, and is precisely in this conception that true piety stands revealed, just as parental advice is really respected when it is said to be founded on the wisdom of the past, or when it is said to be informed by the experience of those who have preceded us in the path.

The genuine piety will be the fruit of a high education. Nor must we demand the same outward manifestation of piety from both types of character. The withholding of the requisite liberty or of a large-hearted confidence will be much more keenly felt by some than by others. The more diffident spirit will sink to a state of mere servitude, while another will avoid too harsh an infringement of piety by resorting to insincerity, or will ruthlessly assert his liberty and become totally estranged. From the moral point of view the right policy in the former case is to intensify the desire for freedom without diminishing his piety, and in the second virtually to emancipate him, so that his candour may be preserved, and that he may see his parents a corrective influence, disposing him to discretion. The piety of the one will show a proclivity to self-assertion, while the other will tend more towards a free recognition of the parents’ personal worth. The former must temper his bias towards dependence by his sense of what personal responsibility involves; the latter, on the contrary, seeking his bent towards liberty by keeping his dissident views apart from his personal relationships, and by habituating himself to yield the same respect for others’ opinions as he claims for his own.

A specially trying situation is brought about when the children, with a wider experience of life, grow out of their parents’ circle of thought and pass beyond their spiritual horizon. In this case piety may manifest itself more in the form of gratitude, adjusting itself in word and act to the mental perspective of the parents, so as to yield them all affection, yet without insincerity. Here, if anywhere, a certain indulgent treatment of the old is necessary, such as could not be vindicated were parent and child at the same stage of culture and intelligence.

Again, piety is variously estimated according as the particular family in which it is manifested inclines towards the aristocratic or the democratic point of view. In the one case, piety preferably expresses itself as a recognition of family traditions; in the other, it can have no support but freedom, the enforced honouring of one’s parents. The aristocratic type of piety tends to find its object in the family and the family bond, while the democratic centre rather in the individual. The former tends towards an exclusive family pride more readily than the latter; it is prone to become egotistical and illiberal, as it ignores the due limit of family interests. For family piety in so sense implies that we shall think less of those who are not our own kith and kin. Such a spurious family pride sometimes asserts itself very unpleasantly in marriage, e.g., when one of the parties belongs to a family whose piety has degenerated into mere arrogance. A high appreciation of one’s own lineage has an adequate warrant in the ethical obligation under which a man stands to his family, and to his parents in particular, as also in the natural relationship which manifests itself specially in personal attachment; but neither of these can readily avoid justification for the disarrangement of other families.

These considerations go to show not only that piety may be modified in various ways in virtue of individual conditions, but also that it has its limits,
since it must neither violate the freedom of fully responsible individuals, nor detract, through exclusiveness, from the respect due to persons or families of one's own kindred.

The contrast between the older and the more recent conception of piety may be gauged from the circumstances that, whereas formerly the faith and customs of the fathers formed a kind of rallying cry, it is now a common practice to describe an objectionable view as 'behind the age.' This change in attitude is in reply due to the spread of the evolutionary idea. Nowadays men often lament that piety is on the wane. Such a complaint, however, would be justified only if the personal relations towards parents, or towards superiors generally, were wanting in dutiful regard, or if respect for what has been bequeathed to the older generation were becoming extinct; but it is not justified by the mere fact that the younger generation strives to assert its independence, even in a critical spirit. On the contrary, a radical criticism is the condition of all progress. If, nevertheless, owing to the inability of the older generation to sympathize with the innovating tendencies of the day, conflicts cannot always be avoided, piety still demands that the young should temper their behaviour towards their parents with all due reverence and gratitude, and strive to mitigate the inevitable differences between them that a rupture may be avoided, wherever possible, without any sacrifice of conviction.

Lastly, as regards the filial relation to God. If all hope of preserving to Deity, that of sonship is susceptible of various interpretations. We may conceive of it as implying the dependence of a child who yields a trustful obedience. Divine sonship, as such, would consist in a man's renunciation of his own will, so that in perfect trust he may obey the Divine commandments alone. But the question arises, Whence do we derive our knowledge of these commandments? If we depend in the last resort upon an infallible revelation, with either the Scriptures or the religious community as the channel thereof, it is obvious that we are not yet of age in spiritual things. It is a commonplace of history that the theory of authority has found acceptance even in Christendom. But, if no such blind acceptance is required, then the sacred book or the community does no more than provide the stimulus towards personal experience and personal thought, and, accordingly, we do not evade the duty of examining the commandments we are required to obey. In this way the Divine sonship passes into its voluntary form: the man to whom it is vouchsafed is exalted by his knowledge thereof to a position of freedom, nor does the reverence before God which is conjoined with this knowledge collide with his sense of moral freedom, just because the Divine sonship harmonizes with his inmost nature, and because the Spirit of God, far from destroying his personal activity, rather anneals it to the highest issues. Thus is brought about a coalescence of theology and autonomy, of the desire to do God's will and the desire to know how we must act, of the knowledge of Divine law and the knowledge of moral obligation. Our freedom reaches its perfection in our sonship: our spirit, apprehended by the Divine Spirit, and in no other way, is raised to a state of concord with all of the world, and full self-activity, and in its own worth and responsibility feels itself enlarged to the utmost. One who is animated by this spirit of Divine sonship will act in harmony with the needs and exigencies of others, and of one's own kindred, and without surrender of his independence.

See, further, the art. on ETHICS AND MORALITY, esp. 'Chinese' and 'Japanese.'
and otheritious beings, and (c) mortifici rites. In 1858, Matti Wallenius published a work on the life and death among the Finns, and taking cognizance of all that has been written on the Finno-Ugrian peoples, and three years later another work on the life and death among the same peoples, in his honour. The term "hauk," "ghost," was taken over from the Lithuanians (Lith. hauke, "one under the earth"). Most of the Finnic names for the dead have been borrowed from Teutonic, and the names for the dead are mostly Teutonic. The Teutonic terms for the dead are "sean," "one dead;" "seanak," "one dead;" "isenak," "one dead;" "sauke," "dead man;" "luhke," "dead man;" "puhke," "ghost;" "pepelke," "ghost;" "evils of the dead;" "fulke," "ghost;" "fulkar," "ghost;" "skaikar," "ghost;" "fulke," "ghost;" and "lawke," "ghost;" (cd. Germ. Kehle), etc.

FINNS (Ancient). — 1. Sources. — Bishop Matthew Agricola, the reformer of Finland, in the preface to his Finnish translation of the Psalter (1561), composed in verse a list of the deities worshipped by the Finns in heathen times. This list was emended upon the catalogues of classical muses and other deities given in the vernacular grammars of the Middle Ages. The idea of giving an account of the ancient Finnish deities, however, arose independently in Agricola's mind, and had no connexion with the attempt of Johannes Magnus to construct a Scandinavian mythology, as found in his Historia, published two years after Agricola's book. In the 17th cent., Agricola's list was translated into Latin, Swedish, and German, and until the middle of the 18th cent. was repeated, as far as a few meagre notices from medieval times — the only sources for Finnish mythology. But a new and singularly copious source was discovered by O. C. Gaarder, in 1850, and published in 1851, under the title of "Deum et Actuum Finnorum praecipuorum maiorum scriptores," dealing with the mythological names in alphabetical order, and this was reprinted and issued in a German edition in 1852 (J. H. Rosenberg). The "Annales" of the "Deum et Actuum Finnorum praecipuorum Kynniaenis der litthlischen Sprache," xiv.

After the publication of the Kalevala, compiled by Elias Lönnrot from Finnish folk-songs, in 1835, and of the fuller recension in 1847, this great epic was used as the principal source for Finnish mythology. The names of the gods and other deities used by Agricola were now set aside as less credible and for a considerable extent unintelligible. But the recent study of the Kalevala, inaugurated by Julius Krahm, has created a new interest in this field, leading to the printed editions of the epic, scholarship has turned to the manuscript drafts of the songs in their manifold variants, and the folk-songs have been critically studied with reference to their geographical distribution. These investigations have made it clear that the epic and magic songs of the Finns are largely of mediaval origin, and that their mythological elements, as in the case of the Edda, are permeated by Christian ideas. A further result is that nearly all the names given by Agricola have received a satisfactory philological explanation, and that the value and truthfulness of his evidence regarding the actual paganism of Finland — which forms the subject of the present article — have been recognized and appreciated.

2. The objects of worship. — (a) The dead. — The cultus of the dead, which is found among all the Finno-Ugrian peoples, is, as elsewhere in this race, the earliest traceable form of religion also among the Baltic Finns.

The Finnic language has retained words which, according to E. M. Bezjak (Phaln. sp. Forsch. sii. 175, 1917), go back to Finno-Ugrian times for the following: finn. bauk, "spirit;" finn. sau, "spirit;" and even to roots common to Finno-Ugrian and Samoyed, such as seman, "corps;" grave," "spirit of the dead;" "death." The Finnic. mansa, "mortal;" "a dead person," was borrowed from some Indo-Iranian language in the Finno-Ugric period (Brr. mantsa). In the general sense of "bed," "soul," "spirit," the term bauk, "ghost," was taken over from the Lithuanians (Lith. bauke, "one under the earth"). Most of the Finnic names for the dead have been borrowed from Teutonic, among which the word se, "one dead;" "isenak," "one dead;" "sauke," "dead man;" "luhke," "dead man;" "pepelke," "ghost;" "skaikar," "ghost;" "lawke," "ghost;" (cd. Germ. Kehle), etc.

Agricola refers to the Finnish worship of the dead as follows: "food was taken to the tombs of the departed, and there the people mourned, wailed, and cried. Likewise the Memmingenians [cd. Germ. Memmingen] received their obligations when the widows married again." Moreover, in keeping with the Finns in Ingria observed the practice of placing in the tomb a vessel filled with peace, flesh, bread, butter, and the like. Among the Karelians of the Greek Church it is still the custom to take to the grave on certain anniversaries, and to entreat the dead in mournful songs to partake thereof. After a while the food is distributed among the beggars who happen to be present. In Lutheran—formerly Roman Catholic—Finland, the so-called feast of Kekri was held annually on the 1st of November. In the dwelling-house, on the eve of the celebration, a table was spread, as at a funeral feast, in honour of the former master and mistress; the bathing-house was heated and supplied with all requital for washing. Sometimes a dressed straw doll with a painted mask was set up in the corner where the stove stood. According to Agricola, Kekri 'promoted the growth of cattle.' The word Kekri is also used in the sense of 'ghost,' but it has not yet been explained etymologically. Long before the festival of Kekri came to be formally connected with All Saints' Day, it was associated with an indefinite period in autumn, as appears from the Finn. name Muratveku, 'month of the dead,' for November, and the Est. Hingaaju, 'month of souls,' for October. Moreover, in keeping with the Scandinavian ideas, but more especially in West Finland, visits from the dead were expected also during the Christmas season.

(b) Household spirits. — As a further result of Scandinavian influences, the worship of local guardian spirits, which sprang from the cult of the dead, became diffused also among the Finns. The Finn. word halajja (from halaja [a Tent. loanword], 'to rule over'), corresponds to the Swed. râdande, 'to be able.'

The talonkahtijla, or guardian spirit of the home, usually represents the person who had been the first to kindle a fire, or, by other accounts, the first to die in the house. The two views are combined in the statement that the first fire was made by the earliest representative of the family; it is often said, indeed, that the talonkahtijla is the spirit of the first master or mistress of the house. The appearances of this domestic spirit usually precede a death or other misfortune; it is kindly disposed, interested in the welfare of the house, and does not like to be startled.

From the domestic spirit is to be distinguished the capricious tomtus (Swed. tomte) — who, according to Agricola, controlled the household — although the two are often confused. The tomtus must be brought from the churchyard, and a special apartment with a well-provided dining-table must be prepared for him. In the matter of offerings he is exacting, but he enriches the giver with corn and money. Besides the tomtus, Agricola mentions the kâvitsi (O. N. kvâvitsi), who 'took care of property,' and who is recognized more particularly in the East of Finland, where he is also called pusuk (O. N. pulluk), twikend, 'fiery tall;' 'shooting star;' and piskuhaan (cd. Swed. tomtse-bus). A special type of the domestic spirit among the Finns, and likewise of the East-Indian origin, is the butter-bringing pâra (Swed. björa).
From the household spirit must also be distinguished the earth-spirit, maamahattia. When a house is to be built, the consent of the latter must first of all be obtained from the god or divinity. The people then make an offering to him by planting a tree, with which he thereafter maintains a special connection.

When the custom of burying the dead in the vicinity of the dwelling-house gave place to interment within and around the church, a tutelary spirit of the church or churchyard was found in the kirkkohattia, or the kirkkohamahattia, the first person buried there, with his subject spirits, the kirkkojousii, or 'church-folk.'

Hiisi, or the guardian spirit of the sacrificial grove, is also a guardian spirit of the bathing-house, the granary, the threshing-barn, the stable, and the cattleshed, some being called hattia, and some tonu.

The smithy likewise may be provided with protective spirits, the pojossii, 'smithy-folk,' especially by bringing thither a little earth from the churchyard.

8 Forest-spirits and water-spirits.—The guardian spirits and the 'people' of the forest (metasamahattia, metasamamahattia) and of the water (vedenhamattia, vedenhamatia) are the localized spirits of the dead. They have the same form, the same character, attributes, and functions as the latter, and are occasionally even called monasalaitia, 'those under the earth.'

One of the forest-spirits designated by Agriola is Ikhekkii, 'the flaming one,' who presided over plants, roots, and trees; he was the soul of a child who had been buried, and to this spirit appeared as the ignis fatuus. Hiisi, who 'bestowed victory upon those dwelling in the forest,' is mentioned by Agriola in the sense of a place, viz., a sacred grove, and the word still bears this meaning in Estonian. As the sacrificial groves occupied the site of ancient places of habitation and burial, Hiisi is also identified with the Puori-paikko, the mountain-god, and, topographically, with the mountain itself. The 'people' of the mountain, the suuruswaki or kallionwaki, are of the same type as the 'people' of the church, the forest, and the water, and belong to the group of localized spirits of the dead; the idea that mountains were the abodes of the dead was taken from the Scandinavians.

Finally, under the influence of Christianity, Hiisi came to bear an evil repute, being personified as the Devil and localized as Hall. From a diminutive form of his name, viz., hittu, is probably derived the word kilttas серева, signifying the spirit that 'brought hares out of the thickets' (Agriola).

The word Tapio, denoting the deity who 'provided prey' for the hunter, was, like Hiisi, applied originally to a locality, probably to the hunting-ground; as a spirit, it is invoked, together with the metak, 'forest,' in the magic poems. Viron-krami, who 'guarded the oats,' is akin to Viron-kula, the Lappish goddess of hunting. And, as regards his name, it is merely a tree-stump (kanto) combined with a smare (virke). Nyker, again, which is 'supplied squirrels from the wood,' is neither more nor less than St. George (Jyrni). The metasamai of Western Finland is represented as a forest nymph, beautiful in front, but hollow behind, and with a golden chain in modern times. The bear, on the other hand, the worship of which is closely connected with the worship of the dead, is a very ancient divinity of the forest.

As regards water-spirits, Agriola makes mention of Vedon smo, 'the mother of the water,' who 'guided fish into the net,' and Ahni, who 'brought fish out of the water.' Probably Ahni likewise is not a propitiation, but a guardian spirit, since it may be applied also to the spirits of the forest and the earth (metasamahattia, maamahattia). To the class of water-spirits must also be assigned Poiskamies, the 'fishing songs.' The word viscus signifies the still water at the mouth of a river. The gift of music and poetry is generally assigned to the spirits of the dead, and especially to those who inhabit the water (of the Swedish Nåcka, which is well known also among the Finns (Nideki)).

(c) The dwelling-god and other agricultural deities.

—Of the agricultural deities the most important was the god of thunder, whom the Finns found both among the Litu-Slavs (as Perkunas, Perun) and among the Scandinavians. The Finnish names Perkola and Piru now denote the Devil, but in an Estonian dictionary of 1660 the expression Perkun sool is given as equivalent to 'thunderbolt.' The Esth. Kõik, Kõik, 'thunder,' must be regarded as cognate with the Lith. kabalepseis, 'thunderbolt,' and O. Prus. kas, 'deivis.'

The battle of the Finns against the Scandinavians c. 1900 was Tarabitha, 'Tar-hep!' which points unmistakably to the Norse Thor. According to Agriola, the god Turis, 'father Tur,' conferred victory in war. As a rule, however, the Finns considered the thunder-god by their equivalents of the Swed. termas Gogubben, 'good old one,' and Gofar, 'little father,' 'guner,' viz., West Finn. Jaisen, 'little father,' East in the Viives, 'grandfather.' The Finn Aijo, 'the old one,' likewise was formerly used as the name of the thunderer, as appears from the Esth. di, 'thunderer,' 'deivis'—the latter sense being retained also in the Finnish songs.

Of the worship of Ukko among the Eastern Finns, Agriola gives the following:

'Ukko's goblet was drunk at the sorting of the spring seed; Ukko's chest was also brought, and then maid and wife drank, and to excess, and, moreover, many sham festivals were there, as was both heard and seen. When Rainui, Ukko's wife, razed, Ukko brushed vessels; hence from the cornerstone (from the North), and this brought thunder-showers and the year's harvest.'

A still extant petition from peasants in E. Finland, written in Swedish and dating from Agriola's time (1845), mentions the fine exacted for drinking Thordes gilthe. A reference to Ukko ev, 'the chest of Ukko,' is found in an ecclesiastical inspection held in 1670. Vestiges of this sacrificial feast have been noted within modern times. According to one account, the best sheep was selected from the flock, and slaughtered on a given day. Its flesh was boiled, and a little of this and of various other kinds of food was put in chests of birch-bark, and carried to the sacred mountain of Ukko (Ukko ev). The vessels, together with a large quantity of beer and spirits, remained on the mountain overnight. Such portions of the food as were found there in the morning—Ukko being supposed to have taken a share—were eaten by those who took part in the festival, but a little of the various liquors was poured upon the mountain, to the intent that the summer might not be too dry.

According to another account, the people, when they thought that the drought had lasted too long in spring, placed vessels, filled with beer, on the roof of the dwelling-house of a particular homestead selected by lot. The god was supposed to know why this was done, and caused it to rain, so that the grain might be moistened. This was then made into malt, and beer was brewed therefrom. The day of prayer in June—the time of drought—was celebrated out of doors. All the
men and women of the village, and especially the older people, assembled at the homestead. The people partook of the beer, and of various foods, and there was a great deal of weather required. No one who came to the festival of the *Ukko vaahä*, 'the feast of Ukko,' brought provisions for himself, as it was considered an honour to supply the wants of the guests. The weather should be fair, and the clouds should hold there. Lots were cast at the close to decide where the feast was to be celebrated the following year.

The various acts of exposing to the rain the corn from which Ukko's beer was brewed, of making a libation of beer on Ukko's mountain, and, according to Agriola, of drinking beer to the stage of intoxication, were all devised as magical devices for bringing thunder-showers in the time of drought.

To Rawen, the consort of Ukko, whose name occurs in the songs as *Röönnäkkä*, corresponds the Finn-Lappish *Róznis*, to whom were consecrated the berries of the mountain-ash. In Sweden-Lappish, in fact, *rúss* denotes the mountain-ash, and, as E. N. Setälä has shown, it is a Scandinavian loan-word (cf. Old Norse *róss*). The Finns also regarded the mountain-ash in their courtyards, and especially its berries, as sacred. The idea that Ukko and Rawen were husband and wife and finds its explanation in the relations which of both Tenents and Litu-Slavs believed to subsist between the god of thunder and the oak. In all likelihood the worship of the oak pertained properly to the sorcerors, which in remote times had served as human food.

At the Ingrian festival of Ukko, songs are sung about a deity called *Sipma* or *Pellervo*, who is first of all raised up—though to no purpose—by the son of Winter, and then at length brought hither by the son of Summer, so that he may speed the growth of the corn. In Finlanding the god was represented as being conveyed from an island—sleeping upon a corn-field, or dollying in a coloured sledge, with his mother as his wife. These ideas seem to be derived from the Scandinavian cult of Frey, which found its way also to the Lapps. The term *Sipma* (a Tent. loan-word (Germ. *Sima*, *Seme*, *brulsh*)) signifies a species of fodder-grass (*Sesamum typhina*), the woodclub-root, which forms the spring, which is gathered for the cattle when the snow melts, and the roots of which are readily eaten. In Finlanding, Pellervo is a word which was used as equivalent to *pellava*, 'fleece,' although it may possibly be derived from *pellu*, 'field.'

Among the gods of the various kinds of grain, as confirmed by Agriola, *Rámudeden*, 'who gave rye,' is to be identified with the Rámkasteen found in the songs as the god of rye; the name occurs also in the abbreviated form *Rámo*; it is a Tent. loan-word (cf. Germ. *rij*, *rye*, and OE. *ryg*, 'fleece'). *Pellervo Pekko*, 'the Pekko of the field,' who furthered the growth of barley, is still recognized among the Ethnians of the Greek Church. A large wax figure, bearing the name *Peko* and belonging to the village as a community, was kept in a corn-shed and entrusted to the care of a peasant chosen every year, and was invoked at seed-time. The name *Peko* is to be traced to the same Scandinavian word from which *Rámo* or *Rámo*, the name of Frey's servant, and the Swedish *brøgg*, 'barley,' are derived. The etymology of the name *Espis*, denoting the deity 'who created peas, beans, and turnips, and brought forth cabbage, flax, and hemp,' is uncertain. The name of turnips called *Apró* has quite recently come to light among the Greek-Orthodox Finns on the Russian frontier. This name is given to a turnip—latterly also a potato—formed of two that have grown together. With feigned difficulty such a root is carried on the shoulder to the storage-pit. The bearer falls three (or ten) times to his knees or at full length, saying, 'I cannot carry it, holy Agrí, it is too heavy for me.' The prayer to Agrí is in these words: 'Holy Agrí, provider, cause to grow hundreds and thousands of the same sort; bring as turnips as thou comest to the pit.' According to another account, Agrí is entreated to bring the worshipper a certain quantity of turnips from the storage-pits of others.

Still another agricultural deity is mentioned by Agriola, viz. *Kendös*, who made 'reclaimed lands and titled fields.' According to E. N. Setälä, the name is derived from a Finn-Ugrian word meaning 'seed-corn,' 'grain.'

(c) Deities of the air and the sky.—*Ismarinen* (from *Isæ*, 'the air'), who, according to Agriola, 'gave calm weather and bad weather, and furthered travellers,' is to be regarded as a Finn-Ugrian god of the air. The name *Ismar*, applied to the supreme deity of the pagan Votaks, corresponds phonetically to *Ismarinen*. But the position assigned to Ismar is to some extent due to the influence of the conception of deity current among the neighbouring Christian and Moslem Finns. Ismarinen, again, can hardly be without some connexion with the Scandinavian *Njord*, who reappears with Thor and Frey in Lappish mythology. The figure of *Ismar*, 'the god of calm weather,' has been found, together with that of the thunder-god, on the magic drum of a Finnish Lapp.

The Finnish word *Jumala*, which is found in Islandic literature as early as 1026 (Jóamali), and is now used by the Finns not only of the Christian God, but for 'god' in general, is supposed by some to mean 'beaver,' being explained either as a Finn-Ugrian root conjoined with the Samoyed *Nuuw*, or as an Indo-Iranian loan-word (cf. Skr. *yama*, 'clear'). Others, again, regard it as connected with the Vogul *ymáze*, Hng. *yjö*, 'good.' *Jumala* would in that case signify the possessor of the good, of happiness, i.e. 'the blessed one' (cf. Skr. *yaj!, 'God,' and *yajt*, 'rich'); also Skr. *yaj*, and, applied originally to the 'blessed' dead, would come to denote deity in general, and at length, under the influence of a higher religion, to serve as the specific designation of one of the major gods. *Jumala* is the name of the god of the sky, and the source of all the other names of the deities of the various parts of the heavens. Agríola refers, finally, to the worship of 'many others—of stones, stumps of trees, the stars, and the moon.' But the statement that Pelervo is a name used for the purposes of his scheme. Among the Finns there is as little evidence for the worship of the heavenly bodies as for fetishism. There is no trace here of the sun-worship which the Lapps adopted from the Scandinavians. Agríola's references to the moon, viz. that *Bakkio*, 'hoar-frost,' 'makes the moon black in parts;,' and that *Koppe*, the 'animals,' 'ate up the moon,' simply reflect popular notions regarding lunar markings and lunar eclipses.

3. Sacrifices.—It has been asserted that the Finns did not practise blood-sacrifice; but this is a false inference from the circumstance that such oblations are not mentioned in the epic and magic poems. There is evidence to show that about the end of the 12th cent. the Ethnians were in the habit of sacrificing oxen, goats, dogs, and even human beings. The Karelians, who were governed from Novgorod, were in 1534 formally accused of sacrificing oxen, sheep, and birds, and even of immolating their children in secret. Until quite lately the Greek-Orthodox Karelians at a deity of oxen and turnips called *Apró* used to perform communal sacrifices of oxen and rams beside their churches, these celebrations having been described and portrayed as recently as 1891. In the most northerly part
of Russian Karelia it is the practice, on the 15th of August (O.S.), to bring a number of votive workmen from a fairly large surrounding area to the village church. In the woodland before the church a fire is kindled early in the morning; a cauldron is secured, and water poured into it. The alchemy is driven from the sheep, a fire is lit beneath the penthouse, in the flooring of which there is a hole with a lid, and presses the animal’s neck upon this hole. Then, calling on an assistant to hold the sheep fast by the feet, he runs his knife into its throat, and lets the blood flow down under the flooring. The animal is next fished outside the enclosure. The blood into the sheep thus slaughtered is burned. The boiled flesh is put into large boxes of birch-bark, and carried outside the enclosure. The broth is made into a gruel with peeled barley collected from the villages, and into this the fat of the animal is stirred. The people then hold united prayer in the chapel, and the sacrificial feast begins. First of all, the meal, which has been fumigated with incense, is eaten. Every donor of a sheep brings a loaf with him, and the villagers also contribute. Meanwhile the potage is ready, and is put into similar receptacles of birch-bark. Only the men — with heads uncovered — take part in the ceremony, the women and children being present merely as spectators. Bones and broken fragments of meat are gathered up and placed in a covered box made of knee-pine chips, and this is bound with rope to which a stone is attached, and cast into a deep pool, not to be eaten, for nothing must be left to be eaten by the dogs.

4. Magic. — Another popular but equally erroneous idea is that the magic of the Finns rests upon the power of the "word." As a matter of fact, our earliest record of a Chudic magician — in a Russian Chronicle of A.D. 1071 — tells how he summoned up spirits while lying drunk, i.e., in the sacred state. The sacred priest of the Estonians passed beyond this primitive shamanistic stage, and (c. A.D. 1200) became what the Latin Chronicle of Henry the Leicht speaks of as a harioes. The practice of divining by means of a horse — by observing what foot it lifted first, as described by that Chronister — was adopted by the Estonians from the Latvians or Lithuanians. The heathen priests of the Karelians are called orvii (orviis, 'one who knows the art of casting lots') in the official Russian libel of 1554. A specially popular practice among the Finns, even in recent times, was divination by the sieve, which came to them by way of the Scandinavians and the Russians. Finnish magicians probably uttered prayers at their sacrifices even in heathen times. The sacrificial prayer of an Estonian priest of the thunder living in 1844, and the Ingram song of Ukko which tells of Sampai, may perhaps date from the heathen period. But it was only under the influence of the medieval spells of Christian origin current among the Scandinavians that the Finnish magicians composed and elaborated their magic songs.

LITERATURE.—The main sources are indicated in § 3 and in the art. FINNO-UGRICANS.

KAARLE KOHN.

FIRE, FIRE-GODS.—The discovery of a method of making fire may be described as the most important event made by the human race. To dilute upon the obvious reason for this description is unnecessary. The history of fire-making alone would fill a volume. Consistent with its cultural importance is the voluminous mythology and ritual concentrated upon fire in early civilization; the modern anthropological literature of the subject is scarcely less voluminous.

Previously to the advent of the 19th century, the general view was that fire-making, together with all culture, was a quite recent achievement of mankind. Stories of contemporary savage tribes to whom fire-worship is still discussed as possessing a possible foundation in fact. But recent calculation places the knowledge of fire-making as early as the Second Inter-glacial epoch, approximately more than 400,000 years ago. The Krapina men possessed the knowledge of fire-making, and there is no reason to suppose that the early Paleolithic period failed to evolve the art. In all likelihood the first suggestion came neither, as Posech thought, from volcanic fire, nor, as others have thought, from forest fires or trees struck by lighting, but from the fire. The sparks produced in the manufacture of flint implements produced by the fire.

1. Fire-making.—The chief primitive methods are frictional, percussive, compressive, and optical. The modern is chemical. Many barbarous peoples of to-day the frictional is the most used; the compressive method comes next. The percussive — probably the oldest — lasts the longest. Many mechanical inventions making it efficient were responsible for its remaining in use till a century ago. Optical methods have been rare, as is natural; chemical, methods are but experiments.

(a) The simplest frictional method is the stick-and-groove. A blunt-pointed stick is run along a groove of its own making in a piece of wood lying on the ground. The stick is pressed the fire by the friction... Among the South Sea natives. The Central Australians employ it as well as the "fire-drill." Hard wood is used for the moving component, soft for the stationary. In the Arunta tribe two men will sit down opposite each other, holding a shield steady on the ground between them by means of their feet; then taking one of their spear-bow runners they will each of them, holding on to one end, pass it vigorously it and forthwards with a sawing motion over the shield, the surtace of which will become marked by a groove. The fine powder, which is separated off very soon, often in less than a minute, begins to smolder, and then by careful blowing a flame is soon produced by the friction between the two.

A variation is used by the Warramunga tribe; in a cleft stick of soft wood a hard stick is smartly rubbed.

The fire-drill has a wide range: Australia, Tasmania, Malay States, Kamchatka, ancient India, Ceylon, Europe, Africa, Central, South, and North America. It is a generally usual method, and no doubt it was independently evolved by various peoples. Captain Cook described its simplest form as used by Australians:

"They produce first, and spread it in a wonderful manner. To produce it they take two pieces of dry soft wood, one is a stick about 8 or 9 inches long, the other piece is flat: the stick they shape into an obtuse point at one end, and pressing it upon the other, turn it slowly by holding it between both their hands, as we do a chocolate mill, after shifting their hands up, and then moving them down upon it, to increase the pressure as much as possible, in about two minutes they get fire in less than two minutes, and from the smallest spark they increase it with great speed and dexterity."

As with the fire-saw, so with the fire-drill, two workers are essential. The latter method is even more laborious than the former, and its wider prevalence is due chiefly to mechanical improvements. The Australians cut a notch extended to the edge of the stationary wood, to admit the twisted stick and to allow the powdery particles to be blown out. Knowing that the twirling must be absolutely continuous, they always employ two men who...
resemble each other. This familiar ‘fire-stick,’ twirled between the palms of the hands, is the predominant form of fire mechanism in art and myth.

The principle of the carpenter’s brace is a simple improvement, possible with a bent or elastic stick, and no cost by the simple action of pulling the stick. The operator presses one end of the stick on his breast and the other (which is pointed) into a hole in a piece of wood, and then rapidly turns the curved part, like a carpenter’s centre-bit.

A cord wound round the drill is still used in India. The method is varied to particular people from the Beakimos to the Moors. A cross-piece is used to keep the spindle steady and in its bearings; this is held by a second person, or the operator holds it in his teeth.

To substitute for the mere thong or cord a bow with a loose string, is a still further improvement, for one hand now does the work of two in driving the spindle.

Ancient and modern peoples used this method for driving holes. The North American Indians employed it for fire-making. A variation is the pump-drill, in which the cross-piece moves up and down, whirring and re-winding the cord. This is found in Samos, in a few South Sea Islands, and among the Iroquois.

In Borneo, Sumatra, and parts of Eastern Asia, fire is occasionally made by striking together two pieces of split bamboo. The allusive coating makes this possible, but it is a precarious method of fire. The Fuegians strike sparks with flint upon iron pyrites. The method is attested for 8th century Britons. 9th century Saxons and Scandinavians, and is used today in a ritualistic principle. The Japanese carried their fire with them on the march. The Russian peasants used to store the fire in a bag. 10th century Japanese used to store the fire in a bag. 11th century Japanese used to store the fire in a bag.

(c) Comparative and optical methods have never been commonly employed. A tube closed at one end, into which a packed piston is sharply forced down the tube to a close-fitting, is used in Malaysia and Burma. The use of a lens was known and practised in ancient Greece and Italy; China and Japan to-day is familiar with it. The Spanish accounts of the Peruvians of lighting the sacred fire by a lens, as also of the virgins of the Sun who guarded the fire, are at least doubtful, owing most of their details, as Tyler has shown, to Pitarch’s account of the Vestal Virgins of Rome and the sacred fire of Vesta.

There does not seem to be any regular course of evolution in fire-making implements. The use of the fire-drill does not necessarily precede or lead up to that of the flint and steel. Nor does the simplest frictional method lead to any of the other economic values. The ‘fire-saw’ and the ‘fire-plough’ are merely extensions of that method.

The cord, centre-bit, and pump-drills are applications to it of simple mechanical expedients. But there is a tendency for drills to predominate in dry, hot climates; flint and steel are limited by the presence or absence of suitable percussive minerals. Savage life shows that fire is rarely made, for it is very easy to secure a permanent supply.

Social regard for fire. The myths of the invention of the art are numerous. The process is one to appeal to the imagination. Their chief characteristics are the ascription of the invention to a bird or bird-hero, and the personification of the implement. Thus in China a myth recounts how...

a great sage went to walk beyond the bounds of the moon and the sun; he saw a tree, and on this tree a bird, which perched as it and made fire come forth. The sage was struck with this, took a branch of the tree and produced fire from it, and thence this great personage was called ‘Juy-sin.’ Juy is the fire or the spirit. Juy-sin is the first person who procured fire for the use of man. 1 The Samite name for the assuaptis, prasamata, is probably connected with the name of the Greek fire-giver, Prometheus. 2 The magic of the Hebrews was to cause fire to be stored the fire stolen from heaven is repeated in savagery by the stick or rod whose dry wood forms the lightning. 3

A simple form of regard shown in maintaining fire, to avoid the inconvenience of re-making it, is connected, directly or indirectly, with the religious cult of the perpetual fire. 4

The Tasmanians never let their fire go out. 5 The homes-fire, as in Korea, is never extinguished. European possession, as the North Americans and Scandinavians, devotes the rule into a ritualistic principle. The Israelites carried their fire with them on the march. 6

The Russian peasants used to store the fire in a bag, to their new house, where he deposits it, saying: 7 ‘Welcome, grandchild, to the new house.’ 8 The old Romans used to march round the land with fire, claiming the area they could walk round carrying fire, from street to street to six in the evening. 9 Various tabus have been enforced in early culture upon the tending and carrying of fire. These follow the lines of similar regulations. 10

Two poles of sentiment are fear of the destructive power, and gratitude for the comfort and usefulness, of the element. An extensive series of myth and metaphor is evolved from these. The general importance of fire in human life is shown by the way it enters into social symbolism and nomenclature. There are Fire places, Fire priests, Fire totem. 11 Fire is placed on the grave to warm the dead. 12 The Calabrians take an oath by nipping a flame between the fingers and swearing by ‘the light of God.’ 13 Australian boys at initiation receive a fire-stick, ceremonially presented by the mother of the future wife. 14 Fire and sunshine are permanently connected in the social imagination.

Both are avoided by persons and especially girls during their first menstrual period. Impreg-

nation by fire is a common notion connected there-
with.1 Cirrocansion among the Australians is per-
formed by means of a fire-stick.2 It is the newly
initiated boy is placed by women on a fire.3 Here
we approach the purificatory idea. A connexion
with the principle of rites of passage is shown
in the formal extinction of fire on a death, and
the making of new fire on certain occasions of
social crisis and change.4 In the Warnamungu
and Marsa tribes of Australia, the co-operative
totem system is applied, one moiety making fire
and handing it over to the other.5 The idea of
fire—a purifier is universal.6 Connected with this
is the power to expel evil or to bar its approach.7
Many peoples throw food and drink to the fire
before meals.8 Fire tends to develop sacred
associations.9

3. Fire-ritual. — Fire-worship proper will be dis-
cussed below in §§ 6 and 7. The ritual of per-
petual fire can hardly be regarded as fire-worship.
Sacrifice by fire, and various ceremonies in which
fire is used, show it as a means and not as an end
of the rite. Frazer's theory of the common origin
in the Greek pyrætis and the Italian temple of
Vesta, from a pre-historic custom of the tendering
of the common fire in the chief's round house by
the chief's daughters, involves the general principle
of the temple is a position of religion upon custom.10
Farnell objects to this theory, and maintains that
optical methods were employed at Athens, the
primitive fire-sticks being used only at Rome, and
that the Roman system in historical times, was excluded
from the pyrætis.11 He accordingly regards the
Ruman ritual of Vesta as not secular but religious
in origin.

The Danomu of South Africa possessed a ritual of the
perpetual fire well developed, though not so
notable nor religious. The fire was tended by the
daughters of the chief—an anticipation of
the Vestal Virgins in appearance if not in evolutionary
fact.12 When the Danomu build a new village, the fire
was supplied from that of the old one.13 The
extinction of the sacred fire at Rome was regarded by
the superstitions as a national calamity, as the
extinction of the village fire in any
easily community would be regarded as at least an
inconvenience, mortally.14 A sacred perpetual fire, sacred to St. Bridget, is said to
have been in use in the 13th cent. at Kilbride.15 The
perpetual fire of the Irish and Hottentots was in all probability later
inferior in ritualistic observance to those reported of Mexico and Peru.16 At Cusa the daughters of the Inca tended the fire.17 In the 12th cent. in Mexico there was, it is said, a
sacred perpetual fire before each chapel. In all these Central
American cases, virgins were the keepers of the fire. Chastity
was obligatory; infliction of the rule was punished with
death.18 The Michoacan fire was tended by a woman ministering in cold weather by fire-sticks. The Spanish chroniclers certainly have
expressed their astonishment in order to enhance their claim for
the new world to be a sacred land. No house had a fire.

The ritual of purification and sacred burning
is linked to a sequence of very widely spread
and influential ideas. The simplest of these, though

22. Apparently complex, may be found in savage cere-
monies of renewal and removal of old things. The
kindling of the new fire follows the expulsion of
evils and the putting off of the old life. In
the mere instinct for change and renewal we may
find the key to many rites on occasion; yet with fire
plays a more or less literal rather than a symbolic
part. Such rites often include a formula of social
reunion.

The Hopi of the Central American tribes is an elaborate
service of regard for society. Its central feature is the Fire
Ceremony. Women and men dance round separate fires.
There is a naturalness of constructive licence, the taboo being
relaxed one by one. Large torches are carried, and a pole, 20
feet high, the westerly, is a central object whose function is
doubtful but possibly is merely centralisation. The principle
of the ceremony is well brought out by the way it is
performed upon private relations. Two men who have quarrelled
previously now light it out with flaming sticks, after which the
ill-wishing is never resumed. A general notion concludes the
ceremony; part of this is sexual, men and women
attacking each other.

From such conceptions and realizations it is no
longer easy to elaborate the philosophies of
Iamblichus, who held that fire burns all the mortal
parts, leaving the immortal behind, or to the
practice of burning the dead, and the connected
principles of burnt sacrifice. In ancient theory,
burning made its patient divine.6 The remarkable
series of fables on the passage of children through the fire is probably due in part
to these ideas, and is paralleled by the Greek
stories of burning children to render them
immortal.7 The remarkable series of fables on
which the figure of Ceres is based is a proof
how in Asiatic and Semitic religion the idea of
burnt sacrifice dominated the imagination of kings
and priests. In the 19th cent. often the bodies of
Rabbits were still burned at Maron in Galilee.8 In
the 20th cent. the Catholic Church retains the
belief in the purificatory fires of Purgatory, and
the eternal fires of Hell. There can be no doubt
that the fires of the astra deae were kindled in
consequence of a theory of purification by fire.
They were thus the agni sacrum, a word which ranges
notations which retain their harmless realization in
the fire-festivals of European peasants.

4. Fire-gods. — The fire-deity often reported for
uncivilized communities is generally a vaguely
envisioned daemons hardly emerged from fluid
animism.9 In all cultures the fire-god proper
appears to be an exception, and not a regular
member of the pantheon. The history of religion
practically includes only two genuine fire-gods—
Agni of Hinduism, and Atar of Zoroastrianism.10
Fancy everywhere locates the source of fire in
various natural objects, as the sun, or the
kangaroo (Austral)11, or the oak, or any material
from which it may be artificially or naturally pro-
duced. The divine person who invests himself
with fire, or reveals its secret to mankind is no fire-god
necessarily, but a culture-hero. Such was
Prometheus. Nor can even Hertha-Vesta be claimed as a fire-goddess.
Farnell has shown reasons for regarding her essentially as a heathen-goddess—
the personification, not of the fire, but of the
hearth-stones.

Fire-worship may be practised without any hard
and fast personification of the element. A case
in point is the comparatively modern cult of the
natural fires at Bakur, whither pilgrims resort
and make expiation for sin. Similar was the ancient
worship of natural fires in Cappadocia.12

5. Fire in Hebrew. — Mention of fire and fire-
ritual is remarkably rare in the Hebrew records.
2. Frazer, Adonis, 116; Iamblichus, de mystère, V, 12.
3. J. T. London, 1864, p. 283. For
Greeck colonies took with them a share of the sacred fire of the motherland.
5. Another class is represented by the current belief
above the Moor. This is no fire-god, or even heathen-
god (K. Taylor, To the East, 1870, p. 651).
though the principle and practice of burnt-offering are ubiquitous. The man who was *gathering* (wędźień) sticks probably intended fire-making by friction of wood. A possible reference is the ‘two sticks’ in the Mesopotamian legend that the fire-drill was given and the method explained by Jahweh to Adam and Eve. Flint and steel are mentioned in 2 Sam. 11:5, and the fire-sticks (brzegi) was used in historical times.

Fire for domestic use was forbidden on the Sabbath. In common with earlier culture, Hebrew ceremonial law stated that fire was created on Monday or the Sabbath eve; when Adam was overwhelmed by the first darkness, the Holy One gave him two 'bricks' for the production of fire. These he rubbed together, and fire came forth. The holy fire of the Hebrews was of Divine origin. From this domestic fire spoke to Moses.

6. Fire in Brahmanism.—Fire is the first of elements; it was produced from the Sat or Brahmam. Māra held that it sprang from water; the Vedas declare that the Sūtras say it produces water. Gold is its first-born. In union with air it warms the ether. Its subtlest component becomes the speech of men, and man's breath is merged in it. The Upanishads speak of the seven tongues of fire. Fire resides in the right ear of the god, the right hand of a Brahman, in water, and in kESA. The digestive process is identified with the action of fire, satadhvam. Philosophy elaborated the cosmic relation of the self to Brahman by means of fire and its seven emanations. The UpASanas are to one another as individual souls are to Brahman. The self is compared to fire produced by the two anu-sticks. The process of fire-product from the anu-sticks, the 'charming of fire,' is an act of generation; the drill is male. In the theory of the 'three fires' these are the three worlds. A trace of primitive magic is seen in the account of the āpikātāra, fire-offerings, in the SātAsattva Brahmanam. If these are not offered, the sun will not rise. In the Jaina Sūtras there occurs the curious notion of 'fire bodice.'

'Some belongs, of various birth and origin, come forth as fire, born of creation or abode or fire, or from invisible creatures.'

The rules to be observed in connexion with the sacred fire are numerous. Sacred fire was kindled at weddings. At funerals the sacred fire for the burning of the body was carried in the procession to the cremation, or 'burning ground.' A heap of fire-wood was piled, and the leader of the ceremony kindled three sacred fires. The spirit of the dead person, invested with its incombustible sublimate frame, was supposed to rise along with the smoke to heaven. The household rekindled his fire when religious rites were performed. The clay hearth was termed gānyā, household fire, and was sufficient for all domestic ceremonies, sādāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsाथ

—FIRE, FIRE-Gods—

A more elaborate arrangement was used in the *home altar*, or room for fire-rite. Here fire was kindled in three different receptacles, each fire having a different name, *Ākāśa*, *Gāthikā*, *Dukkkhā*. Each morning the family assembled round the fire, saying: ‘We approach thee, O fire, daily with reverential adoration in our thoughts.’ It was then ‘fed’ with bits of consecrated wood, *sāmāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsāsाथ

The daily fire service is the *home ceremony*. The *Fire-god Agni*.—The god Agni is the most perfect instance of a divinised personification of fire, and perhaps the only genuine instance. The three great Vedic gods—the Fire-god, the Rain-god, the Sun-god—were born respective from the earth (Agni), the air (Indra), and the sky (Sūrya), one representing each of the three worlds. Agni was the god on earth, and more accessible. He took precedence over all others in sacrificial ceremony. His triple form was of terrestrial, celestial (lightning), and solar fire. Agni was maintained by the creation of the two pieces of the sacred *ṣaiva* tree called *Aśvaghosha*, and consequently always to be found at hand. He was visibly present in every household. He was men's domestic friend, the leader of the sacrificing nation, mediator between men and gods, the bearer of hymns and prayers from the very handy altar up to the highest hearth. He is a sage, priest, king, protector. His origin is threefold—from air, water, and the mystic double *ārāni*. He is the giver of immortality, and pereg from sin. After death he burns away the guilt of the body, and carries the immortal part to heaven, to dwell with the righteous. Fire is male, and water female. Agni is lord of the elements, and is all the deities. He is the god of the house, and of the clan. As priest he superintends his own sacrifices. The focusing of religious sentiment about Agni is well illustrated in the *Vedic hymns*: 

1. Agni *Padāśana*, the other fires are verily thy branches, O Agni. In thee all the immortals enjoy the light which is the centre of human settlements; like a supporting column thou hastest men. The head of heaven, the naval of earth is Agni; he has become the steward of both worlds. The gods have espoused, O Padāśana, to be a light for the Aryas.

The hymns and the *SātAsattva Brahmanam* have the fullest account of Agni. The sun first appeared when Agni was born. He had long remained hidden, till the gods discovered him and led him on. Agni is the essence of earth, secluded from earth. He is produced by attrition by ten young women, the fingers. Firewood is his food. One is associated to him, and his offerings are cakes and better. The bricks of the fire-altar are his limbs; he has three heads and seven rays (or reins). He is the object of the daily worship of the fire (ājās, or jōta, fire as the element). To poke the fire wounds him, and is sinful. To spit before the fire is a sin. Generally he is the protector against evil; he repels the *Ākāśa*, and wards off evil from both gods and men. He is, further, invoked by lovers, to produce magical intervention in their love. Women belong to the menstrual blood of women is Agni. Men invoke him for virility.

FIRE-WALKING

Sometimes Agni is theriomorphic, identified with the white horse led in front of him. At another extreme he is the object of the Brāhmaṇa's meditations as the universal purification deified by Brahman. 7. Fire in Zoroastrianism. — The two chief differences between Indian and Persian fire-worship are (1) the abhorrence in the latter of burning the dead, and (2) the impression of Āta-rā atonement as compared with Agni. Some deny that fire is personified in all Zoroastrianism. Whereas the worship of Agni and the ancient ritual have been degraded in Hinduism, one Brahmāṇa sect alone keeping up any appearance of the cult, the modern Parsees practise a very conservative form of the ancient fire-ritual.

Fire is the earthly form of the heavenly light, the eternal, infinite, divine. The life of all creatures is vital fire. 4. Fire is the son of Ahura Mazda. The infant Zarathushtra was taken out of fire, like King Arthur. Ahura said his Fire and Mind protect Zarathushtra. 5. Fire is diffused through the six substances. 6. It is the "Good Diffuser" in men and animals. It is of five sorts: Ahriman mingled darkness and smoke with it. 7. Signs from the holy fire are invoked by prayer to Ahura. Āta-rā asserts Ahura in his conflict with Ahriman Mainyu. Āta-rā also fights against Ahriman. 8. Āta-rā fights against Ahriman with Āta-rā. Again the Fire Vāzist fights the demon Apātōk. There is also the Fire Frōba. The Pravash of fire is worshipped. 9. The Ávosta and the Fāvāvā texts reiterate the duty of worship, simpler in details than the Vedic ritual. 10. The priests are the protectors of the sacred fire, which may not be extinguished. 11. To allow it to be extinguished is a sin. 12. For the sun to shine upon it is a sin. 13. Before the ashes are removed they must be cold. 14. The Persian notion of the contamination of death, the Vēritā, was introduced into Hinduism by Brahmāṇas. 15. Man or dog died where the holy fire was, the fire had to be removed for nine nights in winter and a month in summer. Death was the penalty for causing a corpse, or even cow-dung, into the fire; even for breathing upon it. 16. No offering might be made without looking at the sacred fire. Three times in a day the unhurried form an assembly in the fire-temple. The prayers and the morning service resemble the Vedā, 17. but throughout the tendency is towards a somewhat impersonal realization—à la any rate, a much less anthropomorphic realization than was the case in India.

A. E. CRAWLEY.

FIRE-WALKING. — This is an ancient as well as a modern rite, and is practised in various parts of the world. It is ostensibly an exhibition of supernatural power, and may be either an act of devotion or an ordeal designed to test the purity of a woman, the truth of a sworn statement, etc.

Its earliest application may have been magical, to make the sun-fire shine in spring-time. The Semitic rite of passing children through fire, though sometimes connected with 'fire-walking,' is really sacrificial, since the children were offered to Moloch; whereas in fire-walking the object is to pass through fire without loss of life. As fire is a natural means of purification and is regarded by most savages as a defence against evil spirits, one of the early forms of fire-walking was probably to ward off and cleanse from evil, such as the evil of drought, impurities and misfortunes. The fire-walker's soles would easily unite with that of aiding the sun to shine. Yet a distinction should be made between the mere kindling of fires and walking through fire or over fire. The former is not necessarily implying the rite of coming into bodily contact with fire.

The earliest recorded case of fire-walking is from India; but here the object is to establish the superior holiness of a priest. In the Tātrīya Brāhmaṇa of the Sāmkvada (c. 900 B.C.) it is said that two priests walked through fire to prove which of the two was 'the better Brāhma'; and of Vata, the successful candidate, it is reported that 'not a hair of his head was burned.' This story, however, is still more ancient, as a brief allusion to it is found in one of the Śaṃkhitās (of the Taṭṭīrīya, c. 1200 B.C.). The case forms also the basis of the later (c. 300 B.C.) legal enactment that, when a man and a woman is doubt as to the truth of a witness, she shall undergo the same test, or a modification of it, in holding hot iron. Another early case in India is that recorded by the Pāndeśa, acting as judge to the Brāhmāṇa, after appealing to the fire-god to attest her wife's innocence by not injuring her, Sītā passed through fire and was not burned. A passage somewhat similar is recorded by the Sāmkvada (Aryavāra, ii. 12) as evidence of the fire- ordeal is doubtful; but a hot-iron test is spoken of in Chāndogya Upaniṣad, vi. 16, though neither of these implies walking through. If a passage through fire is still practised in India, to exhibit 'control of fire.'

In Europe, in classical times, the Hirpi, or 'Wolf clan,' of Mount Soracte walked through fire to propitiate the goddess (of fire or of wild beasts) called Feronia. The god within the performer is said by Lambeth, in his statement as to fire-walking (see A. Lang, Magic and Rel. p. 289), to guard the walker from harm. Strabo (xii. 2) mentions a case where the ceremony was performed by women.

These instances from antiquity are corroborated by modern practices as found among savages and even civilized peoples, as illustrated also by the usage of European rustics in leaping over fires as a ceremony. Thus, in the last century, a family in Spain possessed the 'hereditary power' of walking through fire unharmed. The Natives of Bulgaria dance in the hot embers of a fire and utter prophecies. Savages of the Pacific islands and elsewhere are wont to walk over red-hot stones to show their power. In India, China, Bulgaria, and some other places, the practice is connected with vernal observances—a circumstance which adds weight to the theory that it may originally have been a rite to induce sunshine. A number of instances of the modern practice have been collected by A. Lang (see Literature below), who has shown that no artificial preparation for the feet of savage fire-walkers is necessary. As practised in Mauritius, Fiji, the Society Islands, etc., the rite consists in walking deliberately and unashamed over an oven of hot stones, 293. 294. 295. 296. 297. 298. For comments on the texts, see ib. p. xxxi.}

1. It is interesting to note in this connexion that, when, according to Paréi etymology, the earth shall be covered with modern metal, 'all men will pass into that melted metal and will become pure; when one is righteous, then it seems to him just as though he walks continually in warm milk; but when wicked, then it seems to him just as though he walks continually in boiling metal' (Bundânalong, xxx. 13. 14. 15. 22. v. [1890] 155).
FIRST-BORN (Introductory and Primitive) — 1. Special rites at birth of first-born.—Among both savage and civilized races the birth of children is associated with many rites, the main purpose of which is to protect them or to free them from the taboo incident to such a crisis in life as that of birth (see BIRTH). There is some evidence that these rites are more carefully observed in the case of the first pregnancy, the first confinement, the birth of a first child; or that certain ceremonies are peculiar to these events. This is only natural, since anything occurring for the first time is apt to be considered of great importance, and in many quarters a certain sacreity attaches to the first child, to the sacredness of the sacredness of the hour of birth, and so often happens, sometimes taking the form that the child is unlucky either in itself or in its relation to others.

In Molokai (Hawaiian) there are special feasts and rites after the birth of the first child, and visiting the houses of the village. The child is rocked and fed at the house for 30 days and decorated themselves differently from the others. The birth of the first child is marked by special rites (PL. xxj. 1:10) 60. In Molokai a little bow is put in the child's hands, and the mothers' brothers shoot at it with blunted arrows. Then the father's sister holds it with arms straightened till they tremble, repeating a verse regarding the future of the child and its wife (R.). Among the Southern Mestizo (New Guineans) the umbilical cord of a first-born is placed in the mouth of a leaf growing near the base of a banana. The produce of this tree then forms the material of a series of feasts given, only in the case of a first child, by the maternal uncle. In each case the female remains in the house for 30 days, and must abstain from certain foods, nor must he touch the child until it is about 8 months old, also in the case of each of his brothers. A first-born is called hauhe (the others are called hauhe), and certain foods are forbidden to him until he is 3 months old (Hauhe, Neighbours of Brit. N. Guinean, Damb. 1910, p. 468 f.). Among the Kalingas (Philippines) 50 years before the birth of the first child, but not in the case of other births (8, 704). A Kalinga wife must leave her husband a month before the birth of a first child. She must be born in the house of her parents, and must not live with other wives. In the case of a first-born, the child is known to the child's parents and remains with them; they also receive the dowry in the case of a first born (PL. xj. 1800 f.). Among the We-
FIRST-BORN (Introductory and Primitive)

and daughters). Ezek 16: 20; Mio 6: 2. Fraser considers that behind the Passover rite lies an ancient practice of the first-born, mingled with the custom of redemption, but apt to recur sporadically (GB 452: 4). There is, however, no evidence that the later instances were connected with the Passover rite. Rather were they adopted through imitation of similar Canaanite (probably Phoenician) sacrifices in times of danger and under false notions of what was pleasing to Jahweh (cf. König, Gesch der altesten Rel., Gütersloh, 1912, p. 225 f.); the Hebrew customs regarding the first-born are the subject of a separate article. Here we discuss the evidence for the sacrifice of the first-born elsewhere, since upon it the theory of the early Hebrew sacrifice is sometimes based. It should be observed, first of all, that in some instances there is no sacrifice, but mere killing, usually for some superstitious reason associated with a first-born. 

In New South Wales first-born children are said to have been slain and eaten by the tribe as part of a religious ceremony, because in any case there is no sacrifice (Brough Smyth, Aborigines of Victoria, Melbourne, 1877, ii. 311). A custom common among the adult oldest son is reported from Khashim, China; but no reason is assigned for it, and it is probably mythical (see Eadg. Rel. System of China, London, 1895, ii. 39). In Tibet it is reported that a man eats his son in battle in his wife's mourning, the first-born after the marriage is killed, and this is generally eaten without the body being removed. Probably it is regarded as the property of the dead father. In Uganda many cases the birth of a first-born is a solemnized as a feast because of the birth of a boy meant that the false god would die. Hence, if a male, it was not strangled in the middle, when it was then, the child was eaten, thus ensuring the child's life (Roscoe, Agincourt, London, 1911, p. 54).

We next turn to cases where a child born to a woman hitherto barren is devoted to a god for life or occasionally sacrificed to the god. In the latter case the reason is that, by the willing sacrifice of what was granted by the god and what is obviously his, the woman will henceforth be fruitful. Thus, when an Obot negress has prayed to a fetish for a child, the fetish is considered the property of the fetish and is owned by the fetish. Thus, the fetish owner is not the mother of the child. The child is not actually sacrificed to the fetish, but is given to the owner of the fetish. (Roscoe, J. F. 52, 111, 1905, 427, 428). Among the Bwes, when a child is born as a result of prayers to ... of the Eathgods. If it is a girl, it is married to the priest's son; a boy must serve the priest until his mother has borne a girl. (Spika, Dig. Oceania, Berlin, 1909, p. 438). In Uganda, parents who prayed to the god for children presented them to him if he granted their request. If a girl was born, as soon as she was old enough she was brought to the home of the priest and there she became a maid-servant to the god (Roscoe, 276). Many Hindu women prostitute the deity by various means, one of which is the sacrifice of the child to the deity. This is done at the time of the first-born. Such cases as the green uniform during Muharram, when they have a child, and the other child takes the place of the child's father. Such cases are recorded in the Mahabharata, and it is likely that such customs existed among the early Aryan people. The custom of sacrificing or dedicating a child to a deity by a promise made and the removal of barricades must be a usual one, to judge by a Hittite cycle, of which there are a large number of parallels. In the case of King David, incidents usually reflecting what had once been customary (see MacCulloch, GB, London, 1895, p. 410 f.). Cf. also the sacrifice by the Romans in the Aftertimes, where Halkhundra prays to Varuna for a son, promising to offer him as a sacrifice. When the child is born, he/she eats the promise for life and becomes a sacrifice to the deity or the child (cf. Baudissin, Adonis und Ermna, Leipzig, 1911, p. 60), or for the gift of fecundity to the parents, as in the sacrifices just considered.

The custom occurred sporadically in the American continent. Among the Shiloh Indians of British Columbia the first-born was sometimes sacrificed to the sun for health and good fortune to the family (Roscoe, 65). The Indians of Florida sacrificed their first-born child to the sun or to the child as a child of the god (Grachev, Hist. of the Ave. into Virginia Brittanica, ed. London, 1846, p. 67; Miller, 60). Among the pre-people of Quito, the sacrifice of the first-born was a common custom until it was abolished by the last royal dynasty (Miller, 236, 277; Valsaco, Spanish American, 1900, p. 159). Probably it is regarded as the property of the dead father. In Uganda many cases the birth of a first-born is a solemnized as a feast because of the birth of a boy meant that the false god would die. Hence, if a male, it was not strangled in the middle, when it was then, the child was eaten, thus ensuring the child's life (Roscoe, Agincourt, London, 1911, p. 54).

In India, first-born or only children were sometimes enclosed in walls or foundations to prevent the building from falling (PB 174; EFLR 1881-1886)—an example of the wall or foundation sacrifice like that perhaps adumbrated in 1 K 19: 14, he laid the foundation thereof in Abiram his first-born. Among older races the heathen Russians are said to have sacrificed their first-born to the god Perun (Mose, in Fraser, GB 65). Of the human sacrifice to Cromul Cruadh in pagan Ireland, elsewhere exaggerated, the Didnaddnach relates that they included "the firstlings of every issue and the chief scions of every clan" (ROCH xlvi. 1895) 36. Certain branches of the Semites sacrificed their children, either as a regular custom or on occasions of public danger, but, it must be realized that the first-born is expressly stated to have been the victim. The analogy of Mio 6: 20 and Ezek 20: 6 has, however, suggested that the first-born was the usual victim, being at once the most sacred, the dearest, and perhaps the most difficult to part with, and therefore most calculated to appeal an angry god. Among the Amorites and their colonists the Carthaginians, child sacrifice was so common as to excite horror in the Greeks. Forpyrph says they sacrificed one of their dearest (probably the first-born) to Baal (du Abst. ii. 50). Phii of Byblus (frag. ii. 24) relates that the native Phoenician Kronos once in time of danger offered his only-begotten son in sacrifice. Kronos is here euhemerized into a king, but the evidence is none the less valid. Of Mose, king of Moab, it is said that in face of defeat he offered his eldest son as a burnt offering, but this is only reported by Baye (TSTA lb. 1359, Rel. of Ain, Egypt and Beb., Edinburgh, 1809, p. 69 f.) claims that the earliest text proves that the first-born was sacrificed for the life of the child. But his translation has been controverted (Ball, PSHA xiv. 1891, 169; R. C. Thompson, Semitic Magic, p. 14). and does not appear to refer to human sacrifice. There is no certain evidence

FIRST-BORN (Introductory and Primitive)

For human sacrifice (q.v.) among the Babylonians and Assyrians. The beheading of Baal is now seen to be not Sippur in Bab., but a cultic custom. While the sacrifice of children is an ominously widespread custom, it cannot be said that the first-born is the only one, as it is only occasionally that this is stated to have been the case. Inference may suggest it in other instances, but we can deal only with actual facts.

The Greek view is, or was, that in some instances (certainly not all) it was, explained by a prevailing theory that the father is re-born in the son, and consequently should cease to live. He would then re-share his father's life, and hence should be put to death (Westermarck, II 160; Harland, Primitive Human Customs, II 222). This is supported by the fact that, in those instances where the son is actually thought to be identical with the father, the son is supposed to die at his birth, and funeral rites are performed in the 5th month of his mother's pregnancy (Koen, VII 187). For similar antecedents among the hylobatids, see the Gorilla "birth" of the child, as in the old age of the mother, the child's descent, and its place in the family (see N. B. S. Sjöbo, Studier av L. N. A., 1801, p. 96). The idea of the death of the father in his son is supposed to die at his birth, and funeral rites are performed in the 5th month of his mother's pregnancy (Koen, VII 187).

Right of succession of the first-born: primogeniture. Among peoples with whom descent is connected with males, property is not inherited by the sons, but as a rule by the father's brothers or his sister's sons. Yet even here the natural superiority of the eldest is seen in the frequent practice of making him the principal heir (eldest brother or eldest son of eldest sister) (Ellis, Tshu-speaking Peoples, London, 1887, p. 256; M. H. King, A Fr. Study, 1907, p. 483; f. Besman, in Pinkerton, 1901, p. 191). Hence the Teutons, who were not so far removed from the first-born, etc. (Proctor, Pinkerton, xvi. 591). In India, the eldest son is supposed to be the principal heir, and funeral rites are performed in the 5th month of his mother's pregnancy (Koen, VII 187). For similar antecedents among the hylobatids, see the Gorilla "birth" of the child, as in the old age of the mother, the child's descent, and its place in the family (see N. B. Sjöbo, Studier av L. N. A., 1801, p. 96).

In the Teutons, primogeniture did not exist, except among the Teutonists, with whom the eldest son inherited all but the warhorse, which went to the bravest (cf. Teknor, 32)." But there was an approach to it in the case of the eldest son of the home (the household property as apart from the communal property), which was the joint-property of the father and sons, the eldest son succeeded to it when his father died, but the brothers might build dwellings upon it, forming a house, or other form of property. The eldest son was not divided in this respect (Meine, 298; Lavelay, De la Propriete, Paris, 1874, p. 96). In India, the great object of a man being to have a son who would inherit his estate. In the case of the eldest son, the first-born has always been regarded as peculiarly sacred; and after his father's death he was the natural head of the family, while even before he was manager of the whole property (Manu, ix. 105 (SBE xxv. 346); cf. Family (Hindu)). The earlier law-books announce that the property should be divided equally, a method adopted in Avesta, 6, 14 ff. (SBE II. 133) — or that the whole should go to the first-born, while he should support the rest as a father (Gandhara, xxviii. 11. (SBE II. 302 ff.); Manu, ix. 104 ff. (ib. xxv. 345)). The division of the ancient Hindu law was more a headship than an ownership (West and Bührer, Hindu Law of Inheritance, Bombay, 1884, p. 28). In the case of the eldest son, the first-born has always been regarded as peculiarly sacred; and after his father's death he was the natural head of the family, while even before he was manager of the whole property (Manu, ix. 105 (SBE xxv. 346); cf. Family (Hindu)). The earlier law-books announce that the property should be divided equally, a method adopted in Avesta, 6, 14 ff. (SBE II. 133).

In this case the eldest son of the home (the household property as apart from the communal property), which was the joint-property of the father and sons, the eldest son succeeded to it when his father died, but the brothers might build dwellings upon it, forming a house, or other form of property. The eldest son was not divided in this respect (Meine, 298; Lavelay, De la Propriete, Paris, 1874, p. 96). In India, the great object of a man being to have a son who would inherit his estate. In the case of the eldest son, the first-born has always been regarded as peculiarly sacred; and after his father's death he was the natural head of the family, while even before he was manager of the whole property (Manu, ix. 105 (SBE xxv. 346); cf. Family (Hindu)). The earlier law-books announce that the property should be divided equally, a method adopted in Avesta, 6, 14 ff. (SBE II. 133) — or that the whole should go to the first-born, while he should support the rest as a father (Gandhara, xxviii. 11. (SBE II. 302 ff.); Manu, ix. 104 ff. (ib. xxv. 345)). The division of the ancient Hindu law was more a headship than an ownership (West and Bührer, Hindu Law of Inheritance, Bombay, 1884, p. 28). In the case of the eldest son, the first-born has always been regarded as peculiarly sacred; and after his father's death he was the natural head of the family, while even before he was manager of the whole property (Manu, ix. 105 (SBE xxv. 346); cf. Family (Hindu)). The earlier law-books announce that the property should be divided equally, a method adopted in Avesta, 6, 14 ff. (SBE II. 133).
strict primogeniture (Mayne, *Hindu Law and Usage*, Madras, 1906, pp. 731, 733). Maine points out that, 'wherever public office or political power devolves at the death of the landholder, the succession is nearly universally according to the rules of Primogeniture' (*Anc. Law*, 233). In Muhammadanism all sons inherit equally, but in the case of failure of all male line the succession usually proceeds to the female, if he is fit (Hughes, *Di*, London, 1885, p. 129; cf. *Law* [Muhammadan]). In China, property is divided among the sons, the eldest being the natural pre-eminence of the first-born becomes an accepted fact, whether he is made sole or principal heir or not. Hence certain privileges become his. Even sons who are not the eldest are sometimes given such an estate that the eldest is left in possession of a part of the estate. If the eldest son is not the heir, the younger sons, if they are competent, are given a share of the property (see below, § 5).

Since neither Greeks, Romans, Teutons, nor Celts had a system of primogeniture in the sense of the eldest son succeeding to property, it is a curious fact that the system of the Roman Empire, this system should have appeared and spread so rapidly. Maine has traced it to the system of 'beneficium' or grants of Roman land given to the leading chiefs on condition of military service. These gradually became hereditary, the rules of succession being various, but ultimately regarding only the eldest son. The reason for this was that the property had not descended to the eldest son, the administration of family government did, or had recently done so. The same was the case with the vassals during the great ages, and tenth centuries, may be considered as a patriarchal household, recruited, not as in the primitive times, by Adoption, but by Inheritance; and to such a union of the two systems by Primogeniture was as a source of strength and durability.' Meanwhile the lord invested with the inheritance had no advantage over his brothers and kinsfolk in occasion of war, and so on. But Roman jurisprudence 'looked upon uncontrolled power over property as equivalent to ownership.' Thus the eldest son ultimately became legal proprietor. Probably the sacredness attaching to the eldest son, his position as head of the family who took the father's place in looking after the interests, was the bond which performed the ancestral worship, all also had their place in establishing this new rule of succession, as they had in savage societies where primogeniture ruled. Unquestionably, now, it was better before the law person should succeed to the rights and duties of the tenancy (see Pollock and Maitland, *Hist. of English Law*, 3rd ed., 1899, p. 274).

The custom of the youngest son inheriting all or some important part (e.g. the homestead) exists as a fossil usage where primogeniture is not well established, e.g. in Kent ('borhgue English'), in Armagnac Brittany, and Picardy ('fougerette, malgaret', in Flanders, Aachen, Switzerland, Württemberg, Westphalia, Finland, Estonia, Livonia, etc., and it is the custom with some savage peoples—Bororhians (Herod. iv. 5, 6); R. Chud. Notes of E. Ind. Inst., Hus, Mirs of Arawak, Kikis, Kayongs, and some Eskimos. Many explanations of the custom have been offered. Possibly it dates from the time when the matrilineal was giving way to the patriarchal, the youngest son being sometimes chosen as heir because he was nearer his father in time, especially if the eldest son had already disappeared. 1 In more settled societies, it is said, the last would have the natural pre-eminence. This is suggested by instances where eldest and youngest obtain more than intermediate brothers (Shingo, Baraka, hill tribes of Arakan). The custom has given rise to a multitude of riddles in which the youngest son is the heir (see 'Crott de jurassique,' *La France judiciaire*, vi. [1882-3] i. 312; *Lyon, Origins of English History*, London, 1895, p. 108; Lottermoser, Property, in *Origin and Development*, 213, 215; MacCulloch, *Ob.,* ch. 15, 'The Clever Youngest Son').

5. The rights of the first-born. — As soon as the patriarchal form of the family is well established,

1. Of the Zulul belief that the first- and second-born sons should not inherit because they are sons of the womb (Arbournet and Durnan, *Exploratory Tour, Eng. Tr.,* Capetown, 1869, p. 169).
FIRST-BORN (Hebrew).—The term בֵּיתוֹדֶר (bēthoṭer), which is applied to the first-born of men and the firstlings of cattle, is from the same root as בֵּיתוֹדֶר (bēṭot, 'firstfruits' (q.v.), and בֵּיתוֹדֶר (bēṭotāh, 'the early fig.'). The technical phrase פָּרִים כְּדוֹרִים (parim kerdorim), also applied to the first-born of men and cattle, is from the root פָּרִים (parim), 'firstfruits,' and is opposed to פָּרִים (parim), 'firstfruits,' and כְּדוֹרִים (kerdorim), 'the early fig.' The first-born of men is also applied to man and beast (Ex 12:11 sq., Nu 18:24, Ezk 20:26), standing sometimes in opposition to תָּם (tam) (Ex 13:2, Nu 3:2), and בֵּיתוֹדֶר (bēṭotāh), the first and best (LXX ἐρυγων, erugōn), is commonly limited to fruit and grain, but occasionally used of the first-born male (Ge 48, Dt 21:17). The בֵּיתוֹדֶר, or right of the first-born, entitled the eldest son of Israel to the privileges of which he was not to be dispossessed. He received a double portion of the patrimony (Dt 21:17). It was, indeed, always in the father's power to take the birthright from the first-born and bestow it upon a younger son (Ge 43, 1 Ch 5:1, 1 K 1:15-28), but custom did not approve of the passing by of the eldest son, and the Deuteronomist seeks to guard against the abuse of the paternal prerogative, enjoining that the first-born of a 'hated' wife is not to be disinherited in the intake of the later-born son of a 'favourable' wife (Dt 21:17-19). To despise and better one's birthright, as Esau did (Ge 25:28-34), or to be deprived of it for misconduct, like Reuben (1 Ch 5:2), was a deep disgrace. The first-born was the highest title conferred upon Israel (Ex 4:21-23) and Ephraim (Jer 31:1). The Jews interpreted 'first-born' in Ps 89:4 as a designation of the Messiah, and quemque vocavit, the LXX equate ὑπάρχον (hyparchon), 'he is raised to Christ in the same way as the first-born were raised to holiness in an intensified degree. Their supernatural qualities or associations made it unsafe to use them for common purposes. There was originally no thought of offering a gift or tithe to the Deity; the firstlings were sacrificed, and eaten for the purpose of strengthening the bond of kinship between Him and His messenages (see Numbers). Similarly it is surmised that 'all the prerogatives of the first-born among Semitic peoples are prerogatives of sanctity; the sacred blood of the kin flows purest and strongest in him' (W. R. Smith, § 3). After the settlement in Canaan, when Jehovah came to be regarded as the שד, or lord of the land, and the old idea of holiness as a tabo became unintelligible, the firstlings were sacrificed as 'the expression of thankfulness to the Deity for fruitful flocks and herds' (Wellhausen, Hist. of Israel, Eng. tr., Edinb. 1885, p. 88), with the added idea of sanctifying all subsequent births from the same animal (Dillmann, Er. und Lev., Leipz., 1897, p. 139). Philo describes the firstlings offered to God as the 'blood of the fruitful flocks whether already enjoyed or expected' (de Prumatis Sacris, Mangev, ii. 233). The claim of the first-born sons for Jehovah (Ex 13:21-22, 24-29) has a history which is somewhat difficult to trace. Wellhausen (Hist. 88) regards it as 'merely a later generalisation which, after all, resolves itself merely into a transference to an animal offering and an extension of the original sacrifice.' It may, however, go farther back, and be rooted in the primitive conception of the sacredness of all animals. It is difficult to believe that the law, 'the first-born of thy sons shalt thou give unto me' (Ex 22:28), is unrelated to the ancient Semitic practice. It is certain, on the one hand, that human sacrifice was always repugnant to Jehovah, the distinctive religion of Israel, and that the prophets were right in denouncing it as a mere heathenish horror. But, on the other hand, it is unquestionably the custom among many uncivilised peoples to sacrifice and eat the first-born (Frazier, G. P., 1900, ii. 51 ff.); the practice not improbably existed among the Hebrews before their separation from the common Semitic stock; 1 the numerous skeletons of jar-buried infants

1 This does not imply that at one time the Hebrews sacrificed all their first-born sons, but only that, if sacrifice was to be made, the first-born were 'the best and finest, because the holiest, victims' (Rel. Sem. ii. 238).
FIRST CAUSE

recently found in Palestine indicate that the old Canaanites were in the habit of sacrificing their children, perhaps their first-born (Driver, Schweizer Lectures, London, 1908, p. 85; Marti, Hal. of the OT, London, 1907, p. 104), and in the last days of the Hebrew monarchy, when ordinary means seemed too weak to appease the Divine wrath, recourse was had to the sacrifice of first-born sons (Mic. 6:6). "Thou shalt set in thine heart and in thine ears, unto Jehovah all that openeth the womb: (Ex 13:2) " (for V VV, the verb (בְּאָמַה) is the term regularly used of devoting the first-born of children by fire (2 K 19:17; 21:23 & al.), and in reference to human sacrifice Ezekiel (20:3) uses the words "in that they ceased to pass over" (LEV. caused to pass through the fire) all that openeth the womb," The Hebrew law, based on prophetic teaching, thus seems to stand in pointed contrast with the old Semitic practice, to which the nation, in imitation of the Phoenician or Canaanitic ritual, was faithlessly revertirg. The same antithesis is skilfully embodied in the story of the offering of Isaac, where an animal sacrifice is accepted in lieu of a human.

As often happens in the history of religion, there is a "substitute" for an old practice which has now become impossible, whilst in theory the old still remains v. 190, p. 292). While the Israelites devoted their first-born as truly as any of their heathen neighbours (e.g. Mosaic, king of Moab, 2 K 3:2), how much more reasonable and natural their service ultimately became! When the historical origin of the practice was forgotten, or seemed no longer credible, "is the theological explanation" (Driver, Enr. Camb. 1911, p. lvi) was found in the thought that it was because Jehovah slew all the first-born of the land of Egypt (Ex 13:19; 13:17). In the Priestly Code this theme was complicated by another prismatic section, to the effect that the Levites were taken by God in lieu of the first-born of all the tribes (Nu 3:18). It was the view of later Judaism (Targ. on Ex 24:4; Maim. Zebah. xiv. 4) or self, the dedication was for the Temple-service, but this was a wide divergence from the ancient idea.

JAMES STRAHAN.

FIRST CAUSE. — Every real entity is a cause, and every entity—the First Cause alone excepted—is also an effect. It is with the conception of cause that we are here concerned, and that conception implies an Agent which is the possessor or the vehicle of force, activity, or power. The efficient cause is outside of the effect, while it really contributes to its production. Indeed, to make a thing or effect actual is the very end and function of an efficient cause. Philosophically to define cause is a matter of proverbial difficulty, but the best idea is probably that of producing, wherein something real passes from the efficient cause into the entity of the effect. Indeed, the cause passes into the effect, which stands over against it; this, in virtue of the causal relation being one in which the same fact appears, now as cause, and now as effect. The existence of the causal link is a fact we perceive, and yet it does not admit of demonstration. Therein lies the trouble; it is seen by reflection rather than established by argument. To ask for proof of a first principle is absurd. Minds so different as those of Kant and Herbert Spencer have taken causality to be such a principle. The causal concept becomes an entire and different when it has relation to spiritual beings, the First Cause being thus the supremely difficult instance. Active power or force is presupposed in the cause, so that the cause is independent of the effect, and, qua cause, is prior to it in respect of nature. It does not follow from this that causality need be successive in time, for cause and effect may be simultaneous and synchronous. The effect is the immediate result of the cause. To describe the precise nature of the causal influx is quite another thing from affirming the evident fact. The effects of causation are continuous and inevitable, and the need spontaneously arises to postulate some adequate Source or Ground of ourselves and the world. We are deal with the metaphysical idea of cause, not with the scientific tendency to treat causes as mere antecedents. All science is based on the belief in variable and orderly sequence. Real causes are known to science, which, in reality, deals only with opportunities; causations are to science only transformations. It is, however, no impeachment of the causal principle that it has thus no place in the scientific realm, for efficiency preserves its validity and worth in its own proper, non-phenomenal sphere. In the phenomenal sphere, a First Cause would be inconceivable, no interruption of the sequence of equivalent changes being admissible.

Scientific method, then, excludes all notion of a First Cause, and demands that the system of the universe be demand the postulation of a First Cause, the exigencies of science can meet this demand only by breaking away from its own method, which is confined to change and causation, to the cosmical result to which they unitedly give rise is one which demands another and deeper kind of cause than that which science is able to supply. That true—and, indeed, only real—conception of cause is will. That deeper cause, as the cause of all inferior or secondary causes, is the First Cause, to which, by the law of causality, we are ultimately, but nowise arbitrarily, driven. God, as the First Cause, is the Ground and Cause of all secondary beings or causes, without whom those could not subsist or be. God is the First Cause, all things craving His immediate causality. The quest for such First Cause is, we have seen, but the logical process to the world in toto, as a unity, of the law of causation. But the cause of the universe, as actually existing, can, qua cause, by no possibility exceed or transcend the effect—the universe itself. Because the effect so measures the cause, the universe as an effect cannot, in its finitude, yield us the First Cause. Hence the chief defect in the presentation of the First Cause argument, especially in the hands of British and American philosophers and theologians, has been the frequent and persistent tendency to rest in what could be inferred from the law of causation as applied to the phenomena of the universe, and the failure to pass from the dependent or contingent character of these phenomena to the postulation of an Absolute Ground. The argument is really drawn, as Leibniz properly divined, from the contingency of the world, which reveals, in its dependence, a Primal Power, or Cause, on which it so depends. If the First Cause were finite, there would then be an Infinite Uncaused beyond it. Belief in a First Cause rests on the fact that there is a necessity of thought, in view of the world's contingency.

It is an inaccurate mode of speaking to say that God is the Cause of Himself. God is His own sufficient reason, and all that we can say is that He is self-existent. The First Cause argument is, properly, not an
inference from effect to cause—since this would never take us beyond the really finite—but from effect to effect. But in the favourite form of seeking a First Cause, the cause has taken a Deistic character, with the need of showing that the world had a beginning, and the result of leaving it in a condition of dependence. The issue for Theism could be only very partial and incomplete. The attempt in this connexion to think an absolute beginning, or First Cause of all things, was a futile or impossible one, and was strangely unperceived to be so. In the long chain or process of cause and effect, the First Cause was antecedent to this process, without its being perceived that thus it really stood outside the process, and that the leap to it was illegitimate. In other forms of the argument, such as from the contingent to the necessary, or from the finite to the infinite, we do not escape the necessity of a leap at last, for the conclusion is infinite, which the data never can be. But the appeal may here be deeper—to the necessity of thought or reason.

There must be a sufficient reason for every existing thing, and for the universe as a whole. Such reason our argument seeks. Everything is, in the fullest sense, a substance, and made what it is by its relations to other things. The number of its relations is indefinite, and the concept of substance is even more abstract and incomplete than we yet find out. While an underlying nexus of forces makes everything also causal in its turn, yet there is no trace of existence, independent and non-conditional Absolute. All that we know as existent, as we know being. Parts of existential phenomena, everywhere throughout the universe, depend upon other parts not less dependent in their turn. Not a single casual argument has taken a form that bears the stamp or mark of self-subistence, and the same thing is true of our personal and finite existence. No aggregation of such finite agencies and existences can possibly make an independent and unconditioned universe. Clearly, a universe so finite and dependent must have its Cause or Ground beyond itself. And what must have an independent, self-existent Cause, as the necessary correlate of its finite. Even by those who take the creation of matter to be eternal, such a World-Ground is felt to be. And the same holds true if the world be but one of an endless series of universes—an eternal and ununitary Ground and Cause is necessary as explanation of the vast successions of phenomenal changes and dynamic activities that make up the universe. Yet, needful as explanation of their persistence, no less than their cause. Matter may well be the eternal effect of an eternally producing Cause. Even if matter be taken as eternal, the question still remains whether it has in itself—or from without—the principle of its existence. The Cause or Ground is, in such a case, related to no past creative activity, but is claimed as the centre and soul of present cosmic reality. What, however, does exclude anything of the nature of real effective causation is a merely pantheistic evolution. What theistic philosophy does postulate is that, in respect of all causational effects, a spiritual being, free in His self-action; that His activity in the use of causational power had no need to be eternal, however the power of such causative action might be eternal.

The more assured conclusions and better established theories of science alike point to the finitude and dependence of the universe. But, if we assumed no First Cause as the Source of transcending causal energy to the world, science itself would be reduced to illusion. For no link in the infinite chain of secondary causes would then originate but only transmit, and that would—the First Cause being wanting—be no causality to transmit. To deny a First Cause would be to deny all sequence and the reign of causation within the sphere of experience. The need for a First Cause, in the sense of a self-moved Mover, has been felt from Plato to Hegel and Martineau, and may, for all practical purposes, be taken as universally admitted. But the need is even more pressing for a First Cause which is the present Ground and Cause of the whole concretion of causes now at work in the ordered universe. Underlying all that has been advanced is the principle that what does not exist as of absolute necessity is merely contingent, else there would be a violation of the principle of causality, and we should have existence without cause. The same violation would likewise result if the cause were not adequate or proportionate. It may be here observed that the argument, taken in the customary form as being from effect to cause, can infer existence of the First Cause only so far as it is a cause; for the world, and conditioned, could never give a cause infinite and absolute. An efficient cause may conceivably exist, as being or entity, without a first cause it would not then, of course, be the Efficient Cause, since nothing had been caused or created, but would be the absolutely necessary Being. The weakness of the argument for the First Cause, in the customary form of inferring it from effect to cause, is lack of some clear and valid explication of the sense in which an extra-mundane Power can be a cause. For the casual presentation makes the world, as created by the First Cause, something separate from, and outside of, the Creator. But, if outside of Him, then He is finite. And, if the First Cause and the caused world be not so separated, then there is pantheism. We are not, therefore, driven, as Boyle and others, to make the Creator or First Cause 'identical with His products.' Why this inability to grasp the really inspiring truth that Deity transcends His own works—as we transcend our—while He immanently lives in them? The weakness in the whole case is escaped only by allowing the principle of causation, in its quest for an ultimate, to rest in an Absolute World-Ground. Otherwise, the principle of causation, taken strictly as such, can never conduct us from the world to God. For the argument therefrom is clearly one from the world as the physical effect to a cause as the physical correlate. But the whole force and value of the argument to a First Cause lie in another direction—in an ascent from the swift successions and changeful phenomena of Nature as fate to an ultimate and self-existent Ground and Cause, in which these all find possibility, reality, and permanent base or support. Strictly taken, our principle—that of Causality—does not undertake any categorical affirmation as to existence, either of its subject or of its predicate. It is content to affirm, conditionally, that, if contingent being exists, its Efficient Cause must exist. But, inasmuch as the world is taken to exist as contingent being, it proceeds to set forth its argument for the world's necessary and sufficient First Cause. So doing, it seeks not a mere foundation of Being in the abstract, but a real, actually existing, primitive Ground (Urground) of all reality. It could not possibly find satisfaction in any form of First Cause whose relations to the world should be mainly antecedent to the world, or, for the most part, separate from it. It seeks, through all sequence and dependence of phenomena, some
FIRST CAUSE

continuous and persistent dialectical core of being, and rests not till it finds it in the \textit{en realismus}—the Absolute Life.

No attempt will be made within the limits of the present article to deal with the subject in its historic developments. It must suffice to point out that Kant's modern and has moved far from the position of being content with any First Cause conceptions that treated God as a mere supernumerary spectator of the world-machine's operations, instead of the present and ultimate ground of all things.

The all-destroying Kant is chiefly responsible for the death of the First Cause conception. For he gave men to understand that the causal principle could not carry us beyond the sphere of sensuous experience, and that a First Cause was reached only by a final and unsurmountable leap from the last link in the infinite chain of intermediate causes. It ought to have grown much more evident than it has done how weak the Kantian procedure is, for the essential point in the argument to a First Cause is that the whole chain of causes, and every single link in the chain, are contingent, and depend on self-existent Being or Cause without and beyond them—this, though the First Cause is immemorial, while thus transcendent. The creative process is not only conditioned by God, but by Him; yet He, as the Absolute, Unconditioned Reality and Ultimate Cause of all things, is more than the universe, and for ever transcends it. For transcendence in Deity is what the First Cause argument, in its true and general form, gives: it is a recognition that Deity, on whom the world depends, is more and greater than the universe. Absolute can be or the Deity's knowledge of the world He has called into being, what good reason can be suggested why He should not yet distinguish Himself from the world He so powerfully knows? Bengal and the intuition from the world as \textit{in toto}, a known effect to a World-Ground as its First Cause is a rational and necessary one. This persistent demand of rational thought for an adequate Cause of the world's phenomena has not been at all invalidated by Kant's criticism, which was sharp but not deep. The mind's quest for Primary and Ultimate Cause is satisfied only by the postulation of God as the First Cause, or present and perpetual Ground, of all things finite, in their dependence and contingency. Of course, the postulation of a pure Ground or Cause depends on the compelling power or assertion of Reason, but what we necessarily think we cannot but accept as true. It is this necessitated thought, or inherent necessity of reason, that gives the argument its egocentrality, carrying actuality in its bosom, Kant not withstanding. By such necessary truths—truths of reason—to which we owe the origin and foundation as we do, in the subject and in the object of experience, the objects of experience must conform to us, or existence is no longer rational, and the universe no more determined by universal reason. Such truths of reason are part of our nature, axioms that cannot be resisted; they are such grounds and supports of our thought as make them the criterion of truth.

Of course, a necessity of thought does not mean a necessity of existence, but the refusal of such a necessity of thought as we have here remains absolute and irrational scepticism. Such a causal judgment carries for us, necessarily, objective validity because of the incomensurability of the opposite; wherefore the judgment is affirmed because we cannot do other than in virtue of what we feel to be the truth. Even Kant himself does not pretend to find a full explanation of phenomena in natural causality; he says: "Phenomena must lie in their predicate in the transcendental elements that is, in recognizing the relation as one of real depend-
ence—Kant and Schopenhauer must be allowed to have shown deeper insight than Hume and Mill. Spencer is himself obliged to admit that our conception of the "Unknown Power" is fashioned after that of our own mind's causal activity. The efficient power presupposed in the Cause of all phenomena becomes intelligible only as so conceived, and absolutely necessary in the sense that it is not a fact, and a determining fact; that we recognize the effect as a fact—a fact determined; for only misconceived error can be the result of the denial of causes, or of their identification with effects. It must be remembered that the identity principle is not confined to Neo-Hegelian philosophers. But it is an idle postulation, of purely mechanical and abstractionist character, when reality is reduced to a First Cause which is absolute existence, not, Spencer-wise, to unknown force. Spencer's position in relation to the First Cause is far from self-consistent; for, admitting causation in Nature, he yet assumes absolute power or force for which there is no antecedent cause, although he has himself said that he admits anything uncaused is to take away the need to assume a cause for anything. In speaking of the Absolute Force as unknowable, Spencer fails to perceive that an existent cannot even be thought as unknowable, unless it is either known or continuous with the known. Thus the existent, being something for knowledge, cannot be unknowable existence. The nature of knowledge saves real existence from being unknowable. Spencer's First Cause is an 'Incomprehensible Power,' of which he will not allow us to know anything; but, such Power must be taken as the First Efficient Cause, it can be no other than a Supreme Mind or Intelligence, since of that it is the First Cause is a cosmos—not blind and brute chaos. Mind in experience always goes before matter or mechanism, building up our knowledge of the latter. It is unthinkable that anything save Supreme Mind, as First Cause, can precede the world's vast and interminable mechanism.

Certain of the more extreme forms of Idealism expressively disown the idea of First Cause. Because first of all, the First Cause is far from the mind of the world to be, in the end, a metaphysical explanation, or a metaphysical condition of things. God is, to such forms of Neo-Hegelianism, the only metaphysical principle or cause, and anything like real or distinct causality is denied to individual men. Causation is for such forms of thought, according to Royce, 'a very subordinate idea in philosophy'; and this, apparently, despite all it has been for the history of philosophy (J. Royce, The Religious Aspect of Philosophy, Boston, 1886, p. 477). Now, one may very well be idealist enough to maintain the world to be, in the end, a metaphysical explanation, or a metaphysical condition of things. But we are not allowed to hold the world of reality to be such an active and honest world as is involved in its causal determination of our discriminating and constructive consciousness. To divest the Divine mind of all causality, and to throw it, in Royce's fashion, merely upon perfect correspondence of its consciousness with things as they are, is to exhibit it as a monstrosity of reason, and a paralytic in will. The finite is, in Neo-Hegelian thought, taken up organically into the Infinite, and finds, in this undifferentiated unity, not a cause in time, but a ground of all that happens, or is supposed to be 'given.' The real objects of Nature are, on this view, resolved into mere modes of our conscious thinking, and the element of causality or dynamic energy disappears from things and selves. But this whole assumption of a unity of experience is to form no solution of the world-problem, the world being a real and concrete system, with mighty causal energies whose efficiency rests at last upon the relation of cause and effect. The problem is to apply to such a world which, with its increasing tendency to drop the causal element, have found so much favour in the recent history of science. This dynamical accord, of the universe is still a quasi-metaphysical one, with which the view of First Cause, as here presented, is believed best to agree. What, of course, is most immediately given is the changeableness of the world and its unsatisfying character, but intelligently we soon reach far beyond this. If it be said that the universe cannot be taken as an effect unless it can be an influence, it is beginning, it is then to be remembered that causal agency can be inferred without the need of being observed, and that a Ground of existence, not a mere prior in time, is our real need and quest.
universe may wear the character of an effect, and, indeed, the increasing knowledge of it by science makes it always more certainly known as an effect. Even its ordered character implies its dependence. Everywhere in the universe seem to make for change, as geology and astronomy remind us. The whole world is seen to be in a state of change; in the world of appearances a mechanical connexion is everywhere observable; the self-sufficiency of the world is only apparent, and the cosmos is surely advancing towards a state in which its energy will be transformed into heat, and its life and movement will cease; thought necessarily concludes to a single ultimate Cause, which grounds and regulates the whole world-connexion, imparting to it order, law, and control, and on its own that is, and on its own the phenomena running through the whole world of modern science, in virtue of which we see the change from cause to effect to be one of form rather than of substance. No rational foundation for a philosophy of Nature seems possible save with the Being of the Absolute as a primal datum. Not even Spencer got beyond the need of a First Cause as a datum of consciousness, and no scientific hypothesis, however ultimate—whether primordial energy or ether—can take us to a beginning of things that is really self-explanatory. This, in reality, nothing synthetic in our postulation, for such a First Cause can never properly be reckoned a term among causes that began to be. Indeed, the principle of causality is thoroughly applied to the world, with its explanation of the world for over incomplete, suggest or point to some deeper cause—present to, and in, creation—than any open to the eye. And, indeed, the hypothesis of a cause that can account absolutely and adequately for a condition that is beyond the power of science to explain, is to a degree an illusion, which is simply a conditioned series in time, clearly lies in our claiming any right to attribute absoluteness—absolute initiative—to any particular term in the causal series; and hence rational insight finds itself driven, as we maintain, to ground the causal series in relation to an absolute or transcendental Ground. Without such a single ultimate Cause, which eternally grows and develops, evolutionary process, the entire chain or chain of the developmental series must clearly appear as no better than a series of accidents. Thus we leave behind the old difficulty as to Deity working upon a Nature external to Himself—a conception that made the Infinite power finite, both because there was something outside of it, and because its working on the external must be conceived as subject to law or conditions.

On Efficient Cause, science does, and must, remain soundly agnostic. When, to the considerations already offered, is added the fact that science has no manner of solution, from powers or qualities of matter known to it, for free self-conscious beings, a new demand arises for a First Cause that shall be free, intelligent, and self-conscious. For, between the effect and its cause there must be neither inadequacy nor disproportion. So, though the effect not only may, but must, be different from the cause—else there were no causation—yet the Primal Cause must be such as can produce the total course. Hence we see why the First Principle of all things cannot be, as the monists wish, impersonal. No impersonal cosmic processes can possibly furnish a World-Ground for such a being as man. The First Cause must be at least personal as we are, however much more He may be. This is an inexorable demand of our thought, which absolutely refuses to be content with a Being endowed with plenitude of ethical life, intellect, and will. For God is not the First Cause in the ordinary sense of cause, whose relation to effect is properly physical, not ethical, not necessary, free. In this strict sense, the world is not an effect; and no cause, in this sense, can form the rational of the world. More than its First Cause, in this aspect, is God: causality is an element in His relation to the world, but causality cannot be the principle of thought respecting One who is its free
FIRSTFRUITS (Introductory and Primitive)

Originator, the self-determined action of whose will will take the place of the once God. The laws of Reason and of Morality, found in the world, must be accounted for, since neither the universe nor the human mind can be their cause. These laws of Mind and of the universe are themselves conditional that they cannot be conceived otherwise than as true and existing, were there neither universe nor human mind; hence an argument for a First Cause has sometimes been founded on these necessary truths alone. Their cause can be nothing either irrational or non-moral, and so there arises a call for a First Cause or Moral Intelligence, divine from the world and man's mind, in whom they are grounded. The First Cause is First Cause of an ordered and intelligible world, with harmony in its causes in relation to their effects, and that First Cause must be not only the Supreme Intelligence—Universal Mind—but equally the Ground of all things in virtue of its critical moment. This the best metaphysical thought now fully realises. The First Cause or Ultimate Ground of all reality must be uncassed, and such Cause or Ground can only be One Eternal Mind or God whose will all things are. To such unity of the First Cause we are led by the principle of Parmenides, which would make more than one unphilosophical, and by the unity of the mind alike the laws of the universe and the necessary laws of reason. Thus is met the demand of those who, speaking from the scientific side, insist that

the principle of the First Cause cannot be judged from the mode of action of any secondary agencies. One mode of action is as much another, so far as any welcome to a First Cause are concerned. The intelligence of the First Cause can only be realized by the principle of the cosmos. The Ontologicals of Science the World's Framework, London, 1880, p. 285.

While the scientific view must restrict itself to the actual universe, it is yet a thought suggestive and creative, bringing forth the world out of His own potencies, cannot be allowed to be an arbitrary resting-place, but is a truly rational ground, of thought. For the ontological basis supplied in the essential Absolute Being or Absolute Being is not taken as something standing by itself and indeterminate, but something whose objective activities, as the true First Cause, world-phenomena are, and whose nature there be born to be expanded. Thus we preserve and maintain the First Cause argument in deeper form than the old Aristotelian mode, in which the search for the Prime Mover had relation only to the contingency of motion in matter; our argument goes deeper, being concerned with the contingency of being or matter itself. Neither motion nor causal power can be conceived without itself; both are grounded in the necessary, ultimate, and self-existent Cause of all things.

Davidson, Theism, London, 1882; J. H. Stringer, Philosophy and Theology, N.Y. 1882. [JAMES LINDAY.]

FIRSTFRUITS (Introductory and primitive).

Although a purely practical purpose was perhaps primarily involved in the use of firstfruits (see p. 4), it may be taken as an axiom of primitive thought that all which is new is sacred, tabu, and hence not to be touched by man until certain ceremonies are performed by which the tabu is taken off and the whole is set free. This is analogous to the doing of anything for the first time, or the first occasion of any series of events, or the entering upon a new state of life, e.g., manhood or womanhood, marriage, entrance into a mystery association. These states are sacred, dangerous, and involve a tabu condition, primarily because they are new states. For this reason they are accompanied by rites which serve to remove the tabu and to carry off the danger with which the persons concerned are charged. We can thus understand why it is that the new over, the new vintage, the first catch of the season, the first-born of domestic animals and even of man, are regarded as taboo or tabu, to be cut or gathered or dug up or used until certain rites have been performed. The nature of these rites reveals another axiom of primitive thought—that the whole may be fully represented by the part, so that, by setting aside a part, the whole is

set free. In the case of the crops or the vintage, that part is known as the firstfruits. Similarly in the case of the chicken or the pig, the first animal or fish caught is also set apart in some specific way, thus giving liberty for the hunter or fisher to continue his profit in safety. And the first-born of domestic animals is often sacrificed or set free, because it is invested with a peculiar sanctity, and by this act the future progeny is, as it were, made usable (see FIRST-BORN). The rites by which the corn or the vintage is set free for ordinary use are of different kinds. Thus the firstfruits may be sacrificed to a god or spirit, or to the dead. They are sometimes eaten in a solemn manner and, so to speak, sacramentally; or there may be a combination of sacrifice and ritual eating. Again, they may be given over to the priests, who, sometimes performs upon them or with them certain ceremonies. Firstfruits are sometimes part of the crop which has been sown specially for this purpose. Frequently the firstfruits ceremonies are very elaborate and lengthy. They often terminate with a feast, or are the occasion of a kind of saturnalia; or they form a kind of festival of beginnings, a New Year, when also new fire is kindled and distributed to the community. And, where the new food is eaten solemnly, it is similarly prepared for by fasts, or by fasting or by swallowing emetics, in order to make the body ready for the reception of the sacred food (see FASTING, § 4). It is unnecessary to give examples of these in all parts of the world. It will be sufficient to cite a few typical ones with references to similar customs in other localities.

1. Sacrifice of firstfruits.—(a) Offerings to gods.

—The ancient Romans offered a sacrifice of firstfruits of orchards and gardens with pigs, fowls, etc., were offered to the gods, and it was death to the owner if they were not thus acknowledged (Elias, Polygnotus, Researches, London, 1831, i. 350). Firstfruits were offered to the god Tani in the Society Islands, with the words, 'Here, Tani, I have brought you something to eat'. (Tyrman and Bennett, Journal of Royal Anthropological Institute, London, 1831, i. 284.) Such offerings were general throughout Polynesia. The Baganda offered firstfruits from a new garden to a divinity, asking its blessing on the future crops (Roscoe, Baganda, London, 1911, p. 428). The Baasotes do not touch their corn after threshing, before boiling some, casting it upon a fire, and saying, 'I thank you, gods; give us bread again to-morrow.' The bulk is now pure and fit to be eaten (Casalis, Les Bassetons, Paris, 1858, p. 285). The Ewe tribes offer some of the new yams or maize to divinities. In the case of the yams, some have been specially planted for the goddess to whom they are offered. The offerer says, 'When I dig mine, grant that I may have plenty,' and then proceeds to dig (Speth, Die Ewe-Stämme, Berlin, 1906, pp. 344, 785). In ancient India the drpa-rasat, or offering of firstfruits, took place in early summer (barley) and in autumn (rice). Cakes were made of these, or the grain was boiled, for Indra and Agni, for the Visv Devas, and for heaven and earth. Thus the plants were rendered wholesome and faultless, for myth told how the gods had first offered this sacrifice to free the plants from the poison of the Asuras (SBE vii. 1900) 191, xii. [1892] 209 ff., cf. xix. [1892] 95, 196; cf. the And Mahayana tribes in the first of crops, of wine, and oil is made over to gods or spirits; and, as in the N.W. provinces, this is done that the god may preserve the crop from insects and rats (Crooke, P.R., 1890, i. 105 ff.; Roman-Ordo Journal, Lahore, iii. [1880] 11; Moorcroft and Trebeck, Trav. in Himalayan Provinces, 1832, London, iii. 187; Shaw, Asiatic Res. iv. [1807] 56 ff.). In Borneo, when the rice is ripe, bunches of it are placed round an altar. A two days' feast takes place with dancing. At the conclusion the corn is also given (St. John, Forests of Far East, London, 1863, i. 191). Examples like these from the lower culture might be multiplied indefinitely. In the Semitic area the principle that the gods, or some of them, were lords of the cultivated land was well recognized. To them, therefore—in return for seasonable rain and sunshine, growth, increase, and fruitfulness—a share of the produce was given. Thus, in Babylonia the harvest festival was a well-established custom, and to the gods were presented firstfruits of all produce, since the latter was their property (Sayce, Rel. of Ancient Egypt and Bab., Edinburgh, 1902, pp. 496 ff., 473; Jastrow, Aspects of Rel. Belief and Superstition Bab. and Assyria, New York, 1911, p. 343). This was also true of the Canaanites. The bethnim caused the fruits of the earth to increase, and men presented to them the firstfruits of their crops. In inscription mentions a seven days' festival marked by an offering of firstfruits (de la Saussaye, Manuel d'hist. des religions, Paris, 1804, p. 184; for Hebrew firstfruits, see next article). In Egypt, Min was the god of the generative power in Nature. To him harvest festivals were dedicated in thankfulness. Firstfruits were offered to the male divinity or to the local divinity. The new king also celebrated a festival to Min, offering sacrifice, and cutting a sheaf of new corn which he strewed before the bull sacrificed to him. This was also true in all parts of the world. There is an offering of the firstfruits of his reign (Wiedemann, Rel. of Anc. Eg., London, 1897, p. 127; Erman, Life in Anc. Eg., do. 1894, pp. 66, 245, 273).

The ancient Romans attached great importance to the offering of firstfruits of the grain harvested; and Snorri speaks of three annual sacrifices, one of which was in connection with harvest (Grimmel, Teut. Myth., London, 1880-8, pp. 39, 42; de la Saussaye, 695). The ancient Roman husbandmen offered a sacrifice of firstfruits of all the various crops to those of the divinity of the household, and with their welfare: the first ears to Ceres, the first vintage to Liber. Pliny says that neither new corn nor new wine was tasted until the priests had offered the prerequisite (INN. 2: 2: Festus, s.v. 'Sacrina'; Wisowa, Rel. and Kultus der Römer, Munich, 1902, p. 345). In the festivals of the State religion traces of these offerings still survive. From May 7 to 14 the Vestales prepared the mola soles made from the first ears of the standing corn, and offered these at the Vestalia in June. At the Vinalia in August or April the flames Dialis plucked the first grapes (auspicatio vinendam) and offered prayer and sacrifice for the preservation of the whole vintage (Varro, de Ling. Lat. vi. 10). Wardle Fowler has connected the custom of offering tithe (decemvaria) of various things at the yearly rites of the ara maxima with an earlier offering of firstfruits, these suggesting or even developing sporadically into tithe (W. R. Smith, 245 f.; see § 6 below; W. Wardle Fowler, Roman Festivals, London, 1889, p. 146; cf. also his remarks on pp. 207, 212; see also FIRSTFRUITS (Greek)).

In China the IA Ks describes how the husbandman presented the firstfruits of wheat and millet in the first and second months of summer respectively, and the grass or rice tribes the first of the crops, of wine, and oil is made over to gods or spirits; and, as in the N.W. provinces, this is done that the god may preserve the crop from insects and rats (Crooke, P.R., 1890, i. 105 ff.; Roman-Ordo Journal, Lahore, iii. [1880] 11; Moorcroft and Trebeck, Trav. in Himalayan Provinces, 1832, London, iii. 187; Shaw, Asiatic Res. iv. [1807] 56 ff.). In Borneo, when the rice
in the south, where no one might gather the millet till the chief had offered some to his ancestors (Theal, Records of S. E. Africa, viii. [London, 1901] p. 237). With the Kayans of Borneo, who believe also in the soul of the rice, each person is ceremonially touched by the priestess, and then all eat for a few grains, after which the feast begins (Nieuwenhuijsen, In Centreslal Borneo, Leyden, 1900, i. p. 156). This ritual eating is also found in India. In Bihar, when the crops are eaten, some of the new grain is left for home use and eaten with certain ceremonies (Grierson, Bihar Peasant Life, Calcutta, 1886, p. 338). Among the Coopers the reaper of the first rice is chosen by an astrologer. Each one takes a hot bath and then repairs to the rice-field, where this reaper eats some rice. Of this a cake is made by him, together with other ingredients, of which mung beans are one (Govor, Folk-songs of S. India, London, 1872, p. 105 f.). Old men among the Ainus eat the new millet ceremonially before the people can eat. At the same time they worship the living spirit of the millet or the 'soul of the rice' (see EBE i. 248).  
Ceremonial eating of new fruits, yams, etc., is found among many African tribes. Among the Kaffirs the king himself placed the new food in the mouth of each one, and death would have been the punishment of any one who had eaten before the rite (Grout, Zulu-land, London, 1887, p. 108). Speckmann, Die Herrnmsburger Mission in Afrika, Herrmannsburg, 1878, p. 150 f.). The king first partook of new fruits among the Matabeles. Many oxen were sacrificed, and, on the fifth day, new crops were distributed among the people by a medicine-man. No one might eat until all these ceremonies were over, under pain of death (Decle, Three Years in South Africa, London, 1898, p. 157 f.). Among the Onitsha the medicine-men place part of the new yam on the lips of the person, who then eats some of the first-cooked. Neglect of this would cause the anger of the gods. Her husband then jumps over her, after which the beans may be eaten by all (Roscoe, 425). Many American Indian tribes ate the new corn ceremonially, usually after fasting or drinking an emetic (MacCuney, 5 BBE 1887, p. 222 f. [Seminoles]; Speck, Eth. of Yuchi Indians, Philadelphia, 1900, p. 90 f.). Among the Natches the 'feast of grain' consisted of a ceremonial eating of the new corn which had been specially sow with a certain ritual. If the chief 'saw Sun' appointed a day for the rite, new fire was made, and, after the grain had been cooked, the command was given to eat it (Bull. 43 B.E, Washington, 1911, p. 115 f.). For survival of such customs among the peasantry of Europe, see Frazer, OGB pt. v. vol. ii. p. 50 f. (6) Sometimes the chief or king alone eats the new fruits. This was a common custom among West and South African tribes, no one being allowed to touch the food until the chief had eaten; while the occasion of the W. African yam 'customs' was marked by human sacrifices and wild saturation (Ellis, Talking Peoples, London, 1887, p. 229 [people fast before eating]; Ramsey and Rhodes, Four Years in Abomos, London, 1875, p. 147 f.; Werner, Brit. Cent. Africa, do. 1906, p. 271 [Bantu chief tastes ceremonially before the people can eat]); Macdonald, J.A.I. xiv. (1890) p. 386 (Pondos and other Bantu tribes). In Burma some of the paungyi fruits were taken to the king, who ate of them. No one might eat before this (Bastian, Die Paungyi des Maha Maung, Leipzig, 1886, ii. p. 105). In other cases, as in Samoa, firstfruits must be offered to the chief, else calamities will follow (Turner, Nineteen Years in Polynesia, p. 297). Or, as among the Sedullo (Mada-
FIRSTFRUITS (Introductory and Primitive)

gasaar), firstfruits form a part of the royal revenue (Shaw, in *GB*, pt. v. vol. ii. p. 116). It may be observed that wild food-stuffs are eaten ritually before the bulk can be touched. Some Indian tribes of British Columbia eat the shoots of the wild raspberry. When they are ready, the mother, or wife or daughter is sent to pick a bunch. These are cooked, and the chief bests the spirit of the plant to grant them a good supply. Then the food is distributed to all present. A similar ceremony is performed when the berries are ripe. The ceremonies were intended to propitiate the spirit of the plant, in order that a bountiful supply might be vouchsafed. If not properly carried out, there was danger of offending the spirit (Hill-Tout, *JAI* xxxiv. [1904] 230 ff.).

3. Sacrifice combined with ritual eating.—Among the Naskapi, the women of the family place a basketwork of the new corn to dry. Some drops follow upon the fire; and, if it explosio, this is a sign that it is accepted by the spirits of the dead. A few days later, porridge is made from this grain. Some is daubed on walls and roof, and some placed in the mouth by all present and then spat out towards the east. The head of the family holds some in his hands and prays for health and milk, etc. (Holli, *Nandi*, Oxford, 1909, p. 46 f.).

The Ewes have elaborate ceremonies, in which new crops are offered to the gods and a meal follows (Spiesch, *Die Ewe-Stimmung*, p. 504 f.). The tribes of the lower Congo throw part of the first crop of maize, peanuts, and beans towards the rising sun, and say: 'We are eating them for ever' (Weeks, *FL. XX.* [1900] 311). The Musuakake Indians at the 'Green Corn Dance' make a burnt-offering to the god Manah (or Makoko Manh) for the increase of fertility. Thereafter corn is cooked and a ceremonial feast follows (Owen, *Folk-lore of Musuakake Indians*, London, 1905, p. 52 f.). Similarly, in a ceremony whatever is carried before the ancestral images, cooked in pots reserved for that purpose, with prayer for a good annual crop, and eaten (Glaucone, *L'Anthropologie*, viii. [1897] 48 f.). The Baganda of the Milgirt Hills make the grain of the first sheaf into cakes which are offered and then eaten by the family (Harkness, *Properties of Land* in *Afr. Arc.*, London, 1832, p. 56 f.).

The central rite of the great Pongol festival of S. India consists in cooking new rice, some of which is offered to Ganesh, the remainder being eaten by the family (Gover, *J.R.A.S., new ser.* [1871] 91 f.; Wilson, *Essays*, London, 1882, ii. 169 f.).

In N. W. India firstfruits are offered to the family gods, and then part of the offering, mixed with milk and sugar, is tasted seven times by each member of the family (Elliot, *Hist. of N. W. Provinces*, London, 1868, i. 197 f.). Among the Chama, firstfruits gathered from a sacred field are offered to Po-Nagar, goddess of agriculture, and afterwards eaten. Not till then may the fruit of this field as well as the ordinary fields be reaped (Aymonry, *IRR* xxv. [1891] 272 f.).

4. Origin of firstfruits.—In some of the instances cited it has been seen that the food-stuff is believed to be tenanted by a spirit, or to be divine. For this reason it is not eaten in all cases, for the reason that in all cases where firstfruits are eaten ritually there is a sacrament or communion with a deity, or at least a symbol of divinity. The symbolism of these observances is, however, well known to the people who practice them, and they hold that by eating the firstfruits they are able to communicate with the gods. This belief is also expressed in the worship of the firstfruits, and the practice is continued as a religious observance, even when it is not believed in. The reason for this is that the firstfruits are believed to be the sacred portions of the harvest, and are therefore to be eaten with special care and reverence. They are therefore offered to the gods as a token of respect, and are regarded as a symbol of the power and beneficence of the gods. This belief is also expressed in the worship of the firstfruits, and is continued as a religious observance, even when it is not believed in.
FIRSTFRUITS (Greek).—It is a natural thing for those who believe that the gods meddle in human affairs to dedicate parts of that which they
The Athenians sent the firstfruits to Delos in their sacred ship, and other States sent firstfruits regularly to Delos and Delphi; while the shrine at Eleusis was supported by firstfruits sent thither from all parts on the command of the Delphic oracle. The firstfruits or tithe was sometimes symbolized by a permanent offering, a model in metal of the sickle and basket. We find golden ears of corn dedicated (θυριά χειμωνία), golden olives, wine, perhaps silphium; Pliny mentions a golden radish, a silver beet, and a load turnip. The same meaning may be given to the numerous images of gods or domestic animals, especially those in characteristic attitudes: as hare, deer, stag, duck, cock, sheep, cow, bull, mare, stallion. Specimens of the groups are a brood mare suckling a foal, a man milking a cow, a stag brought down by hounds. A model of a ram dedicated at Athens is inscribed θύριον (θυρίον) αναμίμητος τερών. From the practice also developed the organized agricultural feasts, but the customs of the country folk, which doubtless kept their old simplicity throughout the history of the Greek race, and still survive in some form, may be seen from the descriptions in the novel of Daphnis and Chloe.

Firstfruits are often offered to a hero; the Athenians offered them to the Maianепωρχος, in the custom of the city. Drimakos, leader of the Chian slave-revolt, who was heroized after his death, no doubt this custom also is primitive, as firstfruits are offered now in many places to the ghosts of dead heroes. But they might be offered to any deity who should have helped the worshipper, as Demeter, but the favourite deity of the countryside was Artemis, the hunter, Pan and the Nymphs for the farmer or breeder. The hunter hung up head and horns (if any) or skin upon a tree, or even dedicated these as a shrine of Artemis (as at Lonti in Arcadia), who was angry if she did not receive her due. Pan and the Nymphs were worshipped in caves—its sign of primitive worship. Homer speaks of these: and we have a record of the same thing about 500 B.C. in the case of Vair (βαίρα) [N. (μαραθοιας και Ἀρμακτρός ἀνδρῶν], besides mention of many others. In bk. vi. of the Iliad, Pan receives 34 dedications—more than any other deity. Other deities who get firstfruits are the Mothers in Sicily, Cybele, and Hermes, Aphrodite, Priapus, Bacchus and the Satyrs. Fishers dedicate the first tunny of a catch to Poseidon; they also dedicate firstfruits to other gods, as to the 'gods in general,' to Pan, to the Nymphs, to Artemis. Firstfruits of work (θυριά, χειμώνια) are mentioned, and are recognized by Isaeus (vi. 42) as of regular occurrence. Occasionally we seem to get the craftsman dedicating his first work or 'master piece'; Lytynus states this of himself: 'ισιάνειν ἀντὶς ταν' Αρματιὸς καὶ ὑπαθλοῦς; and a pot found on the Acropolis is called 'firstfruit of work.' We cannot tell if this was a common thing, but there are many records of artists dedicating some of their own works.

Literature.—W. H. D. Rouse, Greek Vetica Offerings, Cambridge, 1905. ch. ii.; Daremberg-Saglio, s. v. 'Donation'; P. F. Winck, s. v. 'Αποταμον. W. H. D. Rouse.

Firstfruits (Hebrew).—The term θύριον (θυρίον), which is cognate with Heb. 'θψχ', 'first-born' (q. v.), 'firstling,' sometimes denotes first-fruits (including cereals) in general (as in Nah 3:19 fig. trees with θυριά돈, often a smaller but choice portion of the first-fruits which is offered to God (Ex 23:20 etc.). The festival (θυράριον) denotes the first of the fruit (Ex 23:20 etc)., of harvest (Lv 23:39), of grapes (Dt 18), of dough (Lv 23:14), of wool (Dt 18), of all one's increase (Lv 23).

Many savage peoples (see Firstfruits [Intro. and Primitive]) have the custom of eating new corn, rice, and other products of the field sacramentally, for the purpose of partaking of the Divine life which is supposed to animate the fruit of the earth (W. R. Smith, Rel. Dem., 1894, p. 242; Frazer, G. F., 1900, ii. 318 ff.). It can hardly be

said that any distinct trace of this primitive conception is to be found in the Hebrew peasant religion, though Ferdinand ingeniously suggests that the name of the corn for the seed of the year to come (Exposition, Nov. 1909, p. 459 f.) is certain in that in the second of its corncrop, and its conception from the Canaanites among whom they settled, an intrinsic sacredness attached to all firstfruits. Just as the whole produce of a new orchard during the first three years was 'meat-cummed,' and not eaten, while all the fourth year's fruit was consecrated to Jehovah (Lv 19:31-32), so the fieldfruit of every year, and the tithe of all the remaining store-corn possessed and uncashed ate alike throughout the year. This, therefore, is quite a different thing from the consecration of animal sacrifices, for in the latter case the whole flesh is holy, and only those who are clean can eat of it (cf. Ezl. 421).

Marti (Red. of the OT, London, 1907, p. 115) finds in the firstfruits a trace of primitive Semitic polytheism. He supposes that they originally belonged to the spirits of the field, for whom it was also the custom to leave the outermost border of the field as a sacred place (Lu 19:33, where the prophet gets the benefit of what was once meant for the spirits). When Animism faded in the strong light of Judaism, the destination of the firstfruits was, of course, completely changed.

The law regarding firstfruits is not the same in any two successive codes. (I.) The Book of the Covenant contains the archaic enactment, "Thou shalt not delay thy fullness and thy thickening (Ex 23:20 EJ), where the LXX paraphrases the substance of the phrase by "the abundant of thy fruits, and of thy liquor." The parallel reference to firstlings in the next clause makes this interpretation plausible. 'Thickening' ( חודה, 'thy fear'). RV seems to denote the newly expressed juice of the grape, perhaps also of the olive. The two other forms of the enactment, consoled in more ordinary language, are found in Ex 23:29-30. 'The firstfruits of thy labours' (v. 29), which stands in apposition to 'the feast of harvest,' commonly called the 'feast of weeks,' seems to be less comprehensive than 'the firstfruits of thy ground' (v. 39), which probably includes the later grape and olive harvest. The provision in v. 29 would thus be exactly parallel to that in 23:20, and Driver (Koschel, Camb. 1911, p. 296) suggests that the two laws, having originally belonged to two distinct collections, were preserved on account of the difference of their form. 'The first (new) of the firstfruits' (Ex 23:29 34), or Es 44:9) denotes either the earliest (Greenius) or the choicest (Koschel) of them; the rendering, 'the best, (even) the choice of the firstfruits' (v. 29), suggested by Benzing and others, is less natural. In all these primitive laws the amount to be offered remains indefinite, being a detail evidently left to the free will of the individual. There is as yet no thought of dues in the strict sense of the word, but only of offerings determined by custom.

(ii.) In Dt 26:1-11 the Israelite is directed to take a basket of firstfruits to the public sanctuary and present it at the altar, making use of a liturgical form expressive of gratitude for delivery from Egyptian bondage and possession of a fruitful land. A joyful feast then followed, in which the offerer and his household were joined by the Levite and the stranger (גֵּר). The relation of the Deuteronomist's firstfruits to the tithe (14:22) is a question of great difficulty. Wellhausen (Hist. Eng. Jr. tr., Edin. 1885, p. 157) and Benzeiger (ED, 491) hold that the two are identical, the firstfruits having been gradually fixed at the proportion of a tenth. This amount is not paid into the sanctuary as a dues, and it is maintained that the directions for the use of the tithe (14:22) and of the firstfruits (26:1) evidently refer to the same domestic feast. W. M. Smith (p. 244 ff.) thinks, on the other hand, that the tithe and the firstfruits were quite distinct, the former being a fixed tribute, comparatively modern in origin, and used to provide for the public banquets at the royal shrines (see Tithe (Heb.)). The question is further complicated by the ordinance of Lev 19:33, which states that the firstfruits are to be given to the priest, which seems so inconsistent with their destination in 26:11 that it is generally regarded as a later insertion, though Driver ('Deuteronomy,' 1CC, 1887, p. 290) suggests alternative ways of reconciling the two passages.

(iii.) Ezekiel demands for the priests the first of all the firstfruits of everything, and also the first of the dough (44:25). (iv.) In the Law of Holiness (He) it is ordained that a sheaf of the firstfruits of the harvest is to be waved before Jehovah; and, until this is done, no bread, parched corn, or fresh ears are to be eaten (Lv 23:10). Seven weeks later two leavened wave-loaves are to be offered (Lv 23:20). (v.) In the Priestly Code it is enacted that 'all the best of the oil, and all the best of the vintage, and of the corn, the firstfruits (יִשָּׂרָה) of them' are to be given to the priests, as also 'the first ripe fruits (בֶּן כֵּיתֶר) of all that is in their land' (Nu 18:11). The יִשָּׂרָה is apparently the raw fruits, while the בֶּן כֵּיתֶר are the prepared corn, wine, and oil (cf. Neh 10:37, 12:7). A meal-offering of firstfruits consisted of parched corn in the ear with oil and frankincense, part of the corn oil and all the frankincense being burned with the fire. (vi.) A distinction was finally drawn between בֶּן כֵּיתֶר and וֹסָרָה (וֹסָרָה, oblations), and two tracts of the Mishna, bearing these names, are devoted to the subject. The בֶּן כֵּיתֶר were drawn from the 'seven kinds,' i.e. the seven products mentioned in Dt 23—wheat, barley, vines, fig-trees, pomegranates, olives, and honey. Those who lived near Jerusalem offered fresh fruits, while those who came from a distance brought them dried. Philo and the Mishana describe the picturesque ceremonial which accompanied the presentation (Schurer, HUP, 1885, II. 1. 257 f.). The וֹסָרָה was a payment in kind for the support of the priesthood, an impost levied upon every species of fruit, whether of the ground or of trees. The amount to be given was not fixed, but the person who gave נְכָנָה was counted liberal, while he who gave נְכָנָה was thought somewhat stingy (id. 259 f.).

**FISH, FISH-GODS.—see Animals.**
FLACIUS.—Matthew Flacius (a Latinization of Flactus) is conspicuous among the German Reformers of the second generation. As a Churchman, he was the ablest and most uncompromising of the Saxon Lutherans who opposed Melanchthon and the later mediating doctrines and practices. As a scholar he was not only the author (with collaborators) of the first, and for long the unexcelled, Protestant Church History, but also the pioneer of modern Biblical exegesis. As a theologian he was the unfortunate propounder of a doctrine of original sin which was rejected by friend and foe alike as a revival of Manichean, and which made him the latter part of his life tragic.

Born 3rd Mar. 1520 at Albona in Istria (hence surmised of Bugnus), Flacius lost his childhood. In early youth he was able to profit by the instructions of the humanist Baptista Eggius, in Venice, but, being still a devout Roman Catholic, he resolved, in his 17th year, to enter a monastery in order to pursue sacred learning. He therefore begged his uncle, Baldo Lupetino, provincial of the Franciscans, to receive him into his Order, promising him in return the half of his paternal estate. This pious and learned man, however, being in sympathy with the Reformation, diverted him from his purpose by directing his attention to the work of Luther, and compelling him to seek an academic career in Germany. The advice proved to be the determining factor in Flacius' life. After studying for some time at Basel and Tübingen, he finally turned his face (in 1541) to Wittenberg, the metropolis of the Protestant faith, where he was welcomed by Melanchthon, and came under the decisive influence of Luther. From the time when he entered Germany, humanistic studies failed to satisfy his awakened conscience, and he spent three years in spiritual darkness, often verging on despair; from which, however, he was at last delivered, chiefly through the wise instruction and tender sympathy of Clausen and Luther. The personal experience which he thus had of the truth of the Evangelical doctrine of justification by faith alone became at once the basis of his theological reformation and the impelling motive of his life-long labours, always sincere if not always dispassionate, on behalf of the Lutheran Church and the purity of its faith.

In 1544, Flacius was appointed Professor of Hebrew in the University of Wittenberg; in the following year his marriage was granted by the presence of Luther, whose own life was now nearing its close; and a happy career seemed to await the brilliant young scholar. But he was soon drawn into the whirlpool of ecclesiastical politics. In May 1549, Charles V. announced upon the Empire the Augsburg Interim, a doctrinal and ceremonial compromise which was to be imposed until religious controversies should be settled by an Ecumenical Council. This formula was essentially Roman Catholic, conceding to the Protestants merely the marriage of priests and the cup of the laity. It soon led to another compromise, the Leipzig Interim, enacted (December 1548) by the Elector Maurice, with the help of Melanchthon and other leading Lutheran divines, for his Protestant dominions, where it was impossible to put the Augsburg Interim into operation. This second document preserved the essential of the Protestant creed, but...

From the disposition of Melanchthon and his friends to treat these ordinances as indifferent or non-essential (ἀνδιάφορα), his party came to be known as the 'Interimists' (see art. 'Erbk. Interim,' p. 80). The 'Flacianists' conquered the 'Philippists'; and Melanchthon, who, in the beginning of the controversy had regarded his young opponent as a renegade— "alaminus in sima serpentum"—wrote to him in September, 1556, offering, for the sake of unity, to confer with him in a friendly conference. Hence, as a process of reconciliation, they met at Leipzig in 1559. At this conference, 1562, a compromise was come to, which is known as the 'Form of Concord.' It was framed by Georg Major, a pupil of Melanchthon, and from 1539 Professor at Wittenberg, declared acceptable (in 1552) that good works are necessary to salvation, and anathematized everyone who taught otherwise. Flacius had recourse, as usual, to tracts for the times, in which he...
and the gallowes, made the salvation of children impossible, confounded the gospel with the law, and weakened the power of Christ's death (ib.); op. cit. 270). Major himself ultimately recanted.

The doctrine with which the name of Flacius is associated, has come out of the Synod of Chalcedon. Having been appointed Professor of NT Theology at Jena in 1557, he soon found himself sharply disputing with his colleague Victorinus Stahel on the question of the operation of the will in conversion. Having a profound conviction of man's corruption and consequent inability to do any good of himself, he went so far as to affirm that original sin is not an accident of human nature, but is involved in its very substance—"quidem substantia in homine"—man having ceased at the Fall to be in any way the image of God, and having become the image of the devil. He was warned in vain that by the use of such language he would provoke a charge of Manicheism, and, as he too much of his energy was devoted rather than to modify his doctrine, many of his former friends fell away from him, some of them even joining the ranks of his bitterest enemies. While he was pointing strong passages from Luther which seemed to favour his extreme view, it was instinctively felt that there was a lack of sufficient proof of Flacius's volitional utterances and the theologian's deliberate dogmatism. The tide of opinion rose swiftly against Flacius, who (10th Dec. 1551) was deposed and excommunicated; and he, with his numerous family—he had 12 children by his first marriage and further issue by a second—was henceforth only a life of wandering and poverty. Scarcely any one of his earlier books sold, the latter were not even sold. His labours and persecutions, his scheme of founding an academy at Regensburg came to nothing. Strasbourg tolerated him for a few years, but cast him out in 1574. He found a last asylum in the convent of White Ladies at Frankfort, where he fell ill in the end of 1574. The City Council gave him notice to quit on May 18, 1574, and in the spring term of the year (11th March), death had released him.

Some of Flacius' most important services to Protestantism still remain to be mentioned. Though his main work was spent in controversy, he was essentially a scholar, and his literary output was as remarkable for its value as for its extent. In 1556 he published a Catalogus Testium Veritatis, in which he repels the charge of novelty which the Roman Church constantly brought against the Protestant, and proves that every Christian age had its 'witnesses' who combated the Papacy and its errors. To this book John Foxe was largely indebted for materials in compiling his Acts and Monuments of Christian Martyrs, of which the first edition was dated 1563. Flacius next conceived the idea of writing a Church History, in which it should be set forth, in certain order and sequence of time, how the true Church and its religion gradually fell away from its original Apostolic purity and simplicity, and how this process, with all the consequences of its teaching, varied from the wickedness of the ungodly; in which it should also be shown how the Church was ever again restored by some genuinely pious men, and how the light of truth now shines more clearly, and was again more or less obscured by the darkness of error.

In order to carry out his scheme on a grand and worthy scale, he formed (in 1553) a society which had its head-quarters in Magdeburg, but he himself remained the soul of the enterprise. Thus, there appeared in 13 folios (1559-74) the Magdeburg Centuries, each volume comprising the events of a century, a magnum opus to which all later Church Historians were consciously or unconsciously indebted (see Barres, Die Epochen der kirchlichen Geschichtschreibung, Tübingen, 1895). To this epoch, added a similar epoch-making work

in the department of Biblical exegesis. In Regensburg he began his Glæiae Scripturarum Sacrarum, which was published in 1657.

'Through this work, which consists of a Bible Dictionary, with Essays, to which the principles of exegesis are laid down, with the abler of Biblical Hermeneutics' (Pitl., PEB. ii. 357).

These principles he applied in his Glossarium Compendium in NT (1670); that to the OT was left unfinished.

For centuries the name and fame of Flacius, the opponent of Melancthon, and the Manichean heretic, remained under a cloud. At Arminian (in 1644) was the first to do him justice. His honours were finally vindicated and his work appraised at its true value in W. Freger's mastery biography, Math. Flacius Hilprenus und seine Zeit, 2 vol.; Erlangen, 1539-61. He had the faults of his qualities, and it is sometimes difficult to distinguish his zeal from fanaticism, his firmness from intolerance. It may therefore be admitted that 'his hard fate was not wholly unmerited' (Pitl., op. cit. 506). Yet Keling (PBE. ii. 415) is scarcely wrong in numbering him among that cloud of witnesses of which the world was not worthy.'

JAMES STRAHAN.

FLAGELLANTS.—The great outbreak of publican scourging which produced the brotherhood of Flagellants occurred in the middle of the 14th century; but this was only an abnormal intensification of a practice which had existed in Christian circles for centuries, and at least one previous epidemic of self-scorching had swept over Europe a century earlier.

Voluntary flagellation as a form of penance is as old as history and almost as wide-spread as religion itself. It does not appear to have been practised in the early Christian period or even in the early days of monasticism, though scourging, inflicted by superiors, was often used in monasteries as a means of correction. But, as the spiritual value of asceticism became impressed on the consciousness of Christians in the 16th and 17th centuries, men who burned with a passion for holiness of life resorted to flagellation as a means of subduing the 'soul's evil yoke-fellow,' the body. It came into especial prominence in the 17th century, through the practices of the monk Dominicus Loricatus (+1600) and of Peter Damian Cardinal of Ostia (+1072). The latter advised the substitution of self-flagellation for the reading of penitential Psalms, and even drew up a scale of values, making a thousand strokes of the lash equal to ten Psalms. The penitential scourgings which St. Dominico (1170-1221) practised upon himself, the passionate flagellation of the early Franciscans, and the introduction of collective flagellation into the monasteries, helped to form the mental attitude which was responsible for the first serious outbreak of public flagellation, which began in Italy just after the middle of the 13th century.

It was a time of mental tension. There was an inner circle of 'Spirituals,' who were greatly assisted with expectation that 1290 was to be the year of the new age of the Eternal Kingdom, prophesied by Joschim of Fiores; the people generally were brought almost to the limit of endurance by the woe of the party strife between the Guelphs and Ghibellines; and with a powerful epidemic of the Plague came in 1299.

Suddenly, in this same year, 1299, without any organized propaganda, the city of Perugia was
seized with a contagion of penitence which showed itself in the form of flagellation. It spread with great rapidity through Northern Italy, along the Rhine, and to the East as far as Bohemia. It affected all classes of life and all orders of society. A contemporary Chronicle (Momochi Patacinius Chronicon) records that even little children of five years, entirely naked, joined these processions. All the flagellants carried scourges made of leather thongs, and lashed themselves until the blood ran down their bodies. All sorts of sins were confessed, enemies were reconciled, vails were removed, and, prepared themselves as for a new spiritual stage of life. Salimbene (1231-88) writes in his Chronicle: "Through the streets of all cities the small and the great, the nobles and men of the people, scourged themselves naked, in procession through the streets, with the Bishops and men of religion at their head; and pence was made in many places, and men restored what they had unlawfully taken away; and they confessed their sins earnestly that the priests had scarce leisure to eat in their monastic chambers. The voice of sinners was as the voice of a multitude." (Momoch. Hist., i. 230 fol.)

The still more famous pious outbreak of the contagion of penitential scourging, which led to the formation of the Brotherhood of the Flagellants (often called the Brotherhood of the Cross), came in the year 1449. Germany being the country where the movement showed its greatest power. It has generally been supposed that the outbreak was occasioned by the fearful devastation of the Black Death, but the investigations of Hunger (Der schwarze Tod in Deutschland) show that, in the incipiency of the movement, the Flagellants preceded the appearance of the Black Death. As rumours came along the South of the Flaggle from the East, bands of penitents formed, in the hope that God would spare Europe if there were a sufficient measure of repentance. These bands of Flagellants next spread westwards, gathering volume and power until all Christian lands were touched by it; and in England it appears to have assisted in spreading the very plague which its organizers were striving to avert.

In its early stages the movement, though penetrated with enthusiasm, was well organized under the control of leaders. Whoever joined the brotherhood was bound to promise obedience to a captain, who was assisted by two lieutenants; to have a layman to pay for his expenses; to have the sanction of his wife, if he was a married man; and to give assurance that he was reconciled with all men. The members of the brotherhood were forbidden to converse with persons of the other sex, to enter any house without invitation, or to beg for anything, though they were free to accept lodging and meals—but not for more than two days in any one town—if the hospitality were offered; twice in the day, dripping to the waist, they lashed themselves with scourges, sometimes knotted, and sometimes supplied with iron points which embedded themselves in the flesh. They believed that their blood would mingle with the shed blood of their Saviour, and that this practice of painful, penitential flagellation, continued for thirty-three days and a half, would wash the soul free of all the sins of the world. As these ideas came to strengthen consciousness in the minds of the Flagellants, they began to feel that the means of salvation were in their own hands, and that the mediation of the Church and its priesthood could be dispensed with.

As the fervour of the movement increased, the idea of treading on the body of Christ assumed a very important rôle, as it had probably also done in the earlier movement of 1290, and vast processions marched through the cities and the country districts as well, singing hymns which aroused popular enthusiasm, and feelings of penitence for the sufferings of Christ and the Mater Dolorosa, and gave the movement a great marching power. These Flagellants had a far greater permanent influence on religious singing in the Christian Church (see Cloesner, Strasburger Chronik; Bartsch, Germania, xiv. [1680] 40 E.; Burkner, Kata, II. 301). Under the mental tension of the times, the bodily pain inflicted by flagellation, and the general social upheaval, it is not at all strange that considerable numbers, in a variety of fonts, appeared. Some of the Flagellants, in their consciousness of spiritual power, undertook to cure diseases, as well as to destroy devils, and woe to them that die the dead. One of the most curious signs of hysteria was the appearance within the group of a letter of Christ which an angel was said to have brought from heaven, promising that all who should scourge themselves for thirty-three and a half days should be partakers of the Divine grace. This letter was read in many places by the leaders of the procession of Flagellants as a genuine celestial document, and produced a profound impression among the highly-wrought populace.

The Church authorities were not slow in discovering that its greatest power contained many seeds of danger. In its first bursts of contagious power, when thousands in a single city were swept into it, little could be done; but the enthusiasm of the Flagellants spread to the East. The movement travelled rapidly westwards, gathering volume and power until all Christian lands were touched by it; and in England it appears to have assisted in spreading the very plague which its organizers were striving to avert.
PLEECE (Greek and Roman).—At a primitive stage of culture, flesces were used as raincoat or covering. In antiquity we find (frequent traces of this use (Paus. iv. 11. 3, viii. 5. 38. 3; M. Bemler, in Darmenb-Saglio, s.v. 'Pelles,' ii. 571 ff.). The Lybians were known to make their coverings, garments, and shoes out of goat's hide. It is not clear what the term 'Hippokrates' means (Pliny, xxx. 118), in which case the warmth of the hide had a soothing effect. It is difficult to draw the line between rational and magic uses; they appear under the name of the animal it belonged to. It is difficult to state, in each case, how far the belief in the magic power of a sacrificed animal's skin is姚in account (AEW xii. 1810) 491 f.; Kroll, ib. viii. (1906), p. 40. Often the healing power of a hide was a perfectly natural one, as when fresh sheep-hides were laid upon bruises (Pliny, xxx. 118), in which case the warmth of the hide had a soothing effect. It is difficult to draw the line between rational and magic uses; they appear side by side, as is customary in popular medicine. The hide is used in many ways: a stag's hide is kept upon to quell the fear of snakes (Pliny, xiii. 161); a sleeve made of wolf's hide is worn to prevent one's being poisoned or bewitched (Pliny, xxxvii. 157); shoes made of beaver or seal-skin are potent against guilt (ib. xxi. 110; Alex. Trall. l. 661, Puschmann); the skin is dressed with fur to relieve a terror or nose-bleeding (ib. xxxvii. 61); amulets are wrapped in pieces of fur and worn (cf. Taborin, i. 116 f.): vases are cut with a scythe which has been dipped in the skin of a hyena, to ensure good germination (Geopon. ii. 18. 8; Colum. ii. 9. 9; Pallad. x. 3. 1); a vineyard is protected from all sorts of evil if the skin of a seal or a strip made of seal-skin in honey is hung over the vines (Geopon. i. 14. 3; Pallad. i. 35. 15). In order to protect a man from hail, one must carry the hide of a hyena, crocodile, or seal round its precincts, and then hang it up before the front-door (Geopon. i. 14. 5; cf. Pallad. i. 35. 14; Orph. Argon. 762 f.). A piece of the seal's skin, which protects against lightning, is always worn (Suet. Aug. 20); during a thunderstorm one repairs to a tent made of seal-skin (Pliny, ii. 146) and hangs seal-skins on the masts of ships (Lyda, de Mens. p. 181. 19 f., ed. Wünsch). Magic texts are written on hyena-hides (Wessely, 'Neue gr. Zauberpap., Denk- schriften d. Wiener Acad., 1895, p. 291. 203. 204.); Ashes of a burnt ram's hide are used (Helmh. Emp. 33. 66, p. 346, ed. Helmh.). Perhaps the strange record of Jupiter having reached heaven with the help of the golden fleece has something to do with the magic power of fleece (Mythogr. Fast. i. 24, where the text of the Vaticanus, according to O. Rosbach's kind information, is as follows: ('pellem auream in qua inivia in celum ascendit')); and it is not improbable that this golden fleece of the Argonaut legend has its origin in the same belief. That the possession of a golden fleece should ensure the knightly power and dominance over the sun's course (R. Eisler, Weltenmantel, Munich, 1910, p. 555. 6) is not corroborated by the Schol. on Hom. ii. 106, ed. Bekker (cf., however, Eur. Ed. 719 f.). The Pythagoreans altogether forbade the use of hides as coverings; they allowed only linen for that purpose (Lamblichus, Vita Pyth. 100).

Not only in magic, but also in cult, the supernatural properties of flesces become clearly evident. And here, too, we are not specific properties, but the very multiplicity of these bear evidence of the magic character in general (cf. Harrison, Proleg. 3, Camb. 1908, p. 27). Thus, when, in the cult of Zeus Akrasia, flesces from Pelion were used to attract rain (Nilson, Griech. Flecht., Leipzig, 1906, p. 5 f.), we need not conclude that the fleece was chosen...
as a simile for the clouded sky (Eisele, 90 ff.). The other testimonies which Pley (p. 21 ff.) adduces for the use of fleeces in rain-magic do not belong to the present category, or are very doubtful. The θησις of the other magic ceremonies is paralleled by the 'weather-fleece,' which, when shaken by the god, had the power of producing rain and storm (H. xvii. 683 ff.; O. Gruppe, Griech. Myth., Munich, 220, p. 383). This is not the only mention of the vassal property of the θησις. It is above all a θησις τριγυρος, a magic terror, that puts foes to flight (Schol. on H. xxv. 28). In this connexion Athenaeus has taken it over. Thus the θησις 'shield' is only a later stage of development (M. Mayer, Arch. Jahrb. vii. [1895] 196), and that the θησις is originally a 'flock of sheep' is proved by his citation of the occasional goddesses who were herself in the θησις (H. xviii. 904), and that the Roman Juno Spoita, who is clad in a goat's hide (Winsona, 117; JHS xxii. [1901] 297), is probably descended from an old Roman type of Athens (Petersen, Röm. Mitte.x. [1894] 561 ff.).

The magic fleece is used in agrarian rites under the name of θωκσόμα, which he had to do with Zeus (Harrison, 23 ff.). In the last third of the month Maimakterion there was a procession in honour of the ochronic Meilichios (Aem. ad Grec. xxii. 481, p. 133 in situ; E. Pfuhl, de Athen, pompis sacris, Berlin, 1900, p. 92; Nilsson, Ath. Mitt. xxxiii. [1898] 245), who later on was identified with Zeus. In this procession the θωκσόμα mentioned by Eust. (i. e.) was most probably carried round. Since for the same period a sacrifice to Zeus Georgios, a kindred god to Zeus Meilichios, is recorded (Prets, De sacris, Leipzig, 1896, pp. 7, 19 ff.), and in the month Maimakterion fields were ploughed and corn sown (Freller-Robert, Gr. Myth. i. [Berlin, 1894] 131, 2; G. Thiele, Antike Himmelsbilder, Berlin, 1896, p. 58), the θωκσόμα was probably borne round the tilled land, in order to protect the seed within this magic circle against all evil (cf. also Pfrengle, p. 439) and the god of the earth (cf. Nilsson, op. cit., p. 194, and the above-mentioned magic rites for protecting the farm against hail). Zeus Meilichios and the Maimakters (Freller-Robert, l. c.) have nothing to do with this festival (cf. Pfuhl, op. cit.), who, besides the reasoning, however, is not satisfactory. On the other hand, the festival Skistrophia, in which a sacred ploughing and sowing—evidently enacted in analogy to the profane ploughing and sowing at that season—was performed (Plut. Conspir. proc. 42, p. 144f.), belongs to this sphere. Here, too, the θωκσόμα was used (Suid. s. v. θωκσόμα), in the same manner, no doubt, as at the feast of Meilichios. The catholic properties of the θωκσόμα seem to have developed later out of its agrarian functions. Not only was the magic fleece able to ward off evil, but any one brought into touch with it was freed from all uncleanliness and evil influences. Therefore, those in need of ritual cleansing placed themselves or their left foot (Hesych. s. v. Δυς επισωμα; cf. Amelung, Atti della Pontif. Acc., 1906, p. 126 ff.) on such a fleece (Pley, 11; Phryn. Prop. soph. p. 9, 14 f.; ed. Borries; the 'fleece' on the scene representing the 'cleaning of Theseus' (Graec. arch. i. [1884] 322 ff.; Gruppe, p. 892. 1) is more than doubtful, and those who were submitted to the various cleansing ceremonies of initiation (Schoenhammer-Lipsius, 414, 417) had to sit or stand on a fleece (Suid. l. c.; Hesner, Röm. Mitte. xxv. [1901] 287) to obtain the blessing. The category must be assigned Aristoph. Nub. 730, c. A. Dieterich, Kl. Schr., Leipzig, 1911, p. 117 ff.). The purpose of the fleece on a 'Thracian rider' 'saddle' (Athen. xvi. [1905] 107, pl. 1, no. 4) is not clearly; it is only probable that the custom made use of such a saddle, which the Delphic omphalos, is figured in the scene in Müller-Wissler (Denkmaler, ii. [Göttingen, 1881] fig. 127, p. 98). It is not impossible that the Ridge of the Cyladonian boar shown in the temple of Atese Ales in Tegea (Pfister, 'Reliquienkult,' Rel. Ver. u. Forsch. v. i. [1895] 534 f.) may once have been used in a rite, but it is not very probable.

It has been indicated above that the magic powers of fleeces were probably in part due to the fact that hides of sacrificed animals were used. The θωκσόμα originated from the skin of an animal offered as sacrifice (Pley, 11). This signification of sacrificial animals' hides can be clearly recognized in several cases. The Iapetian mysteries of the Andianus were allowed to wear only soles of felt or of the skin of sacrificed animals (Dittenberg, Syll., no. 863. 35; Pfort-Ziehen, Leda Grœc. Sacre, ii. 1 [Leipzig, 1904], p. 72 ff., whom the name Ζύλ that were worn on his head, likewise had to be made of the hide of a sacrificed animal (Pley, 38; incorrectly explained in E. Samter, Familie festa d. Grœc. Grœc. Röm. Berlin, 1901, p. 37). Apron and strips of the supra were cut out of the hide of the goat which had been sacrificed to Panus (A.B.V. xii. [1910] 450 ff.). The special importance of wool in religious rites probably finds its explanation in the significance of the sacrificial hide.

From a similar point of view we must interpret the custom of the best man and the bridegroom sat on a seat covered with the fleece of a sacrificed sheep (Serv. ad Aem. iv. 274). But the special purport of this ceremony lies in the fact that the sitting side by side on the same fleece was to render the nuptial bond inviolable. The present writer considers it very improbable that there is any closer connexion between this ceremony and the pelias fests, on which in Rome and Athens the bride and the bridegroom sat down as soon as she had entered the house of her husband (A. Rossbach, Röm. Ekle. Stuttgart, 1853, p. 324 f.). As this custom is found also among other tribes (Samter, 101 f.), it must have an independent meaning. Probably it was a magic rite to promote fruitfulness, as the Indian parallel (Oldenberg, Fig. 2, 1853, p. 594, fig. 120, and the above-mentioned magic rites for protecting the farm against hail) shows; in this case again the fleece exerts its magic powers. We do not know the special reason why the young married couple, in Attica, were visited by the priestess of Athens, bearing the fleece (Suid. s. v. αθηνοτ,); but here, too, a magic rite may be supposed, for the purpose of fruitfulness.

In some dream-orphals it was the custom that the god who interrogated the god lay down to sleep on the hide of a sacrificed animal (Deubner, de Incub. 27; Eust. ad II. ii. 538, p. 1067, 64; for the oracle of Panus, cf. E. Hainz, Verh. ov. Technik, Leipzig, 1903, p. 172. 2). The god was understood to be moved by the fleece of the animal that had been consecrated to him to give the desired enlightenment.

LITURGIES.—The leading sources and authorities have been noted in the article. An attempt to treat the shape of the fleece in ancient cult is offered by F. Pley, 'De uraeis in sanctuarium institur,' in Rel. Ver. u. Forsch. xx. ii. [Göttingen, 1901] 1 ff. Though this does not exhaust the subject, the author's leading idea of close relationship between fleece and wool is correct and important.

FLOOD.—See DELUGE.

FLOWERS.—The purpose of the present article is to discuss briefly the growth of an appreciation of flowers amongst civilized peoples in ancient and modern times.

1. Jewish.—An examination of the references to flowers in the OT yields almost entirely negative results. The country in which the Jew lived was carpeted with flowers, especially in the early spring; and their variety and beauty elicited the

1 For other aspects of the subject, see art. TANIA AND PANTHEON.
admiration of travellers to-day. The flowers in Palestine which specially attract the traveller’s attention are the tulip, poppy, hyacinth, cyclamen, asphodel, Suculentia of Bechahem, cactus, mallow, and scarlet anemone. So little thought did the Jews give to their flowers that, as far as we know, they did not mention them in their common law. Thus the Heb. word א ValidationError, which is now applied by the inhabitants of Palestine to anemones, tulips, and rambouillet, is rendered in the LXX by ασφαλέω, and in Greek lilies. This word is in Ca 25:8 (Una lips are (as) lilies) suggests that both here and in the NT ασφαλέω should be rendered by ‘scarlet anemone’—one of the commonest and most beautiful flowers in Palestine (cf., however, Lw, J. E. viii. 8 f. The representation of pomegranates on the pillars of the Temple (1 K 7:24) and on the prow of the ship (Ex 25) was probably borrowed from Egypt. According to Fliuders Petra (HDB i. 299), the design of balls and pomegranates is the old Egyptian lotus-and-bad border.

If by the appreciation of flowers be meant the appreciation either of their natural beauty or of their mystical significance, apart from a recognition of their ornamental use, it would be hard to quote any passage from the Bible which would form such an appreciation. The Jew, who inhabited a country which was more or less surrounded by deserts, had a vivid appreciation of the fertility of his land (as Psalm 126:4), but the Bible says: ‘The valleys also are covered with corn; they shout for joy, they also sing’ (Ps 65:11). Its beauty and its spiritual blessings, both in the Psalms and in the latter part of Isaiah, where the prophet calls upon the trees and mountains to rejoice with him in view of God, are met with. ‘Brook of singing, ye mountains, O forest, and every tree thereof’ (Is 44:23); and, again: ‘The mountains and the hills shall break forth before you into singing, and the desert and every one of them shall flower, and it shall bring forth many fruits’ (Is 55:12). The words which immediately follow, ‘Instead of the thorn shall come up the fir-tree, and instead of the brier shall come up the myrtle tree,’ seem to show that the predominant thought in the mind of the writer was that of the glorious fertility which the blessing of Jehovah should bring to his land.

The New Jerusalem, the description of which in the Apocalypse is largely based upon the Jewish imagery of the OT, is like a gorgeous palace blended with metal and jewels, but it has no flowers. The ‘never fading flowers’ are a Christian addition to the Jewish conception of Paradise.

2. Graeco-Roman.—When we turn from Hebrew to Greek and Roman literature, we find the appreciation of flowers hardly more developed. In Greek and Latin writers we find proofs of careful observation of natural scenes, but few or no traces of a sympathetic contemplation of flowers. They were constantly used as ornaments or decorations, and the prettiest of their form and colour was recognized, but if we may judge from the literature which has survived, there was no appreciation of their glory and significance such as could inspire Wordsworth to write: ‘To me the meek flower that blooms in the valley Thoughts do often lie too deep for tears.’

Theorists and Malaezgers contain frequent references to flowers but they did not look upon them as beautiful in themselves. The only approach in Greek art to such an appreciation is in the acanthus leaves carved on the Corinthian column, but this is conventionalized and reduced to a geometrical formula.

3. Christian.—It would be impossible to find in classical or in Jewish pre-Christian literature any parallel to the saying of Christ, ‘Consider the lilies of the field, how they grow’ (Mt 6:28). This, and the further statement that not all the wealth of the world, or the gorgeous raiment which wealth might provide, could make a man as beautiful as a flower of the field, constituted a new revelation. It must have been startling, indeed, to His audience to hear one of their commonest flower recognitions that with the greatest of their kings, and to his disadvantage. How little the Jews and those to whom the words of Christ afterwards came were prepared to appreciate this teaching may be inferred from the fact that, although practically every other saying of Christ is commented on by early Christian writers, there is apparently no reference to these words for a thousand years after they were uttered. Many centuries were to pass before His followers could claim that they had obeyed this teaching of their Master.

In the 19th cent., when landscape painting was for the first time practised in Europe, flowers began to be introduced not merely as ornamental accessories, but as an integral part of the painting. Although there is something artificial and unnatural in the conception of a flower garden, which is an attempt to idealize Nature, nevertheless the development of a taste for flower gardens may be regarded as a rough index of the development of an appreciation of the beauty of flowers. Bacon, in his essay on Gardens, supplies a list of flowers which should be in bloom during each month of the year, and urges that the garden should be so ordered that ‘things of beauty’ should be always ‘in season.’ He recognizes that the love of gardening represents a higher ideal than the love of architecture. Thus he writes: ‘God Almighty first planted a garden, and indeed it is the pursuit of human pleasure: it is the greatest refreshment to the spirits of men, without which buildings and palaces are but gross handwork: and a man shall ever see that, when ages grow to civility and elegance, men come to build stately houses than to garden finely, as it gardening was the greater perfection.’

The artificiality which, after Bacon’s time, characterized English and still more French gardens, was not unknown in his own time, for he writes: ‘I for my part do not like images cut out in judasper.’

The modern appreciation of the beauty of flowers, which found expression in Goethe and Wordsworth, was an outcome of the general movement towards the appreciation of Nature and of natural scenery which dates from the Renaissance. The influence of Auguste and those who adopted him as their master had led men to associate evil with every form of manner, and made it difficult for them to regard it as a vehicle whereby the unwritten thoughts of the Creator might be expressed. One of the first English writers to express the latter idea was Thomson (1700-1748), who wrote: ‘These live and works
A soul in all things, and that soul is God.
... not a flower.
But shows some touch, in frolick, steep, or stake,
Of His unival’d soul.’

Half a century later Wordsworth wrote:

One impulse from a verseal wood
May teach you more of man,
Of moral evil and of good,
Than all the age can read.

The mystic consciousness of the Divine message which plants and flowers have to give to those who can receive it, which Wordsworth possessed, has not been shared by many who have written since his time.

4. Japanese.—Of non-Christian nations, whether in ancient or modern times, the Japanese possess by far the most striking appreciation of flower beauty. Baron Himmel, contrasting the development of an appreciation of the beauty of flowers and of natural scenery in Europe with that found in Japan, writes:
The Japanese are wonderful lovers of nature. In Europe a feeling for beauty has been developed by education. Our peasants will talk to you of the fertility of the soil, of the abundance of flowers useful for their mills, of the value of their woods, but not of the picturesque charms of the country. They are not quite entirely insensible to them, but if they do feel them, it is in a vague, undefined sort of way, for which they would be proud to account. It is not so with Japanese labourers. With him the sense of beauty is innate.

In the 9th cent. A.D. the Japanese Emperor Saga held garden parties during the flowering of the cherry blossoms, at which the literati of the day composed verses in honour of flowers.

At the present day some of the most important festivals in Japan are those connected with the blooming of certain flowers. The cherry-blossom festival is preceded by that of the plum, and followed in succession by those of the peony, wisteria, iris, chrysanthemum, and maple. Every Japanese is familiar with the ode written by the poet Motoori in the 17th cent., of which a translation given by a Japanese is:

'Should any one ask me what the spirit of Japan is, I should point to the blossoms of the wild cherry-tree basking in the morning sun.'

The lotus, the flower specially associated with Buddhism and the spirit world, and the figure of Buddha is often represented as seated on a lotus flower. Lotus flowers made of gold or silver paper are carried as Paste flowers, and lotus are decorated with them at the Festival of the Dead. Lotus leaves are also used to wrap the food offerings for the spirits of the dead. In E.F., and various arts, on individual flowers, e.g., 'Lily' and 'Rose', in the same work.

The Japanese treatment of flowers proceeds on conventional lines. In every school a very large amount of time is devoted to the instruction of the scholars in the art of arranging flowers according to traditional rules. The standard by which they judge the beauty of flowers is wholly different from that accepted in Europe, and seems to many Europeans highly artificial. The mass of flowers present in a European bouquet would not convey any pleasing impression to a Japanese. They study the growth, form and habits of the plant which produces the flower, and may great regard to leaf, bud, and to their balance and linear distribution. The art of flower arrangement is said to have been introduced into Japan in the 8th cent. A.D., and several Chinese priests are referred to in early Japanese works as teachers and exponents of this art in connexion with various religious ceremonies. The present style of flower arrangement was developed later, and was specially encouraged by a Japanese shogun who lived in the 17th century. There is a good deal of symbolism involved in the choice and arrangement of flowers, and many weird superstitions, derived from Chinese philosophy and connected with good and bad luck, are associated with the arrangement and subsequent disposition of the flowers.

Although the Japanese are the most painstaking gardeners to be found anywhere in the world, flower gardens such as are common in Europe can hardly be said to exist. The Japanese garden is a landscape garden. For nearly five centuries Japanese artists have been studying and elaborating the rules for the formation of landscape gardens laid down by their predecessors, and with fascinating results. By a careful process of selection and cultivation, few species have been reduced to a fifth part of their normal size, so that their size may harmonize with the tiny garden in which they are to be planted. The object of these gardens is to create a feeling of serenity in the mind of the spectator by an extensive landscape. The older landscape gardeners who are credited with introducing this art into Japan were Buddhist, and the elements they expressed by symbols were of sym- bolistic form ideas such as content, calm, and piety.

5. Chinese. - The Chinese cultivate market gardens with laborious care, and are fond of constructing flower gardens in which both flowers and ponds are the principal features. These do not, as a rule, contain any flower beds, but flowering plants are arranged in pots of various designs. Flowers are grown on the top China, in hanging as in Japan, and the Chinese are specially fond of those which have sweet scents. They also use flowers and their artificial substitutes as ornaments to put in their hair, but they generally have little appreciation of flowers apart from their regard for them as ornaments or as providing sweet scents.

6. Hinta (India). - In India, flowers are rare, though flowers are extensively used for making garlands to be worn on festive occasions or to show honour to strangers. As artificial flowers, however, they are generally most beautiful, and are used for similar purposes, it can hardly be maintained that their use in this way by the peoples of India denotes any real appreciation of their beauty. The Rigveda consists of hymns addressed to Nature-gods; and in the Atharvas, flowers are mentioned only in magic charms. In later Indian literature, however, lyric and dramatic poetry, as well as elegant prose literature, contains many allusions to flowers which even a real love of them, just as in later Jewish literature there are repeated references to flowers in the oral tradition, and references in Bialus' Index to Böthlingk's Ind. Spruche, St. Petersburg, 1870-78; Löve's art. 'Plants', in E.F., and various arts, on individual flowers, e.g., 'Lily' and 'Rose', in the same work.

LITERATURE. - Besides the literature mentioned in the art, see A. Biesse, Development of Japan, and CHARLES H. ROBINSON.

FETICIDE.- Destruction of the human embryo has not among any people become a social habit, as in general infanticide has done among some modern primitive communities and among the ancient Greeks and Italians. Throughout history its prevalence has been sporadic. One section of a race may practise it, while another, though continent, may forbid it, and yet another may be stated to be ignorant of its possibility. Its practice does not involve any high degree of knowledge, for the crudest methods of manipulation, coinciding at times with those accidents which produce natural abortion or miscarriage, are found among the lower races. Nor does it, at any stage of culture, necessarily imply a deprived condition of sexual morality. As often as not—for instance, among the ancient Italians in many cases, and among many modern savage tribes—the sole reason is poverty. The crime thus is parallel in one aspect with infanticide and prevention of conception.

'The same laws hold here,' says Westernarch, 'as induce savages to kill their new-born infants also induce them to destroy the fetus before it has proceeded into the world from the mother's body.'

1 So in the East Indian Archipelago (J. G. P. Biede, El sult-an brachhajee raasen, Euphr., 1866, pp. 24 (Borul), 202 (Tenamur and Zirakpur)).

2 J. 8, 503.

3 MEL. 418.
FETICIDE

Besides the hardships of wild life and the intense struggle for existence in modern civilization, there are subsidiary reasons for the practice. A perverted diathesis may induce the mother to forgo the trouble of pregnancy, birth, and rearing. More often it is in order to conceal illicit intercourse. The period of suckling, which may drive the husband to form other ties, is also a contributory factor. And the same reason applies when the mother has already a child at the breast.

Whatever be the reasons operating to induce the destruction of a new life, the crime, as already noted, has nothing in common with a social habit. The progressive evolution of culture involves the displacement of infanticide proper by feticide, and in the last century feticide itself has been largely displaced by the artificial prevention of conception.

The social attitude towards the crime has followed a similar evolution. Rude indifference to child-murder has given place to a growing culture and abhorrence, while destruction of the unborn child was regarded as venial in comparison. The whole question of ethical values is complicated by the wave of early anthropological ideas, which from the Greek period were applied to the elucidation of biological facts. Both the sentiment and the legislation, ecclesiastical and civil, of Western civilization have been largely influenced by the incidence of these ideas. A broad line, lastly, can be drawn between barbarian, classical, and Oriental ethics, the latter being more pronounced on the one hand, and the value attached to the unborn life and the rights of the individual over it.

Among the lower and the higher races alike the moral objection to the crime varies directly as the social consciousness of the duty of augmenting the birth-rate. Hence it may be laid down that infanticide and feticide tend to decrease with the passage from a natural to an artificial method of subsistence. Where agricultural and pastoral culture are established, the importance of numbers is realized. In a secondary degree the objection varies inversely as the sexual morality, dependent upon the matrimonial system of any given people. Causes of marriage, as in pagan Greece and Rome, are of little significance. An example of the direct variation may be found in the early Hindu systems, where the husband, and in the modern European peoples, including the Jews. Examples of the inverse variation may be seen in the Hindus and Muhammadans, where the results of the matrimonial system have overlaid the primary objection to feticide.

Among semi-civilized peoples it is just possible to concede the existence of the moral objection with upward progress from the natural and precarious mode of subsistence. In Samoa, for instance, artificial abortion was very prevalent. Here there is possibly an indirect influence of sexual morality. The Daekota did not regard it as a crime, though the generality of Indian tribes did regard it.

A good example is the case of the Kafirs:

"The procuring of abortion, although universally practised by all classes of females in Kafir society, is nevertheless a crime of considerable magnitude in the eyes of the law; and when brought to the knowledge of the chief, a fine of four or five bead of cattle is imposed. The accomplice acquaints the woman herself with the facts." 4

As distinguished from infanticide, destruction of the embryo involves no conflict with the instinct of maternal or parental love.

'Considering,' as Westerners observe, 'that the same degree of sympathy cannot be felt with regard to a child not yet born as with regard to an infant, it is not surprising to find that feticide is practised without objection even by persons who never commit infanticide.' His instances Sarmiento and the Mitchell Islands.

Feticide is not referred to in the Mosaic law. The omission is one indication, among many, of the intense regard felt by the Jewish people for parenthood and the future of their race. Hinduism and Islam show an inconsistency between theory and practice.

'In a country like India ... where six-sevenths of the widows, whatever their age or position in life may be, are absolutely debarred from re-marriage, and are compelled to rely upon the uncertain support of their relatives, it is scarcely surprising that great crimes should be frequently practised to avoid the results of immoralities, and that the procuring of criminal abortion should, especially, be an act of almost daily occurrence, and should have become a trade among some of the lower middles." 5

Yet the old laws forbade it and classed it as murder, placing it in the same category as homicide, neglect of the Vedas, incest, and the drinking of spirituous liquor. 6 It is one of the three acts which make women outcasts, the others being the murder of a husband or of a Brahman. 7 The word of 'the wiping off of sins' in the Atharavaveda denounces the abortionist, the bhiresakas, whose name and crime the list reveals. He who has committed an abortion the sin does not pass. 8 Buddhism naturally included it in its denunciation of the destruction of any form or degree of life. The Sikhs, who intentionally kill a human being, down to procuring abortion, is no Samana, and no follower of the Sakayaspattras. 9

In Persia, according to Polak, abortion is regularly practised to prevent illegitimate births; and legislation ignores the crime. 10 In Turkey there is the same indifference, and the practice is not uncommon.

The Avesta theorizes on the date at which the embryo becomes animatic, and its condemnation of feticide is detailed.

10 "That man does not follow the way of the Law, O Zarathushtra, who commits the Skudhovarsha crime with a damsel and an old woman," said Zarathushtra. 11 Descending the crime, the Vendidad (xxv. 152 B.) says that, if a maid who is with child unlawfully tells her lover, 'I have conceived by thee,' and he replies, 'Go then to the old woman and apply to her for one of her drugs, that she may procure thee miscarriage,' and the old woman brings some drugs or ashes, that will cause her to expel the fetus, and the man says, 'Goes thy fruit to perish,' the sin is on the head of three.

The penalty was that for willful murder. When a woman has been pregnant for four months and ten days, the child is formed and a soul added to its body. 12 The uttering of a charm is also frequently a factor, for ideas of magic naturally intrude even in such practices as this. Similarly the Greenlanders supposed that an abortion was transformed into an evil spirit, angels, which avenged the crime.

In his Eugenic proposals, Plato recommends that no child be suffered to come to the birth when the parents have passed the age assigned for procreation. 13 Aristotle, carrying on the Hel lenic traditional objection to the existence of imperfect or deformed children, recommends abortion before the fetus is animatic, in cases where the mother has

already given birth to the number of children enjoined by the State. Under the Roman Empire the practice of infanticide was carried on for reasons of poverty, insecurity, or luxury, and the Senate often praised it as practiced by fashionable women in order to preserve their beauty. Lecky concludes: "It was probable that the lives of the later days of Augustus much as Englishmen in the last century regarded, on the contrary, as a certain, but so serious as to deserve censure."

An attempt was made by the Antonines to prevent the loss of children consequent upon the practice.

Greeks and Romans made a commencement of speculation as to the biological value of the embryonic life. Distinction sharply between infanticide and infanticide, they put it that the unborn child was not homo, not even infans, but merely a epos animantis. It was regarded, not incorrectly, as merely a part of the mother, as the fruit is a part of the tree until it falls.

Christian philosophy, and consequently Christian legislation, applied from the first the healthy sense of the same sanctity of infant life which so broadly distinguishes Christian from pagan societies to this more subtle form of infanticide.

Prevention of birth, asserts Tertullian, is a premeditated murder; nor does it matter whether one take away a life when the seed is yet forming. Bed nay is the child who is about to be one. Even every fruit already exists in its seed.

Empirical knowledge was combined with Aristotle's doctrine to establish a theory of embryonic animation. This, of course, is to be distinguished from 'quelling', which may commence some hundred days after conception. Aristotle held that the soul of the zygote at conception was the vegetative only, that after a few days it was formed by the animal soul, and later by the rational. His followers distinguished between the male and female embryo in the date of animation. The male was regarded as being animated forty days after conception, the female eighty days. Later the moment of animation was fixed for both sexes at the fourth month. The Roman jurisprudence adopted the latter view. The general distinction between the animate and the inanimate fetus was clearly held by Canon and Roman Law alike, and lasted to modern times. It was applied in practice by Augustine thus:

The body is created before the soul. The embryo before it is endowed with a soul is inanimate, and its destruction by human orders is murder. The embryo formatum is endowed with a soul; it is an animal being; its destruction is murder, and is to be punished with death.

Throughout the Middle Ages women guilty of the crime, which, however, was of rare occurrence, were condemned on the capital charge, as the Sixth Ecumenical Council had ordained.

There was to the theory a natural corollary that the embryo formatum required to be baptized if it would be saved. Augustine held that the embryo might share in the resurrection. Fulgentius argues:

It is to be believed beyond doubt that not only men who are come to the use of reason, but infants, whether they die in their mother's womb or after they are born, without baptism or any other sacrament, are punished with everlasting punishment in eternal fire, because, though they have no actual sin of their own, yet they are along with them the condemnation of original sin from their first conception and birth.

Aquinas, however, was of opinion that infants dying before birth might perhaps be saved. Meanwhile some Councils made no distinction between the two, pronounced the same sentence, and condemned all osticid as murder.

Interesting variations of opinion are found as to the right of the mother to abortion. Aristotle held that the fetus was merely the fruit of the womb, and that the soul was not acquired until birth. The Roman theory and practice were in many points far from clear, but the view prevailed that the father alone had the right to order abortion.

As early as the 4th cent., Gregory of Nyssa had evolved a theory anticipatory of Neo-Vitalism. He held that one and the same principle of life quickened the new organism from the first moment of its individual existence, and that, instead of the organism developing the life, the vital principle built up the organism.

Modern biology holds that the zygote is a new individual from the moment, not of 'conception' in the vague and popular sense, but of penetration of the ovum by the spermatozoa. Modern legislation holds much the same view, but is less severe upon abortion than upon infanticide. Popular sentiment has always tended to regard the life of the embryo as distinct from that of the infant. Modern Papal Bulls condemn criminal abortion as unlawful, and punish it with excommunication. Ecclesiastical influence has, until the 19th cent., been predominant in penalizing or opposing efforts against the practice. The humanitarian movement succeeded in abolishing the penalty of death. Apart from the Papal tribunal, modern legislation punishes the crime with imprisonment. Medical practice occupies a position midway between that of the classic lawyers and that of the later Christian eclesiastics. It is on the whole in favour of sanctioning the fetus whenever the interest of the mother demand such a sacrifice. General medical opinion is not, however, prepared at present to go further, and is distinctly disinclined to aid the parents in securing so complete control over the fetus in the womb, nor is it yet disposed to practise abortion on medical grounds. . . . Society itself must assume the responsibility of protecting the race.

In medical circles there has recently been considerable discussion, which Ellis has analyzed in a valuable summary, on the ethics of the question. One aspect of this is a return to the Greek view that the right of deciding upon the operation rests with the mother. Thus, though alike on the side of practice and of theory, a great change has taken place in the attitude towards abortion. It must, however, closely be recognized that the question of abortion by methods for preventing conception, facultative abortion has not yet been embodied in our current social morality.

The practice is said to be 'extremely common' in England, France, Germany, and the United States. Perhaps this estimate is too high. In France, at least, there is a tendency on the part of the law towards leniency, only professional abortionists, as a rule, being punished.

As for the eugenic aspect of the question, it can hardly be separated from the social.

'Sometimes,' says Baléstini, 'abortion becomes a social custom, it is the external manifestation of a people's decadence, and far too deeply rooted to be cured by the mere attempts to suppress the external manifestation.'

Ellen Key argues that a civilization which permits the slaughter of its carefully selected infants in war has not yet won the right to destroy deliberately even its most inferior vital.
FOKLORE

products in the womb... The blind and senseless anxiety to cherish the most hopeless and degraded forms of life, even of unwholesome and disgusting conceptions, will be a weakness, and, since it often leads to inscrutable suffering, even a crime. But... before we are entirely ended... we must learn how to preserve it by abolishing such destructive instincts. The same... are easily within our social power as civilized nations.1

Ellis well observes that 'the necessity for abortion is precisely one of those results of reckless action which the prevention tends to diminish.' The observation includes the abortion which is necessary for the saving of a mother's life, and the various applications of the practice by the licentious and depraved.

Observations.-There is an extensive modern literature, periodical and occasional, but the works cited in the article fully refer to it.

A. E. CRAWLEY.

FOKLORE.-iv. Definition and scope.-Folklore consists of customs, rites, and beliefs belonging to individuals among the people, to groups of people, to inhabitants of districts or places; and belonging to them apart from and oftentimes in defiance of the customs, rites, and beliefs of the State or the nation to which the people and the groups of people belong. These customs, beliefs, and practices are the living traditions, that almost universal desire to carry on without alteration what one's parents or predecessors performed or practiced. They owe their perpetuation not to the indifference of the people to the civilization which towers over them and which is never of their own creation; partly to certain of the people being isolated from centres of thought and culture. Some beliefs, but no customs or rites, are due to those persons or generations of persons who, being peculiarly stunted in their mental equipment, are unable to understand the phenomena of nature or the results of civilization. We may classify these two distinct branches of folklore as traditional and psychological.

2. Materials.-The tradition-founded customs, rites, and beliefs constitute by far the larger mass of the folklore which has been collected and published in almost every country, and forms the basis of the psychological beliefs are much rarer. Unfortunately, the two groups have never been kept separate from each other even by students of folklore, and arguments based upon a belief which is wholly of psychological origin may be entirely fallacious and misleading unless it is used strictly in accord with its classification.

It is obvious that tradition may carry us very far back into the past, and indeed it is one of the facts of traditional folklore, which is the most generally clear and understood, that almost invariably research leads the investigator to the very earliest phases of racial and social life. Psychological folklore, on the contrary, relates only to the present, or rather to the period contemporary with the existence of the belief. This contrast is fundamental, but it does not entirely separate the two classes. The investigator is met with a phenomenon of peculiar significance, namely, that research into psychological folklore leads not only to the genesis of each particular belief which comes under that head, but tends by analogy to the best explanation of the genesis of all beliefs. The unity of folklore exists in its origins. The

5 The purpose of the present article is to fix the definition and scope of folklore, and to indicate generally the materials for study. Further details will be found in the various articles on peoples and religions.

The original 'folklore' was coined by William John Thoms (a well-known antiquary and the founder of Notes and Queries) in a letter which appeared in the Athenaeum, 22nd Aug. 1854.
always observing their own code of life. Besides these curious people every country has its local race-types differing in the dominant race. Thus in our own country, the people of Tuscumbia in Ireland could not speak Irish, but had a language of their own which was Chaucerian English; they intermarried amongst the negroes and took on their own colors, brown and yellow, and never departed from their own customs. Connaught has always had local racial groups in its mountain ranges. The High-lands of Scotland present the same characteristics, and the Borderland was long known as the occupation ground of people whose law was the custom of theirs, not the legislation of the State. In Wales down to 1832 there were records of a curious red-haired race called Cochian, who lived by rules of their own and did not intermingle with the surrounding folk. In Cornwall there is the well-known example of the Gubbins people, of whom there exist notes dating from the 17th century. These examples are special cases of race survival; but all over the country, when for amusement or from inherited custom we admit to our house a first foot on New Year's morn, who can be only a dark man or only a fair man, as the case may be, but never a woman, we are reverting to a racial custom.

(3) Passing from custom to rite, there appears for the first time the touch of a religious sensation. The farmer who rescues his cattle from disease by burying a dead calf at the entrance of the cattle-shed is performing a personal rite of religious significance. The Maori cottage who looks for traces of a foot in the ashes of his fire-grate for the purpose of seeing in what direction the toes point—towards a death; or to the fire-place, a birth—is performing a family rite of religious significance. The 'oblations to the white bull' of Bury St. Edmunds was a local rite of religious significance. These folkcraft are racial rites of religious significance.

(3) Finally, in the division of belief, there are the same main features. Over and over again in traditional belief individuals will retain in memory and in form beliefs which they personally entertain, and which may not be generally accepted. So, too, there are family beliefs some of which are of such special character as to contain many of the characteristics of totemism; for example, the famous case of the Irish clan Connolly, who believe in their descent from a totem, the king, and are named from the totem. In local beliefs there is the significant feature of differentiation in the objects of belief in closely contiguous places.

But the section of belief has an important branch of folklore belonging to it which does not belong to the other sections, namely, the Märchen, the folk-tale or the nursery tale, which, found all over Europe and in India, has led to much discussion as to their origin and significance. Folk-tales are the myths of the race. Myths are the accounts which the science of pre-scientific ages gave of phenomena which could not be understood except by such accounts as early knowledge and observation would allow. If myths accounted for the origin of mankind, of the sun, moon, and stars, of the earth and trees, they accounted for them as creations of higher powers external to the individual. The story into which the myth is woven is not a story to those who believe in the truth of the myth. It assumes the personal shape because the personal is the only form in which the early thought of man can be expressed. It lived on by tradition, because of its original sacred character, and the impossibility of altering the deeply established myth. All research into myth confirms this view of its origin among primitive peoples. Among the higher barbaric peoples the same process of explaining phenomena which were not understood went on, and Greek mythology is a later explanation of temple-rites and ancient worship which did not command the reverence of the Greeks but which demanded explanation. In their hands all religious conception developed, and the gods of Greece became the gods of moral principle, the gods of law and order, the gods of political and social progress—mythic gods all through, but gods very real to the Greek in the earliest stages of his development.

3. Historical value.—If this survey of the materials and folklore suffices to explain in general terms what the subject-matter is with which the folklorist has to deal, it will also have indicated to the student that tradition, being the sanction of folklore, carries a weight of evidence for the past which is scarcely second in value to the historical record. History never has pretended to contain every human fact occurring at a place, on an occasion, in connexion with a personage or a people. And very often, where the historical record is faulty, the traditional record may be relied on to fill up the vacuum. Myths are not created out of nothing. A 'mere' myth, which is an expression often used by those who are not folklorists, does not exist, if by that expression is meant a story or account invented out of nothing, a mere fantasy or fiction. Myth is definitely and distinctively not fiction. It is always the covering, the shell, to a myth or a rite of a race or a tribe; it may be difficult, or impossible, to get at the truth. One authority will argue for one explanation, and others for quite different explanations; but, because modern scholastic methods of research are applied, the chronicles of the past history of the race or of the tribe are not necessarily lost sight of. Modern science or with religious accounts of forgotten ritual, it does not do to relegate the whole subject to the waste-paper basket. Scholars should frankly confess an inability to explain certain subject there, perhaps for more successful efforts by future generations.

4. Scientific treatment.—The custom, rite, and belief, which are properly called folklore, are to be found embedded in civilization—they are, as we have seen, the unrecorded factors of that civilization at its earlier stages. For this reason they are capable of comparison, first, with parallel customs, rites, and beliefs embedded in civilization of practically the same standard (as when we compare British folklore with that of Germany, Italy, Scandinavia, the Slav countries, and the Hindus), or of a wholly different standard (as when we make the comparison with Chinese or Mongolian folklore). Secondly, they are com-parable with parallel custom, rite, and belief which are alive at this day as the ordinary custom, rite, and belief of a tribe or race of barbaric or savage peoples. Savage custom, rite, and belief are sometimes classed as folklore simply because they are capable of such close comparison with folklore, but this is obviously wrong, and only raises inconvenient issues as to the regions respectively occupied by folklore and anthropology. The question of comparative folklore raises very difficult problems. It is not scientific to lift a custom, rite, or belief, a myth, or a Märchen from its civilised surroundings and compare it with the living custom. The story into which the myth is woven is not a story to those who believe in the truth of the myth. It assumes the personal shape because the personal is the only form in which the early thought of man can be expressed. It lived on by tradition, because of its original sacred character, and the impossibility of altering the deeply established myth. All research into myth confirms this view of its origin among primitive peoples. Among the higher
the traditional belief discovered in folklore belongs to the stage of the savage, with which it compares, and that this stage of culture survives in modern civilization together with the physical type of a people. Beddoes insists that types of Paleolithic and Neolithic folk survive in Britain, and European ethnologists advance the same evidence in respect of other countries. The Storks have brought their culture along with them; their descendants could have carried it on and could have passed it on to other individuals. Different degrees of ethnical evolution must be considered in the work of comparison, and it is useless to go on piling up examples of parallel beliefs, rites, and customs without examining the direction in which such parallels are leading the inquirer.

The work of the folklorist is and must be arduous for years to come. Those who collect, as the older collectors collected, without comment or with such comment as need no corrective, are supplying the bricks for the edifice which will one day assuredly be erected. The work of analysis, classification, and comparison must follow, not precede, the life-history of each item of folklore. Just as in philology the life-history of each word can be ascertained, so the life-history of each image, as so in folklore the life-history of each item of folklore can alone be the true basis of the science of tradition. The work is being gradually accomplished, and it will lead to a consideration of early national history which has not yet been attempted.

Custom, rite, and belief—these elements of folklore constitute a very recognisable phase in the religious and social life of the people of the country where they are found. It is, however, a non-Christian religion and a non-political society to which this folklore belongs, and the conclusion is inevitable that it must also be pre-Christian and pre-political. This brings us to a period, if not to a date, for the originals from which folklore has survived. It must never be forgotten that survivals are not the originals. Bits of the originals will have been broken off, sometimes to perish altogether, sometimes to exist as an independent item. Originals will have become timeworn, will, in their encounter with the State religion and the State polity, have become altered in form, if not in essential, will perhaps have attached themselves to a new phase of the people's life; and the wear and tear, the alterations, the new attachments, will prevent the true interest of the survival from being discovered. All these matters the folklorist has to study and prepare for, but it is for a great historical purpose. All the custom, all the rite, all the belief surviving in the folklore of a people, make up a considerable chapter in the pre-history of that people, are indeed the only material which exists for the pre-history outside the geological and the archeological record. Later periods in the historical range are no doubt reflected in folklore. The post-Roman Celtic period in Britain is the strongest case. The Arthur cycle has gathered to itself whole volumes of myth. It is strange that the greatest of all English kings, Alfred the Great, should have been able to attach so little of magic—perhaps it is because that life was so very great. It is not strange that Hereford and the Saxon chieftain should have gained a place in English myth. But these heroes of historic times do not create new myths. They have transferred to them ancient myths, myths formerly belonging to ancient gods or ancient heroes. And so we come to the proposition that folklore is the traditional fact of pre-historic life in contradistinction to history, which is the recorded fact of State or national life. This is a great claim on behalf of folklore, but it is a claim which must assuredly find its way into the scientific study of nations and peoples.

C. L. GOMME.

FOOD.—Not only from the physiological but also from the sociological point of view, food, the food-get, the food-supply, constitutes the permanent basis of human action. Food, as Thorold Rogers observes, is 'the raw material of labour'; it is also the raw material of the social system itself. Even in the highest stages of civilisation, social wealth can be ultimately resolved into the elementary form of food. The provision of food is the primitive form of labour; its accumulation is the primitive form of wealth. In religion and morality this relation is, of course, more or less indirect; but, more than any factor of life, man's meat even when largely realized in direct relation. The beginnings of the moral law are based on food-tabs; religion culminates in a divine meal.

The best distinction between uncivilised and civilised society is that drawn by Payne. It consists in 'the substitution of an artificial for a natural basis of subsistence.'

'... Man adopts the practice ... of saving for future consumption a portion of certain periodically recurring food-supplies; and from providing for that portion of the year during which the food-supply ceases he advances to providing for years of scarcity. Food thus accumulated obviously enables its possessor to employing his own labour and that of others, in some other way than food-provision. The food-supply, therefore, is the foundation of all non-food-producing labour; and advancement is always marked by a progressive increase in the quantity of non-food-producing labour, and by the multiplication of the class of labour of this description assumes ... but the method of procuring food from natural sources also follows, and extremely uncertain.'

The next step, the provision of food by artificial means, is affected by the simple expedient of not only abstaining from some portion of the food-supply, but converting the portion abstained from into a fresh source of increase. Instead of being merely stored, seeds or roots are allowed to fructify in the earth, and the captured young of animals are allowed to grow to maturity and become the progenitors of others. But, while all artificial production is in favour to advancement, the animal and vegetable species to which it is applied are favourable to it in unequal degree. Their value in this respect appears to be measurable by two different standards, by the recompense which they return to labour, and the stimulus which they give to ingenuity. When this principle is broadly applied to the two divisions of food-animals and food-plants, the result appears to be that, while the domestication of animals yields the greatest immediate return, the culture of the food-plants gives ingenuity the greatest stimulation. When progress is found only when cereal cultivation is combined with animal breeding. 'When this takes place, progress is accelerated, as it were, in a compound ratio.'

1. Food-stuffs.—The division of economic progress into the hunting, pastoral, and agricultural stages is untenable. But certain backward peoples are chiefly fruit-eating or pastoral or hunting. As for animal food-stuffs, apart from fish and game (the natural supply), the distribution of animals capable of artificial propagation varies.

3 J. S. 280 f.
4 J. S. 264.
FOOD

largest number is possessed by the Old World; America, before introducing supplies, had few, Australia none. The ox, horse, ass, sheep, camel, goat, and pig are the most important. The reindeer, hare, and hare are exceptional cases.

All vegetable food-species are capable of artificial increase. Their three main divisions are fruits, roots, and cereals. Payne notes that fruits take the first place, roots the intermediate, and cereals the highest position, in reference to the order of adoption, to the amount of labour involved, both for fitting them for consumption and for converting them from a natural to an artificial basis, to their value relatively to bulk, and to the degree in which their culture assists progress. For example, "native savages subsist themselves in the fruit season and are near starvation for the rest of the year."

Though man naturally seems to prefer flesh-meals to the greater force of sustenance, and to its stimulating properties, the slight use of it in hot countries is probably not a primitive habit, but one enforced (like abstention from alcohol) by a long process of adaptation to climate; yet a composite diet alone has formed the foundation of the greatest advance. In particular, as Payne observes, "nothing worthy the name of civilization has ever been founded on any other agricultural basis than the cereals. This appears to belong to the climate. It is to the fact that the seeds of the cereal grasses are, as compared with fruits and roots, extremely rich in albumen and albuminoids, the great nourishers of the muscular and nervous systems."

2. Food-preparation. Methods of cooking are naturally even more numerous than the substances employed for human food. But the principles of cookery reduce themselves to roasting and boiling. Direct exposure to fire is universally employed; gradually it gives place to the oven. But many backward peoples use a simple form of oven, such as a hole in the ground banked with hot stones. The method of bousca or barbecue, by which food is smoked, for preserving it, is common in barbarism. Tylor has argued that stone-boiling generally preceded pot-boiling. Red-hot stones are placed in a vessel of water until it is hot enough to cover the meal. "So instantly," however, is the art of stone-boiling supplanted by the kettles of the white trader, that, unless perhaps in the north-west, it might be hard to find it in existence now. Goetz's theory of the origin of the art of pottery is connected with this development.

Three types of the evolution of the processes of food-preparation, which are not necessarily continuous, may be selected—the savage, the Hindu, and the modern French. The last is esthetic, but each has reactions upon the social consciousness, just as each is an expression of it.

As a culmination of social feeling in the alimentary sphere, applied in everyday life, as distinguished from occasions of critical sacredness, the ritual of the Hindu kitchen and of Hindu meals is signalized by:

'The kitchen should always be on the south side and should run the whole width of the building. This is the most sacred part of the whole house, and persons of a low caste must not enter it. . . . The kitchen is partly a cooking place, partly chapel, and partly dungeon.'

The mere glance of a man of inferior caste makes the greatest delinquents unstable, and if such a glance happens to fall on the family supplies during the cooking operations, . . . the whole repeat has to be thrown away as if poisoned.' (Cf. also art Food (Hindu)).

The preparation of cereal food calls for some description. Payne distinguishes seven stages, viz.: green corn torreded; ripe corn pounded into a paste; corn steeped and boiled—the usual method with rice; meal boiled in water (this porridge is the "favourite food of advanced barbarism"); paste in thin cakes at the tortilla of Mexico; griddle-cakes; paste in thin cakes baked (this is the unleavened bread 'universal in early civilizations'); finally, leavened bread.

Numerous folk-customs cluster round the care of food and its preparation. Food, according to Zoroastrian teaching, must not be thrown away to the north at night. European peasants still regard with horror the throwing of bread into the fire. The ancient Hindu theory was that the remains of food are impure.

3. Food-law and taboo. The physiological dependence of life upon nutrition is recognized throughout the entire history of human law and custom. Food is the first form of human property. The restrictions of food-laws are for the weaker members of a society in this respect no doubt may be regarded as the first of all human laws.

Among the Australians the younger members of a tribe are subject to a variety of food-restrictions, from which they are gradually released with age. In the Bushlayi tribe the unwoman, or food-tabu, was taken off a different kind of food at each Boora, until the youth was at last old enough to eat what he pleased. In the Warrungu tribe a man is usually well up in middle age before he is allowed to eat wild turkey, bandicoot, and emu.

There is little doubt that the ultimate object of these restrictions is partly to reserve the best foods for the older members, and partly to prevent shortage.

An early type of economic co-operation may be illustrated from the Australian tribes. Each individual, until a certain age, is forbidden to eat, though not to kill, a list of animals tabbed to each of the four marriage-classes. The husband, for example, lives on articles different from those eaten by his wife; both of them eat foods which their children are forbidden to touch. Thus, as Roth points out, a proper distribution of the total quantity of food available for a community is secured; and, whereas in Europe the more children there are to feed, the less goes to the parents, here the number of children makes no difference in minimizing the parents' supply.

In Central Australia it is the function of the men of a parti:

3. Payne, in Gleanings, 1897, p. 128.
cular totem to perform initiatic ceremonies, the object of which is to secure or increase the supply of the animal or plant which is their totem. Moreover, the principle is that the food-species of a totem belongs to members of another totem. Magic and co-operation are here in perfect alliance.

The wealth is ultimately reducible to terms of food, it is an interesting fact that civilized aborigines tend to minimize and partially condone offenses against property in this form.

The American Indians studied by Adair, 1 Adair saw one of the most important principles that the food-species of a totem belongs to members of another totem. Magic and co-operation are here in perfect alliance.

The wealth is ultimately reducible to terms of food, it is an interesting fact that civilized aborigines tend to minimize and partially condone offenses against property in this form.

Wattmarck has described the tendency to refrain from eating animals with which men have established intimacy. The Yunus of Brazil will not eat any animal they have bred themselves, and they caused von den Steinen for eating the eggs of owls. Such feeling may be connected with the prohibition of beef among the Hindus.

Fraser observes that the food-taboos upon priests and kings are a fortiori more numerous and stringent than those upon ordinary persons. Thus, the fetish-priests of Loango, the Somalis, the Egyptians, the kings, and some Indian chiefs are reported to have abstained from various foods. If any rationalist is sought for, that which possibly will satisfy most women may be a pre-scientific principle of dietetics. But, as Fraser points out, one explanation remains as to why the food-ego of the Hindu is broad-minded.

One or two forms of restriction are particularly important in their religious or racial aspects. The Hindu avoidance of food-meats has been motivated by various religious principles, but at the back of it is a gradual unspoken process of adaptation to climate; in hot countries a flesh-food is more or less deleterious. Beef is never eaten by modern Hindus; it is the flesh of the earthy representative of the divine Brahman. At the present day all the higher classes abstain from animal food in every form and are rigid vegetarians. But Strychnos use animal food; indeed, some of the lowest classes of that country divided and sub-divided classes eat almost anything and everything that comes in their way. In ancient times beef and other flesh were eaten both ordinarily and in connexion with religious festivals. Thus, Mann, while observing that the eating of flesh (mlech) and of fish (matya) by twice-born men is proscribed, directs that flesh-meal be eaten at certain Srdhadas; he also says:

"No sin is committed by him who, having honoured the duties and the modes, eats flesh-meal which he has bought, or which he has himself acquired, or which has been given to him by another.

The Vedas ascribe a sacrifice of cattle for the purpose of entertaining a guest. The Chororaks, the 1st cent. A.D., ordains that 'the flesh of cows, buffaloes, and hogs should not be eaten daily, but that pregnant women may eat beef, with a view to strengthening the unborn child.' In early sacrificial rites the worshippers ate the flesh. The blood was the way to the Adikumbara. In the relatively modern religion

FOOD

of the Tantras a reaction against the normal tendency of Hinduism is the keynote of theory and ritual. One of the five acts of the Śāktas is the eating of flesh-meat (māsāha); another is the eating of fish (matsya). As Monier-Williams notes, they 'have good ground for so acting, inasmuch as in the days when they are merely reverting to the practice of their ancestors.'

The view held by most Hindus, however, is comparable with that of Europeans on the subject of cannibalism. Westerners think that Hindu vegetarianism is the 'natural outcome of a system which enjoins regard for life in general and kindliness towards all living beings.' In Manu there certainly is the germ of this system, as there is that of its contradistinction, Śāktism.

'Meat can never be obtained without injury to living creatures, and injury to sentient beings is detestable to the attainment of heavenly bliss. There is no greater sin than that which man, though not worshipping the gods or the manse, seeks to increase the bulk of his own flesh by the flesh of other beings.'

A connexion certainly may be assumed between the prohibition of killing animals and that of eating them. The former prohibition is still more stringent in Buddhism and Jainism. It is also important in Taoism. But Buddhism allows pure flesh to be eaten, if, that is, it has not been procured for the purpose, or if the eater has not supposed so. The sin is upon the slayer. Ancient Egypt and Greece knew the religious form of vegetarianism, and their myths, like the earliest Hebrew, represented man as having been originally a fruit-eating creature. The Qurʾān prohibits the eating of what is dead, and blood, and flesh of swine, and whatsoever has been consecrated to other than God. The Jews and early Christians avoided the eating of blood. They also avoided the eating of the intestinal fat, and of the 'sinew of the thigh.' Still important in relation to the carefully observed rules in the preparation of 'koshered' food, is the avoidance of meat that is either 'māthāha' or 'pāthāha.' The former is that of animals dying a natural death, the latter of those 'torn by beasts.'

4. Ideas and Rituals. — The ideas which centre in food and its properties in early culture are multitudinous; but, since they have had considerable influence in the formation of social habits, they must be briefly classified and described. The native of Queensland burned all food left over from meals, to prevent 'sorcerers' from getting hold of it and injuring them thereby. The Victorian tribes believe that, if an enemy gets possession of... bones of animals they have eaten... he can employ it as a charm to produce illness. The Narrinjari call such persons 'disease-makers.' In Tanma of the New Hebrides

This theory is of world-wide distribution. Among strong or magical foods the most potent is human flesh. The transmission of human char–
FOOD (Hindu) 63

acter by this means is at the root of religious cannibalism (q.v.).

The contagion of death is supposed to enter food by means of the vectors, among the American Indians, were not allowed to cook for themselves or others. They could not drink out of any other dish than their own. In Samoa those attending to a dead person must not handle any food, and for four days were fed by others. The Moorish custom of L-ar seems to depend on the theory of the transmission of curses by food. The food will repay is an explanatory phrase. The food eaten in such

The ceremonies of eating together are worldwide, and bring into relief the social sacredness attaching to food. Eating together is a mode of forming an alliance between two peoples, as between two individuals. Following the taboo often observed which prevents the two sexes, in particular two allied persons, from sharing meals, is the marriage ceremony of eating together. There is here the acceptance of mutual gifts, as well as the consumption of anagram food which is representative and which renders the persons 'one flesh'.

5. Food of the gods. The conception that the gods are nourished by the community involves the view that sacrifice is largely developed from the social ideas of food and its assimilation. The offering of animal and of vegetable foods to the gods is linked by means of the vital airs. The essence of food is invisible. Food is the highest of all things that can be swallowed. The Satapatha Brâhmaṇa identifies food and breath as the Arghya, which identify food and life. Food and breath are both gods, the 'two gods'. Food is the deity of the pratiṣkrama hymns, for all live when they partake of it.

Payne suggests that, in the development of language, 'not long after emotional exclamations and demonstrative names came primitive adjectives signifying "good" and "evil", applied to animal and vegetable species with reference to the purposes of food, in the sense in which the African tribes divide all plants into "food" and "good for apes" (the latter including the edible ones, the former the residue). . . . The Bible (Gen xiii.) represents the naming of food-animals as the first effort of speech; and the word and choice of food is of the substance of all its early incidents (Gen iii. and iv.) (cf. Herodotus, Bactria, ii.). Though the Tupa can only count up to 5, Von Martius gives 124 Tupa words for animals and their parts'.

Celestial food, 'bread from heaven', combines metaphor and ideas of transubstantiation. Bread as a type of Christ is an idea worked out elaborately in Jn 6 and 1 Co 10. Food the material becomes food the spiritual.

FOOD (Hindu). The question of food is considered highly important from a religious point of view in India, and is elaborately discussed in the canonical books of all religions. Indeed, the various and manifold rules of caste in India hinge in the first place on food, its preparation, and the persons with whom it may be eaten. Thus eating the numerous kinds of prohibited food, or eating for a considerable period with persons of low caste or with Muhammadans, is among the most ordinary causes of expulsion from caste, one of the most

Digitized by Google
FOOD (Hindu)

dreaded punishments in India, which involves in the first place an instant death against the instigator and his fellow-members of the caste. Though many educated Hindus eat and drink in the European fashion nowadays, there are still Brāhmans and other high-caste Hindus who refuse to eat or drink from a vessel which another person has used or on account of scorpions as to whether the birthplace of the N. W. Brāhman who had cooked it was equal in security to his own native district. Food prepared by a person of inferior caste causes defilement, and a member of the higher castes therefore always employs a Brāhman cook. Leather vessels denote, in the sense no one should cook with his shoes on. Food cooked on board a ship causes defilement, therefore native passengers travelling in a boat will sometimes interrupt their journey to cook their food on shore. The kitchen should be the most retired room in the house, so that no Sūdras may look in and thus defile the earthen vessels. It is also considered highly improper to look at any one who is eating. The women, after preparing the dishes, wait on the men, and eat what is left by them; they never sit down to eat with the men. The orthodox fashion is to eat with the fingers, the use of spoons, forks, or knives being forbidden. Nothing must ever be touched with the left hand, which is used in the worst offices, and therefore considered unclean. Before eating certain kinds of food, a person must wash his hands and feet, and recite part of the prayers. The rice and other dishes are served on a banana leaf or in small earthen vessels. Hindus take two meals a day, in the morning and evening; but widows, penitents, and the disabled are not so rigid. The remains of food are thrown to the crows and the dogs. The gods and the evil spirits are also to be given their share of each meal, with certain attendant ceremonies. If the Brāhman, expelled from his house, is no longer being over, washes his hands, rings his mouth, and gargles his throat. Many of these rules are nowadays neglected, but social estimation can still be gauged by the degree to which the food and water touched by the various castes will be accepted by others. Thus the Commissioner for the Census of 1911 circulated a report on a fivethird division of castes, resting largely on a distinction between those from whom Brāhmans can take water and those from whom they cannot. Water and pakka food, i.e., food prepared with ghee (clarified butter), generally go together, so that a man can take water or pakka food touched by a member of any sub-caste of his own caste, but he can eat aakāla food, i.e., food prepared without ghee, only when prepared by a member of the same endogamous sub-division or sub-caste as that to which he belongs. Most castes will take aakāla food prepared by Brāhmans, and many castes can take pakka food or water which has been touched by other castes; a Brāhman, on the other hand, would drink water carried in a kāla by a low-caste man, if the kāla belonged to the Brāhman, but would refuse to drink from the low-caste man's kāla. Difference of residence also operates as a bar to eating together, as in a recent case of two orderlies belonging to the same sub-caste, both of whom declined to eat even pakka food prepared by the other, because their houses were 60 miles apart. On the Bombay side will, as a rule, not take water from any but other Brāhmans, generally only from the members of the sub-caste to which they belong. As regards the eating of animals, the diet of the Brahmans is more lenient than that of non-Brahmans, and its restrictions on the subject of animal food were therefore attacked in a number of cases. The abstinence has gained ground among the lower castes. The district of Brāhman societies in many places serves as a test of the caste, and the members of the Śāktas sect, who sacrifice certain animals and eat their flesh afterwards, are held in low estimation. It is true that a Śākta cook is sometimes engaged by a family who may feel disposed to eat mutton. The Bengal Rajput, a landholding caste of high standing, eat the flesh of the goat, the deer, the hare, the pigeon, quail, and ortolan. But these animals, if not killed in hunting, must be slaughtered in a particular way by cutting the head off at a single stroke, and the flesh of animals which have died a natural death. The touch of these castes pollutes, and no Brāhman barber or washerman will work for them. Vegetables and sweetsmeats, which form the staple diet of Brāhmans and Brāhmans, are also subject to exceptions. Thus they reject garlic, onions, mushrooms, and other vegetables of a less desirable shape of a head. Turmeric, pepper, cummin, coriander, mustard seeds, and other spices are used, and impart a strong flavour to the preparation. Alcoholic drinks are also prohibited. A respectable Hindu will not touch spirits such as toddy or arrack, or any other intoxicating drink, at least in public. Drunken habits would lead to prompt and severe punishment, and it is generally in privacy only that high-caste natives of India break the law of temperance. The drunken orgies of the Śāktas are confined to a particular set, and to particular days. Water is the ordinary beverage of Hindus; curdled milk diluted with water, butter-milk, and milk are also favourite drinks. Brāhmans will not eat boiled rice, but chewing betel after dinner, according to ancient custom, is believed to be wholesome and is generally practised. Most of these rules are ancient, and may be traced in the sacred books and historical records of the principal religions of India. The prohibition of animal food and the sanctity of animal life are particularly insisted upon in Buddhism and Jainism. Thus king Asoka, who in early life had entered no scruple about the killing of thousands of living creatures on the occasion of a royal banquet, stopped this regular slaughter as he became gradually imbued with the spirit of Buddhist teaching. He ruled that only two peacocks and one deer were to be killed each day, and afterwards prohibited even this limited slaughter; he abolished the royal hunt; and he published (in 243 B.C.) a stringent code of regulations applicable to all classes of the population regarding the slaying of animals for food in his empire. With Jain ascetics, the oath not to hurt is the first of the five great oaths which Brāhmans, on the one hand, and Buddhist ascetics, on the other, are bound to observe. The oath includes not merely the intentional killing or hurting of living beings or plants; it requires also a watchfulness over all functions of the body by which anything which is injurious to life is prevented. The diet of Mann is less severe, and its provisions on the subject of animal food were therefore attacked in
Jain writings. Though not approving generally of animal food, Manu allows a Brähman to eat meat if hallowed by sacred texts and used in sacrificing to the gods or in showing honour to a guest (Manu, v. 311f.). Again, in spite of the general prohibition to eat flesh or fish, certain kinds of fish and birds are declared to be lawful food by the Brähmans (Manu, iv. 90). The worship of the iguana, the rhinoceros, the tortoise, and the hare (Manu, v. 11–18) Animal-sacrifice was a recognized institution in ancient Brähmanism, just as it is with the Sikhs of the present day. Under more recent Brahmánical texts of law, however, the slaughter of animals at a sacrifice or at the reception of guests is forbidden in the present age of the world. In medical works, the Rohita fish (Cyprinus Rohita) is specially recommended to be eaten, as a remedy in various diseases. Of plants and vegetables, garlic, mushrooms, onions, and leeks are forbidden by Manu (v. 19). One of the ancient medical texts preserved in the Bower MS contains a legend, according to which Brahmans are not permitted to eat garlic, onion; it was regarded as a sign of grief; others believe that the intention was to lay the ghost of the dead, flints and other stones from which it is possible to extract fire being said to be efficacious in vanishing the ghost from 'walking.' (JAI vi. 308, quoting Douce, Illustrations of Shakespeare, London, 1807, ii. 224; Arch. Jour. xii. 177; Archaeologia, xliii. 428, xliii. 429.) In this, however, it is to be distinguished that weapons from the other arms and implements laid with the dead to enable them to provide for their wants in the other world. Jevons (Intro. to Hist. of Rel., p. 194) endeavours to establish a gradation in this class of custom. Comparing food offerings to the dead with those of hair and blood, he remarks: 'Originally the dead were supposed to suffer from hunger and thirst as the living do, and to require food—for which they were dependent on the living. Eventually, the funeral feast was interpreted on the analogy of those at which the gods feasted with their worshipers. The food, however, more interesting in the sense that the offerings of blood or hair: it enables us to date ancestor-worship with certainty. It was un until agricultural times that the sacrificial rite became the object of feasts to which the bounty of fellowship were renewed between the god and his worshipers. It could not therefore have been until agricultural times that the ural feast came to be interpreted on the analogy of the sacrificial feast.' This he believes to be corroborated by the fact that ancestor-worship dates from the rise of the family, 'a comparatively late institution in the history of society.' It may be true that Paleolithic man in Europe had no conception of the existence of the spirit after death, and was, therefore, not under the necessity of preparing for its wants in the other world; but even so primitive a race as the Tihumans, who had reached the Paleolithic stage of culture, though there is no evidence that they provided food for the dead, used to place a spear in the grave, 'to fight with when he is asleep' (Ling Roth, Aboriginals of Tasmania, Halifax, 1899, p. 119).

2. Prevalence of the custom. —Practices of this kind can be traced to a remote antiquity.

(1) Ancient Britain, etc. —Thus, pottery in the shape of which is known as 'fowlers' pots' has been found, in association with both burnt and unburnt bodies, in the round and long British barrows and in pre-historic Swedish interments (Windle, The Remains of Prehistoric Ages, London, 1894, p. 150f.; Montelius, Denmarsskunde, Engr. tr. 1888, p. 26; cf. above, vol. i. p. 571f.). Details of articles of this kind found in British interments are described in Brit. Mus. Guide to the Antiquities of the Early Iron Age, 1905, p. 107ff.

(2) Greece. —In the Necus of Homer, when Odysseus visits death-land, the spirits of the dead are too feeble to hold converse with him until they

FOOD FOR THE DEAD. —The custom of providing food for the dead, which appears in all ages and in most parts of the world, is based upon the belief that the departed soul, which, on its departure from the body, is often regarded as a tiny, feeble entity, conscious of the same wants as those which it felt in life, and dependent, at least upon the duration of the periods of life of the survivors. The same belief appears in the provision of clothes, weapons, and even companions, for the spirit in the next world. The last usage is illustrated by the rite of sauf (q.v.), and by the

VOL. VI.—
are refreshed with a draught of blood. He digs a pit (šabqaš) as if a man in length and breadth, and about it poured a drink-offering to all the dead, first with mead and thereafter with wine, and a third time with water; and I sprinkled white mead thereon, and entreated with many prayers the strength-giving hands of the dead. . . . But when I had brought the drink-offerings to the grave and cut their throats over the trench, and lo! the spirit of the dead departed gathered them out from Erebos" (Od. xi. 22 ff.).

Hence arose among the early Greeks the practice of providing the grave with a funnel, down which blood and other drink-offerings might be poured for the refreshment of the spirit (cf. above, vol. i. p. 384*). At Mycenae the round altar, which stood exactly over the fourth grave, was used for sacrifices of animals or human beings; and down its funnel the blood was poured into the grave (Ridgeway, Aegina, pl. xiv.). At the Dipylon cemetery at Athens, the corpse is laid in the grave, which is then covered with wood, and the shaft filled nearly to the top, a small space being left unfilled; in this space the tomb monument, usually a large painted vase, is set. The space round the vase thus served as a sort of trench, communicating by means of the shaft directly with the grave below. Further, many of the vases have a hole in the bottom, to allow the food and drink placed therein to reach the shade below (Pl. iv. 599). At the Dipylon cemetery was placed the grave of the offerings to the dead include oxen, swine, sheep, goats, and rabbits, the last being found only in the poorest graves (JHS xxi. 393). In later times we find a change in Greek sentiment, as is shown by the lines: "in the cold shadows underground the ghost will not be comforted by ointments and garlandslavished on the tomb; the dead man will not weep for the dead man" (I. 6. 8). The custom, however, of consulting the wishes of the departed in the provision made for his wants appears in the Greek Hero-cultus (Fraser, Passages, London, 1886, iv. 24); and the drain as an adjunct to the tomb still survives in the ghost-houses of Tunis (Mom., iii. 57). In the Greek islands the practice of feeding the dead survives to the present day. Cakes (αλεύρια) of wheat adorned with sugar-plums, honey, sesame, and basil are presented to the dead. Sometimes they call these μακάρια, or blessed cakes, cut from an abundance, no doubt; these αλεύρια are put on the tombs on stated days after the decease, with additional lamentations, and remind one forcibly of the ancient feasts for the dead which were otherwise offered on stated days" (JAF iv. 266).

(5) Rome.—The Romans observed the rite of feeding the dead at the dies porcellanei in February, when the family would go in procession to the grave, not only to see that all was well with him who abode there, but to present him with offerings of water, wine, milk, honey, oil, and the bread of the dead. They would touch with the bread, after once more the solemn greeting and farewell (Soleo, remoti partem), to partake of a meal with the dead" (Pioneer, Roman Festivals, London, 1896, p. 301; and see J. E. Harrison, Proleg., Cambridge, 1895, p. 49 ff.).

As among the Greeks, a funeral for libations, connecting the surface of the ground with the grave below, has been observed in Roman graves (Max. Pompeii, Eng. tr., 1899, pp. 451, 457). The placing of food on the bier before cremation is attested by Catullus (lix. 7. vidistia pipere de repro coenaem).

(4) Babylon and Assyria.—The frequent presence of seals in Babylonian interments (unless they were intended as amulets or as a substitute for food in the form of fish) is still unexplained; but instances of deposits of food are common (Jastrow, Rel. of Bab. and Ass., Boston, 1899, p. 592). In such graves the dead man is provided with clay jars and dishes containing food—his favourite wine, dates, fish, fowl, game, or a boar's head, and even stone reproductions of all kinds of provisions which were lasting substitutes for the reality; he was supplied with weapons to protect his food-store (Maspero, Dawn of Civ., London, 1886, p. 688). Vases, spoons, and ornaments are found in Assyrian tombs (Layard, Nineveh and its Remains, London, 1853, i. 15).

(5) Egypt.—In Egypt, Flinders Petrie (Mum., vol. i. 113) describes the evolution of the custom from the earliest times. From the pre-historic age to that of the Vth dynasty a man was laid on the grave, with a pan of food upon it. Afterwards this offering was carved in stone as a table of offerings, to give permanent satisfaction to the soul. By the time of the Xth dynasty the stone table was copied as a pottery tray of offerings. To the tray was next added a shelter, copied from the Bedouin tent; then came a shelf on columns, on which in later times a hut was placed; then followed chambers with wind-openings, roof, courts, and a verandah on the roof. Next we find complete two-storied houses. Finally these are furnished with models of couch, chair, stool, water-jars, and the figure of a woman making bread for the departed. Food and drink were placed for the soul on the table of offerings in the tomb, "for otherwise he might suffer hunger and thirst, or even, so the Egyptians thought, be obliged to feed on his own excreta" (Erman, Life in Ancient Egypt, London, 1894, p. 307). Such offerings were painted on the walls of the tomb, in order to provide the dead with this shadowy food, and the rester-priest was ordered to repeat the meal formally, conjuring each visitor to the tomb, by what he held most sacred—by his children, his office, his king, and by the god of his house—to say "thousands of bread, beer, oxen, and goats," on behalf of the deceased (ib. 308). In the remarkable temple recently excavated at Thebes, on one of the sarcophagi "offerings are being made to the princess, while an attendant dresses her hair and occasionally inserts a hairpin into her coiffure. A priest mists a cow for her, and afterwards brings her the cup, saying: "This is for thee, drink what I give." On another a priest brings a bowl of beer, saying: "Beer for the woman in the grave." (The Temple, London, 1894, p. 463.)

(7) Scythia.—According to Herodotus (iv. 73), when any one dies, his nearest of kin lay him upon a stack of straw and take him round to all his friends in succession; each receives him in turn, and entertains him with a banquet, whereas the dead man is served with a portion of all that is set before the others' (Bacon's Misc. tr.).

(8) China.—In another part of the world, perhaps, has the rite of feeding the dead been so carefully prescribed as in China. The ancient books describe how the mourners observed a rigid fast, till a deathbed was in the house, and the sacrifice of the deceased (de Groot, Rel. Syst. of China, Leyden, 1892, p. 14). The custom of filling the mouth of the corpse with morsels has now well-nigh fallen into disuse at Amoy; but, before taking their usual breakfast, the deceased's wife and children arrange a bowl of cooked rice, and a dish of vegetables, bean-curd, or the like, on a table at the right
FOOD FOR THE DEAD

(11) *Australia and New Zealand.*—The Arunta tribe do not seem to practise this rite; their spirits 'kill and eat all manner of game, but always uncooked, for they are not supposed to have any fires, and not seldom they steal game while it has been wounded, but not killed on the spot, by men' (Spenner-Gillen, p. 516 f.). Some of the S.E. tribes believe that the spirit warms itself at fires left burning in the bush, and eats scraps of food left at such places (Howitt, p. 438). Among the Dieri, if the deceased was a person of influence, food is placed for many days at the grave, and in winter a fire is lighted so that the spirit may warm itself; if the food at the grave is not touched, it is supposed that the ghost is not hungry (ib. 448). The Kukata lay a drinking vessel and food on the stick which is left with the corpse of a woman, in order that she may procure her own food; on the Herbert River food and water are often placed on the grave (ib. 450, 470, 474). In Queensland, tobacco, matches, food, a pipe, and other things are left each night at the grave, and the gift is announced to the spirit (Roth, *Ethnological Studies among the North-West Central Queensland Aborigines*, Brisbane, 1897, p. 155). Among the Maoris of New Zealand, when a person died, food was placed by his side, and some also with him in the grave, as it was supposed the spirit of the deceased fed on the spirit of the food ('Taylor, *The New Zealander*, London, 1886, 1877, p. 230).

(12) *India.*—Some examples of this practice have been given in vol. i. p. 450 f. At the conclusion of a Toda feast, including grains, rice, jaggery, limes, and honey, is placed in the folds of the cloak in which the corpse is wrapped, and in a metal bowl (Rivers, *The Todas*, London, 1906, p. 361, 363, 394). The Khais of Assam hang over the corpse a basket containing pieces of the sacrificed animals. A dish containing cakes, and betel-nut, and a jar of water are placed near the head of the corpse by way of offering refreshment to the spirit of the departed; money is laid near it for the purchase of food on the way; pieces of bread, leaves of bread, the leg of a fowl, and the lower jaws of the animals which have been sacrificed are put inside the cairn before it is closed; similar offerings are made after the removal of the bones to the tribal ossuary (Gurdon, *The Khais*, London, 1907, pp. 123, 135, 137, 141; and cf. Stack, *The Mvirs*, London, 1906, p. 29; Levick, *The Races of S.E. India*, London, 1870, p. 214). The feeding of the dead is inconsistent with the beliefs of orthodox Buddhists, Jains, and Lingayats. But among the degraded Mahayana Buddhists of Tibet, at the noonday meal in the monasteries, 'they serve the cals with a meal consisting of tea, meat, and palm in cakes of wheat or sponge-cakes. Of this the dozen members of the monastery must be left as a gift to the hungry spirits, Hariti and her sons. The fragments for this purpose are carefully collected by the servants and thrown outside the temple buildings, where they are consumed by dogs and birds' (L. A. Waddell, *Buddhism of Tibet*, London, 1886, p. 219).

(13) *America.*—The wild tribes of Central America, when a corpse was embalmed, used to bring food, wine, and the weapons of the dead man, place them in a canoes, and carry them in procession round his house; these things were burnt, the people believing that the flames and smoke ascended to the soul of the dead and was pleasing and acceptable to him (Bancroft, *N.E.,* i. 783). In W. America, among the Californians, money is placed in the mouth of the dead. The New Mexicans place in the grave several kinds of bread, and the utensils and implement with which the dead man earned his living, while on the lips of dead infants milk is dropped from the mother's breast. The Corales of Mexico, if the dead has been a cattle, placed meat upon sticks in the field, lest the spirit might claim the herbs he formerly owned. The Central Americans place food with the dead.
to support them on their long journey. Among
the Mosquitoes, a hut stored with food, drink, and
other articles is erected over the grave; the water
which disappears from the porous jaws is supposed
to have drunk by the spirit, and it is a good
sign if birds eat the food (ib. i. 359, 590, 641, 709,
744). The Carajas of Brazil lay with the corpse an
ample store of beans and other food, which is
renewed from time to time (D. G. Brinton, The

(14) Modern Europe,—The custom prevails even in
England. Some years ago, while a grave was
being dug in Bucklebury churchyard, an old grave
was disturbed, and two bottles of beer were un-
corked.

'...The cloaks and other garments, with the dead man's
furnishings, were so well preserved that, when the
sarcophagi were opened after the lapse of two
centuries, the bones were found clung to them.

3. The funeral feast.—An extension of the prac-
tice of feeding the dead is found in the custom of
the people of the ancient Persia, at which meal the
solidarity of the clan, the kinship enjoy a solemn meal in
the presence of the dead. Jeovin (op. cit. 47) suggests
as one motive for the custom that

'...in the country which is spread with the dead man's
favourite delicacies, to tempt his soul to return, we may have the
origins of the funeral feasts and wakes, which are universal.'

Harland (LP ii. 278 E.) shows reasons to believe that
the

'most archaic form, it barbarity, is that of achatalists, in which
it is known to us, is where the most is nothing less than the
obsequies of the deceased kin group.'

This savage rite, he suggests, sometimes under-
goes a natural transformation into eating with the
death; but wherever a special food, such as beans,
is used, it may be suspected to represent the flesh
of the dead man. This is illustrated by the remark-
able custom, prevailing in Sicily and Perugia,
then, at the festival of All Souls (2nd November),
sweetmeats impressed with images of skulls, bones,
skeletons, souls in Purgatory, and the like, are
eaten. This is called 'eating the dead' (ib. ii. 268 E.). The
feast undergoes a further development when, as with the Hindus, it becomes
periodical; or when, as at the Hallowen rites
performed in various parts of Europe, food is pre-
pared in the house, the doors are thrown open, and
the dead are invited to enter and feast (ib. ii. 312;
cf. also ERE i. 261 f.).

4. Modes by which food is supplied to the dead.
The mode by which food is supplied to the dead
are varied. Sometimes, as among the Lingyates of
S. India, death is anticipated by placing food in
the mouth of the living person (JC xxi. 159).
Others place food in the mouth of the dead, as in
some cases recorded in this article. In Malabar,
when the corpse is laid on the pyre, rice is scattered
over the face and mouth, and pieces of gold are
placed over the nine openings of the body (Logan,
Manual of the District of Malabar, Madras, 1857-59,
1. 129). The Todas drop milk into the mouth of
the dead; the Singulis of Bengal pour spirts on his lips and kill a cock to feed the spirit (Rivers,
op. cit. 343; Risley, TC iii. 303). It is a very
common practice to lay food on the grave, on the
theory that the souls of the dead reside perma-
nently here, the belief in a separate realm of souls
the common practice to lay food on the grave, on the
theory that the souls of the dead reside perma-
nently here, the belief in a separate realm of souls
...The Yoruba of W. Africa, after the funeral feast, carry to the grave the bones of the
fowls and sheep which were sacrificed. 'All
the articles which the deceased had in daily use,
such as his pipe, the mat on which he slept, the
plate or vessel in which he ate, his calabash,
and other things of small value, are carried out
into the bush and burned' (Ellis, Yoruba-speaking
People, 159). Sometimes the food is stored in little huts for the use of the
death. The Bakhs of Uganda believe that
the ghosts of the common folk have no special
abode, but wander about near the kraals; they
have little huts in which food, drink, and clothing are
stored (JAI xxi. 109). The Karenni of
Upper Burma build a small structure on four posts
over the grave, and in this are placed various kinds of
corn (Gazetteer Upper Burma, t. i. 229). It is
the custom of many races to spread sand or dust
near the place where the food for the dead is laid,
and next morning any marks found in it are ex-
amined to ascertain into which animal, bird, insect,
etc., the soul of the deceased has migrated. Some-
times, again, the spirit is supposed to haunt the
house, and here food is provided. The solemn
feast of the Naga of Assam each member of his
sept in perfect silence throws a piece of liver out-
side the house for the wandering ghost (JAI xxvi.
197). Or the offering is made on the head and
where the corpse or bones have been carried. The Khais
of Assam, who dread the attack of spirits, when
bringings the bones of the dead for storage in the
house, lay out grains of rice, castor oil, and
bank notes, and, in the case of a specially malignant
spirit, let a fowl loose in the jungle as an offering
(JAI i. 129). Or, in the belief that the food is
conveyed to the spirit by the agency of water, the
Khyungthna of Burma lay the food aside for
a short time, and then fling it into a river (Burma
Gazetteer, ii. 957). On the same principle the
Kanowit of Borneo use what are called 'soul-boats,'
in which necessaries for the use of the dead are
flowed out to sea, with a strong ebb tide flowing,
meet the spirts, and thus convey them to the
(22) Sometimes the food is carried to the grave, and in some cases if the
sarcophagi were opened after the lapse of two
centuries, the bones were found clung to them.

3 For anything belonging to these terms in their ordinary
sense, see such art. as 'DECREASE,' 'DEVELOPMENT,' 'MIND,'
'IDEALITY.' See also 'WISDOM.'
FORCE

FORCE.—I. Definition.—The term 'force' is, unfortunately, used in many senses: some professedly figurative, some intended to be scientific, but often entirely incorrect. No mistake arises from the common use of phrases such as 'force of mind,' 'force of habit,' 'force of example,' 'economic force,' etc. Nor is there any harm in perpetuating the language which spoke of heat, light, or electricity as 'forces of Nature,' and of their 'correlation.' Such things are so far removed from what is now meant by 'force' in its technical sense that no confusion arises from this kind of figurative speech. But 'force' has sometimes been used, even by those who ought to have known better, for the muscular sense of resistance, and for each of the quantities which physicists call respectively 'energy' and 'momentum.' The word is made to bear each of these senses, as a rule, in one context, by Herbert Spencer ('First Principles,' 1854, p. 432 f.), to the hopeless confusion of his argument. 'Persistence of Force' is an incorrect synonym for 'Conservation of Energy,' but the erroneous identification of 'force' and 'energy' (q.v.) is of long standing, and the confusion is traceable back to Leibnitz (1646-1716).

Apart from figurative application and incorrect usage, the term 'force' has held various significations in the history of science, and has stood for quantities or conceptions of varying degrees of abstraction. Hence the obscurity which attaches to the word. In medieval thought, 'force' was abstracted from 'matter,' and hypostatized as an independent reality. Occult forces were postulated as residing in bodies, and were but a name for latent capacities of various sorts. With the dawn of modern science, however, 'force' began to be reserved to denote the effects of an observed change, such as a change in motion.
The history of the scientific usage may best commence with Newton's (1642-1727) laws of motion. Newton's second law is of a very easy dexterity to the effect of force, which he defines as a power of resisting a power in virtue of which every body persists in its state of rest or of uniform motion in a straight line. This force does not differ from the inertia of the body, so that vis inersa is a 'most significant name for vis inersa.'

Such inherent force, assumed by Newton, is a universal property of matter, essential to its occupation of space; and, inasmuch as inertia is force, there is no such thing, for Newton, as inert or inactive matter. This vis inersa, however, acts only when an external force (vis impressa) is brought into relation with the body in which it resides. The exertion of this vis inersa then becomes vis impressa. Thus Newton's three kinds of force are partly the same thing regarded in different ways. From the conception of vis inersa the metaphysician may set out for his examination and analysis of the nature of matter; while the scientific investigator, who is rather concerned with the observed behaviour of portions of matter, i.e. the mechanical changes of material bodies, has scarcely any need to deal with vis inersa, but takes his start from the concept of vis impressa.

This aspect of force is therefore the one which, since Newton's time, has almost exclusively been adopted by physics.

2. Force as 'vis inersa.'—When we analyze the conception of matter, as used in the most general sense, without reference to its discrete or continuous structure, the rest or motion of its parts, it seems necessary to involve the concept of force. Force, in fact, is the coherence and occupation of space. The absolute hardness of the ultimate particles of matter, assumed by Newton in his Opticks, was increasingly found to be a difficult hypothesis, and the configuration and resistance of material bodies came to be explained solely by 'forces.' Bosovich (1711-87) resolved these atoms into mere masses of force of force, without extension, so necessary is the idea of force to the conception of matter. Thus matter and force imply one another; they cannot be looked upon as separate entities capable of independent existence. Force is simply the activity of matter, or matter conceived as 'doing'; it is the 'efficacy' which constitutes the 'course' of Nature. Like feeling, 'force' cannot be defined; it is similarly an ultimate and unanalyzable element. Considered in itself, it is but an abstraction. Or again, as with matter, we can describe its specific modes, but not itself. From this point of view, force cannot be looked upon as the 'cause of motion,' in the sense of causality to motion. Motion is a state or accident of matter—a less abstract conception than force (vis inersa); and there is nothing to suggest or to authorize the assumption that primarily matter existed in the state of rest, and that its motion was produced after its own genesis.

Newton conceived all 'action' of matter to be mechanical, i.e. to be contact-action, of the nature of paling or pushing. He had a horror of the notion of what is called 'action at a distance,' which seemed to some of his followers to be involved in his theory of gravitation. And since his day the idea of action at a distance has been scouted by physicists as a heresy. This kind of action would, indeed, be difficult for us to 'get in'; but may be asked whether discontinuity or absence of contact must not occur, in infinitesimal degree, even if we take the material world to consist of particles or elements immersed in an ether, as is usually assumed. In that case the differences between contact-action and action at a distance would be only in degree. Incongruity with pre-conceived notions is not necessarily a proof of impossibility; moreover, the preassumption is in this case precisely the accidental that our sense of 'touch' happens to be the most highly developed, and impact the most familiar form of action.

3. Force as 'vis impressa.'—Newton's three laws of motion are as follows:
1. Every body persists in its state of rest or of uniform motion in a straight line, unless it is compelled by impressed forces to change that state.
2. Change of motion (i.e. momentum, here) is proportional to the impressed force, and takes place in the direction in which the force is impressed.
3. Action and reaction are equal and opposite.

Impressed force, or force which is not merely the tendency to motion, but which 'acts,' is derived from these laws always to involve more than one body or portion of matter. Force, then, in this aspect (i.e. as impressed or external) is always a physical action, a stress. From the first law is deduced the definition of force which has till lately been universally adopted in the text-books of physics: 'force is that which produces, or tends to produce, motion, or change of motion'—change, i.e., either in direction or in velocity. Of course, this definition implies that which produces a change of motion, a physical science, however, knows nothing of efficient causes (see CAUSE, CAUSALITY); and, showing itself anxious to disentangle itself from metaphysical implications, has recently sought to remove such terms as force from its vocabulary. So the idea of impressed force is being abandoned as anthropomorphism. The modern meaning of force is largely to have been determined by the following passage in Kirchhoff's Forts. ub. math. Physik., Leipzig, 1870, § Vorrede):

'It is usual to define mechanism as the science of force, and forces as the causes which produce, or tend to produce, motion. This definition has the advantage of the greatest use in the development of mechanism, and still is so to students of the science, if it is explained by examples of forces taken from the experience of ordinary life. But there attaches to it the obscurity from which the concept of cause and tendency cannot be freed. . . . On these grounds I propose as the definition of mechanism that of describing the motions which take place in Nature, and the description of them in the simplest and simplest way. I mean, therefore, that we should concern ourselves only with stating what the phenomena which take place are, not with assigning their cause.'

This advice has been followed by many leading physicists. The tendency is rather a return to the intentions of earlier science—that of Copernicus, Galileo, Descartes, and Newton—than a new step. It is, however, likely to prove rich in consequences, in that it involves the confession, on behalf of science, that it has nothing to do with ultimate explanation, but that its rôle is mere description in terms of 'conceptual shorthand.' Forces from 'naturalism' the usurped right to speak in the name of science.

The definition of force which thus seems destined to become obsolete in science is, accordingly, being replaced by others, which use the term merely as denoting a relation, a mathematical quantity. Newton's second law furnishes a quantitative definition of force, or a method of measuring the relative magnitude of forces. The law may be expressed by the equation \( P = mf \), where \( P \) is the force, \( m \) the 'mass' of the body acted upon, and \( f \) the acceleration produced in it. For \( f \) we may substitute \( a \), where \( a \) = velocity acquired, in the interval of time \( t \), by a body moving with a uniform acceleration of \( f \) units. Hence our equation becomes \( P = ma \), or force is represented as 'rate of change of momentum.' Thus force comes exclusively to be identified with acceleration, and this is all that empirical science is entitled to denote by the term. For experience only yields us changes
in the motion of bodies; it does not bring us face
to face with 'forces' in the older sense. At
the same time, science, in thus becoming purely
dynamical, abstract, and descriptive, only ignores
causation and adhesion; it leaves 'forces' in the
metaphysical sense, to metaphysics, which is con-
cerned to see in them the impermissible relations
of dependence between events which uniformly for-come together. Matter and the law of

Marx, Law of Forgeries, London, 1892;

FORGETFULNESS. — 1. Nature.—'A good
memory,' says Roger Ascham (The Scholemaster,
bk. 1), 'is well known by three properties: that is
if it be quick in receiving, and slow in losing
redis in delivering forth again'—in other words,
it depends on the clearness and distinctness of the
original impression, on its power of retention, and
on its power of reproduction or recollection.
These properties are clearly conditioned by the state of the mind, and of the body as well, at the moment when the impression is made, as also by the frequency of repetition, and, further, by the working of association through similarity and contiguity. Great, however, as the tenacity of memory may be—in some people, "even to a miracle"—the best memories forget; there is a limit to the retentive and reproductive powers of the mind. This arises partly from the enormous mass of materials that the matured mind has to deal with, and partly also from the fact that, in memory, we never recollect the whole of a past experience, but only selected portions of it (only what we have interest in and what we have use for); the remaining parts, through want of being occasionally brought back, drop out of our power of recall. Hence Hobbes, in a very felicitous phrase, designated imagination, and, therefore, memory, "the decaying senses"; and Locke has a touching passage on the decay of memory:

"The memory of some men, it is true, is very tenacious, even to a miracle. But yet there seems to be a constant decay in all our ideas, even of those which are struck deepest, and in minds the most retentive; so that if they be not sometimes renewed, by repeated exercises of the senses, or reflection on those kinds of ideas which first occasioned them, the print wears out, and at last there remains nothing to be seen. Thus the ideas, as well as children, of our youth, often before us; and our minds are as liable to be those tombs to which we are approaching; where, though the bronze and marble remain, yet the inscription is effaced by time, and the imagery molested away. The pictures drawn in our minds are laid in fading colours; and, absolutely, if not so easily, disappear and die away." (Essay Concerning Human Understanding, bk. ii. ch. x. 6.)

Whether, however, any impression once received ever actually vanishes and disappears—so as not to be within the power of recall under any circumstances whatever—is a doubtful point. Without pushing to the extreme the testimony of people who have been nearly drowned that, in this experience, the whole of their past lives came vividly before them in an instant, it may yet be questioned whether, under certain conceivable circumstances, a thing once impressed on the mind, is not recallable to the mind. But forgetfulness, in the practical if not in the ideal theoretical sense, is a fact; and what we have now to do is to look at the causes and the law of it.

2. Causes.—(1) One cause is _faintness in the original impression._ This may arise from lack of intensity in the impressing object, or from lack of vigour in the system at the moment when the impression was made. In either case, the intellectual discrimination is poor, and interest insufficient for effective retention has not been created, and so there has been no motive to repeat or reproduce the primary experience. But, even when interest has been aroused and a certain amount of repetition has occurred, the impression may be transient. A case in point is what is known in education as "cramping." Getting up knowledge for an occasion is quite different from studying from the love of knowledge. Only the latter gives what abides: remembering for a definite, temporary purpose naturally ceases when the purpose has been served.

(2) Another cause is _enfeeblement or injury of the bodily organism—as seen in old age, or in disease of the brain._ The case of old age is significant, for it follows here a definite order. As old age creeps on and the recent impressions are forgotten first; earlier impressions remain. The meaning of this is that recent impressions made in old age, even though vivid at the moment, have not been registered and conserved by repetition, and so are lacking in points of association, whereas the impressions of earlier years have become stable and have formed many points of attachment with other parts of the memory series. Moreover, the earlier impressions were made when nutrition and circulation of the blood were vigorous, when the physical system was strong and active, whereas the impressions made in old age appeal to enfeebled nutrition and circulation and to a decaying physical system. In this way, we see that old age, pipe puffing, and similar recent events, but retain a memory, often wonderfully full and exact, of what happened in their childhood and youth. What first seized sticks, as Berkeley said; the vigour of the organism secures that, in part, and, for the remainder, the result is produced by association and repetition; and necessarily, when the more recent goes from the memory, the earlier remains in full possession.

Still more, earlier experiences are associated with the pleasure that old age has in dwelling in the past, seeing that length of time has not so much that we recollection of bygone days and thrown a halo of glory round them; for it is a notable fact that the mind is not retentive of pain, and so is disinclined to revive painful incidents or experiences, but clings to the thought of pleasure, and its natural tendency is to idealize the past—the Golden Age seems ever behind us. It has further to be observed that, when loss of memory in aged persons begins, it shows itself usually in a tendency to forget people's names. This is in accordance with the nature and working of contiguous ideas, and this point is of importance. The identity of the people themselves is quite well recognized; only their names are forgotten. This means that, although we do associate a person with his name during the time we have known him, nevertheless what specially interests us about him, and what, therefore, impresses us most, is not his name but himself as a concrete individual, living somewhere in space under definite circumstances, pursuing a particular calling, and making a certain mark in life. The image of him, consequently, remains when his name has gone from us.

(3) A peculiar case of forgetfulness arises from the power of a direct experience of activity to obliterate or annihilate a previously formed idea of the actuality. This is the case in which we try to realize from the description given by another the idea of a place that we have never ourselves visited. Our mental picture is sure to be in many respects erroneous, however full and however powerful the description may be. We naturally picture the unvisited place on the basis of some other place or places well known to us, which we suppose to be similar, and the analogy will in many points deceive us. But suppose, now, that we actually visit the place which we have as yet only imagined. The result is that, when we come to have experience of the actuality, the vividness of the impression (its warmth and fullness) lays hold upon us, and so to exclude all the erroneous or partially erroneous parts of the previously formed picture from the mind—the reality and the previous idea will not combine; until, after a time, it becomes altogether impossible for us to call up the original erroneous picture, or possible to call it up only in the vaguest fashion. The reasons are obvious. Partly, we lose interest in bringing back erroneous ideas, after we have obtained accurate impressions of the reality; and, partly, these ideas drop away, because the reality refuses to combine with them. This last fact explains to us how it is that we so readily, as a rule, forget our dreams. However vivid a dream may be, it has not the power upon us of waking experience; and so, when we awake, and are brought under the influence of the reality, our dream-images necessarily fly. They cannot, in the first place, compete with the vivid insistence of reality; but, in the second place, they do not fit into the experience and have for our associations—they are not on the line of our continuous waking existence.

(4) Lastly, forgetfulness may be due to excite-
FORGIVENESS (Hebrew).—I. DIVINE.—In the view of all the Hebrew writers the God of Israel entered into personal relations with His people. If for the first time to speak in a public assembly, has felt this; and, in a less marked case, any one may, through no fault of his own, suddenly or abruptly, be unable to make an immediate reply. Although the question may be one that he could quite well answer in a calm mood, the abruptness of the inquiry has disturbed his equilibrium, and the answer has fled. No better example of the power of excitement to produce forgetfulness could be adduced than the case of Cæsar, and his futile efforts through excitement to recover the mystic and all-potent word 'Open Sesame,' in Ali Baba and the Forty Thieves. The workings of the human mind were especially seen in the days of Harun al-Rashid as they are to-day.

3. LAW.—The great law of forgetfulness is that, under normal circumstances, we forget a thing only by overcoming the mind with something else, i.e. by losing interest in it through acquiring interest in something else. We cannot simply will to forget and the thing is done. If we push something out of the mind, we must fill the vacancy somehow. Extrusive power belongs to a new interest. This may be exemplified by the injunction of the law, 'No hope in the house, no house in it, forget and forgive.' This, on the face of it, seems an injunction to do what is impossible; for, when an injury, deliberate and designed, is inflicted on us, it is only human nature (as we phrase it) to resent it, and, consequently, to harbour ill will towards the perpetrator of the wrong. But, though we cannot forget an injury when the perpetrator is present, we may forget to think of it again and to identify oneself with him and with his penitent attitude. A new and absorbing interest now takes possession of us, and, the more we identify ourselves with it, the less we are disposed to remember his offence; both he and we have entered on a new course together, and the attainment of the new end occupies our attention, so it fills our minds, and forgetfulness naturally ensues when there is no motive and no purpose in life to keep up the memory. In this, every verse of the Psalms, and every saying of Scripture when it speaks of God as forgiving and forgetting men's sins: 'I will forgive their iniquity, and their sin I will remember no more,' (Jer 31:24; cf. He 10:17). Without forgiveness, that could not be; but with forgiveness, if the analogy of human procedure is to hold with the Deity at all, it is inevitable.

Cf. also arts. DEVELOPMENT (Mental) and MEMORY.

WILLIAM L. DAVIDSON.
FORGIVENESS (Hebrew)

now have in view is within the nation itself. Jahweh takes the client, the widow, and the fatherless—of those who have no other protector. Sin against a brother man now becomes sin against Jahweh. The cry of the oppressed comes into His ears: 'He has cheated me, I will surely hear his cry, and my anger shall burn, and I will slay you with the sword, so that your wives shall be widows and your children shall be orphans.' (Ex 22:26.) The question of forgiveness became more complicated as this class of sins occupied the thoughts of reflecting men.

In the earlier prophets—these men were fully convinced that the nation as a whole was the unit with which God dealt. They were at the same time thoroughly persuaded that the oppression of the poor by the rich had roused the wrath of their Protector. The conclusion was easy to draw—the nation must be punished. Jahweh is a God of justice; His love of His people could not induce Him to spare the guilty. The very fact that He had been so gracious to them in the past was a reason why He should hold them to a stricter account now. The confidence of the people at large, that He will not permanently estrange Himself from His own, is seen by these men to be only one more sign of the incurable leprous and blinding of the nation. It is by no means to be wondered at that they have little to say of forgiveness. Their emphasis is laid on the certainty of punishment. The gentleness of their point of view is obvious. The mass of the people thought that forgiveness might be purchased by sacrifices or by professions of repentance. The prophets declare that sacrifice has no value, and compared the repentance to the morning mist which early vanishes away (Hos 6:6).

Abstractly there always existed a possibility of forgiveness. Pardoning them was not the end of punishment, but only a means to that end. The preaching of the prophets at all. Some slight hope that the doom might yet be turned away must have animated them. And in fact they declare that, if the people turn to Jahweh, He will turn to them. 'Let justice roll on as waters, and righteousness as a mighty stream,' says Amos (5:24). The implication is that in that case there will again receive them. Similar statements by Hosea, Micah, and Isaiah show that they all held the conviction of Jahweh's willingness to forgive. No other course corresponds with the character of the people, that of ceasing to do evil and learning to do well (Is 43:8). But the sadness of the situation arose from the fact that Israel had sinned away the day of grace. Twice, as Amos sees in vision, Jahweh of His mercy has good pleasure has turned away the impending calamity. This cannot be expected to go on for ever. This third time the plumb-line is set to the wall, and further repentence is not to be expected. Hosea is equally severe, though he has a more adequate idea of the tenderness of Jahweh. In spite of the yearning which cries 'How can I give thee up?' He will not meet the recurrant people with the fury of a bear robbed of her whelps.

In Isaiah. The impression that Isaiah is distinctly a prophet of forgiveness cannot be verified from his genuine prophecies. The words usually interpreted in this sense should be rendered. 'Though your sins be as scarlet, let them become white as snow; though they be red like crimson, let them become like wool' (Is 1:18). They are an exhortation to the people to amend their ways and to be taken up by the thought that the sins of the fathers have been upon the children and that there was no hope. Their judgment on the past is sufficiently evident in the editorial passages of the books of Kings. Although, for instance, Josiah had done right with all his heart, so that he surpassed all the kings who had preceded him, 'yet Jahweh turned not from the

implies the abstract possibility of forgiveness is intended only as a threat. 'If you shall not be expiated for you till you die' (25:4).
The very purpose of the prophet, according to the prophet, is to harden the people in their evil courses and to increase their sin so that they cannot see their true interest (8:6). The prophet himself, indeed, is purified for his work by a special act of Divine grace (8:7). This is the moral which proves the rule; one who is called to Jahweh's work must be made fit for that work. The doctrine of the remnant, which some find to be Isaiah's leading thought, does not imply forgiveness of the guilty but their punishment; the remnant which survives is made up of the righteous (8:6; 9:6; cf. Mic 2:11). In Jeremiah. —Of Jeremiah we may say that the pessimism grows more intense as the catastrophe approaches. Like the others, he believes that Jahweh is ready to receive those who do well, but he knows the sin of Judah to be too deeply engraven to be obliterated. When a nation has done evil, and Jahweh determines to destroy, 'if that nation repents of its evil then I will repent of the evil which I had determined to do to it' (19). One of the prophet's messages is motivated by the possibility of repentance and forgiveness: 'Perchance they will listen and turn from their evil way, and then I will repent of the evil that I have determined to do to them because of their evil deeds' (30:17). The gentleness of their point of view is obvious. The mass of the people thought that forgiveness might be purchased by sacrifices or by professions of repentance. The prophets declare that sacrifice has no value, and compared the repentance to the morning mist which early vanishes away (Hos 6:6).

5. In Deuteronomy. —The Book of Deuteronomy seeks to enforce the ideas of the prophets and at the same time to make them practical. To this end it adopts a certain measure of priestly and legal tradition. Its conception of sin is that of the prophetic party in general, and on the subject of forgiveness it marks no distinct advance. In its severer moods it tolerate no compromise with evil, and carries out to its logical conclusion the idea of the God who is stern and severe to the wrongdoer, but rich in mercy and ready to forgive. In its milder moods it tolerates no sinner without a sense of guilt, and the existence of a renounceable sin that is punishable by death, and the existence of a repentant sinner, and a death penalty.

6. During the Exile. —In the fall of Jerusalem brought into cruel relief the threats of the prophets and of Deuteronomy, and made the problem of forgiveness acute. The exiles were weighed down by the thought of the sins of the fathers, and the remembrance of the sins of the fathers were upon the children and there was no hope. Their judgment on the past is sufficiently evident in the editorial passages of the books of Kings. Although, for instance, Josiah had done right with all his heart, so that he surpassed all the kings who had preceded him, 'yet Jahweh turned not from the
FORGIVENESS (Hebrew) 75

heat with which his anger burned against Judah on account of all the provocations with which they provoked him (2 K 9:22). At the same time, it would be too much to say that the past gave absolutely no ground for hope. There were many instances in the history which showed Jahweh to be willing to hear and help His people. The prayer of Solomon at the dedication of the Temple was now made to express the longing of the people that the God of their fathers would hear and forgiving those who cried to Him from the places whither they had been carried by their enemies.

7. In Ezekiel.—It was the work of Ezekiel to combat the lethargy caused by the sense of rejection. This prophet, like the older ones, was fully of the opinion that Judah's sin was the cause of her calamity, and his specifications are in substance the same as theirs. Oppression of the client, the widow, and the orphan, bloodshed, adultery, the taking of bribes—these are the things with which the wicked Jerusalem is reproached. But Ezekiel regards these things from the priestly point of view. They are sins to be sure, violation of the righteous will of Jahweh, but they are also repugnant to His holiness. It must be borne in mind that the exiles regarded themselves as being of distinction between sacred and profane. Jahweh was separate from common things, and what approached His holiness must be separated from the sphere of common things. Whatever had been in contact with another divinity was abhorrent to Him. To come into His presence with the contagion of uncleanness was to oppose His wrath. It was because the sins of Judah had made her ritually unclean for the presence of her God that He had deserted His Temple. Such was Ezekiel's thought.

To individual sins Ezekiel held a theory of retribution more rigorous than we find anywhere else in the OT. To counteract the despair of the people, who felt that they were weighed down by the load of accumulated guilt, he was obliged to emphasize individual responsibility. The sinner suffers strictly for his own sins—not the son for the father, or the father for the son. When a man turns from his evil way, then he will be received and dealt with according to his new course of life; and when the righteous man forsakes the good way, he will be dealt with as a sinner (ch. 18).

The difficulty of adjusting the facts to so mechanical a theory of the Divine justice must be obvious. The exiles of themselves seem to have realized something of this, but his main interest was elsewhere. After the fall of Jerusalem it was his task to show how the nation as a whole might be revived. This he did on the ground of the priestly ideals already considered. For the encouraging thing about the difference between sacred and profane was that Jahweh graciously provided a way in which He might be approached. There were rites of purification which fitted a man for the Presence. These rites were matters of priestly tradition, and it is probable that Ezekiel took them simply from tradition without reflecting on their rational basis. Of their efficacy he had no doubt, and this efficacy was of God's free grace. Now it was certain that the nation was to be restored. This followed from the power of Jahweh. It was not possible to suppose that He would rest under the reproach of the Gentiles, who saw Him delivering over His own people to destruction, and who scoffed at His weakness. If the nation was to be restored, it would be by an act of God's free grace, purifying her from the uncleanliness which rested upon her.

1 K K. For the theory of the Deuteronomistic editor of the Book of Judges, see Jg 18:21-19:10ff.

1. This is the programme for the good time coming; Jahweh will restore His people and will make them fit for His service. The Temple will be partly external and Levitical. The most elaborate sanctions will be taken not to offend the exclusiveness of the sanctuary. The Temple, its surroundings, will be all that the most rigid ritualist can desire. But along with this there will be an internal change in the people themselves; they will have a mind to obey the statutes of Jahweh, and that these statutes are etched in their nature we have already seen. Forgiveness for past offences is to be granted, but the main thing is not forgiveness but regeneration. Yet the taking back of the adulteress, the renewal of the covenant with her, and the cleansing of her from all she has done imply a forgiving mind on the part of her God (Ezk 16th, where the RV introduces the word 'forgive' for 'kiper').

2. In the post-exilic prophets.—There can be no doubt that from Ezekiel's time onwards two tendencies manifested themselves in Judaism. On one side, the free grace of God was looked for to forgive past offences; on the other, the utmost care was taken to secure ritual purity. The description of the wrath of God expressed, for example, in the Book of Lamentations drove men to pray for forgiveness without the intervention of priest or altar. The post-exilic prophets encourage the people with specific promises of forgiveness: 'Return unto me, and I will return unto you, saith Jahweh' (Zec 1:3, Mal 3:6). 'As I determined to do you evil when your fathers provoked me to anger, so now have I determined to do you good' (Zec 8:11). Intervened in the Book of Jeremiah, as we now read it, are several passages which represent this post-exilic view and give specific promises of forgiveness. A celebrated example is the promise of the new covenant which ends thus: 'For I will forgive their guilt, and their sins will I remember no more' (Ezk 31:34). Even more striking is the following: 'In that time the guilt of Israel shall be sought, but it no longer exists, and the sins of Judah, but they shall not be found, for I will forgive those whom I preserve.'

But the most delightful and consistent exponent of the forgiving love of God is the great prophet whose words are preserved in the second half of the Book of Isaiah. The words of comfort with which he begins his preaching are accompanied by the assurance that Zion has been forgiven, that she has received the full measure of punishment, and that restoration is at hand (40:2). The gloving promises that follow are based upon the firm conviction of the love of Jahweh for His own: 'Fear not, for I have redeemed thee; I have called thee by name; mine thou art.... Because thou art precious in mine eyes, art honoured and I love thee, I will give mankind instead of thee, and nations for thy life' (43:14). The sorrowful experiences of the past could not be ignored, but they were only a momentary ebbation of wrath and would be forgotten in the infinite kindness that is to follow. Zion, though now desolated and afflicted, is assured of the affection of her Husband who keeps her walls ever before Him: 'I am the one who comforteth thee.' The promise of pardon (43:25; 44:4) is not this love a national matter alone. The individual has part in it; even the sinner may count on a new start and will not be wicked forsoaks his way and the unrighteous man.

1 Jer 51:10-14, 60:3-6. A similar promise is found in Tob 15. The exile or post-exilic origin of all these passages needs no demonstration.
his thoughts; let him turn to Jahweh that he may have mercy upon him, and to our God for he will abundantly pardon (69?). It is unnecessary to multiply quotations, for this part of the OT is familiar to every Bible reader.

9. In the Priestly Code.—The ritual ideas of Jahweh were taken from the priestly compilers, whose work is now embodied in the middle books of the Pentateuch. The tradition is here collected and recorded with the idea of avoiding anything that could offend the sacred service, or, if the contagion could not be avoided, with the purpose of purging it away as soon and as effectively as possible. So far as sin blemishes under the head of ritual defilement, it may be removed by these rites. There is a sin, indeed, that cannot be so removed. Whoever breaks the commandments of God with full knowledge and with deliberate purpose must be cut off from the congregation (Nu 15:31). But for all other offences there is purification. Certain classes of sacrifices called 'sin-offerings' and 'guilt-offerings' play a conspicuous part in the ritual, but the cleansing efficacy is ascribed as well to other sacrifices, and even to unbloody offerings. How far the removal of such contamination as was treated in this way was forgiveness, in the sense in which we use the word, is extremely difficult to make out, partly because the authors of these directions believed in the efficacy of the traditional rites, and did not concern themselves to explain them, partly because ideas of expiation were imported into the rites from non-Jewish sources. The theory doubtless was that by these rites the impurity was removed, call it forgiveness or call it purgation. See, further, Expiation and Atonement (Hebrew).

In the Book of Psalms the experiences of believing Israelites in times of suffering and depression. Their temptations to aspire to temporal misfortunes, sickness, or misfortune, are naturally the occasion of complaint and supplication (Ps 10:1-22). It is only natural that they should cry out in pain at his turning his face from them. Their settled conviction is that their sins have brought the affliction, though they are often unconscious of the sinful motive. Yet in their perplexity they hold fast to the faith that God is merciful and loving. In many cases they are sure of forgiveness, and they are content to endure what He has sent, if only they may have the final revelation of His face. A well-known Psalm recounts the experience of one who had experienced the visitation of God in the past. Where the history of the nation is reviewed, it is to show the forgiving love and patience of God in the past. And, where the authors prostrate themselves before Him in prayer, the most frequent petition is for forgiveness. It is clear that they do not think of any ritual requirement on which forgiveness is conditioned. On the contrary, they take pains to assure us that God does not ask sacrifices. His requirements are met by repentance and humility.

11. With the Book of Psalms we reach the highest development of OT teaching on this subject.

The only thing to add is the declaration of the Book of Job: the Jahweh forgives even the heathen when they cry to Him. The Book of Joel implies, rather than asserts, that Israel will be forgiven in the Messianic time, but for the Gentiles it was only judgment of God. The Wisdom literature occupies itself with other problems.
to have forgiven his sister, for he consents to intercede for her. Aaron's request is: 'O my lord, lay not upon us this sin in which we have done foolishly' (Nu 12:24).

The life of David affords some examples that should be considered here. Two instances are recorded in which he has his enemy in his power and spares him (1 S 24 and 28). Saul's words imply that the generosity David shows without parallel to David, however, reveals that he was not moved altogether by generosity. He would not lay his hand on Jeshal (2 S 26:3-5). To say a consecrated person was sacrilege. Even the mutilation of the king's robe is dangerously near that crime, as we see from David's self-reproach (24:4). There seems to have been a mixture of motives in this case. In the case of Naboth, however, where David forgoes the vengeance which he had sworn to take, no such mixture occurs. Abigail takes Naboth's guilt upon herself and prays David to forgive it. 'Take away the transgression of thy maid' (1 S 25:21). The generous gift she has brought reduces her petition, and David 'accept her face' (v.22). The sequel intimates that his conscience had not been clear from the start, for, after all, Naboth was a fellow-Israelite (cf. v.25).

Jonathan is interesting in that the concept of fairness is allowed by a temporary reconciliation on the part of Saul, but nothing is said of forgiveness of any real or fancied wrong (1 S 18:1). The idea of Meleag's forgiveness towards Absalom is mentioned in the Decalogue, or in Job's list of virtues (Job 31), or in the ethical Psalms (Ps 46, 55, and 101). Only one of the commands of the Priestly Code seems to have it in mind. Here we read:

"Thou shalt not hate thy brother in thine heart; thou shalt surely rebuke thy neighbour, and not bear sin because of him: thou shalt take no vengeance, nor thou bear a grudge against the children of thy people; but thou shalt love thy neighbour as thyself: I am Jahweh' (Le 19:17).

The duty here enjoined is to be exercised towards the fellow-Israelite; but later in the same chapter (v.34), we read:

"And when a client sejourns in your land, you shall not oppress him; but you shall deal honestly with him; you shall love him as yourself, for you were clients in the land of Egypt: I am Jahweh your God.'

This passage recognizes the client (the proselyte), we may in fact say as having equal rights with the native. The AV error in this and other passages by translating the word (pfr) 'stranger,'

Whatever duty of forgiveness is implied in such passages has reference only to those foreigner who have come into definite relations of clientage with the community. Some passages in the Book of Proverbs have a more definite bearing on our subject than any yet considered. The desirability of forgiveness was certainly in the mind of him who wrote: 'A brother offended is harder to be won than a strong city' (Pr 18:19) and who also said: 'The discretion of a man makes him slow to anger, and it is his glory to pass over a transgression' (19:11). In the same book we find the well-known passage: 'If thine enemy hunger, feed him; (25:22); and an exhortation not to rejoice when our enemy falls' (24:17). Unfortunately the somewhat cold morality of this book leaves us in doubt whether genuine forgiveness is in the mind of the wise man, or whether he is taking the position that a slight is beneath the notion of a gentleman. The general sentiment is perhaps expressed by a late writer who thinks that only by the judgments of God will the wicked learn anything, and that leniency will only confirm them in their evil ways (Is 26:12).

In the new age, when the wolf shall dwell with the lamb (Is 11:6), there will, of course, be complete harmony among members of the kingdom; and
wholly may remove an evil affecting the race, but how the individual when becoming a Christian gets rid of the incubus of his sins; and then how, after becoming a Christian, he can annul the sins which still call to him.

In the NT the words used for 'forgiveness' are analogous to the words used in the OT, and come to it through the LXX. The common NT word is 

φόβος, which as noun or verb is used 61 times, of which 46 are in the Synoptic Gospels (18 in Luke), 2 in 1 John (1:9 and 2:1), 1 in James (5:20), 6 in Acts (2:38; gys 1:3; 2:38; 5:38, 2 in 1 Cor. 2:20), 1 in Hebrews (10:17), 1 in Ephesians (1:7), 1 in Colossians (1:14), and 2 in Hebrews (10:18). In RV the Greek word is rendered indifferently 'forgiveness' (60 times) and 'remission' (11 times). What is said to be forgiven is 'sins,' 'debts,' 'iniquities,' or 'trespasses' —a variety which reflects the richness of the Hebrew expressions for wrong-doing.

In the Epp. another word, επικατάληψις, occurs 11 times (2 Co 5:10 and 12:13; Eph 5:30; Col 2:13 23; in Luke twice (7:47). Luke uses also δικαίωσις, twice in 20:23. Also επαμείνειν, 'to cover,' is used in Ro 4:6; Ja 5:13; 1 P 4:14; and ευλογεῖν, 'praising,' (like atonement) in Ro 8:35. In the Apocalypse the idea of forgiveness is expressed as a 'cleansing or purification by the blood' (4:14 etc.).

Another term which bulks largely in the NT, especially in Romans, Galatians, and Hebrews, has been referred to already, 'justification,' a word which always means 'being declared righteous.' This justification is sometimes treated as the genus, of which forgiveness is a species, or the two are sometimes identified (as by Luther), in accordance with the facts to say that forgiveness (like atonement) is the condition precedent to justification, or that a man is first forgiven, i.e. made righteous through the imputation of his sins, and then declared to be in a normal relation to God.

But a mere enumeration of the terms used, or of their filiation, is of little service in determining the specific difference between the forgiveness offered and received in Christ and that established elsewhere. It is hardly possible to express such a religious experience except in forensic, or commercial, or other terms of daily life. But nowhere does the maxim 'can do facint idem, non est idem' apply more truly, of if by these terms we interpret such terms by their whole context of Christian experience, refusing to limit them by their etymological current significance, before we can feel sure that we have seized their vital values.

Of critical importance in this context are the Parables of the Great Debito and of the Prodigal Son, especially the latter. In the former (Mt 18:23) the implicit is that man's normal relation to man is analogous to man's normal relation to God, and that, after any disturbance of that relation, the mode of restoration is the same. Any difference there may be is quantitative rather than qualitative—the debt is a debt in both cases, though one may amount to ten thousand talents and the other to a hundred pence. This parity of relationship, moreover, assumes a community of nature, even the same community being capable of a difference in degree, or authority, or power. In other words, it is made clear out of the ground of condemnation of the unmerciful servant that the evil of unforgiveness is to be found in the fact that its object is a brother (Mt 18:24), and, conversely, that, because God is our Father, whose love for His own is inconceivable, therefore

1 Aquinas, of course, regarding justification as 'a mode of motion from one state to another contrary state: defines it as 'remission of sins accomplished by acquisition of sanctification' (Summa, i. ii. qu. cii. 1). cf. Harnack, Hist. of Dogma, Eng, B., 1894-9, vi. 389-392.

1

FORGIVENESS (NT and Christian).—I. DIVINE.

In the NT—The difference between forgiveness as the subject of Christian and ethnic religion, on the one hand, and of NT and Christian, on the other, is not so much a difference of terminology, or of accent, or of emotional intensity, or of its end, as of ethical and spiritual purity. In all alike the same or similar formulas or ceremonial acts may be used; and the same end—that of the establishment or restoration of union with God—may be aimed at, and yet the underlying conception of sin and holiness, and therefore of the idea of forgiveness, may differ widely, while at the same time the difference may be felt rather than stated.

The difference in the mode in which sin is removed in its cause, its guilt, and its consequences has been conducted on the Christian ground under the same name of forgiveness but of redemption, reconciliation or justification. The reason for this procedure is that theologians have been more concerned with sin than with sins, with discovering and establishing, on both Scriptural and empirical grounds, a theory of the process by which God and mankind may come to be at one, rather than with showing how the individual as an individual may find grace with God.

Of the words referred to, 'redemption' or 'salvation' has the widest scope and embraces the whole benefit which man receives through Christ; 'reconciliation' or 'atonement' seeks to make clear how one special quality of sin in general, via guilt, is abolished; while 'justification,' so far as it differs from the others, may be said to be the formal principle of the position of the man who has been redeemed, or whose guilt has been blotted out. We are concerned here, therefore, not with the whole community being capable of a difference in degree, or authority, or power.

In other words, it is made clear out of the ground of condemnation of the unmerciful servant that the evil of unforgiveness is to be found in the fact that its object is a brother (Mt 18:24), and, conversely, that, because God is our Father, whose love for His own is inconceivable, therefore
He forgives us fully and freely on the ground that we are made partakers of the Divine nature. Like a father has love for his children, so has Jehovah love for them that fear Him (Ps 103:12).

This is the basis of the relationship between God and mankind. God's love for us is expressed through Jesus Christ, who was the manifestation of the Father's love to the world.

In the same parable, however, it makes clear that this effective recognition of this vital relationship must be found on the part of the offender before he can be forgiven. For the very reason why the unmerited servant was handed over to the tormentors was that he had in act broken down the harmonious relationship of God to man and man to God. Given a servant to an evil master in his child is regulative of man's relation to his brother, or, in other words, the brotherhood of man rests only on the common fatherhood of God. He, therefore, who doubts that brotherhood is not so much punished or tormented as relegated by himself to a condition in which he is incapable of experiencing forgiveness, that is, of being restored to a normal relation to God. It is not by an arbitrary sentence but by a natural consequence that he remains in the land of outer darkness far from the light and love.

The Parable of the Prodigal Son sets out with equal clearness, and even more attractiveness, the same two master-truths. The father's love is such a potential energy waiting for the right spring to be touched which shall release it in action, and that spring is touched by the desire of the prodigal for his father's house. The expression of this desire in changed life and return. The elder brother is the analogue of the unmerited servant, in so far as his self-centred habit of soul prevents him from accepting the love which does not weigh merit or demerit, but gives itself freely where there is willingness to receive it.

The full force, however, of the NT teaching on forgiveness is not till we see that it is correlated with another law of the Christian life, Nothing is more familiar to readers of the NT than an antithesis which occurs constantly, though in varied forms. The Publicans are set over against the Pharisees, 'the elect' against the 'called'; the spirit against the flesh: the son against the father; of earth against of heaven; of earth against of heaven; faith against faith, and so on. But what has not been sufficiently observed is that these different antitheses are expressions for one and the same opposition between two states of the soul. One of these is described as carnal (e.g. in 1 Co 3:1; or as psychic (e.g. in 1 Co 4:2); or as walking by light (2 Co 6:6); or as being under law (Gal 5:2); or as being a slave (Gal 4:1); or in darkness (Lk 1:17, Ro 14:13); as light (1 Jn 1:9); as life (Ro 8:11); salvation (Lk 5:9); faith (Gal 6:9); liberty (Ro 8:2). The very richness and variety of the terms used to describe the two states are an indication, on the one hand, that as living processes they do not lend themselves to definition, and, on the other, that they express something which has the mark of reality.

Moreover, other passages indicate a transition from one state to the other. Christians have passed from darkness to light (Ac 16:31); from bondage to liberty (Ro 8:2); the disciples have ceased to be servants of sin and have become servants of righteousness (Ro 6:16). The slaves have become sons (Gal 4:4); the saints have been translated into the Kingdom of God's Son (Col 1:12); they were raised with Christ (Col 3:5).

The moment which marks the transition is defined as being born again (Jn 3:3), as regeneration (Tit 3:5), as conversion (Mt 18:3, Lk 23:38, Ac 2:38), as an opening of the eyes (Ac 26:18, Jn 9:4, Lk 24:36), or as deliverance from the darkness of sin (1 Jn 1:5), as the light of understanding (Lk 24:45). The subjective factor in the transition is called ordinary repentance (Mt 3:5-8, Lk 13:3, Ac 8:17-22), or repentance joined with faith (Ac 20:38).

The precise character of the process which leads to forgiveness must be duly emphasized before any clear conception can be gained of the nature of Christian forgiveness. From the above it is clear that two psychological conditions are sharply contrasted, viz. the psychic and the spiritual, the former of which is characteristic of the first, and the latter of the possession of it. The one revolves round the lower self, and the other round God, and hence one is the realm of disorder and the other of order, in much the same way as a geocentric system of the universe leaves confused what a heliocentric reduces to order. The act which 'translates' the soul is not man's but God's, though man has his work to do in preparing himself for the re-creative act of God—faith is the human factor of grace. When the cup of the soul is emptied of self and purified from the dust of earth, the wine of heaven is poured into it from above, and the man is born into a new order, the spiritual, out of the old order, the psychic, and he is a new creature for the old things are past and gone, and all things have become new (2 Co 5:17).

The annulment of the old is called in the technical language of religion the 'transmutation of the soul'. The nature of this forgiveness will be best understood by considering a moment an aspect of the change of condition which plays so large a part in the homilies of St. Paul.

Man, as a religious animal, passes, according to St. Paul, through three stages, the chaotic or earthly (1 Co 15:35-58), the psychical (v. 45), and the pneumatic (v. 49). (a) The chaos is animalism unchecked by any practical knowledge of law (Ro 7), and, therefore, a man in that stage commits, strictly speaking, no sin (v. 3); not till a law forbids lust does the animal-man discover what lust is, or learn that it is wrong (5). When he does this, however, he is ready to pass into the second, or psychical stage.

(b) The characteristic stage of the second stage is the law, i.e. command of an external and superior authority, enforced by sanctions. This power of law acts as a check on the natural impulses of the object; and, as he is ordinarily a man not yet wholly freed from the passions of his choice, or earthly, state, he spends his life in a sort of intermittent warfare with the Law. He learns, however, slowly, by means of the pains and penalties inflicted by law for disobedience, that it pays him better in the long run to obey than to disobey, and thus a habit of obedience grows out of suffering, or the fear of suffering.

The psychical man learns to obey through fear of pain or hope of comfort, and hence he is sometimes described as a hireling or mercenary, to distinguish him from the chaotic man who is a slave, or from the spiritual man who is a son.

It is important for our present purposes to note that forgiveness has no place at all while man is merely earthly, and a limited and lower place only while he remains on the second, or psychical, level—none in the first stage, or chaos. Forgiveness implies some sense of moral responsibility, and a lower in the second, because that sense is as yet imperfect. In the psychical stage the man is as yet concerned with his own life, and makes himself either better or lower, and hence forgiveness can only mean the remission of some penalty, the non-exaction of some pain or loss which would otherwise fall to him on
account of breach of law. It is obvious that for-
giveness in this sense has little to do with the
forgiveness which figures in a religion which is
built on spiritual reality.

(c) But the Christianity of the NT is a vividly and
obviously a religion of the spiritual, or, third, degree.
Its worship is to a stand in truth i.e. its proper
sphere is that of spirit, and its proper object the
Great Reality. Its characteristic is love, and love
is a super-personal force directly connecting person
with person. Its sanctions are law external, its
motive is not fear or gain, and its driving-power is
in the 'unspeakable gift' which has been com-
mitted to the soul. Negatively, it may be said
that the hallmark of this religion is freedom from
law; and, as a matter of fact, it is this very freedom
from law which forms the subject-matter of the
moralism contained in the Epis. to the Somat.
Galatians. If we bear this in mind, we shall see
quite easily that the forgiveness which stands in
the heart of the 'Christian spirit' is synonymous
with liberation from law and its consequences
such as:

'The law of the spirit of life in Christ Jesus
made me free from the law of sin and of
death' (Ro 5). And 'if ye are led by the Spirit, ye
are not under law' (Gal 5).

It is necessary, moreover, if we are to appreciate
the central position occupied by forgiveness in the
NT, that we should notice that it is no specific law,
Jewish or otherwise, that is the principal of
the Spirit, but law as law, and especially that law em-
bracing all lower laws, viz. the law of cause and
effect, by means of which the human mind ever-
stricts a coherent whole out of the scattered
members of our empirical life, and in so doing rob
man himself of his own freedom. The laws of
Spirit and duty, like the law of Causality, form the
unity of forces evolved by man out of his inner consciousness by a Divine necessity, for the
purpose of first fettering him that he may
afterwards be led to seek and find liberation.

When by asceticism, self-surrender, obedience,
endeavour, prayer, or contemplation he breaks
through the boundary set by the law and attains
direct communion with the Great Reality, he
experiences what is called 'forgiveness.' It is not
so much that he escapes from the penalties of
broken law, such as disease, agony, death, or hell;
the boon is different and greater. He is set free
from law altogether as law, and acts as the Spirit
with him (with which he is now) impels him to
act; and, even though the consequences of past
breaches of law still persist (for he is still in soul
and body is a member of the phenomenal world), yet
they do not persist as penalties, but have suffered
a sea-change into instruments of the Divine
alchemy which is transmuting the dross of earth
into the gold of heaven. Hence, in the fullest
sense he is set free from law in the whole range of
its jurisdiction. He has been 'forgiven,' that is,
set free from the kingdom of Law by being ad-
mitted and naturalised in the kingdom of Spirit.

2. In the Christian Church. The history of
the conception of forgiveness in days after those of
the NT is a history of the struggle of the two forces of
Law and Form to establish an equilibrium. It might
be contended with some plausibility that the equi-
poise was seldom, if ever, actualised, and that at
the best any approximation to it was due to a
more or less intermittent hostility between the forces
in different Churches, or different sections in the
same Church. Nor is it difficult to see why this should
be the case, for the 'mystic' nature of forgiveness
as portrayed in the NT was too lofty for human
nature's daily food, and hence it might be pre-
dicted that some means would be devised to give
the inner process known as 'forgiveness' some
concrete form or statement which might be intel-
ligible to the ordinary Churchman. This was
affected as part of that development of the life of
the Church which came to be known as Catholi-
cism, and was carried out with growing decision
and thoroughness from the date of the 'peace of the
Church' (A.D. 313). The dominant form it finally
took was that represented as Jesus Christ as
Mediator of reconciliation (1 Cor. 15:21; Rom. 8:1)
between God and man. The gifts of the Holy
Spirit were seen, then, as part of the same whole
as the forgiveness of sins. The Christian Church
proceeded to realise, then, the Christian ideal in
the formula of the 'sacrament of penance' by which
it was to be possible to cleanse men and women of
the sin which had made them unworthy to come
into the presence of God. The old concept of
'Raglative' became thus extended and improved.

But the forces which substituted the 'sacrament
of penance' for the originally dynamic and un-
formulated act of forgiveness were active from the
breach point. The community of Christians was at
the first a company of saints, membership in which
gave and maintained forgiveness of sins. Sins
previously committed were due to ignorance—they
were done 'in ignorance of the truth' (1 Cor. 15:31).
But, being recognised for what they were, repent-
ance ensued, forgiveness followed repentance, and
this process was repeated over and over again, made
by the Holy Spirit working in the hearts of those
whom the Son poured the sins of the people entrusted to Him.

It still remains uncertain whether forgiveness of
sins was from the first regarded as the pre-condition
of baptism, or as the principal consequence of
baptism, that is to say, baptism effecting or merely proclaimed
forgiveness. But what is clear is that the inner
sanctification was set as a condition of the rite of
baptism, and that the rite of baptism was created
in a sacred ordinance; that this sacred ordinance
of baptism was regarded as washing away all
previous guilt; and that it admitted its recipient
unto a holy society. The early Church thought of
baptism as a private act, like marriage, and not
an abnormality requiring special treatment. The
original Christian teaching had been that none but
God could forgive sins, even though He might act
mediately; but this mediatory action quickly real-
ised into the assertion that the right of forgiving
post-baptismal sins was in the bishop as the suc-
cessor of the Apostles. Thus Pope Calixtus
against the so-called Novatian heretics, marked
unconsciously the part of the way, for it
defined the process which changed the Church as
a 'sacred communion of salvation and of saints,
which rested on the forgiveness of sins mediated by
baptism, and excluded everything unholy' into a
body not interested to have 'a holy institution in
virtue of the gifts with which it was endowed.'

The primitive conception that God alone could
forgive sins was changed into the proposition that
the bishops alone had jurisdiction in the matter—
'per episcopos solos posse posse dimitiri.' The
way was now clear for the further materialisation
of the authority into the coherent system of
the theory and practice of the 'sacrament of penance.'
The efficient cause no doubt of the establishment
of this sacrament was to be found in that seculari-
sation of the Church which was produced by its
recognition by the Empire and the consequent
crowding into it of men and women of all grades
of piety. The majority, especially after the con-
version of the emperors, were but children in
religion, and demanded elementary methods of
discipline and training. These were found in the
authority which came to be vested in the leaders
of the Church. The bishops represented a power
enough to exclude from the community certain classes of
sinners for varying periods, especially those guilty
of murder, idolatry, and adultery. On the other
hand, the excommunicated could be restored
after public confession and promise of amendment be
restated. Out of this salutary custom of forgiving
on terms those who had confessed and explained
their sins against the Church there grew gradually
a custom of another kind and of more searching activity, viz. the forgiveness after confession of sins against God, in which was involved also the substitution of the priest for the Church as the absolving authority.

The machinery thus established lay with a heavy weight on the medieval world. Eugenius IV., in his proclamation, Augustine and the new Law were seven, of which the fourth was Paraclete; for the matter of this sacrament consisted in the three acts of contrition, confession, and satisfaction; and that the words of absolution were its form, a duly authorized priest its minister, and its effect the forgiveness of sins. Martin V. condemned those who maintained that all exterior confession was superfluous and useless where the sinner was duly contrite; and he also directed that all Hesitants should be interrogated whether they believed that besides contrition it was necessary to salvation to confess to a priest only and not to a layman, however good and devout he might be. Sixtus IV. condemned the proposition that there was no obligation to confess evil thoughts, since they were blotted out by averison to them without recourse to the Keys; he condemned that the substitution of the priest should be secret, i.e. of secret sins and not of open sins.

To the sacrament of penance as an instrument of forgiveness there was added later a system of indulgences (i.e.) under which the Church dispensed from the temporal pains of purgatory not merely canonical or notorious sinners, but all, whether living or departed, who either themselves or vicariously performed certain prescribed ecclesiastical exercises, such as saying given prayers, attending given offices, or paying fixed sums of money. This form of forgiveness of sins, however justified theoretically, can hardly be recognized as akin to the forgiveness of sins described in the NT.

Accordingly, in the 11th cent. the whole of the excommunications, indulgences, and all else in the manner of the forgiveness of sins was challenged in the name of the NT. It was no accident which led Luther to direct his attack on indulgences, but a true insight in the fact that there were the logical outcome of a long historical process which was a corruption rather than a development. According to Luther, the liberty of every Christian man was destroyed by the priesthood; the Church Catholic had banished or buried the Church of Christ; ecclesiastical law had taken over the role of the law of God; Paul's transaction of ceremonies had overlaid the piety of the heart; and a mechanical and external forgiveness of sins had created forgiveness as dynamic and proper to the individual.

The battle thus begun raged round the word 'justification,' which hence bore an extended connotation, being made to cover the fundamental difference of Lehenschaftung which marked the Reformers from the Romans, and was crystallized by the decrees of the Council of Trent: on the one side and by numerous Confessions of Faith and Articles of Religion on the other. Unfortunately, it was a hard necessity laid on the Reformers that they were compelled to attempt to solve a religious problem by logic and by authority which St. Paul called 'carnal.' Forgiveness, as we have seen above, is of a spiritual nature, that is, it belongs to a sphere where reason is not so much contradicted as transcended, but it was pulled down by the new learning into the world of reason and sought to be defended by proof-texts, historical precedents of the practice, and similar instruments of controversy. The result was, and is, that the true, essential nature of forgiveness has been left obscure in the Evangelical Churches by a process which meant only that one kind of scholasticism was substituted for another. The scholasticism of Calvin differs in form, but not in method or spirit, from that of an Anselm or an Augustine.

II. HUMAN.—It is the prerogative of religion to impose on its subjects, as regulative of their relations one to the other, the relation to them all of the God who worship. Christ unites the relation of God and his relation to the world, but his teaching that the forgiveness accorded to men by God is the pattern of the forgiveness which men are to extend to each other. This is set out clearly in the Parable of the Great Debebtor, and in the fifth petition of the Lord's Prayer, for in the former the sin of the unmerciful servant is just this, that he did not do what his master had done, and in the latter the statement that we forgive our debtors is not cited as the pre-condition of a contract, but as affording that the forgiveness given to man by man is an organic factor in the forgiveness given to men by God. The Christian prays for forgiveness, and adds as a plea in justification of his prayer that he is in the habit of forgiving his debtor (Lk 11:4), but he does not imply that his appeal is to anything but the lovingkindness of God (Nu 14:19, Jon 4:2); on the contrary, he appeals to God for forgiveness through the forgiveness of others. His nature and property is ever to have mercy and to forgive, and adds by way of proof of his being aware of the greatness of the boon he is seeking that he already practices it himself. This petition, therefore, is an expansion of Mt 6:15.

It may be urged that the capacity for extending forgiveness to others is acquired only as the direct consequence of being first made conscious of the forgiveness given by God, while Jesus seems to imply, if not to assert, that before being forgiven by God we must have forgiven others. The reply is that the objection is similar to that raised by the scholastic distinctions between prevenient, co-operation, and subsequent grace, viz. that the difference is formal only and not in the matter of the forgiveness of sins was challenged in the name of the NT. It was no accident which led Luther to direct his attack on indulgences, but a true insight in the fact that there were the logical outcome of a long historical process which was a corruption rather than a development. According to Luther, the liberty of every Christian man was destroyed by the priesthood; the Church Catholic had banished or buried the Church of Christ; ecclesiastical law had taken over the role of the law of God; Paul's transaction of ceremonies had overlaid the piety of the heart; and a mechanical and external forgiveness of sins had created forgiveness as dynamic and proper to the individual.

The battle thus begun raged round the word 'justification,' which hence bore an extended connotation, being made to cover the fundamental difference of Lehenschaftung which marked the Reformers from the Romans, and was crystallized by the decrees of the Council of Trent: on the one side and by numerous Confessions of Faith and Articles of Religion on the other. Unfortunately, it was a hard necessity laid on the Reformers that they were compelled to attempt to solve a religious problem by logic and by authority which St. Paul called 'carnal.' Forgiveness, as we have seen above, is of a spiritual nature, that is, it belongs to a sphere where reason is not so much contradicted as transcended, but it was pulled down by the new learning into the world of reason and sought to be defended by proof-texts, historical precedents of the practice, and similar instruments of controversy. The result was, and is, that the true, essential nature of forgiveness has been left obscure in the Evangelical Churches by a process which meant only that one kind of scholasticism was substituted for another. The scholasticism of Calvin differs in form, but not in method or spirit, from that of an Anselm or an Augustine.

II. HUMAN.—It is the prerogative of religion to impose on its subjects, as regulative of their relations one to the other, the relation to them all of the God who worship. Christ unites the relation of God and his relation to the world, but his teaching that the forgiveness accorded to men by God is the pattern of the forgiveness which men are to extend to each other. This is set out clearly in the Parable of the Great Debebtor, and in the fifth petition of the Lord's Prayer, for in the former the sin of the unmerciful servant is just this, that he did not do what his master had done, and in the latter the statement that we forgive our debtors is not cited as the pre-condition of a contract, but as affir
FORM (Aesthetic)

FORM (Aesthetic) — 1. Meanings of the word.

— Form, in its literal significance, means any objective representation of an image or mental idea, whether in matter, language, or sound. This may be the work either of Nature or of Art. In both cases it is the product of an arrangement of the different, but related, parts of a complete thing, or image of a thing. The psychological impulses whence this process arises is that of expression, which belongs to the nature of mind. In the aesthetic sense this general conception is narrowed by the artist being driven to add beauty to the representation, to construct forms in accordance with the canons of good taste and perfect ideas. As the form is thus discerned as the representation of choicest images or ideas in forms that approach the perfection of Nature or Art.

Thus the evolution of art becomes the evolution of forms. Two features of this evolution should be noted. On the one hand, the forms of art have changed with the growth of man in intelligence, sympathy, and insight, i.e., as culture and social life have advanced. This is a natural development towards the universal truth of life has always inspired and guided the process. On the other hand, as the various stages of culture and civilization have reached, these forms that have crystallized in which are expressed its highest and noblest insights. Form and content, in short, have always mutually influenced each other. It is this obvious feature of aesthetic evolution that underlies and explains the apparently irrepressible conflict between the forms of so-called classical and romanit. For the expression is called its classical phase; but this is seen to be purely relative. The adoption and imitation, for any length of time, of any form as the highest form suitable for the expression of aesthetic ideas necessarily lead to its becoming stereotyped and conventionalized; and thus a form becomes 'classical,' i.e., representative or typical of the highest insight of the times that gave it vogue. But, as soon as the inadequacy of these forms to express new ideas is perceived, or a change in life which the interest takes place, the classical conventions are threatened and superseded; a new spirit, often of revolt, is generated, which proceeds to invent new ideas and, to the organism, well-adapted to our romantic reactions. But these, in turn, become set, conventional, imitative; and so the cycle is gone through again. The essential fact in this cycle of forms is that there is a real progress in the invention of forms to express the ever-widening meaning of life, the good of each epoch filling its role as guide and inspirer of its later products.

Form, in the technical sense, refers to the various methods by means of which the artist seeks to give perfect expression to his ideas. Why these need not concern ourselves here, belonging, as they do, to special disciplines. One remark may, however, be made: the methods have grown more elaborate and perfect for their purpose as the resources of ideas and of mechanical invention have been perfected. The form, in the instrumental sense, cannot be said to have reached its limits, unless we can say that the limit of ideas and of the means of expressing them has been reached.

2. No definite rules can be laid down for the classification of the various expressions of art. For the most part these follow the line of interest or inspiration, by which the artist's sense of beauty is controlled. According to his point of view, he may be either an impressionist, a realist, or an idealist, just as he lays stress upon the part sensuous feeling, imagination, observation, or the sense of beauty plays, or may play, in art. His forms will vary accordingly. In the case of the sculptor, the painter, or the poet, a large part of the images or ideas will be imitated from the forms of Nature, through which, by the subtle alchemy of feeling, imagination, and beauty, they will seek to express either their sensuous feeling, or their elementary sense of the verisimilitude, or the higher sense of ideal beauty or perfection. Value may be conferred on the forms of art in any of these ways; but it is the last alone that reaches the highest spiritual standard.

3. Forms and content.—Form may vary in accordance with the kind of ideas which the artist seeks to express. No poet would employ the lyrical form to express the outward form to express the inward state of mind. Where the balance between form
and content is maintained we shall find both ade-
quate and beautiful, and therefore satisfying.

Taste, in the modern sense of the word, the
subjective factor is allowed to overbalance
the formal beauty of the work; temperament
is allowed free play, and even truth may be of less
importance than fancy or imagination. Under
these conditions the formal element of art does
not necessarily become less perfect, but it is ob-
scured in the stronger tides of passion. Art
becomes descriptive of and declamatory, as in much
c of Carlyle's writing, while interpretation becom-
relatively unimportant.

Realistic art for this reason has always been de-
sicient in the formal beauty of its representa-
tions: it tends to become documentary, evidential,
not universal. This is the case with much of the
art of the present day; and, since form cannot
long be valued for its own sake, and since a return
to classical form seems impossible, it must be
judged as, on the whole, a healthy tendency,
though it is necessary that art, as a whole, be not
restricted to a higher synthesis of form and
content, of the real and the ideal, which may

On the other hand, form may be emphasized and
deemed of more value than matter. This was
the case with much of the literature of the 18th cen-
tury. In this style of art, the adequate relation of form and content, poetical thought find-
ing equally poetical formal expression. Where this
is the case, form is perceived to be the indispensable
means to the ideal. In this case the art of
which the work was designed to produce.

4. The law of form.—This is the law of unity
in diversity. This is a clear enough in poetry and
music, which cannot stir our appreciative sense of
their beauty by merely stringing together a con-
tinuous stream of sounds, however harmonious, in
the absence of unifying ideas, endowed, ab initio,
with power to move the emotions. In lyrical
poetry this seems especially obvious; but it is no
less so in the epic or the tragedy, which lead to a
certain inevitable catastrophe, impressive in itself,
and purging the spectator's emotions by fear and
pitiful. And, making due allowances for the different
mediums in which the sculptor, the painter, and
the architect work, the same is true of their arts as

Unity, however, depends, in turn, upon the rela-
ted elements, diverse in kind and number, which
enter into and help to compose it. The unity of
an art is the synthesis of the various parts of a work of art; and, where
this is sacrificed to power, energy, or force, we
feel that something essential is wanting. In this
matters the judgment will be guided as much by
the sense of fitness between the detail and the
central and unifying idea as by emotion. Few
have manifested the law of form more perfectly
than Shakespeare, who nearly always produces in
us a feeling or judgment in which we repose in a
discised unity amid a wealth of plot and incident.

5. Ethical implications.—Behind all these tech-
nical considerations, governing the evolution and
control of the formal element in art, lies the fun-
damental truth that form is always subject to the
influence of moral ideas, to the ethical quality in
the personality of the artist, and to the acknow-
ledgegment accorded by humanity to the Supreme
Good. In particular must moral character in the
artist be a powerful influence in the form of his
art. As Ruskin said, a bad man is not likely to
produce art of the highest kind. The precise ways
in which the ethical factor affects the forms of
expression in art cannot be reduced to strict classi-
fication; but it is safe to say that it will impart to
all works of art, where its influence is allowed to
work, a sincerity and earnestness, as well as a
certain chastity and exaltation, not otherwise
attainable. After all, the highest art culminates in
the supreme revelation of Nature, the perfect
man, who unites the ideal in the real, in whom
God and man are reconciled. Thus, even on the
formal side, art and religion are seen to seek the
same end. However this may be, it is certain that
we can never permanently approve, either aesthetic-
ally or morally, an art, however beautiful or cor-
rect in its mere form, which lacks the qualities of
greatness, imparted to it first by the ultimate
idea, and next by the ideas to which it, by means of its
forms, gives a local habitation and a name. If it be
a man of high ideals, the form of his art is
likely to reflect the quality of those ideals.

FORMALISM, FORMS.—See WORSHIP.

FORMOSA.—1. Geography and ethnology.—
The Formosa of this article is a continental is-
land, extending from 20° 30' to 25° 15' N. latitude,
and from 129° to 127° E. longitude. Its southern
end lies 336 miles due east from the British crown
colonies of Hong-Kong, and its northern end some
140 miles E.S.E. of Fuchan, the capital city of
the Fukien Province of China. It has a length of 252
miles, and a breadth of 80 miles across the widest
or middle part; while the coast-line encloses about
13,500 square miles of territory—an area consider-
ably larger than Holland, or about half the size of
Scotland. Thickly wooded hills cover the whole
eastern side of the island, the ranges culminating
in Mount Morrison, which is more than three
times the height of Ben Nevis, and was so design-
nated by Richard Collins, after the name of his
dear friend who began missionary work in China
fully one hundred years ago. (See the Brit. Asiatic
Soc. viii. [1864] 25). For the most part, the in-
habitants of Formosa are found in the towns and
villages scattered over the broad, level, western savanna, and may be classified as follows: (1) the Malay aboriginal tribes, made up of (a) 180,000 Pehopan, who live in the more accessible valleys, and (b) 40,000 semi-nude savages, who occupy the higher mountain ranges, differ in speech, colour, and dress from the Pehopan in speaking their own Polynesian dialects, and spend their time in hunting for game or for the heads of people with whom they have no tribal relationship; (2) the descendants of immigrants from the mainland of China, consisting of (a) about 50,000 from the Kwantung Province, who speak the Hakka form of the Chinese language, and (b) about 122,000 from the opposite province of Fokien, who use what is known as the Amoy vernacular; and (3) about 83,330 Japanese, who began to arrive when the island was Japanese territory.

2. Religious and other beliefs; manners and customs.—With regard to the religious beliefs and practices of the people of Formosa, it is not necessary to enter into details about the civilized Pehopan and the Chinese settlers, because these two classes may be looked upon as one so far as superstitious worship is concerned, while other articles in this Encyclopedia will deal in an exhaustive way with the religions of China and Japan.

The first thing to notice in making any statement about the savages of Formosa is the extreme paucity of the information which is available. No European or English-speaking scholar of recent times has acquired any of their dialects, or heard anything more than two or three days at a time. It should be remembered, however, that, for thirty-seven years during the first half of the 17th century, the Dutch were in possession of Formosa—at a time, when the ancestors of the present-day hill tribes swarmed all over the western side of the island. Devoted pastors from Holland then laboured for the conversion of this people, and they have left on record many notices of the native customs which are still to be met with. In the absence of anything more circumstantial belonging to this period, the present writer may here transcribe from his Formosa under the Dutch (1905, p. 75, and passim) the following account and bones.

The ridiculous part of their religion is that the people find sin in things which are really not sinful. For instance, it is considered as evil for any one to build a house on some sacred ground, or to retire to that house, the instant the sign of the king or the king's troops are known to be near. The Formosans imagine that there are several gods, each having his own work and abode; but of one it is said that the Supreme Creator they know nothing, affirming that the world has existed from all eternity and shall eternally so remain. Nevertheless, they believe that there are certain rewards for the good, and severe punishments for the wicked; the former having to cross over a very difficult gulf before they can become partners of great joy and every variety of pleasure, while the latter will never be able to cross this gulf, but will be thrown into the flames of punishment for their sins; a doctrine which would seem to involve belief in the One Divine Being, since there must be a Supreme Ruler of the universe if all men are to be judged according to their deeds.

The ridiculous part of their religion is that the people find sin in things which are really not sinful. For instance, it is considered as evil for any one to build a house on some sacred ground, or to retire to that house, the instant the sign of the king or the king's troops are known to be near. The Formosans imagine that there are several gods, each having his own work and abode; but of one it is said that the Supreme Creator they know nothing, affirming that the world has existed from all eternity and shall eternally so remain. Nevertheless, they believe that there are certain rewards for the good, and severe punishments for the wicked; the former having to cross over a very difficult gulf before they can become partners of great joy and every variety of pleasure, while the latter will never be able to cross this gulf, but will be thrown into the flames of punishment for their sins; a doctrine which would seem to involve belief in the One Divine Being, since there must be a Supreme Ruler of the universe if all men are to be judged according to their deeds.

The Formosans have several gods whom they worship, and to whom they sacrifice in time of need, two of them especially being regarded as excellent in power and riches. The one—
FORMOSA

(1) In June 1867 R. Swinhoe spent two or three days among the Kweiyling and Tylokok tribes of south-eastern Formosa, and his account is of some interest. He described the dark-coloured race, whose features, speech, and customs suggested a decidedly Malay-Polynesian origin. They had a decided philtrum, and two or three signs of short lines arranged in compact groups on their foreheads, the upper and lower consisting of eight horizontal lines each, and the middle ones six. The tatoos of youth begin when they are sixteen years of age; but, when further on in their teens, and when they have qualified for marriage by capturing the head of an enemy, they are tattooed under the lower lip with a square of short horizontal lines. The faces of the married women showed first three simple lines; then two rows of signs like X between two lines lower down; and, below all, four more simple lines. These people usually wear very little clothing, but on holiday or festival occasions gaudy dresses are worn; and, on celebrating a marriage, they all turn out in fine attire, and assemble at the house of the bride’s father, when the skull won in that combate which entitles the bridegroom to take up his position is brought forward and presented to the bride, who prepares a draught in it by mixing spirits with the brains, and then offers it to the guests, commencing with the chief of the tribe and ending with the bridgegroom. The huts of the Kweiyling are made of thatch, and built together in protected groves of rattan, and thatched with palm leaves. The women and old men do most of the hard work in cultivating the fields for dry rice, sweet potatoes, and vegetables. When the pestilence or war is raging, they protect the women and children in the houses or cabins in which they slept was sufficient to account for the prevalent sickness. They commenced the building of new structures by digging a large oblong pit about four feet deep. The earth forming the floor of this pit is then thrown about, and the sides are built round with large stones. When the ground is hard, they place the buildings, and other articles used by the deceased while living, are placed beside the body; some simple ceremony of mourning is gone through, a couple of the nearest relatives fill up the grave, and everything goes on as usual.

There is not much to remark about the Kale clan of Formosa. They were found to be a finely formed healthy-looking race, their faces free from tatt marks, and all of them wearing a reasonable amount of clothing; not a few, indeed, being rather prettily arrayed in bright-coloured dresses, and ornamented with ear-rings, bangles, and necklaces of cornelian stone. The chief of the village of Ka-pu was a stately-looking dame, who received the respectful service of her people as a matter of course. The few presents offered by the writer for her acceptance at the close of the introductory ceremony included about twelve yards of a highly-coloured cotton print which at once stirred the hearts of all the beholders. It was a piece of the finest Manchester stuff, with great staring flowers on a scroll-work; and yet that bit of cloth made a remarkable impression on the minds of this people. All formality was now banished. The writer and his party were looked upon with some share in the manufacture of this wonderful production; the word was passed that a first-class medicine-man was now among them; and their pent-up feelings found relief in an order to have supper prepared forthwith. Very few
traces were met with of any belief in the unseen. Ghosts are known to exist, and various simple expedients are resorted to for propitiating them, and avoiding evil, while at harvest time, offerings of thanksgiving take the form of laying out little quantities of grain and cooked meat, that the good spirits may partake of the feast, before the people feast themselves on what is left. The Kalo also indulge in the practice of head-hunting; for one morning when the writer pointed with strong disapprobation to a number of freshly-clad-in-skulls, the Kaplingers immediately shouted out with great emphasis, "Lang-wah! Lang-wah!" meaning that all their customs in connexion with head-hunting were not only blameless, but greatly to be commended.

3 A two days' journey south-east from Kapling brings one to the country of the Amia, the largest tribe in this part of the island. Our fullest knowledge of the Amia comes from George Taylor, Chief Lighthouse Keeper at South Cape, from whose notes mainly the following account has been compiled. The Amia trace their descent from the occupants of a long catamaran which was washed ashore at Filam many years ago from a distant island of the Pacific; the place of debarkation is still pointed out and the scene of an annual religious offering to the spirits of those early castaways. They have also the tradition of a 'first man and woman,' believing that, long ago, some great unknown being planted his staff in the ground, whereon a bamboo and then a tree gave birth to a man and a woman, the impression of whose feet on a large stone is still shown to privileged persons, at a place called Arapini. The Vilans, or common people, in the Supreme Deity named Maraktoo, who is supposed to live 'above and beyond the earth,' and whose assistance is implored on all occasions of danger. The ceremony of adoration and propitiation is always accompanied by throwing handfuls of small glass beads in the air, together with small pieces of pork. Among the villagers living near South Cape, however, the belief in a special Supreme Deity is unknown, although spirit-worship prevails, with belief in witchcraft, and in prophetic powers as displayed by certain individuals. Beads and small slips of bamboo blackened on one side constitute the ritual implements used when interviewing the spirits; and the priest who is to interpret to the inquirer, by the odd or the even number of beads, or by the position of the bamboo slips as they fall, what the spirits wish to make known. Thus ghosts or spirits of the dead are generally believed in, and thought to be visible to the priestesses; indeed, if they appear to others than those authorised to interview or observe them, it is considered necessary for such unlucky beholders to plead for the immediate intercession of the priestesses, lest death should ensue.

Spirits are supposed to dwell in caves, cliffs, and high places, and to be the cause of echoes; and accordingly such localities are held sacred and reserved for superstitious ceremonies and incantations, these being gone through when the tribe is going on the war-path, when sickness prevails, or on other important occasions. The village elders among the Amia have the power to see what goes on there; and the chief sight brought before them is that of the priestesses contorting themselves and getting worked up into a kind of ecstasy, till they swoon away. In the midst of all this, there are left till they enter the village next day to make known the will of the spirits. Those priestesses have a reputation for superiority in knowledge and power, and they are frequently consulted by the people of other tribes. The Amia believe in an after-state, where good and bad actions performed in this life meet with corresponding good and bad consequences. They have no special code of moral law, but are very much guided by use and wont, and by what they suppose will benefit each other and the community generally. The dead are supposed to enjoy a future heaven, a hell, and a purgatory. Every one, of course, hopes he will go to heaven after death, and hell seems to be reserved as the possible terminus ad quem for one's neighbours. They say, however, that, since no one ever comes back to complain, the future world must be better than the one they stay with here.

There is not much courtesies, or observance of nuptial ceremonies among the Amia. Young people fall in love with each other, and proclaim their intention; should no objection be raised, there is the usual gathering of friends with its necessary feast. Cohabitation generally follows. The Amia have only one wife at a time, but divorces are very frequent, and arise from infidelity, or some trifling dispute, or incompatibility of temper. The Amia are not a very jealous tribe, and the children are made by the village chief, whose decision is accepted as supreme and final. Sometimes the offspring of divorced persons consult their own inclination as to which parent shall retain custody of them, though in deciding this point the grandparents have an influential voice. No stigma is attached to the children, and, in so far as they can, they strive to take up residence in whichever home is the more comfortable. A curious custom is for all the young unmarried men to live and sleep together in a large dormitory, where story-telling and drinking bouts take place. The idea is to keep the minds of the young women and children from being debased—an end that is served by causing them to come in contact only with staid and elderly people.

Before going to hunt, the Amia split open a betel-nut in which they place a red bead (one of any other colour is unsuitable), and, laying it in the palm of his hand, waves it in the face of heaven, invoking protection and success in the chase. When any one is sick, they go to him, and the chief sight brought before them is that of the priestesses contorting themselves and getting worked up into a kind of ecstasy, till they swoon away. The men, to the extent of the enemy has been killed, a few drops of his blood are sprinkled on the ground as an expiatory offering. To go to the land of the Dead the Amia includes beef, pork, and all kinds of fish, with rice and vegetables; but they never partake
of chicken, believing that fowls are the abodes of good, gentle spirits, and should, therefore, not be used as food. When hungry and far from home, they find relief by tightening their girdles and chewing betel-nut, of which they always carry an ample supply. They suppose that earthquakes are brought on by the pig eating insalubrious food, and Kalaptep, the former causing thunder by knocking about the household effects in his anger, and the latter producing lightning by uncovering herself in her displeasure—this being a favorite method which Amia females adopt for showing their temper against others. The people of this tribe further believe that the sun, moon, and stars were made by two spirits named respectively Dyangha and Bortean; and that the sun revolves every day round the flat world, going under the earth at night. During warm weather, both men and women go about stark naked in their own villages; but, when travelling or hunting outside, the men wear waist-cloths and the women jackets and petticoats. This may be noted down as numbering about 12,000.

Since the cession of Formosa to Japan in 1895, various successful attempts have been made by Japanese travellers and scholars to obtain fuller information regarding the ethnography, language, customs, and folklore of the native tribes, but their access has been made easy of the use of the records which are unknown to the outside world, or in reports which were prepared for the local administration, and they are all in the Japanese language. Y. Ino especially made good use of the opportunity given him for collecting a large amount of useful data in every district of Eastern Formosa; and, from the ethnological and linguistic material obtained, he has divided all the aborigines into the following eight groups, proceeding from the north downwards: (1) Atayal, (2) Vounum, (3) Tsou, (4) Tsaiilien, (5) Paiwan, (6) Yuauma, (7) Ami, (8) Peco. Only a brief summary can be given here of Ino's remarks on the superstitions of some of these tribes. Among the Atayal, ancestor-worship is the main religious observance. The people suspend cakes or boiled rice or millet from trees, on the day before full-moon at seed-time and harvest, and hold a general feast that day, at which there is much drunkenness, and any amount of riotous, licentious dancing by the young women and girls of the village. The Vounum also meet for ancestor-worship twice a year. Their distinctive ceremony consists in the fixing in their houses of bundles of green grass, and sprinkling native whisky on the ground in front—such acts being looked upon as sacred that day—and, while fire from the striking of steel on flint serves for everyday use, it must be obtained by the rubbing of two sticks on ceremonial occasions like this. People of the Tsou tribe have a tree near the entrance to their villages which is thought to have a peculiar sanctity attached to it, and once a year they sprinkle whisky on the ground under its branches, and worship the spirits of their ancestors. They also regard a certain kind of orchid as sacred, and carefully cultivate it near the holy tree just now referred to, as their forefathers are supposed to have carried this flower into battle and thereby to have gained their victories. The Tsaiilien occasionally observe a ceremony which takes the form of arranging on the ground dishes containing rice, millet, fruit, and native wine, and mumbling over them certain prayers or incantations; the offering being supposed to come down and preside so long as the ceremony lasts. Severe penalties are inflicted on any one who breaks the rules of this ceremony, or who offends by stepping within the charmed circle. A tradition is current among the Tsaiilien that their ancestors came down from heaven with twelve earthen jars; and another tradition is that the moon gave birth to them, for which reasons an old earthenware jar and an ancient circular piece of white stone are still preserved and treasured as being as old as the race. The Paiwan think that the spirits of their ancestors dwell in a thick wood; others that they are entombed in swords handed down from generation to generation. They worship these swords to plant their fields and at harvest-time, and once every five years, on one of these festival days, they join in a game called Misweepeum. This takes the form of the players trying to catch a bundle of wood bark on the point of their bamboo lances, the one who impales it being considered the victor. According to current tradition, this practice is the survival of an ancient game in which a human head was tossed about and then offered as a sacrifice to the spirits. On a certain festival day among the Puyuma, a monkey is selected and tied to a tree in front of the boys' public dormitory, where it is killed by the arrows which are thrown at it. The village chief afterwards steps forward and throws a little wine three times skyward, and a little more three times to the ground. All present thereupon spit on the dead monkey, and cast its body away, before joining hands in the hilarious dance which follows. Tradition explains that during early times, when the Puyuma were all-powerful, a member of some subjugated tribe was always sacrificed on such occasions, but that, in their present weakened condition, they have to be satisfied with the oblation of a monkey.

W. CAMPBELL.
FORTUNE (Biblical and Christian).

Greek (St. George Stock), p. 93.

Celtic (W. G. Walshe), p. 91.

FORTUNE (Biblical and Christian).—Two inconsistent conceptions of fortune are found in association with Heb. thought. The one recognizes it as a superhuman force acting alike upon gods and men, and gradually deifies it as a person to be invoked and appealed to. The other keeps its appportionment strictly within the functions of Jehovah, without any betrayal of the monothestic position; and this conception eventually established itself as a norm of thought and devotion in Christendom.

I. There are several indications that Fortune was known to the early Semites under the name of God, and amongst them must be placed the ancient tradition in Gn 39:3. If the text be read according to the direction of the Masoretes (742; so also the Targum), Leah is represented as first exclaiming, 'Good fortune is come,' and then selecting the term as the name of her husband's son. The tribal name may have been current before this explanation of its origin was given; but the vivid human interest of the narrative points on the whole to the opposite conclusion. The Aram. lady was so delighted at the success of her device and the close of her disappointments that she gratefully recognized the action of the power which she had already learnt to be superior to any local god, and chose for the child a name that would be a memorial of her gratitude and a pledge of his future prosperity. At the time of the narrator this power had probably itself been invested with personality and exalted to the rank of a god. At the more ancient period, in which the traditional Aramaic is placed, and earlier still, a new stage in the development of the thought is represented. The power is conceived as impersonal, with a certain degree of uncertainty attaching to it, which could not be entirely removed by any kind of appeasement. The endeavour to devise means of ensuring the favourable action of this force must have been an important factor both in lessening the power of personification and in grouping the gods into a hierarchy.

1. Origin of the term.—Exegetically the radical idea in the word God is that of cutting or penetrating into something—cutting the flesh as a religious observance (1 K 18:38), or making attacks upon the life of the righteous (Ps 94:9). 'Cutting off' so to make detachments or bounds is a later meaning (see Osv. Heb. Læx. s.v.). Hence fortune is conceived primarily as an external influence, hostile, or at least likely to be mischievous, breaking in upon a man's hope or scheme, and not to be averted by the ordinary worship of the local god. It was an easy step, in accordance with principles traceable in almost all the early stages of primitive religion, to invest this influence with neutral qualities and make it a source of good as well as evil. That is evidently the stage corresponding with the presuppositions of the narrative of Leah; and the full personification of Fortune as superior to the local gods and altogether outside their control was a natural corollary.

2. Early range of the conception in Israel.—It was almost certainly from the Canaanites that Israel learnt this conception of Fortune, and also borrowed the nomenclature. Several place-names might be quoted in evidence. On the northern limit of Joshua's conquest was the town of Baal-gad (Jos 11:17, 12:13), possibly identical with the Baal-hermon of 1 Ch 8:6 (but see Currit, ICC [1910], in loc.) and Jg 5:6. The boundary was variously indicated, topographically by the conspicuous landmark of the famous mountain, or, more reverently, by the village on its slopes with the significant name 'The Lord of Good Fortune,' or 'Good Fortune is our Lord.' To interpret the place-name as denoting that Baal brings good fortune to those who reside there is to ascribe to the people an impossible degree of idolatry even in those polytheistic days, unless the name was current among the earlier Canaanites. In that case it is easy to understand why the Israelites sometimes preferred to call the site by a less suggestive name, Migdal-gad (Jos 15:59), again, in the territory of Judah, is 'the tower of God,' and is commemorative of the ancient worship there. Apparently it dates back to a time when Fortune had already become personified in the locality.

A similar feature can be traced in personal names, two of which are of interest. The Judges (Nu 13:11), 'my fortune,' was one of the twelve spies; and Gaddiel (Nu 13:3), 'God is my fortune,' was another. Neither of these involves the conclusion that Fortune was already regarded as an independent deity. Endearment or devotion is a sufficient explanation. The former recurs again centuries later under the form of Gaddius (1 Mac 23), the eldest brother of Judas Maccabaeus. For Gadi (2 K 15:14, 15), the father of Menahem, there are Nabatean and Palmyrene parallels; and a bond of tradition may be found with the Aram. wwtj, 'a friend,' naturally popular with mothers. Assag (Assyrian) is the name of one of the signatories of the covenant in Neh 10. A number of the family or clan had returned with Ezra 12, but cf. Neh 7:1. In Edom, Elcan evidently was a large one, and the original detachment was followed by a second. Its name has been intermixed with the Aram. wwtj, 'a friend' (Tory, Is 18:15) 'a runner' or 'messenger'; but no early instances of its use in this sense can be found. 'Gad is mighty' (Gray, Heb. Prop. Names, London, 1898, p. 145) is the meaning; and the thought is not a general complaint of the hardness of fate, but the ascription of power to a god Fortune conceived as personal. It is not probable that this family learnt this special form of idolatry in Babylon, for so far that district has yielded few, if any, traces of the prevalence within it of the worship of Fortune. The family became familiar with the worship in their earlier Canaanitic home, and brought it with them to Babylon, where, in the misery and disappointment of the times, it may well have spread among many foreigners, though not attracting the native Babylonians. That large numbers of this family should join the return from the Exile would be due partly to a reaction in favour of the worship of Jehovah, and partly to an adventurous and unstable type of character.

The only explicit reference in the OT to the worship of Fortune is in Is 66:3, where also the kindred deity Destiny (Meni) appears. The passage may be dated before the reforms of Nehemiah (4:11, 38), or even before the return from the Exile, in which case it may help to account for the large representation of the Pm 'Assag among
3. Range outside Israel.—It is not easy to relate the worship of Fortune in Israel with that in kindred races. Aramaean, Arabic, and Syrian parallels are available; and there are possible connexions with Bah. beliefs, though there is no distinct mention of the god. Lenormant writes (Chald. Magie, Eng. tr., London, 1877, p. 120) of a ‘Maranie’ on the Euphrates, in a Sassy state (Hibb. Lect., 1891, pp. 400, 476, 480) that Merodach was worshipped with a view to obtaining and confirmed with the claims of Jahweh. He has been identified with Merodach and Ishtar; and this has been strengthened by the Oriental practice of worshipping Jupiter and Venus as the Larger and the Lesser Luck. Yet the resemblance may be on the contrary, an illustration of the tendency to invest the gods with real influences upon the life of man, and, under other circumstances, to identify them with the planets. Early in the Christian era, and there are antithetical rather than graded powers; and Meni is the god of a hostile fate, not of a lower degree of good fortune (cf. Skinner, loc. cit.). Similarly the LXX renders Gad by Beelzebub and Meni by Φοίη, though the reverse order is supported by evidence of value, both Mosaic and Patriarchal. But the significant thing is that the translators selected equivalents that are in antithesis. The one denotes a goddess, conceived as benignant; the other a supernatural force, awful, arbitrary, and only with difficulty to be subdued, even of neutrality. The Bah. conception was different. It invested its higher deities with a power of affecting both good and evil; but, as far as available information goes, it did not personify this power, or even separate in thought the power from the gods so far as to reach the Greek conception of a natural force playing upon gods and men alike. Hence neither the origin of the name Gad nor the responsibility for his worship can be claimed for Babylon. In Persian religious thought there is a closer parallel, possibly dependent in part upon Heth influences and itself in turn influencing the development of the conception in Israel. An Old Persian word for ‘god’ is βαγά (Av. baga; Skr. bhaga, ‘fortune’; an implication of divinity accompanying the Av. term). Bevai is a Phrygian name for Zeus, and the identification of Gad with Jupiter, may be of a later date.

At a comparatively early period signs of personification appeared in the principal Sem. dialects. A transition is found in the Syr. phrase quoted by Paget, ‘the king’s fortune’; ‘the king’s spirit,’ with which may be compared the practice of swearing by the φύτης of the Seleucids. To place also the name was applied, at first adjectively in the sense of lucky or unlucky, and then with the implication that the place was the abode of a genius or god, kindly or ill-disposed. Both the islamic passage and the non-Jewish evidence point back to an indeterminate period, during which the process of personification had been going on. For, just as an inscription of the 4th cent. B.C., dealing with the festival of Lyurga, refers to the cost of the sacrifices γάρ Φώτος and συμμετοχής, and converses the impression would be treated thus in association (cf. Jerome, loc. cit.), there being, indeed, traces that the two were thought of as a pair, different in gender but complements in function. This ‘preparing a table’ does not carry the idea of indulgence and debauchery, as in Ezek. 23:10. The thought was that the worshiper would ingratiate himself with the gods, avertingills which Destiny had prepared and securing the beneficence of Fortune; and the simple motive of courting the favour of a god was both original and permanent (cf. Jer. 44:18). But the same thing was true of the Phrygian Attis or Adonis, whose cult was popular in the districts (see, however, Nöldeke, ZDMG xxxiii. 471); and in any case a Phrygian deification of God at an early date must be allowed. A later inscription was discovered at Makr in 1892, and records that a local council vowed to θεία —a close parallel to the ‘Fortunes Coelestis’ of CIL viii. 5633. ‘Lovers of God’ is the title of a goddess, a village in Haraun to the family at whose expense the altar was built. The Phrygian inscriptions are later, but again are well established practice. One of them links the worship of Bel with that of θεία —Θεία θεία, i.e. Gad, the patron deity of the clan θεία. Another protects a seaport with this inscription: ‘I am a breaker-in may have no seed or fortune for ever, and thereby shows how the original conception of fortune as not itself a god, but simply a good gift administered by a god. Destiny and the later personification are antithetical rather than graded powers; and Meni is the god of a hostile fate, not of a lower degree of good fortune (cf. Skinner, loc. cit.).

In pre-Islamic Arabia, again, Manāq is one of the three chief deities (cf. Qur'ān, liii. 20; Wellhausen, Rel. arab. Kultur, Berlin, 1897, p. 26; Lyall,iese. Arab. Relig., 1899, p. xxix), and is identified by the astrologers with Venus, the goddess of Lesser Luck (Siegfried, JPTA, 1975, p. 356 ff.). Gad would consequently be the god of the Greater Luck, and equivalent in popular thought to Jupiter, to whom that title was given. These, however, are comparatively late identifications, and cannot have exercised any influence on the growth of the conception in Israel. What is wanted is a common source for beliefs that prevailed among the principal Sem. races, and cannot at present be traced in Bah. literature. The Assy. Mann rabs (WAJ iii. 68) has been suggested as the origin of Meni (Lenormant, 190), with Kibi-dunak as that of Gad. The latter god is described as a dispenser of favours; but the linguistic affinities are too remote to allow a confident assertion of dependence. Its growth is more likely to be found in a primitive human instinct, or rather in one of the sources of the differentiation of the religious instinct, and that the development itself in Israel, checkered at times of religious revival, recovered under the influence of the indigenous and neighbouring peoples.

4. In the NT.—There are no distinct indications in the NT of the personification of Fortune or of its particular worship. The nearest passage is
1 Co 10th; but 'the table of demons' need not even be the formal locustierism in the precincts of the altar or anything more than the least that was customary after certain sacrifices. It shows that the Christians at Corinth were in danger of becoming entangled in the idolatrous usages of their city, but not that they yielded to the seduction of the worship of Fortunatus, who may well be an inference be drawn from the allusions to idolatry and other magical arts in such passages as Ac 9th, 18th Rev 21st 22nd 23rd ch. (see DIVINATION). For, though it was undoubtedly believed that in such ways the weather and the crops, and the health and conditions of men, might be influenced for evil or well, the power to remain under the control of the sorcerer was rarely viewed as concentrated in a single person of Divine rank. A close connexion with idolatry is evident, especially in the cities of Asia; but not many in the Christian communities went further than to suspect or suppose that the arts of the sorcerer might wield supernatural influence or even stir demonic agencies into action. Of the recognition of Fortune as a distinct deity there are no clear traces.

II. While the worship of Fortune was a form of idolatry that marked certain groups in Israel and occasionally became a national danger, views consistent with monotheism appeared at an early time, surviving even after the fall of Israel, and gradually gathered force, and in the Christian era may be said to have held the field without any real rival. Of views common to both Jews and Christians, it is possible to distinguish several constituent elements.

1. The fundamental belief is that man's earthly fortune is in the hands of God. To that belief frequent and varied expressions of gratitude because of God's gift of good fortune are abundant (as De 8th Ps 23rd 28th). His aim is conceived as no longer chiefly or only earthly good, but as the moral perfection of men. 'Rains and fruitful seasons are sent not merely to fill the stores with wheat and the vats with wine, but (Ps 24th 25th) to bring glory to Himself (Ac 14th; and the fortunes of men are so arranged as to become opportunities for or incitations to resultant love. The one purpose is to promote the good of the man in the prosecution of His benevolent purpose (Ph 2nd), so He works around them, shaping their lives with a view to their spiritual triumph.

3. The methods by which the results are attained are arbitrary; nor have the difficulties been entirely removed either by the teaching of Scripture or by later Christian thinking. In His administration of fortune, God or Moses is a divine witness to God as the dispenser of earthly favour, and a call upon Israel for worship because in that respect there is none like Him (De 33rd). It was an ancient proverb that 'the lot is cast into the lap; but the whole disposing thereof is of the Lord' (Ps 16th), and in the early Christian practice the object was to provide a means by which an intimation of the Divine will might be given (Ac 1st 2nd Ps 31st 32nd). Each of the godly remnant singing 'My times are in thy hand, much as in Is 35th stability in the conflict of life observed, of the fear of the Lord. All useful gifts, writes St. James (1st), are from above, coming down from the Father of lights; similarly Jesus Christ in Mt 7th and 8th, where He even expositates with men for supposing that their physical needs are forgotten. On the other hand, God dispenses evil fortunes, according to the OT, where evil spirits and even Satan (Job 19th) are His ministers, by means of whom He brings adversity and disaster upon men. In the NT these beings become antagonistic to Him, and themselves independent sources of evil; but they are still subject to His restraints, and countervailing aids are provided (2 Co 12th 4th). Everywhere God is the Lord of life; and the decrees of earthly weal or woe is portioned out by Him.

4. To God's aim in determining the changing conditions of life, there is a difference, at least in emphasis, between the OT and that of the NT. Briefly the difference is that in the latter case moral considerations outweigh material good fortunes, and secular well-being falls into the background. The possession of the inheritance of the land (Ps 37th Is 57th et al.) were taken literally in the one case, but in the other (Mt 9th) are ineffectually involved with moral advantage. Even Ps 33th, with its marvellous record in the records of devotion, is concerned primarily with earthly fortune; and the still waters, green pastures, and spread table are at least as prominent as the guidance of the voice of the shepherd. But the NT gives the consciousness of the conscious presence of God. Between Job's estimate of life's relative values and that of St. Paul, there is a striking contrast. Paul loses everything (Ch 42nd); Job gains more than he had originally possessed (Job 42nd); Paul, too, lost most of the good fortune that men possess (Ch 9th), but his comfort and most prominent, though not by any means the only, pursuit of the good man in the OT, whereas against such comfort, either in itself or in its natural influence on human character, the NT with the strenuous and lowly life of Jesus in its centre is a protest. From Mt 5th alone it might be inferred that God is indifferent to the moral evil of man in His gift of fortune; but the real meaning is that He affords the supreme example of fatherly love by showering kindnesses upon His children, though suffering (2 P 3th). His aim is conceived as no longer chiefly or only earthly good, but as the moral perfection of men. 'Rains and fruitful seasons are sent not merely to fill the stores with wheat and the vats with wine, but (Ps 24th 25th) to bring glory to Himself (Ac 14th; and the fortunes of men are so arranged as to become opportunities for or incitations to resultant love. The one purpose is to promote the good of the man in the prosecution of His benevolent purpose (Ph 2nd), so He works around them, shaping their lives with a view to their spiritual triumph.
make the best of himself is unchanging. No course could be safer or kinder than to adapt the conditions of life in the community to the needs of mutual service. How God's particular gifts in detail conducive to that end is often a subject of dispute, but the rule to be observed is, in so far as the principle on which He acts is the implication of Scripture and the treasured conviction of Christianity.

5. Of this belief in the obscure but ethical disposal of human fortunes by God the Incarnation in some of its aspects is an illustration and pledge. On the one hand, as devised by God, it is such a modification of earthly conditions as is designed to bring redemption near. The cosmic relations are altered by the introduction of a new and mightier force; and upon the individual play influences from the incarnate Person and Life, which strengthen the tendencies to right and make the passage easier. Good fortune smiles upon him in his upward struggle, and supplies him with encouragement and aid. Further, in that God spared not His own Son (Ro 8.34), the transcendent gift is a proof that His bounty will provide everything necessary for salvation, and ordain the different earthly fortunes of man accordingly. On the other hand, the varied incidence of fortune in the life of the Incarnate Man brought opportunities for His growth in wisdom and in favour with God and man (Lk 2.49). Though he was Son, yet he learned obedience by the things which he suffered, in order that having been 'made perfect' (He 5.9), he might become the great high priest and offer to God gifts for the sins of the people, in whom there was no spirit of disobedience to be overcome, but a self-surrender to be kept complete at every stage by a deepening insight into the Father's will. Thus 'through sufferings' He was made perfect (He 2.10). His humanity in its absolute dependence upon God became complete in moral dignity and power—a qualification for sympathy with men in every state of fortune, and an eternal proof that God's intention in regulating the good and ill of life is to lead men on without coercion to the right.

LITERATURE.—Commentaries on Gen 30, especially Dillmann 6 (1863), Daubenschöns (1867), Guetala (1875), Driver (1864), Skinner (1919); and on Lk 2, especially G. A. Smith (1860), Daubenschöns (1889), Duhm (1891), and Bin (1893). See also Bous. (568) 479 f. and Sandalius, 'God,' in F.R.S. VI (1869) 225-236.

FORTUNE (Chinese).—Popular ideas of what constitutes Fortune among the Chinese are variously classified.

1. We have, for instance, the Three Auspicious Stars, an almost universal compendium, viz. Happiness, Emolument, and Longevity. A brief examination of each of these will help to elucidate the meaning which they convey to the Chinese mind.

Happiness is represented by the character 福, and is frequently symbolized by the figure of a bat, the words for 'happiness' and 'bat' being similar in sound. 福 consists of a combination of two characters, signifying 'worship' and 'full,' and is explained to mean 'the felicity which attends Divine protection.' The character is found in every possible connexion: on the gables of houses, on funeral biers, on painted scrolls; and is constantly heard from the lips of mendicants, and in all forms of congratulatory speech. It may be said to include every variety of earthly desiderata, and to correspond to our notion of 'blessedness.'

Emolument (禄) is equivalent to the receipt of official emolument, or the material acquisitions which are conferred by the imperial favour; and suggests the fact that, in China, one of the great objects of ambition, and one avenue to greatness which is open, practically, to all classes of people, is the attaining of a position in the service of Government. The 'upper classes' in China consist, almost exclusively, of officials or their relatives, and the 'landed gentry' are represented to that extent, by retired officers or their descendants.

To the Chinese, therefore, the 'happiness' of official emolument is an endowment of a much more tangible character, and much more capable of realisation, than its equivalent in Europe. The word 禄 is pronounced in the same way as that which stands for 'deer,' and hence 'office' or 'emolument' is often suggested, symbolically, by the picture of one of these animals.

Longevity (寿)—compounded of the characters for 'old' and 'speak' (indicating the period of age to speak with authority—is frequently represented by a crane or a tortoise, creatures regarded as enjoying an extraordinarily long term of life; in Taoist circles, by the peach, with which is connected the gift of immortality.

May the Three Stars [i.e. Happiness, Emolument, and Longevity] shine on you! It is a familiar inscription on complimentary scrolls, etc.

It must not be supposed that every one possesses an equally unlimited capacity for enjoying these inestimable graces of Fate. In Chinese life, they are strictly measured by the receptivity of those who would seek to partake of them. The portion of happiness which is allotted to a man may be early exhausted by too large drafts upon the funds; the conditions may be present, but not the power to assimilate the blessings proffered. Happiness, in measure, is within the reach of all, but great emoluments are the result of exceptional service. Similarly, with regard to predestination, though it is asserted that 'God never sends a man into the world without providing him with a place and a vocation,' it is also admitted that he may be unable to maintain the dignity of the office which Heaven has assigned him. Longevity depends upon the Decree (see Fate (Chinese)), which is often represented as depending on Heaven's apportionment—as the proverb says, 'Complete happiness comes from Heaven'; whilst a lesser degree may be cultivated by the virtuous—'Great virtue carries happiness along with it'; 'To dwell in peace is happiness.'

2. A somewhat more comprehensive category is that of the 'Five Blessings,' viz. Longevity, Wealth, Tranquillity, Love of Virtue, and a Full-filled Destiny.

Wealth.—The characteristic 福, which differs in tone from that which stands for 'happiness,' though both are alike in the Roman system, is explained as signifying a well-filled shelter; and, no doubt, to the vast majority of the Chinese this best represents the gifts of Fortune. The god of wealth is found in a conspicuous place in almost every house of business, and is daily propitiated with offerings and guanxian (a sacrifice); for, though economy and frugality are recognized as having an important bearing on the acquisition of wealth, it is believed that 'riches and honour depend upon Heaven.' In this connexion it is understood that only to a minor extent can man attain to Fortune by his own efforts—as the proverb says, 'Great wealth is from Heaven, little wealth comes from diligence.' The mind which is wholly concentrated on amassing a fortune is likely to be disappointed, since 'Longing for wealth destroys happiness,' 'Man dies in the pursuit of all.'

Tranquillity includes health of body as well as peace of mind.
The Love of Virtue is regarded as one of the most certain means to Fortune—as the proverb says, 'To do those who do good deeds in secret, Heaven sends the happiness in time'; 'Those who rely on virtue prosper'; 'By a single day's practice of virtue, though happiness be not attained, yet misery may be left at a distance'; 'Perfect virtue acquires nothing, therefore it obtains everything'; 'Perfect virtue does nothing, but there is nothing which it does not do.'

4. A faithful Dayak, or 'attain to the end of the Decree,' is equivalent to completing the span of life which is allotted; or, in other words, to die a natural death.

5. Another summary is described as the 'Three Abundances,' i.e. Abundance of Good Fortune (Pu), Abundance of Years (Shou), and Abundance of Male Offspring (Nam); but these are recognized as comprehended in the above, and as being synonymous with Wealth, Honour, and Tranquility. With regard to the last item there is a proverb which says: 'If your sons and grandsons are good, what (other) wealth do you want? If they are bad, what use is wealth to you?'

6. Other terms applied to Fortune, such as the 'wealthy' and 'rich' families, and the Creator is sometimes referred to in language which seems to represent him as 'Fortune,' in accordance with the idea that what is brought about for men by a higher power is to be attributed to Fortune.

7. Methods adopted for the attainment of Fortune. The pursuit for Virtues was, in the early days, regarded as the best, if not the only, means by which the gifts of Fortune might be attained, such gifts being then comprehended under the head of 'wealth' and 'honour'; and in the Classics there are very few references to any arbitrary methods for the acquisition of these gifts. The following of the Tao, or living in conformity with Nature, was regarded as the surest way of attaining happiness; but in later ages—possibly as a result of the introduction of Buddhism, with its material object of the bliss of divinity, which was gradually invented, including the 'happy gods,' or gods of Fortune (the Chinese equivalent of the Larves and Females), who are worshipped with a view to the dispensation of the gifts of Fortune. Thus the god of wealth is represented as supporting in one hand a 'shoe' of silver, and holding up a number of fingers of the other to indicate the amount as popularly supposed, the amount of percentage he guarantees his votaries. The god of the heartse, commonly described as the 'kitchen god,' usually takes the form of a rough print, which is posted on the wall of the large oven which serves for cooking purposes in Chinese kitchens. The spirit is supposed to preside over the affairs of the household, and is periodically 'invited,' or presented with offerings of food (in some families twice a month); and on the occasion when the 'god' is timed to ascend, in a chariot of fire, to Heaven, i.e. by being burned in a bonfire, a special oblation of flesh is presented, so as to secure his goodwill as he mounts aloft to report the doings of the household during the year just closing. Xuexue, generally denominated the 'god of mercy,' is worshipped by women who are desirous of obtaining male offspring, her name in Chinese being most commonly 'the fact that sons among the figure of the goddess is in some cases an almost exact reply of the Madonnas and Infant—a resemblance which has its good reason for believing, is the result of a definite historical connexion, rather than a mere accidental coincidence. The varieties of means for warding off evil influences and increasing prosperity are almost incalculable, including, in addition to the wearing of charms of every description, the writing of felicitous inscriptions on doors and walls, the scattering of a special powder in the four corners of apartments, the avoidance of ill-omened expressions, and festival and other special occasions, and the careful study of the calendar with a view to the discovery of lucky and unlucky days.

5. Fortune-telling is the case of those who are in doubt, recourse to various classes of fortune-tellers is usual. These 'calculators of destiny' are generally divided into six classes: (1) those who profess to foretell the future by throwing the eight cyclical characters which denote the year, month, day, and hour of birth; (2) those who study the physiognomy, the fingers, etc., of their clients, and attempt to delineate character, etc., thereby; (3) those who employ a number of slips of paper—generally 64 pieces—on which special symbols are written, and a specially-trained bird, which picks out two of these at a signal from its master; the two characters thus selected are interpreted as applying to the circumstances of the inquirer; (4) those who dissect the two written characters which are drawn at random by the applicant from a number submitted to him, and thus profess to trace his fortunes; (5) those who use the tortoise-shell and other contrivances, after the manner of throwing dice; (6) professors of Feng-shui, or geomancers, who examine the configuration of the landscape, and advise against house building, townes, etc. Cf. further, ERE iii. 731.

6. Feng-shui, 'wind and water,' is fully treated in a separate article, vol. i. of the Encyclopaedia.

5. Popular scepticism.—Whilst recognizing the fact of the traditions which appear to find almost universal acceptance, it is well to remember that there is another, and by the common proverb which seem to cast doubt upon the orthodox beliefs. To refer to the several departments of happiness which are described as ideal, it may be said that, though the traditional means for the attainment of these desired ends are plainly exhibited and generally adopted, painful experience and doubt prevalent, dissentient, and have suggested that the nominal high roads do not always lead to the destination indicated, as the following quotations may serve to show.

Happiness.—'He who possesses a liberal mind will have great happiness.'

Fortune.—'The happy man finds a happy grave without the aid of the geomancers.'

Fortune-teller dies in the prime of life, the Feng-shui philosopher has no more success, whilst pointing south, north, west, and east, mumbles meaningless words; it is among the hills there are places of holiness and kindred, why do they not seek such a place and bury their own ancestors there?'

Misfortune and prosperity have no door, they are evoked by men themselves.'

Abundance.—Riches and honours are but a dream, office and emolument like hobbies on the water.'

Poverty.—'You are in the storehouse of resentment.'

Honesty never gets rich.'

Chivalry.—'To him who does not love money is some of itself; he is honest, he is governed by being content, promote health by keeping an easy stomach, promote wealth by cutting down expenses.'

Longevity.—'For cultivating long life there is nothing like moral goodness.'

Virtue is a sure means of longevity.'

Similar expressions are applied to Fortune generally, as a, e.g., 'If heart and look both are bad, you will be poor all your life long.'

Lucky people need never be in a hurry.'

The unlucky may do anything.'

Thus, though belief in the efficacy of charms of various kinds may appear to be universal, and fortune-telling, in its several departments, has proved to be a most profitable business, it is not necessarily the case that those who constantly resort to these methods, there is a deep underlying suspicion as to their effectuiveness. It may well be that, as the saying goes, man clutches at a straw, so the Chinese people, taking counsel of despair, find some consolation in the thought that by so doing they are omitting no precaution; and that, even if no good may result, they are thus maintaining the traditional observances.
The very complexity of the methods may itself account for the growth of sceptical opinions; the number of lucky days, as set forth in the Imperial calendar, and the innumerable cross-currents of good and evil fortune which must be considered in the selection of a date for any enterprise, have resulted in the feeling expressed by the paradox that one is as little likely to go astray by neglecting to consult a calendar as to believe in an unravelling the complications which attend the selection of a lucky day, according to the arbitrary methods therein set forth. Inspiration in China has, therefore, overreached itself, and the future of the Chinese people may serve to show that the chains of traditional custom are not so inexorably fixed as some have been generally supposed by their Western critics.

Literature.—See under FATA (Chinese) and Penso-sui.

**FORTUNE** (Greek).—The word ῥῆχος contains the stem of the verb ῥῆξεν, which meant originally to hit the mark, as ῥαπατέρα meant to miss the mark. Hence his time, hence, to begin with, the idea of success. The conception of Fortune is absent from the early religion of the Greeks. Macrobius (Sat. v. 16) has pointed out that the word ῥῆχος of Homer occurs in Homer. By the father of poets everything is assigned to ῥῆχα. On the other hand, Macrobius remarks that the later poet Vergil even ascribes omnipotence to Fortune. Fortune is a goddess who grows up before our eyes in historical times. There is no mythological history attaching to her. She is more like the simple allegorizations of Roman religion than the complex deities of Olympus, endowed with a family history, personality, and adventures by the prolific fancy of the Greeks. She is not, as such, however, to the fullest sense, a personifier of a power in China like Cybele; nor is it necessary to connect her with the mysterious Ceres. Fortune is rather a home-growth of the Greek intellect. The connection between the nymph Tyche and the goddess Tyche, which has been so charmingly traced by F. Allégre, seems to be devoid of solid foundation. We read in the Theogony of Hesiod (line 380) that one of the daughters of Oceanus and Tethys bore this name:

Ἐκείνη ἦν ῥῆχα, τὴν τε καὶ ἀγκαθοῖαν, ἐγείροντα τε ἀτέρως ἐκείνην.

And again in the *Homerian* Hymn to Demeter (line 420) one of the maidens who was playing with Persephone, when she was carried off by Pluto, was called by the same name:

Μηλυκέλεια ἦν, τὴν τε ἀγαπάττου, ἐγείροντα τε ἀτέρως ἐκείνην.

The juxtaposition of the two names ῥῆχα and ἄγκαθοι, in a comparison of the two passages generally, makes one feel certain that the author of the hymn was borrowing from the Theogony. But that this humble nymph, lost among the crowd of her three thousand sisters (Theog. 341), grew into the tremendous power which at last scaled Olympus and ousted the gods from their thrones—this is more than we are required to believe, at least until some proof is forthcoming. All that can really be gathered from Hesiod's mention of the nymph ῥῆχα is that the word ῥῆχα was in the Greek language in his time, whereas we cannot be sure that it was so in Homer's. The names of all the other Oceanides being significant, we may justly infer that Tyche's was also so.

2. The poet.—The earliest surviving word of the otherwise than as a proper name, is in the *Homerian* Hymn to Athena (xi. 5): ῆρηχος ἐστι οἷς ἵλια ἄγκαθοις ἐχθροῖς ἐγείροντα τε ἀτέρως ἐκείνην.

Here ῥῆχα is not a person, but a thing. The next is in a fragment of Archilochus (no. cxxxi. Gait.):

τὰ μὲν ἄγκαθα τοῖς ἀτέροις ἐγείροντα τε ἀτέρως ἐκείνην.

The thing is here on its way to being a person. It gives and no longer is given. Half a century later, 1

1 *Prometheus* (iv. 30. § 5) is responsible for the identification.

Alamen finds a very respectable pedigree for this new personage. According to him, Fortune—presumably the fortune of a State—is the sister of Loyalty and Persuasion, and her mother's name is Forthought (Plut. de Fortuna Rom., p. 318 A). Her son, whose archonship was in 504 B.C., reduces the person again to a thing. In the Introduction to his Laws he invokes Zeus to grant them success and honour (fr. xiv. Gaisf.).

Προετικά μὲν ἄγκαθα τετηρείται τοῖς ἀτέροις ἐγείροντα τε ἀτέρως ἐκείνην.

According to Theognis (c. 544 B.C.), it is not virtue or wealth which is the one thing needful for life, but simply luck (129 f.).

Μὴ γὰρ ῥῆχα τοῖς ἀγκαθοῖς, ἀγκαθοῖς ῥῆχα ὑπέμεινη, μὴ ἄγκαθοι μὲν ἄγκαθοι γέρους ῥῆχα.

In other words, 'Nothing succeeds like success.' Pindar (c. 491 B.C.) is full of references to ῥῆχα, sometimes associating it with Divine agency, as τοῖς μὲν δαίμονοις (Ol. viii. 67), τῷ θεῷ θέω (Pyth. viii. 53), σὺν Ζεῦ φοίην τοῦ (Nom. iv. 17). He appears to have composed an Ode to Fortune, in which he declared her to be a Fate, and rather more powerful than her sisters (Paus. viii. 38. § 3). To this Ode is assigned the fragment which is preserved by Aristides (ii. 256).

τὸ γὰρ ῥῆχα μὲν ῥῆχα τοῖς ἀγκαθοῖς

in which the sentiment is the same as in Go 92—

'The race is not to the swift, nor the battle to the strong.' Ol. xii., which is said to have been recited in the temple of Fortune at Rome, is derived from an Ode of Pindar. This poem consists mainly of an address to the goddess herself, though its professed object is to celebrate the achievements of a runner named Leander. The ode may be considered as the first formal appearance of Fortune on the stage of Greek literature. Under the title of 'Saving Fortune' (*Sωζομενή Τυχα*), she is hailed as the daughter of Zeus Eleutherius, and is invoked to protect Himeria, seeing that ships at sea, battles by land, the counsels of the Agora, and the hopes and fears of men are all arrayed by her power. It was under the same aspect, as the protectress of cities, that Pindar bestowed upon Fortune the epithet of *φερέτωρ* (Paus. iv. 30. § 4).

2. The tragedians.—In *Eschylus,* a junior contemporary of Pindar, ῥῆχα is rather a form of Divine agency than itself a Divine agent. With this highly religious poet all is else or τύχη or μοῖρα, with Zeus as chief ruler. ῥῆχα hardly appears as a power of any consequence to mankind. In the *Chóropoi* (178-6), 'Zeus, the father of the Olympian gods,' is invoked to bestow good luck (ἦ τοῖς τυχαῖς; cf. Sept. 422). In Sept. (622) we have an express denial of the reality of chance:

ὅτα ἐκ τῶν ἄγκαθων τὸν θεόν ἐπιγείης.

If we find in *Agam.* 664

τῷ θεῷ τοῖς ἄγκαθοι ταύτῃ ἐστίν 

it is only as an alternative for

τῷ θεῷ, τοῖς ἄγκαθοι, οἷς ἐστίν.

The only passage in which Fortune figures as an independent power is Sept. 426,

ητίμι τοῖς ἄγκαθοι διετήσαι 

which may be let pass as only a way of speaking, 1 which does not represent the true mind of the poet. Neither does Fortune bulk largely in the mental field of Sophocles. We have mention of τοῖς τυχαῖς (Ed. Tyr. 80), but it is only in a passing phrase. The unhappy Iocasta, who proclaims the reign of Fortune and denies Providence (ib. 977 f.):

Thus is soon convinced of her error; the noose seals her confession that Fate is more than Fortune, and that some intelligent, but inexorable, power rules

1) For other allusions to τοῖς ἄγκαθοι see *Eschylus,* see *Agam.* 663; *Prom. Vin.* 375; *Pers.* 921; Supp. 350, 543.
the lives of men. Odipus, flushed with his unparalleled successes, proclaims himself the son of Fortune, the giver of good, and is therefore prepared to face with equanimity the possible revelation of a low origin (Od. 1080 f.).

But the actual revelation is such as to render the light unendurable to him, and it makes the chorus moralize on how man's prosperity 'never continues in one stay.' This might be taken as illustrating the power of Fortune; yet it is not Fortune but Fate, since it has all been foretold. With Sophocles, as with Aeschylus, the religious view prevails, and fortune is nothing but the mode of action of the gods (Philoct. 1516):

It is not till we come to Euripides, 'the rationalist,' that Fortune appears as a rival power to that of the gods. Euripides was a man of a religious cast of mind, but he was unable to accept the contradictions of the pre-Socratic theism, and he gave voice to the new science and the new philosophy of the Periclean age, as Tennyson did to that of the 19th century. The antithesis between Zeus and Fortune is strongly brought out in a passage of the Hecuba (488-91), where Talithus, finding the ex-queen of Troy lying in the dust, exclaims:

Talithus does not decide the point, neither does the poet himself,—he was not an atheist, but a sceptic,—but his language is loaded with a triple tautology, as if to emphasize the apparent futility of the notion that there is an over-ruling Divine will discernible in the course of human affairs. Chance, it is suggested, is the true bishop of the diocese of man.

With the elder dramatists we found that there was a tendency to resolve chance into Divine agency; with Euripides the tendency is to resolve Divine agency into chance. If the gods do not intercede over the cauldron of human destiny, they throw in confusion, 'in order that in our ignorance we may worship them' (Hec. 900). In Euripides, too, we become aware of a change in the conception of τίτανες. With Sophocles, as with his predecessors, τίτανες, so far as it was a power at all, was a benign power, and meant definitely 'good fortune,' so that there was no need to add the epithet ἡμικλίνη. But with the Ischymenes, Euripides, τίτανες became the designation of ill Fortune. Aias says Agamemnon (Isc. 785), 'What woman was ever so unfortunate?' 'There is none,' replies Hecuba, 'unless you were to speak of Troy here.' Also, apart from personification, the word τίτανες is used by Euripides in a bad sense (Herc. 714):

With later writers this was usual only when the word was employed in the plural. τίτανες properly means no more than 'turns of chance.' But man looks upon good fortune as his right, and so attends more to the chances for the worse. The successors of Euripides went further than he did himself. Chremes, a tragic poet who flourished about 890 B.C., answers the question asked by Talithus:

A rigorous consistency must not, indeed, be demanded from the chatty and charming Ionian. He gives us views of all sorts. The same poet says, 'No one, who is made to dilate on the jealousy of God, also offers the following highly sensible remarks—that good counsel is the best thing; for, even if it be worsted by Fortune, its goodness is not impaired, whereas he who has counselled ill, even if Fortune attend upon him, has only made a find (εὑρίσκετος).

Although Thucydides came into the world only 13 years later than Herodotus, yet in turning from the one to the other we are passing at one bound from the theological to the purely stage of thought. Thucydides makes Pericles say, or appear to say (for the passage admits of different interpretations), that there may be a real unintelligibility in the march of events, as there is in the processes of human thought; there where we are accustomed to ascribe to chance whatever takes place. "On the face of the sea, that is, in the common τάσις τοῦ θεοῦ, in the purpose of the gods." 1

1 L. 164. 1 5: ὤφθον τῷ Ἐρατώτατῷ τοῦ Προμηθέως ὡς τὸν ἔρριπτον θεοῦ, ὥστε καὶ τοὺς λόγους τοῦ θεοῦ.

place contrary to reason. If anything can be shown to have a definite cause, then it does not come under the domain of chance. That name is reserved for those events for which we are unable to assign a cause. Chance constitutes the irrational, or at all events inescapable, element in things, which is not under the control of human forethought. τὸ γὰρ now no longer a person, but a thing. There are certain events for which no cause can be assigned. These it is convenient to throw together under the head of τὸ κεκόψθεν. This meaning of the term was facilitated by the use of τὸ κεκόψθεν as a mere auxiliary verb—τὸ κεκόψθεν. ‘I am walking,’ ἔγειρον τῷ περιττῳ, ‘I was walking,’ and so on. So generally τὸ κεκόψθεν meant what has been raised as to how it came to be. If one had insisted on raising this question and getting an answer from Thucydides, he might perhaps have referred one to Divine agency. At least he makes the Melians declare that they rested their trust not to be defeated by τὸ κεκόψθεν, (v. 204), seeing that their cause was just.

4. The orators.—In the orators we may expect to get nearer to the heart of the people than in a scientific thinker like Thucydides. For the orator, who has to play upon the feelings of the multitude, must share those feelings himself, or at least seem to do so. Let us take the greatest of them—Demosthenes. He is full of passages on the power of Fortune. But he might be, seeing that his own ‘best-laid schemes’ went ‘agley.’ It was the touch of truth in the reproach brought against him by his rival, Zóchises, that he was an unlucky statesman, which gave it its sting. Zóchises (in Ctes. § 157, p. 76) warned the Athenians against the ‘evil genius and ill fortune which are as a pet rattle to the feet of the man.’ Demosthenes himself displayed a secret distrust in his own luck, when he got his friends to put their names to his decree, instead of signing them with his own hand. But in his public speeches he put a bold face on the matter. He had done all that in him lay; if fortune thwarted him, he was not to blame (de Cor. § 203). But it was absurd to attribute the disasters of the State to his personal fortune. Nor was the fortune of the State itself really bad. For the Athenian State had the advantage over other States of having played the nobler part, and yet being better off than they. But Athens had to take her share in the general blast of ill-fortune, which was then blowing over mankind—with the exception, we must suppose, of Philip (de Cor. §§ 253, 254, p. 811). This curious conception of a hierarchy of ‘fortunes’—that of individuals, of States, and of mankind in general—is in accordance with the genius of polytheism, and throws light on the manifold worship of Fortune public and private, which became more prevalent as time went on.

5. The philosophers.—Anaximenes (544 B.C.) made a very shrewd remark when he said: ‘We are wont to use the term ‘fortune’ to the element in life which is irascible to man. For, if we always went right in our judgments, the name of Fortune would never have been heard of’ (Stob. Ecl. ii. 240). We get a very striking estimate of the power of Fortune in what may perhaps be deemed an unexpected quarter. Democritus (450 B.C.) is quoted as saying (Stob. Ecl. ii. 344):

‘Men have framed for themselves an image of Fortune by way of apology for their own ill counsel. For Fortune does not oppose wisdom much, but the quick-witted and clear-sighted man guides most things in life with her.

With regard to the power of Fortune, Epicurus speaks as contemptuously as his predecessor, in language which seems to be modelled on his. In the fourth book of the Laws, he says: ‘The Athenian stranger is on the point of saying that “pretty nearly all human affairs are a matter of chance.” He corrects himself, however, and substitutes the formula that “God, indeed, governs all things; but, under God, chance and opportunity (τὸ κεκόψθεν καὶ τὴν ὁμοθύμνῃ) are the pilots in all that relates to man,” this again being amended by the addition of “more than chance and opportunity,” as being more polite (κυριαρχεῖται).

But, when we reach the tenth book, which is Plato’s great and final pronouncement on matters theological, we find a very different value assigned to art (τὸ κεκόψθεν). He starts from the view held by some people that ‘all things which come into being, or have come, or yet shall come, are due to three causes, Nature, Chance, and Art—the more important, such as the four elements and the constitution of the universe, being ascribed to the first two, Nature and Chance, and the less important to the last, namely Art. He then goes on to show that the soul is the only thing that moves itself, and must therefore be the cause of all becoming. Now, soul is either good or evil, wise or devoid of wisdom. It is impuity to say that the orderly movements of the universe are caused by an evil soul under the universe; we are therefore compelled to conclude that they are produced by one or more souls possessed of perfect virtue (688 C). But, if soul be prior to body, then the things of the soul are prior to those of the body. And, as art is one of the things of the soul, we are thus brought to a Divine artist more exact and painstaking than any human workman, and one therefore who will not neglect small matters any more than great. In this cosmos of the beneficent soul (688 E), what room is left for chance? Plainly there is none. Chance then—Plato does not say this, but we may say it for him—must lurk in the chasm which precedes the cosmos, where dwells the evil soul of disorder.

If we turn now to Aristotle, we shall find, as usual, the same thing said, only in less theological language. After giving us in the Physics (ii. 5) his famous fourfold division of causes, into Material, Formal, Efficient, and Final, he goes on to say that Chance also and Spontaneity (ii. 4: καὶ τὸ κεκόψθεν καὶ τὴν ὁμοθύμνῃ) are reckoned among causes. How then do they come in, and are they not? First, let it be observed that a thing is due to chance, not if it have not an efficient, but if it have not a final cause—in other words, if it be not intended. A man who is not in the habit of going to market goes thither on a particular occasion, and meets another man who takes the opportunity of paying him a debt. This, we say, is due to chance. It is the kind of thing that might have been done on purpose, only in this case it was not. Each of the two persons has his own particular cause for going to market, and the conjunction of the two results from the conjunction of the two, as a kind of by-product. Thus Chance (κεκόψθεν) is something within the sphere of mind or human agency which is not due to that agency. The whole of a man’s actions is to Man, so is Spontaneity to Nature. When some effect which might be produced by Nature is not produced by Nature, then we say that it took place spontaneously. It is not necessary here to discuss the question of Spontaneity. But, with regard to Chance, let it be observed that Aristotle finds the source of it in undesigned collocations.

1 See Stob. ii. 246, which may be emended from Cte. de Fin. i. 66.
FORTUNE (Iranian)—FORTUNE (Jewish)

St. George Stock.

FORTUNE (Iranian).—The concept of fortune in the sense of chance or good luck finds little place in the Zoroastrian and Pahlavi texts. A happy wife is termed 'fortunant' (hukhka) in Vis. II. 7, but neither this nor the frequent word udtē, 'weal,' 'good fortune' (lit. 'according to wish'), can be regarded as expressing the idea of good luck in the common acceptance of the term (cf. the passages listed by Bartholomaeus, Alltrum. Vorderb., Strassburg, 1904, col. 417 f.). Nevertheless, there are a few passages which seem relevant in this connexion. Success (aspēnima dagēnma) is objects of reverential honour (Vis. xvi. 1.), as is also the everlast-ing and endless progress of events according to one's wish (vispedyām . . . udtdēto aksōrānem), which it is the torture of the wicked not to enjoy (Vis. xviii. 2). Supplication is offered to the Pādras (g.e.) for all boons (aīyandēs aīyandēs) (Vis. xii. 135), who grant what they pray for (ib. 24), as do Ardvi Sūra Anāhita (Ib. v. pāzēm), Turēya (ib. vii., d. Vīdrapa (ib. i. pāzēm), Midrāya, ib. vii., Vāra, ib. v. pāzēm), Añi (ib. xv. pāzēm), and Ḡāzira Vāri (Vend. xx. 3).

Boons are invoked upon Viśtēpā by Zoroaster (Vis. xxiv. 48), while Ātēr (the Fire) prays (ib. 88) on behalf of all the monarch: 'May the Aposerter and Distributor bring to thee a boon (spāvarōm yosym bāzdās mēzērātā), the allusion probably being to Ahura Mazda. According to the 9th cent. Sankhā-Gamobi Vaviy, iv. 8, 29 (tr. West, SSE xxiv. 128, 120), heaven (spāvar) is the place of the Divinities (bāzdās), who are 'the distri-butors of all earthly blessings,' from which they always justly bestow their distribution of every happiness.' In conformity with this, Haoma granted his four first worshippers the heroic sons Yima, Thraēāsā, Urvārāsā, and Keresāsā, and Zarathushtra (Yama ix. 2, 10, 18); and the obtaining of boons is the direct reward and forious observance of religious duties (Vis. xxiv. 25).

Among the people it would seem that fortune played a larger role than in the official religion, for bāzdā, 'fortune'; bāzdātā, 'fortunates'; bāzdāvār, 'fortunates' (king); Vādā, 'wealth of the fortune of the free-born'; Sēkkōtātā ('possessed of wealthful fortune'), Sēkkōta ('having the fortune of God'), Sēkkōtā ('possessed of young (.i.e. sturdy) fortune'), Sēkhtēta ('having good fortune'), Sēkhtētā ('having fortune (chief) new'), Sēkhtōtā ('possessed of fair fortune'), Sēkhtētā ('to whom fortune is friendly'), Sēkhtētā ('he whose fortune has bloomed'), Sēkhtētā ('possessed of the fortune of a sūtrā'), Vādātā ('possessed of evil fortune'), and Zēddātā ('fortunates through the birth') (ib. 90).

Yet it must be confessed that the concept neither of Fortune nor of Fate (g.e.) was encouraged by Zoroastrianism. In the ceaseless conflict of good with evil, which human and super-human beings alike must wage, there was little room for mere chance. Such fortune as the Iranian might crave—and all that he might have—was such as his own efforts could win; and the most besides that he might hope for were those boons which Ahura Mazda and his wise Divinities might vouchsafe to their pious worshippers and fellow-combatants against Ahriman and his forces of evil.

Side by side with fortune went misfortune, not always ascribed to merited sin, but even for the good. Why the wicked so often flourish in this world while the righteous suffer woe is answered by ascription of both good and evil fortune to Fate by the Dēdām Māmōq-i Xrāt (II., tr. West, SSE xxiv. 63.)

FORTUNE (Jewish).—God's free interference in human affairs is one of the cardinal doctrines of the OT. To His causation as rewarding and punishing all men's deeds, all things are ascribed the all the happy and unhappy experiences in human life. There is therefore no Hebrew equivalent for 'fortune'. The old explanation, us., Gn 30:1, rendered in LXX to τηρη, should be translated 'by the help of Gad' (cf. "mōq", v. 18, and BDB, art. 'Gad'), a divinity of fortune supposed to have been worshipped in Laban's household (see FORTUNE [Biblical and Christian]). Post-exilic Judaism further developed the doctrine of Divine compensation. Ezekiel was the first to teach its application to individual no less than to national events. The fundamental doctrine of the Wisdom literature is that piety is renumerated in this life. The gift of the book of Tobit is that it stands well, and better than before, because a righteous man is rewarded for his merit. The Mishna Pir. t. 1, which is repeated in the daily Morning Prayer, sees in the observance of certain commandments a profitable investment, 'the interest of which a man enjoys in this world, and his eternal reward in the world to come.' In Ecd. 260 we read: 'Whoever keeps one commandment is rewarded (in this world), he will be exalted, and he will inherit the earth.' Or Pirke Av. 11: 'Whoever keeps the Law in the midst of poverty shall eventually keep it in the midst of wealth.'

Likewise, a state of adversity is not a mere sport of fickle fortune, but an exercise of גונום, the attribute of God, just as 'the appearance of a judge' is the manifestation of the Law in a human person in a judicial manner, יבש, יבש, 'measurement for measure.' To every transgression of the law an appropriate penalty is attached: 'With what measure one measures it shall be measured unto him' (Soa. 88). 'There is no death and no suffering without sin' (Sha. 56a). Frequently the correspondence between each manifestation of misfortune (so-called) and the particular sin which it caused is not evident; but it exists, and resignation is demanded of the sufferer. The Burial Service is called גונום, the acknowledgment of the justice of the Divine judgment. Some instances of misfortune are viewed as evident manifestations of Divine retribution. Thus bereavement is the penalty for broken laws, for neglect of the study of the Law and of certain ceremonies; domestic strife, premature birth, and death of children in infancy, for want without cause. For with-

This is an ancient and pious view, plied generally in the Talmud (E. T. 9: 96). The Mish. San. vi. 6 directs that after an execu-

the relatives and friends of the criminal should not eat with the judge and witnesses and acknowledges the justice of the decree.
holding tithes and other priestly dues comes failure of crops. Violence is punished by swarms of locusts and famine; perversion of justice by wars and pestilence; false swearing, blasphemy, and Sabbath-breaking by unnatural conceptions, infanticide, and devastation; incest, idolatry, and neglect of duty observing the Sabbath and jubilee years by exile; formation by wounds, bruises, and the bite of serpents, etc. Dryness is a token of immorality, jaundice of hatred without cause, poverty of pride and overbearing, cupidity of slander (Shab. 232 B). Bloodshed was the cause of the destruction of the Temple and driving the Shekinah away (ib.). Jerusalem was destroyed for neglect of Sabbath observance and of daily recitation of the psalms, for impudence, for despising school-children, for levelling classes, for not reproving each other for sin, for slinging the learned (Shab. 1196).

The manifold experiences of life, however, did not square with this doctrine of judicial restitution; and a problem was created which already tried OT saints (e.g. Ps 78). In the age of Kohelst, "since sin is the wages of every evil work," man was not executed speedily or the righteous rewarded, evil was on the increase (Ec 8:11). The author himself did not know what to make of life. The problem shows that the harsher edicts of the religious persecution under Antiochus. A modification of the OT doctrine of retribution became necessary. A man's worth was not to be estimated by his fortunes and misfortunes. The true compensation was in another world. This faith supported the martyrs under persecution. It did not, however, easily solve the problem to the legalist.

R. Yehudia: 'A priest cannot reap the prosperity of the wicked and the suffering of the pious (Pirke Ah. iv. 15). When Meir was on Mount Sion to receive the Law, God revealed to him the greatness and mastery of R. Abiba: 'If I had seen such a reward? Indeed, God replied, I have been doing it' (Maim. nn).

To account for the inequalities of life with regard to nations and individuals, the Rabbis devised a theory which is a combination of OT views and that which relegates retribution to another world, according to which the prosperity of the wicked is a reward in this world for some merit, the punishment being reserved for the next world; the suffering of the righteous is to be regarded either as compensation for former impiety, or as a trial of their faith and constancy, or even as an atonement for others. For references to the Rab. literature on the subject, see Weber's Jud. Theor., Leipzig, 1890.

The spread of astrology all over the Roman Empire, its universal acceptance as an exact science, and its hold on the popular mind alike excited also Jewish folklore and introduced into the Judaism of the Talmudic period an attraction for the pagan doctrine of fortune. The term used for it is 'נ, mezad, Aram. 'מעזד, mezadla, standing also for constellations of the zodiac and for planet. Since there is no record in the post-exilic age of a refusal to accept its tenets, the re-introduction of the term into the Jewish vocabulary should be traced back not to Babylonianism, but to contact with the 'Chaldeans,' astrologers and charlatans of the early Empire. Maxzla, then, is not a divinity like Fortuna, but is either a 'station of the planet' at the time of a nativity or of some other event, or it signifies, in the late Magian sense, a sexual act performed by a man on an ox (R. Y. vii. 52). But the use of the word was discouraged by the Rabbis because of its association with the god Gad of Is 60 (see RV).

VOL. VI. - 7

Thus Shab. 679 forbids the repetition of the magic formula, 'נ יז 'נ יז, god godl's zikra leh = in my fortune, O my fortune, and relax not.' A place Godol ("fortunes") was hallowed into Godol ("dunghole"); a Jewish word, and maszol ("right luck") is still used as a form of congratulation at births, weddings, the blessing of the new moon, and other occasions.

Mankind, then, has a mysterious connexion with the planets (Targ. Ec 7:9). 'All depends on that connexion (Masza)!' (ib. 9:7). "Life, children, sustenance depend not on a man's merits, but on his Masza' (Moed Ed. 26a). Every individual has a Masza. 'In the case of a sudden fright, if one does not see the cause of it, his Masza sees it' (Targ. 93). 'The Masza makes wise; the Masza makes rich' (Shab. 156a). 'Every plant has a Masza in heaven, which influences it and make it grow' (ib. 49a).

'Even the copy of the Law in the Synagogue chest is subject to the influence of Masza' (Zebar. Mach. 184). 'Animals, on the other hand, have no Masza' (Shab. 30a). 'The Masza sees neither what is before it, nor what is above it, but what is below it, like a man descending from a ladder with his back turned, having only his feet forwards and his backwards' (Yev. R. 13). 'The propitious hour recedes if pursued' (Ber. 56a). The Masza of two is stronger than that of one (Ber. 15b).

Celestial phenomena came to be regarded as harbingers of good or evil.

Thus an eclipse of the sun forebodes evil to the Gentiles and of the moon to the Jews, because the former reckless time by the sun, the latter by the moon. If the eclipse spreads, it concerns the inhabitants of the respective places; but, if in cold-heaven, the portent refers to the whole world. A comet is an omen of war, and a grey one of famine. If the eclipse is at sunset, the forthcoming evil will be delayed; if at sunrise, it is near at hand (Shab. 50a).

Some days were considered more fortunate for transacting business than others (Ezra 5:25). The corn of the year before a jubilee was supposed to be of finer quality (ib.). There were lucky and unlucky months.

'If an Israelite has a lawsuit with a gentile, let him withdraw in the month of Ab because his Masza is weak, but let him present himself in the month of Adar when his Masza is strong' (Tif. ed. 56a). Merit is impounded on a meritorious day, and guilt on a guilty day (ib. 56b). It is unlucky to cut the hair of a horse on a Tuesday, because on that day Nineveh is destroyed (Shab. 49a).

The spread of astrology all over the Roman Empire, its universal acceptance as an exact science, and its hold on the popular mind alike excited also Jewish folklore and introduced into the Judaism of the Talmudic period an attraction for the pagan doctrine of fortune. The term used for it is 'נ, mezad, Aram. 'מעזד, mezadla, standing also for constellations of the zodiac and for planet. Since there is no record in the post-exilic age of a refusal to accept its tenets, the re-introduction of the term into the Jewish vocabulary should be traced back not to Babylonianism, but to contact with the 'Chaldeans,' astrologers and charlatans of the early Empire. Maxzla, then, is not a divinity like Fortuna, but is either a 'station of the planet' at the time of a nativity or of some other event, or it signifies, in the late Magian sense, a sexual act performed by a man on an ox (R. Y. vii. 52). But the use of the word was discouraged by the Rabbis because of its association with the god Gad of Is 60 (see RV).
on R. Hask. 17a, still prevails of changing the patient's name, generally into Chaos, signifying life, or Anis, 'another.' In the formulas used on the occasion (see p. 148 of the Book of Life, ed. B. H. Asher, London, 1863) occurs: 'And thus may his Messiah be changed from evil to good,' etc. Mary of Nazareth is described as the woman who was infested by Messal (Shak. 156), but the belief in astrology was already common.

In the Middle Ages, Maimonides was perhaps the only one who wrote against a belief in fortunae (Yad Ab. Cohab. xi. 8). On the other hand, that most talented Rabbi, Ibn Ezra, was the most superstitious. In the poem on his Evil Star, he maintains that if he dealt in candles the sun would not set in his lifetime, and if in shrouds no one would die. Although this was written in jest, he lived up to the conviction of his ill fortune. He was himself the author of several works on Astrology.

LITERATURE.—See literature at the end of art. FORT (Jewish).

A. E. SOKCRIM.

FORTUNE (Roman).—It is not possible to follow out the history of the ideas which the Romans attached to this word with the same accuracy as in the case of Graeco-Latin one. (1) the Romans have left us no literature earlier than the second half of the 3rd cent. B.C. and (2) when Roman literature begins, it consists chiefly of translations or paraphrases from the Greek, and in the Greek words as fortuna is apt to become modified in a Greek sense. We have no Italian Homer of whom we can say that the word for chance is not to be found in him; we can only infer, and somewhat doubtfully, that, as the idea of a capricious force interfering in human affairs is a late growth in Hellenic, so it may have been in Italy. Our treatment of the subject must begin with the cult of Fortuna at Rome and in Latium—about which we know something, though without any certainty of detail.

Fortuna is formed adjutively from Fortuna, the image of a Roman name, Fortunum from portus, Neptune from some word unknown to us; and forso, so far as we can guess from later literature, must have signified what we call pride, whether good or bad, and is thus a word which in some sense was part of the religious consciousness of the people, a combination quite in keeping with Roman religious usage, but probably indicating a degenerate offshoot from the original Latin stock. That stock, if we examine it as it appears at Precenesto, where we have some little knowledge of it, may have been touched by Greek influences at a very early period, for the idea of a deity presiding over fortunes and therefore capable of foreshadowing the future is the true meaning, then, of the Latin Fortuna; it is not till the time of Servius Tullius that a form of the words as Fortunae can hardly have been seriously affected. The cult-title of the goddess here was Primigenia, which must mean 'first-born'; and that she was so or came to be regarded as the first-born daughter of Jupiter is made certain by an inscription of great antiquity, first published in 1882 (U. L. iv. 2683): 'Orecia Numeri nationis curat Fortuna Diuoni fili primocemia donom dedi.' Here a woman presents an offering to Fortuna, the first-born daughter of Jupiter, for help in childbirth (sacros sancta); she had no doubt consulted the oracle, which here, as elsewhere in Italy, foretold the future by means of lots (sortes) mixed together by a boy before she drew one. Now, it is true that this anthropomorphie conception of the deity as daughter of Jupiter is foreign to old Italian ideas, and, as Precenesto was undoubtably the scene of foreign cults at a very early period, it is highly probable that Fortuna here taken on some of the characteristics of the Greek Tyche or Nemesis; but this could not well have been the case if the nature of the original Latin deity had not been of such a kind as to suggest or allow a connection with Jupiter. But Jupiter is of all Italian deities the one who could be associated with anything in the nature of blind chance; and we
are justified in conjecturing that this Fortuna was a Power believed to govern the destinies of women in childbirth, perhaps also of the children to be born. Her name was at all times especially a woman's deity, as her many cult-titles clearly show; and adorning her great temple at Praeneste, as Cicero tells us (de Div. ii. 65), was another also of Fortuna, which women had by law frequented by matrons; here there was a statue of her with two children in her lap, popularly (but not dogmatically) believed to be Jupiter and Juno (see Wisewore, op. cit. p. 259; Fowler, op. cit. p. 254 et). So far, then, as we have any evidence on the question, it would seem that the name Fortuna did not suggest to the primitive Latin any idea of blind chance as a ruling factor in the world. Unlike all Latin goddesses, she was a Power to whom, among the chances and chances of this mortal life, appeal might be made for help, especially by women. Not, of course, every change or chance; there never was, as Wisewore says (p. 261), at any rate during the Republican period, a Fortuna who was a general deity of luck; but in course of time, specialised and localised under various cult-titles, she came to be the patron of Roman women, and women, in relation to particular activities or critical moments. It is probable that the cult of Fortuna, already mentioned, was connected with the work of harvest; the foundation-day of the temple, which was beyond the Tiber, was 26th June, when that work would be largely completed; and we have the Colossal of Columella (x. 316) that after a successful harvest the praises of this deity were sung. The other temple attributed to Servius, in the Forum Boarium, was certainly that of a woman's deity, known as Mater Matuta, and also with the Pudicitia of Livy, x. 23 (Wisewore, 287). Fortuna meiaria, connected traditionally with the story of Coriolanus and the persecution of women, was worshipped only by women once married (Dion. Hal. viii. 56), and may therefore have been the spirit believed to guarantee good luck in legitimate wedlock. Fortuna virilis was also a woman's deity, more especially of the lower orders, and was supposed to bring good luck in domestic relations (Fowler, op. cit. p. 65). At the end of the Hannibal war, the great deity of Praeneste was transplanted to Rome, probably after successful results to her oracle, which so far the Roman State had declined to use; but transplanted cults seldom retain exactly their original characters, and here we find the beginning of the Fortuna publica populi Romani, of which we hear so much in later times. Fortuna tends in the later Republic to become a kind of good genius of particular acts and times; Fortuna heuces dieis is the unknown essence in whose charge are the events of a particular day; Fortuna aequitatis is the good luck of the Roman cavalry, and so on. The idea became popular; innumerable Fortuna came into existence (see a list in Plutarch, de Fortunis Romanis, 10); and, as the Greek conception of τιχος became more familiar to the educated Roman mind, Fortuna lost in purity and dignity what she gained in popular favour.

There is thus in the early history of the worship of Fortuna nothing to suggest that the virile and popular Fortuna should ever have obtained to be at the mercy of chance. Such an idea would, indeed, have been utterly inconsistent both with his character and with his complexion of his relation to the gods, who, in his view, so far from being capricious, were always open to supplication, and practically bound to yield to it if approached in precisely the right way. The only right way was known to the religious authorities of the State, and in placing himself entirely in their hands the Roman believed himself to be perfectly safe in all matters which lay outside the sphere of his own will and his own activity. But assuredly he never minimized the importance of that will and activity—virtus, as he called it. The Fortuna Romanorum is a late idea, not to be traced further back than Polybius, and therefore, unlike the others, not by any means definitely conceived; it was by virtus and pietas, strenuous endeavour and a sense of duty, that the Romans of later days believed their forefathers to have conquered the world.

2. In the scanty remains of the earliest Roman literature, offspring though it was of a sceptical Greek age, we find nothing to suggest that the Tyche of Euripides and his successors had gained a footing in Italy. Fortuna, it is true, as well as jory, has come to mean the incalculable in human affairs, and in this sense was used throughout all later Roman literature; but we have distinct traces of the true Roman feeling that ‘fortunam esse industria subveniendum.’ One of the sententiae of Appius Claudius Cecus (c. 300 B.C.) is the famous saying: ‘Est unaqueque faber ipsa sanae fortunae’ (here Fortuna has partly the sense, which never left it, of prosperous condition); and in the Annalium of Ennius (i. 172 [Bacherrn]) we find the perennial proverb, ‘fortibus est fortuna viria data.’ So again, old Cato, in his Origines (quoted by Gallus, ill. 7), wrote that the gods give a soldier ‘fortunam ex virtute.’ Such sayings fairly neutralize commonplaces like—

‘Multa dies in bello conturbat unus
Et cum multis fortunae fortius reuocatur.’

(Stesich., Am. i. 150).

In Plautus and Terence the use of fortuna and its compounds in the ordinary sense of luck or chance is constant, but not even the influence of the Greek original ever suggests the elimination of human endeavour, unless here, as in Captivi, ii. 54, or Pseudolus, ii. 14, the chances of war as bringing captivity and slavery are reflected from the unhealthy conditions of Greek life in the post-Alexandrian period. In Cato’s book de Agricultura, the only complete prose work we possess of the period following the Hannibal war, fortuna is not mentioned. Dis-integrating as the consequences of that war were to the old Roman character, they could not all at once obliterate the sense of the need of strenuous human endeavour, and they may have added to it the first intuition of the idea of the destiny of Rome, her mission to rule the world, which remains immortalized in the story. In spite of an attempt to introduce Epicureanism early in the century, the better minds at Rome kept clear of any degrading doctrine of chance, with its corollaries of individual selfishness and fatese faire.

3. This better tendency was upheld and confirmed by the presence and influence at Rome of two Greeks of great ability, personal friends of Scipio the younger, sympathetic admirers of the Roman spirit—Pamakes the Stoic philosopher, and Polybios the philosophic historian. It is hardly possible to exaggerate the importance of these two men, and especially of Pamakes, as guides to the Roman mind in beginning to realize on the facts of life; and their influence of the power of Fortuna must here be briefly explained. Greeks as they were, they form an integral part of the history of Roman thought.

Both of these men belonged to the Stoic school, but their Stoic doctrines were curiously tempered so as to harmonize with the Roman character, and they were fully doubtless by the knowledge of that character and of the extra-
ordinary progress of the Roman State in the last two centuries. In each we find the freedom of man's will fully acknowledged, and his dependence on his own active endeavour emphasized. Cicero, in his de Officiis (ii. 6 ff.), has reproduced the view of Panetius on this point. The passage is an emphatic assertion of the power of man to work out his fortune by his own reason and will. Not that chance is wholly excluded: "magnam vim esse in fortuna in utramque partem, vel secundas ad res, vel adversas, quis ignorat?" (ii. 6. 10). Accidents will happen which could by no human means have been avoided; but these are comparatively rare, and by far the greater part of the good or bad fortune that may happen to a man, in spite of the element of chance that is always present, is mainly dependent on 'hominum opes et studia.' So far from sitting down passively to take what fortune brings him, the duty of man is here declared to be the free use of his reason and will in modifying for his own advantage and that of his fellow-men the conditions under which he lives (see Schnekel, Philosophie mittel. Epoche, p. 194). It was in accordance with this common-sense view of life that Panetius rejected all divination, thus breaking with the older Stoic view, and also with the traditional Roman practice—a fact which was of great importance for the Romans of the last cent. B.C. The more the philosopher exalts the position of man in Nature, the less need will he ascribe to him of such methods for securing himself in the future.

Polybius was not a professed philosopher, but his mind was a philosophical one, and in his treatment of history it is extremely interesting to note his view of fortune. He works out his own ideas of historical causation independently, and from the popular emicist position—a fact which was of great importance for the Romans of the last cent. B.C. The more the philosopher exalts the position of man in Nature, the less need will he ascribe to him of such methods for securing himself in the future.

the mouth of his brother Quintus the Stoic view of divination as represented in his lifetime by Posidonius of Rhodes, who differed from his master Panegorus in maintaining that divination, skill and observation can to some extent unravel the mystery of the future, of fate, the "ex omni aeternitate flumen veritas sempiterna" of the Stoics. In the second book of his "De fato" Cicero notes that this view (though himself an augur, and here we seem to find his own personal view of Fortuna. He declares that divination, whether of predetermined fate or of matters accidental, is altogether impossible.

"Quoniam ergo ut quod tumero sit esse casum et voluntatis fortunam, hic [Cicero] esse voluit augurium. Sin illum esse tam contrarium rationis et constat que scire fortunam, et subinde necesse esset. Qui se ex isto esse sciret, et scire quid esse et fortunam necessarium sit, sic enim esse, quod inesse eventium. Sic igitur augur est, qui cur stringit fortunam cum praecognitum esse. (§ 135).

No doubt this is the view of Carneades and the Academic school generally; Cicero tells us as much (@ § 9); but a perusal of the whole book will produce a strong impression that he adopts it in one case and with conviction, and in the incomplete of De Fato, written shortly afterwards, we find much the same view; here also in the course of a long criticism of Posidonius. Fate, he says, is the product of the brain of philosophers; common sense and experience teach us that nature exists and chance exists, but not fate. Where is the need to fide in fate? (secularis fates) is, 'can sine fato rationalium rerum ad naturalia fortunamque referatur?' (§ 6). Such arguments are scarcely convincing, and we feel that Cicero is not very clear as to the meaning he attaches to the words fates, natura, fortuna; but there seems no doubt that he genuinely disliked the idea of a chain of causation—quod erat augendum, as the Stoics called it; he had too lively a consciousness of his own free will, and of the sport of chance in the history of his own time, to accept such a theory. Hence the ascribing possibility to every cause; he lived too much in the world, enjoyed too thoroughly the exercise of his own individuality. Lastly, the reader may well turn to an interesting passage in the De Natura Deorum (iii. 88), in which, after insisting that the gods do not give us virtues, and that we do not thank them for it, but for riches, honour, commodities, and much like, he sums up in these words: 'judicium hoc omnium mortalium est, fortunam a deo petendam, a se ipso cumendam esse sapientiam.' Here, as in the passages above, the book is both false as a theory, and false as a practice, in a double sense, for we all do, particularly in military operations. In describing his defeat at Dyrachium he begins by saying that "fate, qua plurimum potest cum in reliquis praestat quae praeceps in bello, parvis momentis magnas rerum commutationes efficit; ut tum accidit; but after the battle, in addressing his soldiers, he tells them that "fortunam esse inventam esse nondum." As far as we can judge from his own writings, he seems as rational as Lucretius on this point; and, if it be true that he held Epicurean doctrines (which is, however, by no means certain), it may be that he looked on Fortuna much as the poet did—as the mechanical force of Nature acting in ways which we cannot foresee or understand. Lucretius wrote (v. 77):

"Pratae sono cura marmora fortuna guberna.

What and what nature guberna is appears in line 107, 'quod procul a nos fata fortuna guberna.' On these lines Musurus 

But, if Cicero himself were clear of any degrading view of Fortuna, and never in reality personifies her, this is not so with his younger contemporaries. The experiences of the last century of the Republic might well create a belief in the blind or willful dominance of chance in human affairs; society and politics seemed to be governed by no benevolent destiny, or rational law of development. Cicero himself had spoken of Fortuna in this sense when pleading for Marcellus before Caesar (in R. 2. 7. (pro Marc. 1. 7). Sallust was more in the more vigorous manner of a way which we have never as yet met with; 'Sed profecto Fortuna in omni re dominat; as res suecunt, ex libidine magistrorum presciatur obscuratur' (Catil. 8) and in the tenth chapter of the same work, while he looks on the history of Rome conquest down to the destruction of Carthage as the result of labor and justice, he declares that after that terrible event 'severi Fortunam ad missere omnia oris.' The author of the Cesarian book on the Alexandrian war (possibly Asinius Pollio) speaks of Fortuna (ch. 26) in terms of the Greek Nemea, as reserving those on whom she has heaped benefits for a harder fate. And Cornelius Nepos (Dices. 8) in the same way says that the sickness of Fortuna began to sink the hero whom she had just exalted.

It is true, indeed, that neither of the two finest spirits of the Augustan age, Augustus and Cicero, is; he lived too much in the world, enjoyed too thoroughly the exercise of his own individuality. Lastly, the reader may well turn to an interesting passage in the De Natura Deorum (iii. 88), in which, after insisting that the gods do not give us virtues, and that we do not thank them for it, but for riches, honour, commodities, and much like, he sums up in these words: 'judicium hoc omnium mortalium est, fortunam a deo petendam, a se ipso cumendam esse sapientiam.' Here, as in the passages above, the book is both false as a theory, and false as a practice, in a double sense, for we all do, particularly in military operations. In describing his defeat at Dyrachium he begins by saying that "fate, qua plurimum potest cum in reliquis praestat quae praeceps in bello, parvis momentis magnas rerum commutationes efficit; ut tum accidit; but after the battle, in addressing his soldiers, he tells them that "fortunam esse inventam esse nondum." As far as we can judge from his own writings, he seems as rational as Lucretius on this point; and, if it be true that he held Epicurean doctrines (which is, however, by no means certain), it may be that he looked on Fortuna much as the poet did—as the mechanical force of Nature acting in ways which we cannot foresee or understand. Lucretius wrote (v. 77):

"Pratae sono cura marmora fortuna guberna.

what and what nature guberna is appears in line 107, 'quod procul a nos fata fortuna guberna.' On these lines Musurus
Once more, a curious passage in x. 107 ff. must be
here noticed, because it shows that Virgil could
comprehend the working independently of
Jupiter, and in contrary directions for different
people; in response to the pleading of Venus on
one side and Juno on the other, Jupiter declines to
interfere.

"Saepe conjurae aures laborant, 
Fortunamque versat, saepe Jupiter omnibus ideis; 
Vita visum invenerat."  

Thus Fortuna is in Virgil, as at any rate in the Aeneid,
a moral conception, to which the leader of men,
and indeed all men and States, has to respond by
obedience and faith, inspired by that sense of duty
to god and man which the Romans called pietas. 
When the poet is not speaking of pietas Aeneas, or
of any one who has this sense of duty, he may use
fortuna in the ordinary sense of chance. In
the speech of Turnus (A. viii. 375 ff.), which is intro-
duced by the words "Tallius exarit verbis violen-
tia Turni," and is therefore the speech of one
uncontrolled by a sense of duty, we find quite a
different Fortuna:

"Nisi diebus varias labor manifestis atque
Resulit in mecum, multos alios revellit 
Etenim Turni, et in solido rursus Fortuna leniuit."  

For Fortuna in Livy the reader must be referred
to the valuable summary in the introduction to
Weissenborn's edition, p. xii ff.; the general results
of an independent inquiry can alone be stated here.
Whoever reads Livy's noble Preface to his work
cannot fail to be struck by the absence of any attrib-
ution to Fortuna or Fate of the growth of Roman
power, or the decline of the Republic's schools, must be
moved to see how much 
a fortuna in  
Romeror.  
Here, however, Fortuna is rather
Chaos (v. abbrufare) than the grander conception
of Liya or Virgil; the question raised is whether
the greatness of Rome was due more to Fortuna or
to Virtus, and the author concludes that it is due to
both, but chiefly to Fortuna. "She came to Rome
to stay, and laid down her arms, and was no
more a person of our purpose in this work, but it serves to
show how much people were thinking about Fortu-
na at the time, and chiefly in relation to Roman
history.

(2) Fortuna as Fate, or a guiding power of some
more or less definite kind. It was said at the
beginning of this article that Fortuna, as distin-
guished from Fates, never wholly lost the meaning
of a superior and intelligent power. In the Empire,
among educated people at least, this still holds
true. In spirit, indeed, in the minds of the people,
much more and more conceived on the one hand
as a deity, on the other as luck and ill-luck in
human life, which is the sport of chance. Thus
Seneca (de Benefic., iv. 3. 2) writes: "mane natura
voce fatum fortunam, omnia ejusdem de nomina sunt varie utilia potestia sua"—an interesting
passage, because the universal providence of Stoic
philosophy is here a nameless deity, neither Jupiter nor
another, the God whom Senece urges his disciples
to love as well as worship, in language hardly
 distinguishable from that of St. Paul (see Zeller,
Stoics, Epicureans, and Sceptics, p. 522 ff.; Boeitier,
Religion rom. ii. 71 ff.). But, as a rule, Seneca
uses the word in the current sense, never to be
worshipped or submitted to, but to be over-
come by the human will and wisdom; e.g. in de
Constantia Sapiendi, 15. 3 (and, indeed, passim),
"vinci nos fortuna nisi fortuna animus est," Evident-
lly there is no clear distinction between Fortuna and
Fate, yet the former is not so much pure luck or
chance as something which the human will can
understand (Aug. de Civ. Del. v. 9), or the executor of
the decrees of Providence (Macrob. Sat. v. 16. 5).

1 There were two Fortunae at Antium, but Horace speaks of
one only, which may perhaps indicate that he did not know
much about the cult.
authors like Seneca, Juvenal, and Tacitus, is a
toleration of this condition which the
Empire is occasionally puzzled by conflicting ideas of
Fortuna and Fate, though, as a rule, he uses the
word in the vulgar sense, e.g. Hist. iv. 47, 'magnus
domus Domitiae deus et Fortuna mitis centum.'
In a famous passage in the Amadis (vi. 22),
where see Furneaux's notes, and some excellent
remarks in the Introduction in his first vol. p. 21
Tactius tells us that he cannot make up his mind
whether human affairs 'fatone et necessitate immutabilis
forte votum volunta.' (cf. iv. 30), where fort is
identical with fortuna as popularly used.
It would seem that, as Furneaux says (p. 22),
Tactius was inclined to accept the idea that our destiny is
fixed from the moment of our birth, and could be
foretold from our horoscope if we were sure of our
interpreters; it is only now and then that he has
doubts, as when writing (Amadis iv. 30) of the excellent
Manius Lepidus who did good work in evitable
quiet under Tiberius, he doubtfully raises the
question whether favour or dislike of princes is the
work of Fate and our 'sors nascentior,' an 'sit
aliquod in nostris consiliis,' etc. This is no real
philosophic reflection, but merely the passing doubt
of an acute mind which has watched the tyranny of
Domitian. Is the human will free to shape its
course and thereby with happiness end?

(3) Fortuna in the vulgar sense of pure Chance.
There is no need to illustrate this further by
citing the example given by the elder Pliny (E.H. ii. 22),
in which the universality of the ascription to Fortuna of all
good and evil in human life is most emphatically stated.

Tactius, the great novelist and historian of his
century voce Fortuna sola invocatur et nominatur, una
accusat, una aequus res, una cogitatur, sola consilium,
sola argutus. Et cum conviccit oculis, veritati, in plebem vare
cosse extremae, vaga, locumnum, incesta, vertit, indiget,
universa incepta. It is quite certain that we may accept,
et in toto mortali mortale sole utique paginis facit
(i.e. in the debit and credit of human accounts—adventure
and prosperity—everything is set down to her), adoccus obstinate
some sort, at sunt lips pro deo sit, quas deus probatur
incertas.

This last sentence should not lead us to imagine
that Pliny is here thinking of Fortuna only as a
good in the lives of men. The good or evil in
human life is the subject of the passage, and
what the newsmen believed Fortuna was or was not
is not the point of the argument. What is
the main point is that Pliny is saying that
human life is a mixture of good and evil,
and that Fortuna is the personification of
that mixture.

Fortuna, however, under the influence of the
syncretism of the age, Fortuna puts
on, in addition to her own, the attributes of other
deities: (1) of the mysteries of Panthea, by which
she seems to become exalted into a position in
which she unites the attributes of all other
deities (see Roscoe, i. 1384 ad.), possibly as a consequence of an
oligarchy with
sea-sailing, which is common to both. The
latter identification is the most curious
development of Fortuna under the
Empire.

We can see the process of assimilation in a
charming passage from the
romance of Aeneid, where the young Lucius is
initiated, by the priest of Isis, into the mysteries of the
gods. Lucius is told that he has passed out of the
capricious power of the blind and reckless
Fortuna, into the loving care of a
Fortuna who is not blind, and who even illuminates the other gods by
her own light. 'Abhors, freed from his former troubles,
reposing in the provident care of great Isis, Lucius triumphs over his
own Fortuna.'

The worship of Fortuna in connexion with the
person of the Caesars may be called an
adventitious, or a part of the
official cult of the Emperor (see art. Roman
Religion, Period iv. § 1). It began in 19 B.C. with
the return of Augustus from a course of travel
in the East, where he
was received with the highest honors (Muc. Anecr. ii. 26, Gr. 6, 7),
an altar was dedicated on Dec. 16 to Fortuna Redux,
and a permanent cult instituted. In the year
A.D. 14, i.e. in the first year of
Domitian, games were celebrated to Divus Augustus
and Fortuna Redux, which henceforward were held
annually in the beginning of October under the name of so-called "Propitiation of the Relics", and the religious calendars (Tac. Ann. i. 15; Fasti Amantini and Antiates, and Forale Cumansus). From this time onward Fortuna Redux, with the title Augustus of the Gates, has become a specific when of the imperial family. We find her invoked, with the sacrifice of a sow, in the ritual of the Arval Brothers. A quo urbem ingressus est Vespasianus, 'pro salute et reditu Domitanii,' and on other occasions of the same kind down to the beginning of the 3rd cent. (Hermes, Act. Fratric. Are. pp. 98, 1823). For full information on this worship, and the kindred one of Fortuna Dux, see R. Peter, in Roscher, l. 1929 ff.

How far Fortuna was conceived by Augustus and his immediate successors as a really efficacious goddess must remain doubtful; but later on there can be no doubt that she, or rather her image, became little better than a fetish. The stories of Galba and the image has already been told; the Scriptores Historiarum Augustae tell us of Antoninus Pius, and even of Marcus Aurelius, that they kept a golden image of her (Fortuna Redux) in their bed-chambers, and carried it with them wherever they went (see, e.g., Jul. Capitolinus, Ant. Pis. 12: Spartianus, Severus, 28). But after the death of Commodus and the end of Christianity this came to an end, as did the official worship; for Fortuna, whether thought of as a goddess of fortune, or as a propitiatory deity, was equally irreconcilable with Christian convictions.

Summary. — We may now sum up in a very few words the long story that has been told above. Fortuna begins as a deity, not of mere chance, but of helpful power in relation to certain events of human life, especially childbirth and seafaring, and then develops under many forms and cult titles wider, however, gradually loses its original power and meaning, like so many other of the early Roman worship (see Roman Religion, Period iv. § 1). Meanwhile the influence of the later sceptical Greek idea of τῆς μέτριας introduces the Roman mind to the conception of blind chance, best shown in the fragment of Pausanias (above, p. 98); but this is the more advanced among the later or Roman School of Stoicism, beginning with Seneca, and in a historical form with Polybius, and having a tendency to associate the conception of Fortuna with the destiny of Rome and the Fortuna Populi Romani, as we see in Virgil and Livy. This is the confusion of the last age of the Republic, and perhaps under the influence of popular Epicureanism, the more degraded idea of Fortuna gains ground, and appears in writers of a less earnest moral type in the 1st cent. of the Empire, and also in the thought and worship of the less educated classes. Lastly, we return to an official or state cult of Fortune in connexion with the cult of the Cæsars, and with the settled order of the Empire; and finally, under the benign influence of Christianity the lower aspects of the idea and the cult alike tend to disappear.

FOSTERAGE. — By this term is meant the practice of receiving into a family the child of another household, to keep and nurture for a certain period. The custom differs from adoption (p.v.) in that the foster-child does not become a permanent member of the family though he is received. Language does not originally distinguish between nurse and foster-mother, and fosterage may be considered as a natural development of nursing, arising when the conditions of health or other special circumstances render it desirable to separate the child for a time from its parents. Such cases were very common among primitive, and the natural tie of affection between nurse and nursing may be expected to subsist between foster-parents and their charge. Among certain people this feeling attains exceptional strength, and the relationship develops into an important institution. This happens especially in a tribal condition of society, when family relationships are still the main social nexus, before the growth of political association.

1. ORIENTAL RACES. — 1. Arabia. — Although it is among European nations that the custom reaches its highest development, it has its importance for certain Oriental peoples also. It must have prevailed from early times in Arabia. Muhammad was put out to nurse with a woman of the Reni Bed, who reared him among her own tribe until he was five years old, and anecdotes are told of the attachment which he displayed in later life towards his foster-mother. Thus it is said that the Prophet stood on his foster-mother's grave, and besought the leave of God to visit it after the Resurrection (Muir, Life of Mahomet, London, 1884, pp. 5-7). When he came to legislate for his followers, he laid down a law against it, as marriage of people was rendered by the Bāb al-lāhil, the principle of the law is stated in the words: 'Whatever is prohibited by consanguinity is also prohibited by fosterage'; that is to say, the child of a slave is as much a slave as his foster-child, and marriage is the tie of blood, and the kin of foster-parents come within the forbidden degrees in just the same way as the kin of the actual parents (Meadows, tr. Hamilton and Griffith, London, 1870, p. 67). This enactment must be regarded, not as an arbitrary decree of the Prophet, but as giving legal form and sanction to the traditional usage among the Arabs (Robertson-Smith, Kindship and Marriage in Early Arabia, London, 1908, pp. 175 ff., 195 f.). Muhammad's principle was worked out in the Hadith, and a metaphysical theory was supplied by later legsits. The provisions thus established remain in force to the present day, and are incorporated into the Anglo-Mahom. law of India (R. E. Wilson, Anglo-Indian Law of India, London and Calcutta, 1898, p. 113).

2. INDIA. — On this point there is a sharp distinction between the Mahommedans of India and the Hindus. Among the latter fosterage is not unknown, but it has no particular significance and is practically unrecognized by Hindu law (R. Main, Early Institutions, 243), whereas adoption holds an important place in this code. A foster-child enjoys no legal status unless the ceremony of adoption has been performed (J. D. Mayne, Hindus Law, Madras and London, 1888, § 167). The pure-blooded inhabitants of Rajputana, however, with their more primitive type of community, give much more prominence to foster-kishmish.

Although the foster-family of a child is never of the Rajput clan, but belongs almost always to some particular family of a well-known pastoral tribe, it is the foster-father who has the most influence and position at his court, and the family has a recognized hereditary status of 'kishmish by the milk' (Loyd, Asiatic Studies, London, 1888, p. 281.)

In the same way the Rajas of Bundelkhand have their children fostered by women of the tribe of cowherds; in speaking to a man of this caste, dosan, 'foster-father,' is a respectful mode of address (information from H. Spencer, I.C.S.).

The same habit of choosing foster-parents extends among a particular subordinate tribe will meet us again in Ireland.

3. TURCO-TATAR. — That foster-kishmish was more
than a legal fiction among the Muhammadans of India may be seen in the case of Akbar, the Mughul Emperor.

Akbar had much to suffer on account of the favours which he bestowed on his foster-mother, Mahua, and her family. She was for many years the most influential person at his court, and her son, Shast Khan Azha, was one of his generals. When this man actually stabbed the Emperor's minister, Muhammad Khan Azha, it is remarked by the Muslim historians that Akbar's word was sufficient to prevent his execution ("cession") which bound him to the son's mother, and to order his summary execution. The murdered minister and his son, Azla, were related to Akbar through another foster-mother, Asia, who succeeded to the position of Mahua. The Mughal Emperor, however, refused to inflict any but the lightest punishment on him, saying: 'Between me and Asia there is a stream of milk which I cannot cross' (Mahanars, Ahsan, Oxford, 1880, p. 177).

The case of Azla, Azha, and their relationship with the foster-mother, her husband, and their son, are Turkish words used among the nomadic tribes from whom the Mughal Emperors drew their origin; and the sentiment which Akbar acknowledged cannot be ascribed to the influence of the Mahan faith with which he and his people had embraced (he was far from being a devout Muslim), but marks the prevalence of the customs of fosterage among the Tser-Tatar nomads of Central Asia. The custom and the associated sentiment no doubt grew up among the Tser-Tatars similarly to those which obtained over most of Arabia. Among these tribes, as among the Arabs, the tie of milk seems to have been from immemorial times equivalent to kinship; and a slave Turcoman was as likely to adopt a foster-brother free access to the Arians, which is otherwise permitted only to near kinsmen (A. Vambery, Dei Turcomeni, Leipzig, 1868, p. 310).

A similar principle is found among the close adherents, on whom he relies in the hour of need (Elia and Rose, Turkei-4 Bessell, London, 1866, p. 429, note). The custom is mentioned in the cases of the Irish and Scottish tribesmen.

4. Circassians.—The Oriental peoples agree, as a rule, in regarding the act of nursing at the breast as the essence of the foster-kinship, which therefore centres in the person of the foster-mother: it is only as related to her that the rest of the foster-kindred comes into account. With the Circassians, however, the foster-father seems to be of more importance.

'The son of a Circassian chief is taken from home and consigned to the charge of a tutor or foster-father, called an atika; and, until he attains the age when his education is supposed to be brought to an end, he feels outside weakness in the real father to desire to see his child. 'Boys are regarded rather as orphans of the tribe than of the person'; and, should the latter have neglected to choose an atika for their son, any one who feels disposed may offer to undertake the charge. There are instances of an eminent educator carrying off a pupil by force; and this is not by Circassian law a punishable offense (L. Mohamed, Gessell, London, 1866, p. 25). The role of the atika is here very similar to that of the eite in Ireland and the Scotoir in Skye (see below).'

II. EUROPEANS. 1. Slaves.—The European peoples do not, as a rule, lay the same stress as the Orientals on the function of the foster-mother, nor is milk-relationship generally regarded as a bar to marriage. An exception must, however, be made in regard to the Slavs of southern and eastern Europe, who, influenced perhaps by their Mahan neighbors, consider the union of foster-kindred as unlawful. Foster-children (and also adopted children) are regarded in the same light as the natural offspring, and the foster-child bears the name of the foster-father so long as it remains in his house (Maine, Law and Custom of London, 1891, p. 287; F. S. Krauss, Sitten und Brauch der Slaven, 1861, p. 287; F. S. Krauss, Sitte und Brauch der Schwarz-Deutschen, 1873, pp. 322, 358). The practice is generally recognized as public, and is entrusted either to Foundling Hospitals and similar institutions, or

cases no doubt are to be found, and there are indications that under the later Roman Empire as in the Parisian world of the 19th cent. many women sometimes got rid of domestic burdens by putting their children out to nurse in the country. An edict of the Emperors Honorius and Theodosius (dated A.D. 400 and incorporated in the Digest under Cod. lib. vi. tit. 3, § 2) forbids parents to entreat their offspring in this way to the care of shepherds, a class that was held in very ill esteem; 'Nemo curatulatus plebescorum possessorumque filios nec nutriundo pastoribus tradat. Allii vero rusticulis, ut servi solent, nutricendos deri non vesternos' (Cod. Theodos., ed. G. H. Hudd, Bonn, 1841, p. 390).

Foundlings.—A different type of fosterage receives special treatment in Roman Law. This arose from the custom of exposing new-born infants which the parents did not desire to rear. It sometimes happened that the unfortunate babe was rescued and brought up by strangers from motives of compassion or convenience. The story of Oedipus and the plots of many Greek comedies afford examples. In Rome, the codes of the later Emperors define the rights of the fosterer (nutritor) in such cases. The Codes Theodosianus, adopting the principle of an edict of Constantine, lays down (lib. vi. tit. 3) that any one who rears an infant thus exposed acquiesces full rights over it, and may treat the foundling as his son or his slave, at pleasure. If the actual father desires to recover his child, he must give in exchange a sum of equal value, or pay an equivalent sum. Similar provisions are found in the semi-Roman codes of various barbarian peoples who were linked with the Empire, and among whom the exposing of children was a common practice. The statute just quoted was incorporated in the Codes of the Kings of the 8th century (see Capitulare Regum Francorum, ex jure in, in Codi, Barbarorum Leges Antiquae, Venice, 1781, ill. 274). A further development is added in the Laws of the Visigoths (e. A.D. 584), where the steps which are laid under a formal obligation to redeem the child; if they fail to do so, they are to suffer exile for life, and the jaditus territioria is directed to pay the redemption price out of the father's property; or, if the father has nothing, he is to become a slave in place of his son, who is to go free. It is further laid down that, if parents entrust a child to another person, the fosterer is to be paid annually a shilling (solidus) for each year of the child's age, up to the age of ten, after which his service is to be taken as equivalent to his keep. Of course, impossible to say whether such enactments were really operative among the rude nations for whom they were framed.

The attempt to enforce the performance of parental duties was no doubt due to the growing influence of the Church, to which the practice of exposing children was naturally repugnant. The Formulari Sirmundi, which probably represent the practice of the tractus Turmonom (Tournais), speak of a class of officials called matriculos, or whose special duty it was to take charge of foundlings. These infants were usually left at the church-door by stealth; the matriculos had to take care of them and induce charitable persons to receive them into their families. The Synods of Vaison (A.D. 422) and Arles (A.D. 463) laid down canons dealing with this question.

Cf. Holtz, Hist. of the Consuetud. Eng. tr., Edinb., 1860, ii. 168, 170; Formulari Sirmundi, in Canadii, iii. 419, 438; see also Regn. de Boc. Diplomat. Paris, 1871, l. 153. The methods adopted by the medieval Church are still in force in the Balkan States (F. S. Krauss, 567). In the more progressive countries the care of foundlings is generally recognized as a public duty, and is entrusted either to Foundling Hospitals and similar institutions,
to foster-parents, who are paid for their trouble either by the State or by local authorities (Ebor, art. 'Fondling Hospitals').

3. Anglo-Saxons.—After the introduction of Christianity into England, these duties were done by clergymen, who were known as succorercy (Augustine, Ep. ad Bonifac. 23). The laws of King Ine provide an allowance for any one who takes charge of a foundling; and other early laws define the rights of foster-parents on lines similar to those laid down by the Codes Theodosianus. Fosterage by desire of the parents seems to have been prevalent among the Anglo-Saxons. Augustine, in the Epistles just referred to, complains that mothers are apt to delegate to others the duty of nursing their children; and the early Church set its face against the practice, and went to the extreme of actually prohibiting it (Ecclesiastical Laws, I. xi. 15). The care of the foundling was usually by a woman, and the nurse was called a wet-nurse (Bede, Hist. Eccl. iii. 12). The foster parents were also looked upon as officers of the Church, and were expected to teach the child the rudiments of the faith. The child was called a Christian before he was taught to talk; and the nurse was required to teach him the rudiments of the faith before he could be taught to talk (Bede, ibid.).

Such cases as the story of the foundling who was brought up by the wife of the man who killed his father (Cailleay-Vigfusson, s.v. 'Fostrer.') In many cases the foster-father gives part of his property to his foster-son. The amount that may be thus conveyed is limited by the ancient law in the interest of the proper heirs (Norges Gamle Lave, Christiania, 1848, I. 218); but in the Saga the foster-son is sometimes made to help the fosterer in his property (K. Kastland, in Skarftaligr for nordisk Oldkongehistorie og Historie, 1870, p. 270). (2) Strength of sentiment.—The affection which sprang from this relationship is described as of extreme intensity, both as between foster-father and foster-son, and as between foster-brothers; as in Ireland, it is said to have been even stronger than the tie of consanguinity. When Thorhall, the foster-son of Njal's fosterer, heard that Njal was killed, he said he would not live longer than Njal, and cut off all over and over the heart of blood burst forth from both his ears, and could not be staunchened, and fell into a swoon (Verand. 116). A violation of the trust by the foster-brother is regarded as an offense against the natural charities. The tragic motive of the Leivisa Saga consists in the gradual estrangement between the nutritional woman and the foster-brothers Bolli and Kjaran, which issues in a fratricidal conflict. Attached sedulously to Bolli, Kjaran slings away his weapons, saying: 'I am much more than to take my death from you than to cause the same to myself' (Leivisa Saga, tr. A.A.C. Freze, London, 1888, p. 176). The term 'foster-brothers' came to be extended to those who had gone through the ceremony of swearing brotherhood, as in the so-called Fotbrotvs Saga. This rite is described in Vigfusson and York Powell, Origines Islandicae, Oxford, 1905, I. 319 and in art. BROTHERHOOD [Artificial], vol. ii. p. 827; cf. Daseii, Edd. Edin., 1888, I. 23. The proper term for such a 'sworn-brother' is, however, sidbro or svebro (see Vigfusson and York Powell, Corpus Poeticum Boreale, Oxford, 1883, I. 424). (3) Reasons of special development.—The causes which gave the practice of fosterage peculiar importance in Scandinavia must be sought in the barbarous and violent condition of society described in the Norse and Icelandic Sagas. The weaker man, unable to secure the safety of his household, could gain the protection of a stronger neighbour by fostering his son. Or, again, one who found himself isolated and threatened by enemies might acquire in this way the support of powerful friends. In the Forsey Saga the crafty and treacherous Tordard, being a kinless man, takes to himself foster-sons from three different families, and fosters them to one of his own company; and is fostered to one of Hege Asbjornsen's children; being convicted of theft, he refuses to pay the usual fine, saying that 'It would be little good he should get by fostering Hege Asbjornsen's son; if he should have to pay the penalty in a case like this.'

The fosterer is therefore, as a rule, in a position of inferiority to the parents of his charge; hence the saying that he is the lesser man who fosters another's child (Cailleay-Vigfusson, s.v. 'Barm-flot'). This maxim may be illustrated by a tale which is told in the Saga of Harald Hakrung, (K. Læring, Lettelebringer, London, 1895, I. 841-4). At Harald's command, the two Haralds, Harald Ingimundr, performing an act which might be construed as an act of homage to the English king. Wishing to pay his debt in kind, Harald sent his infant son, the child of a servant of the king of Norway, to King Christian the Younger under the charge of Harald. On being admitted to the king's presence, Harald advanced and set the child on the king's knee; and, when Asbjorn asked what this meant, he replied: 'Harald the king's son.' 'What?' asked the servant; and the king answered: 'A fostered child. Having set the child on one's own knee (Ísland), he was taken up by the boy, who grew up to be king Hakon. Harald was de-
FOSTERAGE

lighted at the success of his rector, 'for it is the common
observation of old people,' says the chronicler, 'that the son
who fosters another's children is of less consideration than the
other.'

Instances are, however, to be found where the offer to undertake the charge of a boy is made as
an overture of friendship, as when Heidrek, in the
Hervor Sagas (p. 111), offers to foster the son of the
churl; 'there is no further ado on it;' the queen's advice to her
husband on this occasion shows that it was dangerous
to refuse such a proposal when made by a formidable and ruthless warrior. Again, the person
who offers fosterage may be an equal or superior, and his intention may be to make reparation for
injuries done, by thus accepting the inferior position.

Those who undertake fosterage are said to be
kuld, whose father has been slain by Njal's son
Skarphedin (Burnt Njal, ii, 59).

(4) Fosterage as a legal contract.—The ancient
laws, and the first, and define his rights and obligations in
respect to the foster-child and the actual father.

The parties enter into a regular contract, and the
foster-brother receives a certain amount of money
or goods or land to defray his expenses. If either
side fails to fulfill its part of the bargain, the law
provides for a suit for damages. If the father is
drawn by the father, he cannot recover the money
he has paid, while, if the fosterer ends the child
home before the proper time, or if he does his part
so badly that the father is justified in withdrawing
his child, he must refund a proportion of the amount
paid to him (Grundt, tit. xxi; Gamla Love, i. 286,
§ 61). In some cases recognized by the Swedish
law, no payment is made by the father, fosterage being
given in consideration of benefits rendered or
promised. The case of an orphan is specially provided for: if he is reared by a person not legally
responsible for his nurture, the fosterer may claim a
fee (interesting) out of any property which may
come to the foster-son, or out of any property
which may be left to him as a reward for his services
on behalf of the foster-parent. If the child is
eligible to make claims on behalf of his foster-parent,
and is responsible for claims made
against him.

Thus, when Sigmund in the Forsyning Saga (as above, pp.
35-38) claims money paid to Thord for the murder of his father
Brendur, as a condition of undertaking the fostering of
Laf, whose father had been slain by Sigmund, and makes a
contract with Thord for a certain sum which he demands from
Sigmund on account of the expenses of Laf. Under the ancient
Judicants-law, either of a pair of foster-brothers has the right to demand a sum equal to the
services of the fostered child (Law, ii. 389).

In all these legislation there is much that is closely
similar to the provisions of the Ancient Laws of
Ireland. The foster-relations are scattered throughout the five volumes of
the Ancient Laws of Ireland (which, it must be re-
membered, do not constitute a code and have no
historical unity). The most important locus is
the Cais Forrath, or Law of Fosterage-Fee (ii. 146-192). The term forrath answers to the Scan-
dinavian foster-land, and denotes the values in money
or kind made over to the fosterer by the parents.
The amount of this fee is fixed on a scale varying
according to rank, a higher rate being charged for
girls than for boys. Provision is made, as in Scandi-
navian law, only with more detail, for the termina-
tion of the arrangement on either side, and for compensation to be made by the foster-parents
in case of neglect or of harm done to their charge.

The treatment which the foster-child receives is to
vary according to the rank of the parents and the
amount of the forrath. Rules are laid down as to
gradations of food and dress, with a minuteness
that belongs to artificial theory rather than actual
practice (for details, see CHILDREN [Celtic], § 7).

The foster-father is to teach the useful and agree-
able arts, especial stress being laid on riding;
and the actual practice in this case of misbehaviour; on the other
hand, he is made responsible for mischief done by
the foster-child, so far as this can be ascribed to
his own neglect or ill teaching. His functions thus
include those of a tutor; the importance of the
moral influence so exercised gave rise to a saying
to the effect that fostering is two-thirds of a child's
nature (O'Donovan, Battle of Magh Rath, Dublin,
1842, p. 294). As one man might foster several
boys, it is clear that in a more settled state of
society the foster-father would easily pass into a
schoolmaster. And, in fact, the term aise may
mean either 'foster-father' or 'tutor,' and the
derivative aitchoa or cicochoa is in modern Irish
the regular equivalent of 'education'; so also dailea
is an ambiguous term meaning sometimes 'foster-
ing' and sometimes 'pupil.' The relations between
tutor and pupil are explicitly regulated in the
Laws as constituting a distinct species of fosterage;

(2) Historical evidence.—There is much uncertainty
as to the period in which the Irish Laws
first took definite shape, and it is difficult to judge
how closely their theory corresponds with actual
usage; but there can be no doubt that their stan-
nards in regard to fosterage are founded on a
custom which was inwoven with the life and
habits of the Gaedel in far back times and is
known to us. It is already in vigour in the
legends of the Ulaid (the cycle of Conchobar and
Cuchulainn), which represent a state of society
perhaps as old as the Christian era; and still meets
us at every turn in Irish literature and history,
down to the break-up of the old tribal system
about the year 1200. Even in the 17th and 18th
centuries it still lingered in certain regions.

In Ireland, as in Scandinaavia, it was deemed...
honour and advantage to be allowed to rear the son of a powerful chieftain, and thus establish a claim to fealty and protection. This, however, has been the rule in very primitive times, or it may have been a point of artificial theory, not really observed in practice; at all events, if there ever was such a restriction, it must have disappeared very early. As a rule, no doubt, the foster-parents belonged to the same clan as the father, but this was not always the case. The son of a noble house often had several fosterers.

At the birth of Ochobalanach, who was nephew to the powerful king, Forghaill had an earnest desire to assert (II. 268) that fosterage was not generally that of a whole family or tribe, and that in very many cases it became a bond of friendship and alliance between two or more tribes and even provinces. This is an exaggeration; it is more probable that the tribe was concerned only when the fostering was the son of an important chief. Such cases are to be met with frequently in Elizabethan times.

High Bee O'Donnell, born about 1573, was fostered by chieftains of the O'Donnell and MacNolan families. It was said that O'Donnell, thus uniting the support of three of the strongest families in the north of Ireland, felt himself strong enough to stand safely until the day of battle. He was the son of Donn and was also the grandson of Donn (O'Donnell).}

According to Sir John Davies (in H. Morley's Ireland under the Tudors, p. 170) the O'Donnells claimed fosterage with the O'Connors and MacNolans, and that the latter was inextricably bound with the former. But the O'Connors were also fostered by the MacNolans, and it is certain that the O'Donnells did not consider themselves bound to foster with the MacNolans.

It is probable, however, that the O'Donnells were bound to fosterage with the MacNolans, and that the latter was inextricably bound with the former. But the O'Connors were also fostered by the MacNolans, and it is certain that the O'Donnells did not consider themselves bound to foster with the MacNolans.

In 1603, the first earl of Tyrone, a member of the MacNolans, and the son of Donn, was fostered by the O'Donnells. This was a great blow to the MacNolans, and it is certain that the O'Donnells did not consider themselves bound to foster with the MacNolans.

It is probable, however, that the O'Donnells were bound to fosterage with the MacNolans, and that the latter was inextricably bound with the former. But the O'Connors were also fostered by the MacNolans, and it is certain that the O'Donnells did not consider themselves bound to foster with the MacNolans.

to the Western Islands, London, 1876, p. 118). Skene (Celtic Scotland, Edinburgh, 1876-80, iii. 221) gives four examples of written contracts of fosterage, the latest of which dates from 1855. They conformed to the usual type and agree in principle with the Irish Cásar Jorrach already quoted. The obligation of the foster- father towards the child, and the share of expenses to be borne by each of the parties, are very precisely specified.

7. Wales.—Among the Brythonic races the evidence of such nobility is more meagre with their Geisic relations. The remains of Breton and Cornish literature are too slight to furnish any information, but in the Mabinogion and other Welsh traditions, we find what seems to show that the custom held a certain place in the primitive life of the Welsh people (see the tales of Prenedur, Kulwech, and Brawneu, in Lady C. Guest's Mabinogion, London and Llandover, 1849, i. 313, ii. 260, iii. 114).

The references to the subject in the Ancient Laws are unimportant in comparison with the elaborate provisions found in the Irish Laws; but they imply that it was a common practice for a noble to allow his sons to be fostered in the house of a serf or toog. If such fosterage lasted a year and a day, the boy thereby acquired a right to a share in the goods of his foster-father; but if the fosterage lasted a greater period, he was to be considered a free tenant. The men of Cétait Néagur dig a hole at each of the four corners and place a small quantity of rice in them, with a piece of wood or mango, saying that the test may truly indicate whether the site be good or bad. If the rice is found next morning to have rotted, the place is good; if it is not, it is bad. This mode of augury is common in India and Africa. In Africa, however, it is never used, the omens are reversed, as the Masoreans of the Great Law used to say, if the food be found good, the omens are bad, and the other way about for the snail (Eunica). In glowing words the site of the temple is described to the Westans (orphan-spirits), who decide on the goodness of the place. But, if the food has been disturbed, the Westans have eaten of it, and the choice of site is rendered improper (see Rostovtzeff, Moscow, 1878, i. 264).

The foregoings are illustrations of a simple method of divination. When professional diviners are called in, the ceremonies frequently become very complex, and it is impossible to enumerate or even roughly classify them. Attention may, however, be paid to the Chinese practice, which has elaborated geomancy into a pseudo-sciene called feng-shui (v.c.), without which no site is selected for any purpose (de Groot, Rel. East. Asia, 1895 ed., iii. 393; Dannay, Fohsien China, London, 1876, p. 60). But there are some methods of divination which follow the same principle, and are practised by the natives, and used as proof of the site. In the Middle Ages, it was decided by the translation of the Holy Scriptures.

Animals of good omen for this purpose are met with in many countries.

In Japan a Buddhist temple was erected, under the Emperor Kotohiko, on the spot where a white deer was seen quietly moving (Nihon, Art.Ⅹ, Yokohama, 1890, ii. 297). In Germany the Abbey of Erfurt was erected on a site shown, in answer to prayer, by a snow-white roe bearing a burning taper on either horn; and the spot of the neighbouring church was determined in the 11th cent. by a flight of dove over Callisto (Burgess, Berlin, 1883, p. 381.). Many such sites in France and Germany are alleged to have been chosen by similar indications. The capture of a bear in the forest of the Arz on Good Friday, 1191, when Duke Berthold of Lübben was contemplating building a fortress there, is said to have decided the site of the town of Berne (ib. 350). The contrary case is reported from Japan, where the village of Ner Phingal in Seras was built by Nabaw, since called Shinsino Kiyon, on the spot where, we are told, a hare turned on one of its horns and put it in the air (1504-7) 395; cit. 106, and Crooke, P. S. P., 1890, p. 100). On the N. E. slope of the Odenwald there are serfs that regard every site as lucky, and thus suitable for his house. He is guided in the choice by his cattle, and builds where they prefer to.
FOUNDATION

to lies. He avoids the place where red ants make their hill; but if a hill of black ants promises good fortune. Like a wise man, however, he will keep on it, and that on the very spot. If his dreams be fair, especially if of fine cattle, this settles the matter; otherwise he hesitates. Sometimes he will test the site by leaving on it a glass not quite full of water and coverless with sand. If on the following day the water has increased, the place is lucky; if it has not, he will avoid it. If these precautions be omitted, the site may turn out to be haunted by demons. If he builds the house or store there mischief will result to the inmates (Rainald, Die Burgen, Vienna, 1864, p. 99).

Another form of divination is found frequently in French legend, as, for instance, in the story of the foundation of the famous abbey of Cluny, concerning which we are told that the monks were unable to agree where it should be built. The dispute was finally decided by one of them, who was a mason, swinging his hammer; and the abbey was erected on the spot where it fell (Sébilliot, Folk-lore de France, iv. (Paris, 1907) 114).

A somewhat similar mode is employed by the Southern Slavs. It is not, indeed, employed to fix a site, but to determine whether the hill-spirit will permit the erection on a hillside provisionally selected. The peasant-farmer who proposes to build a new round cake down the hillside. If it ultimately falls on its face, the hill-spirit which haunts the place is favourable; otherwise, he is against him, and the farmer must seek another position. The cake is made according to a certain recipe, and is thrown on the ground. If the hill-spirit is favourable, it will lay on the chosen site some large stones. Coming three days later, he turns them over to see whether worms are to be found beneath them; and he builds on the spot where the stone lies under which the worms appear. The worms are the spirits of the landscape which designate the place, and their presence is a sure indication of its favour (Krauss, Facoletkoy, Mitteilungen, i. W., 1880, p. 168).

Throughout N.W. Europe a very common legend relates that the site, especially of a church, was changed by supernatural means. The legend is usually etiological, and its object is to account for a site the original reason for which has been forgotten. But it often points to the necessity for securing the consent of the local earth-spirits to the project. This belief appears repeatedly in both legend and custom in many parts of the world. It is brought prominently forward in many stories relating to the elves or fairies, in the British Isles and elsewhere.

In Galloway, for example, 'when the new house at Greenan was being founded, a woman appeared and asked the masons and others taking a hand in the work to change the site. She told them that the house on that site would be right over her dwelling, and in consequence much annoyance and inconvenience would be caused to her and her household' (Rep. Brit. Antiq. Society, x. 1876, p. 126). Great care is taken to avoid a spot haunted by the underground folk. The builder must go to the depth of three feet, make known his purpose in a loud voice, and ask permission; and the day before he intends to begin work he lays his tools and materials there. If the underground folk agree, the noises of people busy with hammering and hunting will be heard in the silence of the night. In the Faroe Islands an instrument as modern as the compass is laid on the site. According to its behaviour it is ascertain whether the Jottling dwells there. If the Jottling dwells there it is not to be disturbed (Zeitsch. d. Vereins f. Far. u. Pfalz. vik. (1893) 274, 373).

Sites in Europe and elsewhere, especially for churches, are said to have been indicated by the direct command or the apparition of supernuminate beings, such as the Virgin Mary. Or an image is found in a certain spot and cannot be removed. It is needless to refer here to instances. Sometimes the Divine will is shown by a flame or light seen in a bush, as in the case of the Monmouthshire church of Llanllytlo Borodilly (Parochiaek, Arch.-Combr., xii. 1811, Suppl. 36, 71). Some of these sites, such as that of the famous shrine of Our Lady of Guadalupe, near the city of Mexico, and have been places of pagan worship, converted to Christianity and accorded with the well-known policy of the Church.

2. Appropriation of the site.—The site being chosen, the next step is to appropriate and to exorcise it, and incidentally to mark it out. Among the Basuto, when the village, or kraal, as it is often conveniently termed, is to be removed, the chief drives into the ground a peg covered over with charms to nail the village firmly to the soil of the new site, and in order that neither war nor any other misfortunes may distress the inhabitants and force them to return. A boundary is drawn, and religious acts, and probably attended with ceremonies which our authority has unfortunately not thought proper to recount (Cusack, The Basutos, Eng. tr., London, 1845, p. 124). A boundary of the A-Kamba of East Africa (like the Basuto, a Bantu people), when a new village is founded, a medicine-man is generally consulted, and, having satisfied himself by divination that the site chosen is lucky, he kills a goat and walks over the rough outline of the village, sprinkling it as he goes with the goat's blood and the contents of its stomach. The extent of branches surrounding the site is then put up. The head of the village and his family camp in temporary shelters inside the fence for several nights before beginning to build the huts. On the second and fourth nights of their preliminary occupation the head of the village must cohabit with his wife—doubtless as a magical rite to obtain prosperity, and increase in cattle and crops, as well as in the human population (Hobley, Ethnol. of A-Kamba, Camb. 1910, p. 58). The circumambulation of the site is also an aspect of the rituals of the A-Kamba is also a magical rite. In Islam, when the ground for the erection of a Buddhist temple is first dedicated, eight labbers, or round marking stones, are set up with a cross on them, and are buried, to mark the limits from which evil spirits are warned off (Alabaster, The Wheel of the Law, London, 1871, p. 372 n.). Doubtless the priest performs the sprinkling by walking the circle. The Etruscans, on founding a city, ploughed with a cow and a bull a furrow round the limits; and we gather from Ovid's account of the pomerini of Romulus that the animals yoked to the plough were white (Fasti, iv. 229). To some such rite as this, misunderstood by later ages, we must attribute the numerous legends assigning the extension of lands given for various purposes, the quantity that the recipient could walk or ride round in a day. Thus Coirbi, when a fugitive from the south of Munster was given by his non-in-law Aedh, king of Connaught, as much of certain wooded lands as he could pass round in one day. As in all these stories, the extent of the land thus acquired was much greater than the donor anticipated, and led to subsequent trouble (Annals of the Four Masters, Dublin, 1851, ii. 259 n.). Variants of the tale are by no means confined to Europe.

The most famous of all is perhaps the Hindu legend of Vipyu, who appeared to have been an old woman, and who told him that he should find a hoard of treasure in the three places of his vast kingdom. The boon was granted contemptuously. Forthwith the dwarf and his first step measured the earth, with the second the sky, and there was no space left for the third. Full submitted to this, he was made the judge of the dead (Beauchy, The Story of the Hindus, quoting in a note Somnara's Vayugiti. The ultimate literary source is the ancient poem of the Harivaes.)

Of similar origin are the stories which represent the quantity of land as to be enclosed by a bull's hide. It is cut into very thin thongs, and the area is thus rendered unexpectedly great. The earliest example of this is the tradition of Dido, who obtained the site for Carthage in this way. Parallel tales are found in Britain and Scandinavia, though not without suspicion of literary influence—a suspicion, having regard to the legend of Gefjon's Ploughing, not entirely deserved. The legend is also current among the Fatast tribes of the north, and as far to the east as China. There, in one version, the settlers are Spaniards, in others Dutch; and to them the Dutch trick in India and Cambodia. The incident is even told by the Hottentots of the first settlement of the Dutch at the Cape of Good Hope (Arbouset and Dommers, Exploratory Tour in S. Africa, Eng. tr.,
The kind of rite to which these legends point may be illustrated from the practice of the Bochumua in founding a new town. A bull is taken, its testicles are sewn together, and, thus blinding it, is led to a precipice in the place where it is to be killed where it is found, roasted, and eaten on the spot. The white plume of the skin, and hair of the head it has been marked with certain appropriate markings and 'medicine,' is cut into one piece and is given as a present to the bridegroom. This is done about two feet. One of the lengths is pegged down in each of the poles leading to the new township. After this, if a foreigner approaches the new town to destroy it with his weapons, he will find that the town has prepared itself for his coming ('J. A. M. 89 (1886) 208 f.). It is clear that we have been a mystic rite intended for the protection of the town and its inhabitants.

Among some of the Kaffir tribes of South Africa, the medicine-man formally disembowells the site before the work of building was begun ('Müller's, x. (1900-01) 70, citing Magyar, Reisen in Süd-Afrika, Budapest and Leipzig, 1889). The practice of the Vasa and Masnegna about Lake Nyasa describes that the chief, with his brother and the medicine-man, shall ride on a board, and then sit cross-legged. Walking round the site, they throw the image in little knots, covering them with medicine. At the spot where they think it is to be erected they take fire and put 'medicine' upon it. Then, in burning, they sing in a spavyn the moon, which is to guard the village from man and cannibals. The moon then throws the medicine towards the sun, and close the ground (Bastian, Fabeln in Chinesen, 1897, p. 199).

Among the Ijone race of West Africa, a great mound is cast up. The priest brings over four covetises in his hands, and, walking round the spot, he throws the eggs to which they have just found 'possessed the geneal blood' for favour and human fecundity, and that nothing evil may happen. He places on the mound a piece of muslin and a cord, and, again, throws the eggs upon it. If they, or even two of them, do not fall upon the side, then the erection is always applicable. When the site has been cleared and prepared for building, the medicine is made and sprinkled on the earth, and the people all wash their faces with it, and are anointed with holy water. Largest of the creatures used for this purpose is the cow, and after it is many birds for favour ('Pfaffen', Die Ijone- und Lobi-Bande, Berlin, 1909, p. 357).

In some of the Moluccas, where the population is Muhammadan, a ceremony which, like that of the Egyptians, is led by our authorities 'conscription' is performed.

On the day of the new moon the owner's wife measures a piece of cloth by the brightness of the moon, the length of her outstretched arms—and gives it to her husband, together with a bottle of water and an egg. The rope is rolled up and laid partly in the ground, with the bottle and the egg. The owner invokes the prophet Lawom and the Wani, and explains to his ancestors the place to be chosen to obtain an angry. He watches all night. If a dog approaches, it forbids quarrels in the house; if a cow passes by, it means sickness. If neither of these customs occurs, and if next day the rope is found of the same length, the bottle still full, and the egg uncorrupted, the ceremony is successful, and the work proceeds. While it would seem to be not merely a conscription, but an endorsement, this type of conscription is often found in the Orient, and is in the highest powers ('Riedel', De standl. en bronzebares moses, The Hague, 1899).

Nor is consecration of the site, even of ordinary dwelling-houses, unknown in Europe. In some parts of Germany pious people of the old faith still sprinkle the site with holy water and bless it. Formerly a priest performed this function; and by its means all evil, all ghosts and demons, are exorcised ('Glock', xvi. (1870) 186, quoting Montaigne, Des deutscl. Fastenpflichten, Lahrn, 1884-85). Consecration (q. v.) of sacred sites is, of course, well known. It is not a specifically Christian rite, but has descended from much more archaic times and practices.

3. Laying the foundation.—When the site has been appropriated, it is cleared and levelled. The next step is to erect the materials. This is often done either by rule, or in accordance with the directions of a priest or medicine-man after divination; and certain rites must be observed. It is begun on a day deemed lucky (astrology is practised) according to the calculations of the astrologers. Except among highly civilised peoples, where manor-houses are erected and easily observable, the case of very important buildings, the fabric is usually of timber. If a block-house, as frequently among the peasantries of Europe, the lower beams constitute the foundation. Otherwise the stability depends on the centres of poles or the corner poles, and it is consequently about their erection that ceremonies tend to aggregate. Such ceremonies to procure stability may be roughly divided into those whose object is to call the spirits and destroy spells; (b) to conciliate the local spirits; (c) to provide a new tutelary power. Among many peoples the house is built in a particular direction, frequently to the east. On some of the Moluccas it faces the east, in order not to offend the divinity Upluro ('Riedel', 880). In the State of Manipur ('India') it is the rule of some of the Nagas tribes that the house must not face the west, because that is the direction taken by the spirits of the dead. As showing how utilitarian sometimes coincide with superstitions considerations and render it difficult to distinguish the real origin of a practice, it may be said that the prevailing wind is westerly, and it would, therefore, enormously increase the danger of fire to build the house facing in that direction ('Hodson, Nagas Tribes of Manipur, London, 1911, p. 43). The custom of many North American tribes is to place the entrenchment with its entrance to the east. This was always done among the Omaha, when the site was encamped for tribal ceremonies; while at other times, if the entrenchment was not made, the entrance was not always in the same direction, it was always symbolically so reckoned, and the position of the various clans relatively to the entrance was the same ('Fletcher, R. E. , 1811, 399'). In the lower culture the plan and erection of houses is always traditional, and it would be a serious breach of custom to depart from them. When a chief of the Bochumua chose a site and fixed the foundations of his own dwelling and the public cattle-kral, each of his tribemen knew the relative position of his own lot ('Mackenzie, Two Years North of the Orange River, Tweed, 1872, p. 400). In his own dwelling and the public cattle-kral, each of his tribemen knew the relative position of his own lot ('Mackenzie, Two Years North of the Orange River, Tweed, 1872, p. 400). In his own dwelling and the public cattle-kral, each of his tribemen knew the relative position of his own lot ('Mackenzie, Two Years North of the Orange River, Tweed, 1872, p. 400). In his own dwelling and the public cattle-kral, each of his tribemen knew the relative position of his own lot ('Mackenzie, Two Years North of the Orange River, Tweed, 1872, p. 400).
substituted for the pebbles with advantage, since they attract the "right" of gods and benevolent demons (JRAI xxviii. (1909) 150). The Hruszles lay incense, money, salt, and bread under the lower beams of their blockhouses to ward off evil spirits, and towards the exterior charcoal and mortar from a baking oven. The former objects are regarded as luck-bringing, the latter as efficient against enemies, probably spiritual. We may see, here a relic of the custom of bringing fire from the old house (Kaindl, 31). Salt and bread are widely regarded among comparatively civilized peoples as valuable talismans, the former as driving away evil influences, the latter as bringing plenty. They are among the first objects to be brought into a new house; and salt is commonly placed on the breast of a corpse while it is lying in the house. Money, like bread, and doubloons for similar reasons, is pre-eminently lucky.

When Pope Julius II. in full harness laid the foundation-stone of the basilica of Christi Vecchia, he spread mortar in the form of a cross (an apotropaic spell) and put under the stone a vase full of coins (RTP vi. 90, citing Romani, L'immagine summa. Fonti, Rome, 1696). During the vicereignty of Lord Dorset, Lady Dufferin laid the foundation-stone of a hospital in India and put underneath it a coin, together with a little greenish-coloured powder for the building (RTP vii. 1892) 490, quoting Lord Dufferin's Four Years of Vicereignty, in India, (1887) 488.

Pre-historic cists and arrow-heads are amulets wherever the Stone Age has been forgotten in the march of civilization. In France they are customarily placed under the foundations of houses or in the walls of houses, or even churches, as preservative against thunder or fire; or they are kept in the house for the same purpose, or hung up in the stables and cow-houses to secure the domestic animals from disease. They are also worn on the person or stuck into fruit-trees (Sébiliot, iv. 70).

Various plants, too, are held to be prophylactics. The consecrated box-twig at Dinant has already been mentioned. On the island of Rügen a juniper-bush is laid in the foundation to keep out the devil and evil spirits (Kuhn, Sagen, etc., aus Westfalen, Leipzig, 1859, ii. 60). On the island of Serang in the Moluccas, beneath the spot where the sleeping apartment will be, health-giving herbs and roots are buried to keep off evil spirits (Riedel, 119). Sacrifices of men or animals will be discussed below. Independently of sacrifices, however, blood has well-nigh magicised magical value. The Ottoman Jews, on digging a well, cut the throat of a cock and allow three drops of blood to fall into the excavation in order to destroy the evil spirit, which might cause it to fall in (Mehesen, viii. 281). To the blood of fowls, among other substances, the Nicobarese ascribe occult virtues; they smear their horse-ports, or even their own bodies, with it, either alone or mingled with various powerful ingredients, for protection against evil spirits (Intern. Archiv, vi. (1889) 13). In Aberdeenshire the first stone laid is that behind the fireplace. A chicken is struck upon it until it is covered with blood. This will ensure that the pot boiling on the fire will always be well filled, so long as he for whom the house is built occupies it (Gregor, in RTP vi. (1891) 173). It is said that the mortar used to build the Tower of London was tempered with the blood of beasts (NQ, 78 sec. cit.: 1892, quoting Fitzgerald's Survey of London, London, 1898). Blood is prescribed for this purpose in many places; whether it is actually used is another question. Not very long ago a builder at Brooklyn went to much trouble and expense to try the experiment with bullock's blood; but the results did not justify the outlay. In the Celtic barbarous customs, the use of blood tends to the adoption of a milder expedient. One of the traditions relating to the bridge in the Kwenchen, Lower Saxony, affirms that a bottle of wine is walled up in the founda-

tion (Schambach-Müller, Niederfröchte. Sagen, Göttingen, 1855, p. 18). To this origin we may attribute the breaking of a bottle of wine against the bow of a ship in the ceremony of launching. (b) Sacrifices. — In cases like those hitherto examined, the shedding of blood seems not to have involved a sacrificial object, but to be performed for the prophylactic virtue of the blood. Hence, if the sacrifices were numerous, however, are the instances in which it constitutes a sacrifice. In connection with this we shall find that, whether of men or of the lower animals, is not the only form of sacrifice at the foundation of a building.

Sacrifices are sometimes offered to ancestors on these occasions. In German South-West Africa, when a man dies at a wefrt, or village, the wefrt is abandoned and a new one founded. If he has been a man of importance, he is buried in the cattle-kraal of the old wefrt. After a lapse of years the people often return to the former site to rebuild there. The holy fire of the wefrt where they have been living in the meantime is extinguished, in order that new fire may be made with fire-sticks in the sacred manner on the site to which they are returning. Before doing this, they invoke the deceased chief of the village, telling him that they have done as he ordered. When the new sacred fire has been made, it is the custom to slaughter a sheep as a sacrifice. The occasion is marked by a call up (S. Afr. Folklore Journal, i. (1878) 61). On the island of Buru in the East Indies, as soon as a site has been decided on by divination, an offering to ancestors is made (Riedel, 12).

This also seems to be the explanation of an obscure Maori custom. The ground-plots which support the house are cleared to represent the presence of spirits who are deemed to have been sacrificed; on them the figures of ancestors stood. Taylor (Te Ika a Maui, London, 1870, pp. 90, 91) explains this as referring to "an extinct custom of killing human victims and placing them in the holes made to receive the posts, that the house, being founded in blood, might stand." The crucifixing of human victims was mentioned by G. Webbe (1731), and we shall see hereafter, capable of another explanation. But, if it were really a maoris here, it would without doubt be a sacrifice to ancestors.

More usually, however, it is to divine beings or to local or earth-spirits that the sacrifice is offered. In India the examples are very numerous. Only a few can be referred to here; some others will be considered later.

The Kula of Hoth Maggor offers an egg to the god god longaonga, the gods being his symbol (F. Pichon, in Etudes de l'Asie Central., 2, (1885) xxxvi. in the huts of the common people, and the chief's wife to be buried under the foundation, because the king was warned in a dream that 'the favours of the king's ring will be won by buying alive a man and a woman.' (Bro. xvii. pi. iii. p. 289.)

The practice of slaughtering an animal on such occasions is firmly rooted throughout the west of Asia and the north of Africa. The Arabs of Meoh, east of the Dead Sea, thus endeavour to pacify the jinn (who are regarded as malevolent spirits) whenever a tent is set up in a new place. As soon as the tent is fixed, a fat sheep is taken, its head turned to the east, and its throat cut with the words, "Permission, O possessor of this place!" This is a request for authority to enter the tent and to dwell there. Part of the blood is received from the victim in a bowl. With it the master of the tent sprinkles the four corners of the building; and sometimes the good-evil curtains during the night, on the west side is also aspersed with the blood. The holy Eastern Arabs of the same country make a similar offering at the building of a house, first on putting up the vault, again on the threshold when the tiling is laid, and at the end on the threshold at completion. The practice even extends to Christians in the Greek Latin East (Jansen, Costumes des Arabes, Paris, 1898, p. 329 et. c. 319).

Analogous to this was the ancient Roman custom of fixing a boundary stone. A victim was killed and offered as a burnt sacrifice. Fruits of the earth, together with the bones, ashes, and blood of the victim, were put into a hole, and the boundary stone was rammed down upon them. It has been suggested with probability that the
annual festival of the *Terminatio*, in the course of which a lamb and a sucking pig were slain and the blood poured over the altar. The removal of the altar, upon which the stone was originally fixed in its place (Powlère, *Roman Funerals*, London, 1888, p. 225). In the east of Egypt, it is observed that the blood is gathered in a head daubed with a sail, and commonly sacrificed; for, according to a popular adage in Greece, 'there must be blood in the foundations.' The object of the sacrifice seems to be to propitiate the evildoer, or familiar of the spot (Rodt, *Customs and Lore of Med. Greece*, London, 1892, p. 148). In the New World, similar sacrifices appear to have been made, though the exact object is not quite so clear. The Mayas in Southern Mexico, for instance, dig a hole beneath the place intended for the fireplace, and bury there canoe-shaped caskets, which are said to bring good fortune (Starr, *Incubation of Southern M.,* I [1900] 70). In Guatemala, the Kechi Indians, when building a communal house, slaughter a pig and place its blood on two beans. With this blood (J. W. H.) 1894 465). In India, when the foundations were laid of a European house, built by some German missionaries and other prisoners for the king of Ashanti before the taking of Kumasi, a goat was slain, and the blood sprinkled on certain places with prayers to the *Fetish* (Hansard-Kühne, *Four Years in Ashantih, ed. London, 1875, p. 228). When Tako-danu, the first king of the Kingdom of Delonooy, conquered the Frys about the year 1691, the English king, at this place, put to death, and built his palace upon the victim's body, whence the palace and ultimately the kingdom were called *Nyanzi*; 'the king's belly' (Ella, *Spoken Tongues, Fremantle, London, 1892, p. 579 f.).

It is perhaps open to doubt whether this last rite was performed at the foundation of temples. The central pillar of one of these was said to rest upon the body of a goat which in the time of the sanguinary deity worshipped there (Ella, *Polyg. Resear.,* London, 1831, i. 246). Similar rites were practised in Malacca (Cordrington, *Malacca and the Malacca Peninsula,* 1881, p. 401). In Western Europe numerous cases are reported from Brittany and Belgium where an animal has been killed and the foundations sprinkled with its blood. During the same period a domestic cattle was killed in the Morbihan it is said that at the building of a house or a church an ox would be killed, and its blood spread upon the earth, so as not to destroy the building. A pair of fowls was often offered. They were feathered and buried in the middle of the site. Afterwards they were dug up many pensioners whether human or not, and a request was made for something which merely symbolises the real intention. Thus in Germany, and indeed in other European countries, the skulls of horses, horns, hooves, and pottery and vegetable remains have been repeatedly found beneath the walls of buildings. In Ireland, horse-skulls have been found as well as broken querns, buried beneath houses or in recesses of the walls (v. Wiss. 1894). In Lincolnshire the old-fashioned jugs known as 'greybeards' are sometimes found embedded beneath the foundation, the tops of which have been removed by the building or the destruction of ancient buildings (FL xii. 176). Among the Saxons of Transylvania a human bone used to be buried beneath the floor to give stability to the building (von Wilamowitz, *Kulturgesch. der Siebenbürger Saxen*, Berlin, 1895, p. 202). In the middle of last century, when Corgarff Castle, Aberdeenshire, was demolished, it is said that the workmen found in the foundations of a skull wrapped in a red material. And Dr. Gregor discovered some evidences of a former custom, on the erection of important houses. He records the workmen to seize the first person or animal they met in the morning on going to work, and to touch his head with the first stone to be laid (RTP v. 558). In taking down the old Priory of Prideaux Tracey (built in 1700-1706) for the purpose of rebuilding in the year 1867, the engineers discovered, under the foundations of the second arch on the city side, and fifteen feet below the present bed of the river, the quantity of bones of cattle and sheep and some
human bones. On these the foundations had been laid (Lieberbrecht, 289, citing Illust. London News, 2nd March 1885). In medieval times, if not later, at Rome it was the custom to bury ancient statues—the smaller whole, the larger smashed to pieces—under the foundation. Between 1875 and 1885 no fewer than 500 statues and busts were found on the Esquiline alone, buried in this way; and doubtless many more have been since recovered (JFLJ 1885) 25, quoting a communication by Sigismund Schaaffhausen to the Athenaeum. Other surrogates will be referred to below (p. 110).

Many substances, however, put beneath a foundation have their own proper value as offerings. Thus a favourite offering in the Moluccas, by way of propagating the divinity of the earth, is gold or silver—either in dust or small pieces—food and drink, pigs (Riedel, 63, 200, 225, 250, 256, 425); and in the Pueblos of New Mexico sacrificial deposits of turquoise and shell-beads have been found (Am. Anthr., new ser., ii. [1900] 180).

(c) The provisions of a guardian spirit. Numerous legends relate that on the construction of an important work such as a palace, a bridge, an embankment, or a city wall, the building repeatedly fell, until a living human being was buried in the foundations; or that such a victim must be obtained to render a fortress impregnable. In the Balkan Peninsula and adjacent parts of the Levant the tale is the subject of many ballads, of which the best known is perhaps that of the Bridge of Arta, where the victim is the master-builder's wife, but in the most pious of all an innocent child is walled up; often it is a virgin or a beggar-boy, in one case a student. These legends are most numerous in Germany, the East of Europe, and India; but they are also found in the west of Asia, North Africa, throughout the European continent, and in the Celtic parts of the British Isles. Specimens have been discussed in the article already referred to (EBB ii. 850). Nor are they unknown on the American continent. The Shuswap believe that the beaver, when constructing a dam, kills one of its young and buries it beneath the foundation, that the dam may be firm (Rep. Brit. Assoc., 1890, p. 644). It is common in tales of the N. W. tribes, and indeed a matter of actual practice, that, when a chief or great man built a house, captives and slaves were put to death and the house-posts reared upon their bodies; and others were buried beneath the fireplace or the totem-pole in front of the house (Bosan, Ind. Sagen, Berlin, 1896, p. 186; JAFJ vi. [1893] 61; Rep. Brit. Assoc., 1896, p. 357; 86 BREV [1906], 437). In central America the incident is mentioned in the Popol Vuh; probably, therefore, the practice was not unknown. In S. America the palace of the Bogota, ruler of the Chibchas, was believed to rest upon the bodies of maidens (Lieberbrecht, 287; cf. Anthrope., v. [1910] 116).

So deeply engrained are these stories and the beliefs which they imply in the popular mind that in modern times and civilized countries public scares have repeatedly arisen at the erection of great architectural and engineer works.

In India they have recurred many times within recent years, notably at the building of the Hooghly Bridge and the construction of the new war works at Delhi. At the building of the cathedral at Bhangal it was said that the municipal council required a certain number of human bodies to bury beneath its foundations; and for a week people were afraid to go out by night, especially near the site. There was similar scare in the north of China during the construction of the Manchurian railway. In our pride we deny that these precautions are civilised, yet we remind ourselves that such scares have arisen in Germany, as when the bridge at Bails (finished 1849) was built (Grimm, Text. Myth., London, 1880, p. 114); at the construction of the railways; and it was seriously believed by some people that a man had been thus buried one of the towers of the great bridge between New York and Brooklyn (NQ, 7th ser., vi. [1889] 13).

and that Lord Leigh, barely a half a century ago, was accused of having built an obstruction person (some people say he put sheep pools) into the foundations of a bridge at Stoneleigh (Lieberbrecht, 285, citing Times, 15 June 1833). No adequate explanation of legends and scares like these is feasible in the absence of a widespread custom which deeply impressed the popular imagination. Such a custom was not only common; it is not yet abandoned among barbarous nations. Without going further afield than Turkey, it was reported concerning the Correspondent of the Echo de Liége, on 1st Oct. 1866, that, when building a new blockhouse at Dugs, near Rugga, the Christian workmen who were engaged on the work caught two Mussulman soldiers in the act of preparing to bury two young children alive in the foundations. In many cases we have seen that the victims are regarded as a sacrifice to a god or spirit, while in others a magical virtue attached to their blood. But there is yet another reason. The vague intention expressed in many of the legends to render the building stable or impregnable conceals the purpose expressed more clearly in the accounts we have of actual sacrifices, to provide a supernatural guardian, a daemon, to watch over the building.

'Thus when a new gate was made or an old gate was repaired in the walls of Bagdad, it used to be customary to crush three men to death under an enormous beam in a pit at the gate before it was closed. Before they were led to their doom, they were regarded at a splendid banquet; the whole court came to sate them; and the king himself charged them straitly to guard well the gate that was to be committed to their care, and if any man could cause its opening, let him be punished.

Even if enemies or rebels came to assault the city. The next moment the rope would be suddenly loosened; and when it fell, the three were supposed to have been transformed into the giant which they called pali' (Frazer, G. H., 1911, 'Taboo,' 90).

The same purpose is explicitly attributed to similar practices prevalent in Burma up to the date of the British conquest. The notion that a human being put to a violent death becomes a powerful daemon is extensively believed. Nor is such a being necessarily hostile to the murderers; it may be, at any rate, propitiated and its friendship secured. The East Indian practice of head-hunting is an attempt to convert an enemy or a stranger into a supernatural protector. The well-known legend of St. Romnald, whose reputation was so great that the community proposed to secure him in perpetuity as a tutelary saint by putting him to death and thus obtaining possession of his relics, is typical of many tales localized from China to the Atlantic. And the same notion is probably—to some extent, at least—responsible for the veneration of the relics of the Christian and Muhammadan martyrs. Mighty kings and heroes are sometimes buried on the boundary of the kingdom, to ward off attacks by supernatural powers.

Thus, according to the Norse Saga, Ragnar Lodbrog's son, Harald, dying in battle, by his will directed that where his realm was most exposed to attack. Nor could William the Conqueror penetrate the territory until he had dug up Ivar's body and burnt it to ashes. In the same vein we are told that, when Brian the Blessed, invading Ireland, was wounded to death with a poisoned dart, he commanded his men to cut off his head and take it to the White Mount, in London, and there bury it with the face toward the sea. When they did so, no invasion from across the sea came to this island while the head was in that position (C. G. B. Martin, in Monograph, London, 1877, p. 283). Roghan Bell, king of Connacht, was similarly interred for the protection of his kingdom.

The custom of living burial for the same purpose was, if we may believe Irish traditions, which are no doubt accurate on this point, carried over into Christianity in connexion with the foundation of monasteries.

When, in 590, S. Columba, offered himself, or the lot fell on him, to be buried alive under the monastery of Tona, Clunamcolm, was consecrated by the similar burial of a laver which contained the blood of the community of the monastery. Thus a protective purpose does not definitely appear, it is true, in these stories. It is clear in the case of
FOUNTAIN OF YOUTH

115

sisterhood at Clif Eschallée, founded by St. Senan of Inis Cathay. They entreated Senan that the body of a lowly monk of his community might be given to them, so that his relics may protect us." Senan replied: 'Verily this shall be granted to you. Be in no distress as to one from whom your protection shall come' (ibid. 156). Probably in this case the monk was not buried alive. However that may have been, bodies or human skeletons are often found built into the foundation or the walls of churches in this country and on the Continent; and it has been conjectured that in the practice to which these discoveries point we have a relic of the belief now under discussion. The conjecture seems well-founded; but in the later Middle Ages, at all events, such burials, unless of persons renowned for sanctity, and even perhaps in their case too, may have been carried out without any definite reason beyond compliance with custom. Numerous tales of burial in the wall, whether inside or outside the church, in order to avoid the consequences of a pact with the devil, and of persons walled up alive by way of punishment, may have been founded on the custom when it was forgotten (or not, and it seems probable), there can be little doubt that the church-prim believed to haunt churches among the ancient Romans was to the ancient Romans was to provide a sense of security. Whether this was the case or not, some of the old house-spirit, who is formally welcomed to his new domicile (Ralston, 120, 127). The Hindu custom of interring earth from the parental household in the new foundations has probably a similar meaning (PNU. i. [1884] 87).

LITERATURE.—The principal works dealing with the foundation sacrifice are E. B. Tylor, Prominent Cultures, London, 1876 (*1909), i. 94 f.; G. L. Gomme, Folklore Relics of Early Village Life, do. 1899, ch. 1.; F. Liebrecht, Zuer Volkskunde, Heidelberg, 1882, p. 291 f.; E. Kohler, Anfänge des ostdeutschen und Thüringischen Volkes, Leipzig, 1883 (Liebrecht, 259). Whatever credit we may give to this story, it is quite certain that, as everywhere in the lower culture, magical virtue was attached during the Middle Ages to an effigy, and many stories illustrative of the superstition have got into literature. Its use in witchcraft is well known. A statue was often supposed to be possessed of a god or spirit who, unless a personage celebrated in Christian hagiography, was necessarily regarded as evil. The belief is still applied to the consecration of a house in some parts of India. The image of Varti, or the genius locus, is placed in a box face downward and buried in a pit near the foundation pole (BG x. 358; cf. Crooke, PL i. 159). In this way the genius secured and effectually prevented from escaping.

Even easier modes of identification with the intended victim are practised. In Europe, in modern times, the ignorant populations of the Balkan Peninsula and adjacent islands would continue the rite of burying a human being beneath the foundation-stone, or the stone is laid upon the shadow. It is believed that he will die within the year, or, as it is said in some places, within forty days. In default of a human shadow, that of one of the lower animals is measured (Frazier, 89 f.). In the island of Kleeer in the East Indies, the guardians of a house or village is the measuring-tape with which the declared purpose is to measure the foundations of the house of the village-tus. It is wound round a stick, and is then thrown on the figure of a human being, and is kept in a box (ib. 1. 2. 4). In Russia, the carpenters at the first few strokes of the axe call out the name of some dead or beast, believing that the name so mentioned will rapidly perish. (On such occasions the poets the take care to be very careful to the carpenters, being assured that their own names might be pronounced by those workmen if they were neglected or provoked (Ralston, 125). The pronunciation of the name at the moment of the stroke causes the spell in some magical way to reach the owner of the name. British law in Burma is equally opposed to the rite in its crude forms. Accordingly the Nagas tribes of Manipur, who used to put a head under the main post of a new house, are preserved that a look of hair is of equal value, for the ghost of the wretched would go there and seek the missing head, and forever compelled to remain below the post (Hodson, 116).

Thus, in order to obtain a tutelary spirit, it is not absolutely necessary to immune a human victim. Fowler is of opinion that the real object of the rite already described at the fixing of a boundary stone among the ancient Romans was to provide a sense of security. Whether this was the case or not, and it seems probable)

E. SYDNEY HARTLAND.

FOUNTAIN OF YOUTH.—The legend of the Fountain of Youth was known throughout Europe in the Middle Ages, and is even intertwined with the history of discovery in the New World, where Fonce de Leon sought the Fountain after hearing of the medicinal springs of Florida, with which he associated the Fountain of Youth the more readily since in popular belief the latter was also located in the Indies. In Europe, this tradition of the Fountain was inextricably united with that of the River of Immortality. And the two did not have the same origin, and they should be kept apart as distinct legends. The River, or Spring, of Immortal Life was Semiti; the function of the river in legendary history is to be found in the story of the Fountain of Youth was not Semiti but Hindu, and the function of this water was not to render man immortal, but to renew his vigour. The one idea easily glides into the other, and history shows
that the two national legends actually became united, the more quickly perhaps because the Semitic story with this notion of rejuvenation unites, but it was not associated with man, and not at first with a fountain. This parallel phase of the legend is that of the rejuvenation of the 'in youth' given in Semitic legend in the youth (cf. Ps. 103), not at first by means of bathing.

In India the Fountain of Youth appears in early Brahmanic legend and has continued down to the present day, although many of the modern 'Fountains of Youth' are in reality so called only by Europeans, most of them being known to the natives only as 'spring' waters. The idea that some water was curative undoubtedly formed the basis of the legend in India, as it did in Florida. On the other hand, rejuvenation, either by fire of a spiritual power or by means of drugs, charms, etc., was recognized as possible much earlier than was the special form of rejuvenation utilized in the legend of the Fountain. As early as the Rigveda water is spoken of as medicinal, and men are rejuvenated by the will of the gods; but the two ideas are not brought together till a later period. In Greece and Rome there was no Fountain of Youth attainable for man in this world, but only a spring of rejuvenation in the next or the spirit world. And so, originally, the Semitic 'Water of Immortality' was that which was only in Annoetis land, which was Paradise, not within the reach of man on earth.

The legend of the Fountain of Youth was not known in Greece till the period introduced it from the Orient. There is no reason, therefore, to suppose that this was an Indo-European myth. The kettle of Medea, which used to be brought into these ideas, is itself a myth, has a different motive, and the water here used has no similarity with the Fountain. In French and German legend the Spring is called La Fontaine de Jove, the Jove, the Juno, and the different popular versions, mixed with the Semitic legend of the Water of Immortality, are found to be clearly drawn from Oriental sources, all being originally forms of the story known as 'The Three Brothers.' The tale of Alexander's search for the Water of Immortality in India did much to facilitate the (other) the natural combination of the Semitic and Hindu legends. At the time of Sir John Mandeville, the 'Fountain of Life,' now identified with the River of Immortality, was placed definitely in India. Other names, the legend of the Fountain more vaguely to the Orient. In America there was no Fountain of Youth, only a medicinal spring, till European tradition had built upon native belief. Chinese and Muhammadan accounts have joined in spreading the tradition through the Pacific, where, again, European thought has often interpreted some other means of rejuvenation as a Fountain of Life, or the Water of Immortality as a Spring of Youth.

The tradable Hindu fable was brought from India by the Nestorians (possibly by the Arab), and was thence conveyed to Europe. In Europe, the Nestorians were constant communication with India as early as the 7th century. The Persians were not likely to have their intermediaries, as they did not have the legend of rejuvenation, but only that of the Water of Life. Nestorians in the Southern India (where European legend placed it) was the home of the Fountain. Outside of India, the eagle (see above) and the phoenix were rejuvenated. But it is to be noticed that the rejuvenation of both birds is ascribed to a fountain in the Orient. No classical writer, however, knew of such a fountain. As for the eagle, even Origen and Augustine, when commenting on Ps. 103, on the eagle's renewed youth, do not ascribe it to a bath; though Donatus (ad Herod. ill. 2. 10) attempts thus to explain the allusion to spring. Herodotus (Ep. ad Fradurium) has the legend, probably from an oriental source, since, when the eagle's fountain is first located, it is placed in India. To seek to earlier classical authorities is to lose all trace of the eagle's spring of rejuvenation. Aristotle (De Anima, ix. 22.), Pliny (HN x. 3. 5), and even Aelian (Calendar, Cebes 3944) and Aulus Gallius (in his ch. concerning marvels, ix. 4), are silent on the subject, although they have much to say of eagles, Aelian especially stating (op. cit. ii. 26) that the eagle 'needs no spring' (being superior to thirst)—a statement he would scarcely have made without modification that he knew of the eagle's spring of youth. We may, therefore, conclude that the eagle was not rejuvenated by a bath in a fountain till the Oriental version of the Fountain of Youth became familiar to the Mediterranean littoral.

To sum up the tradition and legends of rejuvenation, there are various means of rejuvenation, but the Fountain of Youth appears to be derived from India, where it is first known. In European thought it was combined with the Semitic Water of Life, and with the classical Spring Immortal, which confers endless health and life on those who have passed the bourne whence there is no return. This idea, with the ends of the earth imagined as a home for the blessed. This, in time, coincides with the belief in the immortality of the soul as described by Plotin (DeSortes, 225) as free from disease and old age. The Fountain of Youth, considered rationalistically, is medicinal water with eury,”

FRATRES ARVALES.—See AVAL BROTHERS.

FRAVASHI.—This is the Avestan name (Pahlavi Frasdrk) of a spiritual being, conceived as a part of man's personality, but existing before he is born and in independence of him; it can also belong to divine beings. The concept so many arises out of ancestor-worship that a complete account of it requires include all the material already given in art. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian), vol. 1, p. 454 ff.

The etymology of the word given by Lehmann (in art. cited) is still accepted by Geldner and other excellent authorities, but it must be regarded as exceedingly doubtful. A. V. Williams Jackson has abandoned it, and Bartholomew makes the name mean "the word as obscure. There are many proposals, but none can be regarded as proved. Procaccayio nataway, the Fravashis of the form Fravashis, is a world in the prose Gathas Hapangahini, which represents a desired release from Zarathushtra's teaching towards the old polytheistic Nature-worship which he tried to supersede by his spiritual monotheism. The significant absence of the Fravashis from the Gathas proper is best explained in the same way as that of Mithras and Haoma, divinities for whom Zarathushtra could find no room without compromising the unity of God. The Fravashis, as described in the oldest and most authoritative text, the Farvardin Yasht (Ys. 18), have no definite ethical character; nor is there any attempt to moralize them until the Sasanian age. Zarathushtras, who would admit the spirit of such a fountain. As for the eagle, even Origen and Augustine, when commenting on Ps. 103, on the eagle's renewed youth,
FRAVASHI

FRAVASHI was not likely to approve of the popular mones-worship, which moved in a far lower plane. He made much of the dirād, the 'self' or 'individual,' which, indeed, may have owed its origin to his own analysis. He taught the great ethical lesson that this ego—a part of every man, good or bad—was the real determinant of a human destiny.

The Association of the individual existence is just as close to the dirād; but the difference is vital, in that the former is divine, though in a sense in which the dirād may be far harsher. Pantheism never allowed the association of the Frawashis with the personality of a bad man. This was capable of interpretation on the same lines as the sine of the Māra about the egress of a sinner; but the original reason was very different. It was simply because the maxim do mortuis nāstī, manum has a very serious significance among primitive peoples, and eschewment becomes a necessary precept; hence the 'Frawashi of the pious' in Parsism, and the Di Manes, or 'good gods,' in Zoroastrianism. In ordinary Parsism, 'unbelievers have no frawashti, it is only because the concept was too deeply rooted in ancestor-worship to be capable of association with the world of evil. The conception was not paramount as to what happened to the Frawashi of a pious man who went wrong. Two exceptions are noted from late periods in the history of the religion. The Sādār Sānchakš (ed. and tr. by K. H. Durand, M.L.S., 1880, pp. 178, 175) says that the Frawashi of an unbeliever goes to hell with his soul and his 'perceptions,' and King Astash in describing Fārvardīgūn (the All Souls festival), makes the souls of the dead return to their old homes 'from the places of their reward or their punishment.' (Cf. Jērām, 12, 14.)

The concept may be far more complex in both to the same very limited degree. The Greek ἀγαθὸς καθαρὸς is a kindred concept, less fully developed; and all three may well go back in their history to the common store of the pro-ethnic Indo-European people. It is possible that we may link it in its remote origins with the notion of the External Soul.

We come now to the ideas connected with the Frawashi in the singular. Avestan psychology made the human personality include live immanent material elements vital, 'self,' 'soul' (sōra), 'sense' (budhāna), 'soul' (śwāsna), and Frawashi (Yt. 13(21). The last was the highest, the immortal part, which, according to an important passage from the Great Dāstur, Zand-Avesta, Paris, 1882–83, ii. 600 f.; Blochert, SBE xxv. [1896] 104), dwelt with Ahura in life and united with the soul at death, thus saving it from extinction, when the others were dispersed among the elements.

The pre-existence of the Frawashi was as essential a characteristic of the conception as its continuance. Yt. 13(2) tells us that the Frawashis apportioned the paths of sun, moon, and stars. In the Sānchakš (ii. 10 f., tr. West, SBE v. [1890] 14) we read of the choice of the Ahura Mardeša, between abiding eternally in the spiritual world and becoming incarnate to join in the battle against the demons. The same great Pahlavi cosmogony makes the first of four trillions years in the world-year belong to the spiritual creation alone, the Frawashi living with Ahura above, before anything material was made. The silence of our earlier sources makes it probable that this first trillions was added in Sassanian times; but that the Frawashi existed before the other elements of human personality is beyond doubt an ancient idea. It is implied, of course, by the fact that in Yt. 13 the Frawashi of the yet unborn Saosyants are adored. They are, moreover, classed as though of those of the 'men of the primitive law' (pāthnēr-šakta), Zarathushtra and his immediate followers, as the most powerful of all the Ahuras, and the host. That the Frawashi has travelled a long way from exclusive association with ancestors is sufficiently shown by this strong and repeated connection with men yet unborn, and by the express statement that 'the Frawash, and his human counterpart are mightier than those of the dead' (Yt. 13(7).

The connexion of the Frawashi with communities was alluded to above, among points in which the Roman Genius showed kinship. In Yt.
118 FREEMASONRY

The earliest Masonic documents now extant are a number of MSS known as the 'Old Charges of British Freemasons,' so called because they contain certain charges of the craft that were in bygone times read or recited to a newly admitted member of the craft. Of these, 78 different versions are known to exist, the earliest of all (known as the Regius or Halliwell MS, and preserved in the British Museum) having the date of c. 1390 assigned to it by experts. These 'Old Charges,' though differing in details, all have the same general character, and consist of three divisions:

1) an invocation or prayer, addressed to the Holy Trinity; (2) charges addressed to the new member.

According to the legendary history of the craft narrated in these old MSS, masonry (as it is called in them) was originated in Egypt by Esau, and spread thence to various countries, reaching England in the time of St. Alban (A.D. 300), who is said to have obtained increased pay for masons from the king, and to have 'got them charges and masons.' It is further stated that King Athelstan (925-941) granted a charter to the English masons on the condition that they held an assembly every year. No doubt, in thus ascribing the origin of geometry to the Egyptians, the compilers of these 'Old Charges' were but following the tradition (confirmed by modern inquiry) that the Egyptians were compelled to invent it in order to restore the landmarks effaced by the inundations of the Nile. Egypt was also the birthplace of architecture, which commenced there with the construction of the Pyramids, 3000 years or more before the birth of Christ. Much, again, of the present ritual of the Masons can be traced to Egyptian counterparts, and Egypt was the home of the 'Mysteries'; but we doubt whether any connexion between modern Freemasonry and Egypt can be established.

The rules or precepts contained in the 'Old Charges' were plainly intended for the government of bodies of operative masons, and it is to such bodies that we must look for the origin of the Freemasonry of the present day. With the progress of civilization the art of building necessarily grew more and more important, and those who practised it tended to become more and more a close society with their own trade secrets and rules for their governance, just as with other bodies of men who practised the same calling or trade. Thus it is on record that, from the very earliest times of the city of Rome, there were corporations of men with common interests called collegia, which were recognized and allowed by law. Some of these corporations were formed for trade and commerce, such as the Collegium Fabricorum, or guild of workers in hard materials, the Collegium Pistorum, or guild of bakers, and others, members of which had a common profession, trade, or craft upon which their union was based, although every man worked on his own account. These corporations or guilds spread throughout the Roman Empire, until in the time of Theodosius II. (A.D. 401-450) there were, in almost every city and considerable town, companies similar to those which existed in Rome, who exercised some particular trade or occupation for the safety, benefit, or amusement of the city. One of the earliest of these was a Collegium Fabricorum in Britain is established by a reference to it on a tablet now preserved at Chichester, which records the dedication of a temple to Minerva. Probably the origin of English Freemasonry may be attributed to these Roman collegia, though it may be impossible to trace its actual descent from them. This supposition is strengthened by the number of

13th we find that each of the four concentric circles of the Iranian commonality—house (avés), family (πᾶ), clan (σπά), and district (dāwy)—has its heavenly counterpart. The much disputed phrase 'the angels of the house of God' is an analogy here with the 'princes' of Persia, Greece, and Israel in Daniel, and with the 'angels of the churches' in the Apocalypse. Actual Persian influence in NT passages speak of individual 'angels' in terms which strongly resemble the heavenly counterpart of Persi, whether or not the latter has been developed under Persi influence. Mt 18th makes the 'angels' of the little ones dwell perpetually in the Presence. The declaration is clearly interpreted if these are the heavenly counterparts, the Fravashis, of those who have not yet learned to sin; no other conception of angels suits it so well, since tuleyar angels of children would have no special reason for precedence over other angels. In Mt 18th Peter's 'angel' is clearly his 'double'—his counterpart which has taken his place while he still lives. (See on this and other Biblical passages the present writer's paper in JTSAS iii. [1895] 914–22.)

The connexion of the Fravashis with the stars was probably a feature peculiar to Magian theology, never naturalised in Persia. In Mt 18th they guard the heavenly bodies, but only in the same way as other yazatas are said to do. Identification with stars is not found till a late Pahlavi text (ZK II, p. 253), where it seems to be mentioned only as an opinion held by some. It is quite in keeping with Magian star lore—one of the most prominent notes of the Magi in ancient accounts of their visit only by its relative absence in the Avesta. If the Magi did thus identify Fravashis with stars, we have a promising suggestion for the interpretation of Mt 2, by the help of their well-known devotion to divination by dreams. An appearance of a bright Nova in the sky would suggest the Fravashi of a great and newly born king.

LITTERATURE.—In addition to that cited in vol. i. p. 465, references may be made to C. Bartholomaeus, Altiria. Wörterbück. Nuremberg, 1904, col. 194 t., and to the chapter on the subject in the present writer's forthcoming Gilbert Lectures on Early Empiricism.

FREEMASONRY.—The Freemasonry of the present day, organised as we now have it with its associations of Lodges (as the various units are called) grouped territorially under what are known as 'Grand Lodges' with their hierarchies of 'Grand Officers,' took its rise from very humble beginnings in London in the year 1717, when the famous 'Four Old Lodges' 'Thalatta' were constituted under the first 'Grand Lodge' of the world. Until that time there had been isolated Lodges of Masons, working for the most part independently of each other, as far as is now known, in different parts of Great Britain. Whence, then, had these various Lodges come? What was their origin? These are the problems that occupy the mind of one who would write a history of Freemasonry.
points of resemblance that can be traced between the organization of a Roman Colloquium and that of a Masonic Lodge. It may be asked, Why did these men, who trade preserve their organization? Because, being largely employed to erect ecclesiastical buildings, they came specially into contact with churchmen, as the 'Old Church,' and therefore the order was supposed to have been more highly organized than other combinations of workmen, besides being more skilled; and because this was the time of the Reformation, wherever their services were in request, they would need such organization more than the others would.

It is known that the masons of the Middle Ages, when employed to erect the important buildings, used first to make for their own use a temporary hut or shed near the place where the work was to be carried on, which they called the 'lodge.' Thus, in the Fabric Rolls of York Minster, we find an order for the workmen issued in 1302 as follows:

In summer they are to begin work immediately after sunrise until the ringing of the bell of the Virgin Mary; then to breakfast in the fabric lodge (l主营ium fabrici); then one of the men shall make the door of the lodge, and if the sun goes up with all are to return to work until noon. Between April and August, after dinner, they shall sleep in the lodge; then work until the first bell for vespers; then sit to drink until the end of the last bell, and return to work so long as they can see by daylight.

Hence we see that the masons employed on a particular building, and living together in the lodge, would naturally become a more or less exclusive and organized community. Such bodies existed in the sixteenth century. Lists of the members of the lodge keep in the Bodleian Library at Oxford, which contain the names of the members of what is called the 'lodge Lathamorum,' or Lodge of Masons, attached to the Priory of Canterbury for the years 1543, 1541, 1542, and 1543. Such bodies of skilled workmen would naturally have their own operative secretaries, and would be jealous of admitting outsiders to a knowledge of them, and would have some system of keeping a record of the work done by the workmen. There can be little or no doubt that the Freemasons of the present day are the descendants of such bodies of operative masons, who moved about the country and set up their lodges wherever their services were needed, having a system of secret signs and passwords by which a craftsman who had once been admitted could be recognized by the members of another lodge. They were called 'Free Masons' because they were free to travel about in times of feudal bondage and to remove themselves from one part of the country to another, their services being in process of construction. The earliest instance known of the name in this sense is found in a list of the members of the Lodge entitled to send representatives to the Common Council, dated March 1376, and now preserved in the Corporation Records of the Guildhall, London, in this the nineteenth century.

These organized bodies of workmen, with their rules and regulations, seem to have been more common at one time in Scotland than in England, or at all events to have left behind them more records of their existence in the north than in the south of Great Britain; thus two codes of rules for operative masons were written up in 1488 and 1500, respectively, which dates they bear, are still preserved in Scotland. They are signed by William Schaw, Master of Work, Warden of the Masons, and by William Schaw, Master of Works in Scotland in 1584, and had under his care the royal buildings and palaces in the Northern Kingdom. The Lodge of Edinburgh shall be the first and principal lodge in Scotland, Kilwinning the second, and Stirling the third, and contains an elaborate code of rules for the government of the craft. The Lodge of Edinburgh possesses minutes commencing in July 1599, and has been in continuous existence from that time, and, inferentially, from an earlier date.

In England the Masons Company of London, though its extent date only from 1620, is considered by its historian (Edward Conder) to have been established about 1220. If not earlier, at which time there was great activity in the masons' trade in London, consequent on the building of London Bridge, which was commenced in 1176, and of Westminster Abbey, of which the foundation-stone was laid in 1221. These works, especially the latter, would naturally attract to London the members of such operative lodges as that previously mentioned as having existed at Canterbury, which were attached to religious houses, and possessed certain signs, secrets, and symbols relative to their craft. These symbols had doubtless descended from a remote antiquity, together with some knowledge of geometry, which was then regarded as a trade secret.

We have now to trace the gradual process by which the lodges of operative masons lost their operative character and were converted into the present-day Lodges of speculative Masons, who meet in secret, and have changed the working tools of the operatives into symbols inculcating moral lessons, so that the square with which the operative masons tried and adjusted rectangular corners of buildings is now regarded as a teacher of morality, the level denotes equality, and the plumb-rule uprightness. The earliest instance known is that in 1717, and various instances can be mentioned of the admission of non-operative into the craft before that time. Thus it is on record that, on 8th June 1600, John Bowell, Laird of Appenzelles, was present at a meeting of the Lodge of Edinburgh, when, like the-operative members present, he attested the minute by his mark. In England the earliest proof of the existence of a non-operative or speculative Freemasonry is afforded by the records of the Masons Company of London, from which it is made clear that this practice existed as early as 1620, and, inferentially, from a remote past, certain members of the Company and others met from time to time to form a Lodge for the purposes of speculative Masonry, and they were known as the ' Accepted' Masons. Hence comes the familiar title of 'Freemasons,' implying a combination of operative and speculative Masons. Then it is also on record that Sir Robert Moray, who was Quartermaster-General of the Scottish army which occupied Newcastle in 1641, was admitted into Masonry in that year at Newcastle by some members of the Lodge of Edinburgh, who were also serving in the army. Next we find the celebrated antiquary, Elias Ashmole, founder of the Ashmolean Museum at Oxford, stating in his diary that he was made a Free Mason at Warrington in Lancashire in the year 1646; he also gives the names of the members of the Lodge, and it has been ascertained that they were all men of good social position, without a single operative mason belonging to their number. He also records in his diary that in 1659 he attended a Lodge at Mason's Hall, London, when six persons were admitted into the Fellowship of Freemasons. In 1668 was published the Academic of Armoury; by Randle Holme, who was a herald and a professional genealogist, and acted as Deputy Garter for Cheshire, Shropshire, Lancashire, and North Wales; it is said that he wrote, 'I cannot but Honor the Fellowship of the Masons because of
its Antiquity: and the more, as being a Member of that Society, called Free-Masons.' It is, therefore, obvious that symmetrical Masonry must have existed in London before the admission of Abbeville, and in London before 1700; and that the gradual change of operative into speculative Freemasonry had begun early in the 17th cent., if not before.

However, we have no means of tracing the change with any completeness, until, in 1716, four of the theses exist. Lodge's met together and determined to unite under a Grand Master 'as the Centre of union and harmony'; and accordingly, on St. John Baptists' Day in 1717, the Grand Lodge of England was established at the Goose and Gridiron in St. Paul's Churchyard, London. Apparently the operative masons were already in a minority, for of the three principal officers then appointed, one is described as 'Gentleman,' one as 'Captain,' and the third as 'Carpenter.' Dr. James Anderson, the historian of these events, says that they 'revived the Quarterly Communication of the Officers of Lodges (call'd the Grand Lodge), resolved to hold the Annual Assembly and Feast, and then to choose a Grand Master from among themselves, till they should have the honour of a Noble Brother at their Head.' Hence the establishment of this Grand Lodge in 1717 is commonly known as the Revival of Freemasonry, though there are no authentic records of its new extent of any previous Quarterly Communications or Annual Assemblies. But some sort of Annual Assembly must have been held, for the 'old Charges' previously mentioned constantly refer to the duty of a Mason to attend the Assembly when properly summoned to do so; and possibly the note in Aubrey's 'Lives of Men of Military and Religious Fame' (ed. 1847, p. 99), that on 18th May 1701 'there was to be a great convention at St. Paul's Church of the Fraternity of the Adopted Masons,' may refer to this occasion. It is impossible to be known even to a non-Mason. However that may be, this 'Revival' in 1717 forms the starting-point from which continuous Masonic history dates.

A similar Grand Lodge is known to have been in existence in Ireland in 1725, though the precise date of its establishment has not yet been ascertained; and in 1738 the Grand Lodge of Scotland was erected. From these three Grand Lodges have come, directly or indirectly, all the other regular Grand Lodges throughout the world, so that modern speculative Freemasonry has descended from the operative masons of Great Britain, who, in turn, may possibly have been descended from the Roman Collegia.

The founders of the premier Grand Lodge were quickly able to get a 'Noble Brother at their Head,' for in 1731 the Duke of Montagu was their Grand Master, and from that time onwards an unbroken succession of noblemen or members of the Royal Family have presided over the Craft in England, the present (1913) Grand Master of English Freemasons being H.R.H. the Duke of Connaught, who succeeded the late King Edward VII.

In 1754 a rival Grand Lodge was established in London by some Irish Masons, who claimed that they alone preserved the ancient tenets and practices of Freemasonry, and that the regular Lodge had made innovations; so they called themselves 'Ancient' Masons, and styled the members of the 1717 Grand Lodge 'Moderns'; the two lodges continued in rivalry until 1815, when the 'United Grand Lodge of Ancient Free and Accepted Masons of England' was formed, and this body has continued ever since.

The spread of speculative Freemasonry throughout the world since 1717 has been something marvelous, especially of late years, until there are now in existence about one hundred and ten independent Grand Lodges, besides thousands subordinate Lodges, from which the operative element as such has quite died out, and with over two millions of members owning allegiance to these various Grand Lodges and Freemasonry in all civilised countries, except Russia, China, and Japan.

Besides the pure Ancient Masonry, the growth of which we have been trying to trace, which consists of three degrees and no more, and is known as the 'Craft' or 'excellence,' there are a number of other organisations calling themselves Masonic, a few being of real antiquity, but most being of quite modern growth. Among them may be mentioned the Masonic Knights Templars, a body of great strength in the United States of America; the Mark Masons, who are very flourishing in England; and the members of the Ancient and Accepted Rite, besides many others which it is needless to particularise in the present article.

The question is frequently asked, Is Freemasonry a religion? The answer to this must depend upon the meaning to be given to the term 'religion.' The latter may be defined as 'a system of faith in, and worship of, a Divine Being.' Freemasonry is defined to be 'a peculiar system of morality, veiled in allegory and illustrated by symbols.' But 'morality' is concerned with man's duties to his fellow-men, and is therefore different from 'religion,' which is concerned with man's relations to the Creator. Thus our question may be answered in the negative—Freemasonry is not, and does not profess to be, a religion. At the same time it may be called a handmaid of religion, for it is founded upon the purest principles of piety and virtue; and no man who endeavours to live up to and act upon its teaching can fail to be a better man for doing so. As the early optimism of the young Masons in England, from whom our modern Freemasonry is descended, were mainly employed upon ecclesiastical buildings, it is only natural that Christianity should have been the religion of the early Masons, as is conclusively proved by the 'Old Charges' previously mentioned: it was not until the formation of the Grand Lodge of England in 1717 that they were left free to belong only to that 'Religion in which all men agree that is, to be Good Men and True.' Freemasonry has never met with favour even from the Roman Catholic Church; and has been expressly forbidden by several Papal Bulls; and some writers have maintained that its symbolism was only a cloak for a conspiracy against government and religion. But, whatever may have been the case with Continental Freemasonry, such an accusation is groundless as regards British Freemasonry; and Masonic Lodges in Great Britain were specially exempted from the operation of an Act passed in 1799 for the suppression of secret societies. Cf. art. FREE-THOUGHT, p. 1226.

Now, with the spread of Freemasonry over the whole world, men of all religious faiths are admitted as members, and work together under its banners in harmony, as also do men of most varying political views; and Freemasonry has become a potent factor in promoting a feeling of universal brotherhood among mankind.

FREE-THOUGHT.—The term 'free-thinker,' as applied to certain writers and others who,
individually or in societies, impugned the supernatural authority of the Christian Church, came into use during the 18th cent., and gained general currency largely as a result of its employment by Shaftesbury and Collins (cf. Collins, Discourses of Freethinking, London, 1713; Fr. tr. 1714). In France, those belonging to societies of this type were called libéres généraux. liberty, liberty, liberty of countries was not the term to themselves. This fact indicates the two most salient characteristics of the free-thinkers—the one negative, viz. their opposition to the Church of England, and its implication on freedom and independence of the Church; the other positive—

its French representatives, Rousseau alone adhered to a form of religion in essence identical with Christianity. In the Netherlands and Germany, on the other hand, the Reformed Church predominated, producing a more decidedly Christian variety of freethought, the adherents of which, from the time of Grotius and Leibnitz, maintained the essential identity of Christianity with Nature and Religion, and differed in opinion only as regards the extent of the positive additions and guarantees which the form assumed. In England, free-thought was, in a religious regard, extinguished by the rise of Methodism, and, as a philosophy, transcended in the historicoc Psychological religion of Hume. In Germany it gave way before Herder's doctrine of development, and the poetic pantheism of philosophy. In France it succumbed to the anti-metaphysical principle of Positivism and the historicocritical method. In the purely religious sphere it declined greatly before the rehabilitation of ancient creeds which set in slowly with the modern movement, and then effectively asserted itself after the Napoleonic wars. More recently it has suffered further impairment at the hands of Socialism and its newfangled ethical and metaphysical theories. It must not be forgotten, however, that amongst the people generally, in so far as they have freed themselves from ecclesiastical authority, and yet do not desist from providing for religious education and edification, the tendency towards a form of free-thought that will meet this need is still active at the present day. Though the outward elements are predisposed towards such a type of free-thought precisely as in former times, by the natural theology which commingles with Christian teaching. The tendency is due partly to the elements of Christianity which survive when it has abandoned mysticism and the belief in miracles, and, accordingly, it continually re-emerges from the work of criticism in the Christian Church. Pardly again, it rests upon ideas towards which the moral and religious emotion of mankind, emancipating itself from all historical data, is daily growing; and, indeed, such ideas have a natural affinity with the moral and religious instincts of mankind, are so far not unjustifiably called 'natural.' To these influences we must add that residuum of tradition from the desistico and rationalistic epoch which has all along continued to operate powerfully in poetry and general literature, and in positive and apologetic theology, and from the popular popular prejudice that Christianity may ever anew be developed. It is to be noted, moreover, that almost all endeavours to enlighten the masses, and all democratic movements and organizations inspired by modern philosophy, tend naturally to approximate to the same position. Virtue, love of mankind, belief in Providence or in development, progress, the unification of the race, and an all-embracing philosophy of teleological optimism—such are the features of a phase that ever recurs in this sphere.

It is true that this holds good only of the earlier stages of free-thought, i.e. of its English forms. In France, where Catholicism, conformably to its nature, had drawn a much more rigid line of demarcation between religious doctrine and modern thought than that found in Protestant England, freethought, as employed by Voltaire, remained all connection with Christianity, and in the Encyclopaedists and their adherents it broke away from religion altogether. In England the free-thought of the 18th cent. was not so confined, and while the revolution having positive religious aims and subject to powerful religious influences, whereas in France it was associated with a purely social and political movement, and the ideas of progress have come to be focused more upon the present world, upon the social and humanitarian factor, and—in place of personal immortalit—also the permanence of liberty in religion with the Catholic State Church, and so took up a position of fundamental antagonism to both at once. It was in France, accordingly, that the movement assumed its most radical form. Of
favourably disposed towards the belief in God, immortality, and a responsible freedom: regarding these, in fact, as originating from the light of reason.

But, discounting these changes, we may venture to assert that, in all civilized countries where the people have not been under the control of the Church, a widespread tendency to free-thought pervades the lower and middle classes. Within the sphere of pure science, on the other hand, and among the higher classes—as far as they have been influenced by science—the clash of fundamentally antagonistic systems and the habit of scientific scepticism have conspired to produce sheer anarchy in such things; and to speak here of science cannot exhibit any kind of unanimity in its conclusions is out of the question.

This brings us to a phase of the subject which, though of great importance, is usually overlooked. The characteristic feature of free-thought, as distinguished from modern science, properly so called, is the pervading sense of an axiomatic unity amongst its adherents, based upon the assumption of certain self-consistent, universally binding, and 'natural' truths. The sociological aspect of ethical and religious thought manifests itself here in the assumption—'natural' and self-evident—that all independent thinkers will inevitably arrive at unanimity in their moral and religious thought. On the foundation of natural religion arises, so to speak, a 'natural' Church of free-thinkers. At the outset, indeed, the free-thinkers proposed simply to alter the process of purifying the Church by criticism, and the English Deists and free-thinkers had originally no other end in view; their object was the conservation of the Church as a Church. But, with a purified or natural knowledge of God, which, after all, was the true essence of Christianity. But, in proportion as the Church resisted their efforts, and their internal development carried them beyond the Christian sphere of thought, they found it necessary to form communities and societies of their own. It would certainly be wrong to dissociate this tendency from the purely theoretical and dogmatic side of the movement, where, on the assumption of a free, autonomous, and individual thought, it might appear, of course, as something altogether individualistic. As a matter of fact, however, such movements in the sphere of doctrine, like all other human interests, have a social aspect. This is found, first of all, in the axiomatic character which the free-thinkers expected to attach to the uniformity of their assumed principles, and in the fact that, being invincibly united in these, they were feeling their way towards becoming a power of the future and of progress—a spiritual federation of mankind, which would by itself come to prevail in virtue of the mere force of natural thought. Thought, just because it is free, i.e., because it is free from the necessity of nature, which is everywhere the same, is likewise a socially uniting factor. But, again, they were, of course, forced to recognize that, though the community of man would come into being of itself, it nevertheless required the aid of education and propaganda. They were thus brought to realize the necessity of organization, and, in the nature of things, their organizations became known as Church. But they went further still. Even for fully developed and mature minds they felt the need of some visible means of cementing and deepening the convictions held in common—some kind of ceremonial and worship which should present these convictions to the imagination in vivid form and thus serve the increasing force of solidarity. The result was the establishment of something analogous to Church worship, which, indeed, has to some extent the same end in view, while the only elements thereof that the free-thinkers consider the Church is holding a real influence upon the Deity and the preaching of ecclesiastical dogma.

It was in this way that the movement was led to adopt the policy of forming associations, and became allied with the forces working for the disestablishment of the Church. Of outstanding free-thinkers, Rousseau alone wished to make the new religion an official and compulsory one, proposing at the same time, however, that the individual be allowed to cultivate his distinctive tenets in his own sphere of free-thought.

Here, then, we have the explanation of the fact that the 18th century was crowded with secret societies and free-thought unions, the secret being recorted to partly as a protection against the power of the State Church, and partly as a means of drawing the masses, or, as it might be, of out-rivalling the attractions of Church life. The academies of the 17th century had already pointed the way. From the soil of Deism sprang Toland's scheme of a Secret Socieites Sociolitissimes, for which his Paracelsuses was to serve as a litmus. But the most outstanding example is found in Freemasonry (g.e.), which was instituted in England by the foundation of their Order in 1721 and 1726, and introduced into France in 1762, and found a footing in Hamburg in 1763, and which now pervades the whole civilized world. Freemasonry created a sacred symbolism, lived out the process of purifying the Church by criticism, and the English Deists and free-thinkers had originally no other end in view; their object was the conservation of the Church as a Church. But, with a purified or natural knowledge of God, which, after all, was the true essence of Christianity. But, in proportion as the Church resisted their efforts, and their internal development carried them beyond the Christian sphere of thought, they found it necessary to form communities and societies of their own. It would certainly be wrong to dissociate this tendency from the purely theoretical and dogmatic side of the movement, where, on the assumption of a free, autonomous, and individual thought, it might appear, of course, as something altogether individualistic. As a matter of fact, however, such movements in the sphere of doctrine, like all other human interests, have a social aspect. This is found, first of all, in the axiomatic character which the free-thinkers expected to attach to the uniformity of their assumed principles, and in the fact that, being invincibly united in these, they were feeling their way towards becoming a power of the future and of progress—a spiritual federation of mankind, which would by itself come to prevail in virtue of the mere force of natural thought. Thought, just because it is free, i.e., because it is free from the necessity of nature, which is everywhere the same, is likewise a socially uniting factor. But, again, they were, of course, forced to recognize that, though the community of man would come into being of itself, it nevertheless required the aid of education and propaganda. They were thus brought to realize the necessity of organization, and, in the nature of things, their organizations became known as Church. But they went further still. Even for fully developed and mature minds they felt the need of some visible means of cementing and deepening the convictions held in common—some kind of ceremonial and worship which should present these convictions to the imagination in vivid form and thus serve the increasing force of solidarity. The result was the establishment of something analogous to Church worship, which, indeed, has to some extent the same end in view, while the only elements thereof that the free-thinkers consider the Church is holding a real influence upon the Deity and the preaching of ecclesiastical dogma.

It was in this way that the movement was led to adopt the policy of forming associations, and became allied with the forces working for the disestablishment of the Church. Of outstanding free-thinkers, Rousseau alone wished to make the new religion an official and compulsory one, proposing at the same time, however, that the individual be allowed to cultivate his distinctive tenets in his own sphere of free-thought.

Here, then, we have the explanation of the fact that the 18th century was crowded with secret societies and free-thought unions, the secret being recorted to partly as a protection against the power of the State Church, and partly as a means of drawing the masses, or, as it might be, of out-rivalling the attractions of Church life. The academies of the 17th century had already pointed the way. From the soil of Deism sprang Toland's scheme of a Secret Socieites Sociolitissimes, for which his Paracelsuses was to serve as a litmus. But the most outstanding example is found in Freemasonry (g.e.), which was instituted in England by the foundation of their Order in 1721 and 1726, and introduced into France in 1762, and found a footing in Hamburg in 1763, and which now pervades the whole civilized world. Freemasonry created a sacred symbolism, lived out the process of purifying the Church by criticism, and the English Deists and free-thinkers had originally no other end in view; their object was the conservation of the Church as a Church. But, with a purified or natural knowledge of God, which, after all, was the true essence of Christianity. But, in proportion as the Church resisted their efforts, and their internal development carried them beyond the Christian sphere of thought, they found it necessary to form communities and societies of their own. It would certainly be wrong to dissociate this tendency from the purely theoretical and dogmatic side of the movement, where, on the assumption of a free, autonomous, and individual thought, it might appear, of course, as something altogether individualistic. As a matter of fact, however, such movements in the sphere of doctrine, like all other human interests, have a social aspect. This is found, first of all, in the axiomatic character which the free-thinkers expected to attach to the uniformity of their assumed principles, and in the fact that, being invincibly united in these, they were feeling their way towards becoming a power of the future and of progress—a spiritual federation of mankind, which would by itself come to prevail in virtue of the mere force of natural thought. Thought, just because it is free, i.e., because it is free from the necessity of nature, which is everywhere the same, is likewise a socially uniting factor. But, again, they were, of course, forced to recognize that, though the community of man would come into being of itself, it nevertheless required the aid of education and propaganda. They were thus brought to realize the necessity of organization, and, in the nature of things, their organizations became known as Church. But they went further still. Even for fully developed and mature minds they felt the need of some visible means of cementing and deepening the convictions held in common—some kind of ceremonial and worship which should present these convictions to the imagination in vivid form and thus serve the increasing force of solidarity. The result was the establishment of something analogous to Church worship, which, indeed, has to some extent the same end in view, while the only elements thereof that the free-thinkers consider the Church is holding a real influence upon the Deity and the preaching of ecclesiastical dogma.

It was in this way that the movement was led to adopt the policy of forming associations, and became allied with the forces working for the disestablishment of the Church. Of outstanding free-thinkers, Rousseau alone wished to make the new religion an official and compulsory one, proposing at the same time, however, that the individual be allowed to cultivate his distinctive tenets in his own sphere of free-thought.
central organisation in Berne (1868); it owes much to the influence of Auguste Forel. Similar aims are pursued by the societies for moral culture which have been set up throughout the world. The latest organisation of the kind is the Monistic Society inaugurated in Rome by Ernst Haeckel, but it is not likely to be the last. It stands to reason that, if modern thought should eventually prove unable to remodel the Churches, and find itself totally incapable of coming to terms with them, it must provide something to take their place. The alternative organisations which it has hitherto produced have been mainly imitations of the Church in one or other of its aspects, and a really sufficient substitute has not yet been found.

On the whole, we may affirm that the principle of an autonomous and non-theological type of thought for which the free-thinkers contended has, so far as science is concerned, been fully vindicated, and is now regarded as axiomatic and outside the sphere of controversy. But their other principle—their belief in the universally valid conclusions of Natural Theology—has completely broken down in the face of modern historical relativism and the great philosophical systems. Free-thought is thus, in one of its aspects, a self-evident principle, and, in the other, a shallow illusion now finally dispelled. This leads us to believe that it will produce new associations and groups, though fresh efforts in that direction are always being made.

[Additional Note.—Owing to a lack of sufficient material on which critical inquiry can profitably exercise itself, it is a work of peculiar difficulty to trace the progress of freethought in the religious life of the Ancient East. But, as Max Müller long ago pointed out, the religion of Buddhism was originally a pure a-theism. It was only as a reaction set in, and the popular mythology began to exercise itself in the British East, that Western thought and the system of atheology decayed. In the Brahmanic cults it is not, perhaps, incorrect to say that pantheism took its rise and developed itself from the semi-developed attitude towards 'free-thinking' in its widest application; while in Persia the reaction from polytheism in favour of a partially enlightened Mithraism, and the later Mithraism, issued in nothing that deserves the name of free-thought. In Egypt, despite the vast store of materials that bear upon the problem of religion, but of which definite knowledge has come to hand; though it is arguable that the religious reform of Akhenaten was prompted by what may, for lack of better nomenclature, pass as Rationalism.

With China, different tendencies were at work. Apart from ancestor-worship, the religion of China has been, and still is, rationalistic in a pronounced degree. The arrested growth of the church, as generally understood, is one of the significant facts that face the historian. In the 'religious' reformation connected with such names as Kung-fu-tse, Lao-Te, and Mencius, there is merely every sign of a religion, and the reduction of the supernatural elements to a minimum, are points that deserve consideration.

From all the facts above, it seems that the rationalists really realized save partially and sporadically; of a system of Rationalism we cannot properly speak in this connection. It is true there are traces of a freethought movement in the later books of the OT, such as Job and Eccl. But the characteristics of the main current of the nation's religious development, which was in the direction of a rigid monotheism, akin in many respects to the creed of Islam.

Not until we reach Greece do we find those forces vitally at work out of which a co-ordinated system of freethought springs; but, once there, we realize that those forces were active all down the stream of Greek history. Many reasons might be alleged for the unique place which Greece holds in the evolution of human freedom; but they are not germane to the present inquiry, which is to indicate the direction of the movement itself. It may be noted, however, that nothing contributed more to the rationalizing of all religious thought, which characterized the most progressive epochs in Ancient Greece, than the fact that for the people generally there was no definite creed, no sacred book, no universally acknowledged priesthood. 'Each local cult had its own ancient ritual,' says J. M. Robertson (Short Hist. of Freethought, 1, 187).

Of any definite cult of freethinking in Ancient Rome there is scarcely a trace. Religion was largely based on purely material considerations, and the element of 'mystery' was noticeable by its absence. It was the very lack of this element which brought about the hankering after weird emotional cults, which became such a feature in the last days of the Republic and the early days of the Empire. Lucretius is, perhaps, the one genuine exception to the statement made above; his great poem, de Rerum Natura, based on the teaching of Epicurus, is one of the last and most Rationalistic, and a poem, in hexameters, to the spirit of Rationalism.

Coming to a later period, we must briefly mention the rise of Rationalism in the Muslim world. No free-thinker of any country—Voltaire alone excepted—is more celebrated in England than Omar Khayyam, the high priest of free-thought and of pessimism. But, though Omar has attained no great vogue in Islam, he does not stand alone; the names of al-Kindi and Avempace (to mention two only) as once spring to the mind. Of freethought in later times there is less to record; but that the foundations of Islam are being gradually undermined by the modern Muslim through the influence of Western thought, no serious student can doubt; and this in spite of phenomenal successes secured by the followers of the Prophet in Central Africa during the past half century.

Of Rationalism in Christian Europe during the Middle Ages we find many traces; but the questions that arise in dealing with its progress must be sought for in a history of heresy. With few exceptions, a free-thought propaganda during those centuries was mainly confined to the struggles of the heretics and the semi-'orthodox' to assert for themselves a right to worship in accordance with what they held to be reason and revelation.

It is with the Renaissance (p. 5) that free-thought, in the modern sense of the term, begins to make itself powerfully felt. The free-thinkers of the 15th and 16th centa, once more set aside the torch of human liberty which had been smoldering for a millennium. The complex ecclesiastical organization which had its centre at Rome had tried—and almost successfully—to quench it; but the re-discovery (so to speak) of Greek ideas opened the opening up of vast avenues of thought which was the consequence of that discovery, finally broke the domination, mental and spiritual, exercised for ages over the minds of men. A beginning
was made by Boccaccio and Petrarch; the movement culminated in Machiavelli, the politician, and Giordano Bruno, the philosopher and man of science.—E. H. BLAKENET.

FREE WILL.—I. GENERAL.—1. Freedom a vital question. The Free Will controversy is sometimes regarded as turning merely upon words and ambiguous expressions to which a few intelligible definitions would immediately have put an end (Hume, Philos. Works, Edin. 1854, vol. iv. 'Liberty and Necessity'). Historically, a vague terminology—will, motive, necessity, determination—undoubtedly caused confusion too; while the controversy has often been verbal, there is a real issue at stake. 'The government of God and the responsibility of man are equally involved' (H. R. SMITH, Faith and Philosophy, Edin. 1878, p. 399). Again, the Free Will controversy is not an indifferent one, as SIdgwick implies (Methods of Ethics, Lond. 1901, ch. 7). Historically, indeed, thinkers of the most diverse moral systems are indiscriminately found on both sides of the discussion. Anthony Collins the free-thinker defends necessity against Clarke. Brunschweig defends freedom against Hobbes. Edwards and Chalmers seem to fall into the same ranks as Hume and Mill. This quasioccasional seems to cut athwart well-defined moral affinities. The cautious manner in which man 'of high-toned character and devoted piety' (J. Martin, A Study of Religion, ii. 190) is affiliated to either side of the controversy is irrefutably true; however, that the question of freedom is an ethically indifferent one. For (1) this caprice is more apparent than real. Though Bain, for instance, could define compatibilism as the idea of the world, yet the Weltanschauungen represented by the two are separated tota causo. Leslie Stephen and Green also may both be called determinists, but in a very different sense. Frithjof B. Cunningham took Hamilton to task for identifying predetermination and philosophical necessity, and historical justice demands such differentiation (W. Cunningham, Reformers and Theol. of Reformation, Essay i, p. 120). (2) We must also discriminate between what thinkers are defending and what they are denying. Thus Augustine denied free will in order to defend God's free grace. The defense was the real aim, the denial was incidental. There are those which are, outwardly considered, entirely unimportant, but in a way are a great deal. The doctrine of sin and grace to be judged. As an expression of popular religious experience it is true; but projected into history it is false (Herzberg, Outlines of the Hist. of Dogma, Lond. 1890, p. 272).

This is really a vital point to remember. Many who oppose free will do so because they wish to conserve the effects of good actions already done (so T. H. Green, Prolegomena, p. 130), while many who champion free will do so to give some ground of hope to those who feel the burden of the past (W. James, Pragmatism, New York, 1907, p. 120). The problem of freedom is neither a linguistic nor an ethically indifferent question. It is a permanent problem of thought.

2. Freedom of problem in human nature. Kant has emphasized the difference between man's theoretical and his practical activities. Man, as intellectual, demands coherence in experience. From this point of view, the problem is 'empirical'; i.e. it falls under the law of causation. Man belongs to the realm of Nature. But man, as moral, looks on himself as an 'intelligible' character, and 'the intelligible character has his prerogative and all other beings that he fixes his end for himself' (Werke, ed. Hartenstein, Leipzig, 1867-68, iv. 85). Virtually this man belongs to a realm of ends. Whatever may be the external facts of history (see J. Ward, The Realm of Ends, Lond. 1894, for a discussion both of its importance and of its liability to abuse), the distinction itself is recognized as an absolute one (for us, as for Kant, the question of freedom takes the form of a deep-seated antithesis between the 'intelligible' and the 'intuitive' or 'intellectual consciousness on the one hand, and the moral and religious consciousness on the other' (J. Seth, A Study of Biblical Theology, p. 242)).

The moral life is a real part of human experience, and it must not be denied in the theoretic interests. This at once obviates many objections to freedom. (a) When the psychologist denies freedom, he does so in the theoretic interest. Psychology is in the third person, its point of view is that of the spectator (cf. F. H. Hocking, Outlines of Psychology, Eng. tr., 1892, p. 245); morality is in the first person, its point of view is that of the agent. To raise the question of freedom at all is to transcend the ground of psychology, unless, indeed, we get a psychology, such as Boyce Gibson outlines in Personal Idealism (London, 1902, pp. 156-192), how takes the first person of view. (b) In the same way arguments against freedom based on the law of the Conservation of Energy lose their force because such discussions are carried on in a universe of discourse which leaves the moral attitude outside. (c) It is quite true also that historians and statisticians are able to appeal to uniformities of experience due to material conditions without regard to the questions of the spectator. (W. James, Hist. of Civilization, 1887-88, p. 26), but that is just the function of the statistician (cf. W. James, Will to Believe, p. 155). This analysis shows a vital objection. (d) We always explain the voluntary action of all men except ourselves on the principle of causation by character and circumstances (H. Sidgwick, his biographer, Chalmers on his side). We excuse our own actions on this principle, yet if one really seeks to excuse himself in the sequel, by trying to show that it was impossible for a man with his particular antecedents to act otherwise than he did, he is regarding the action entirely from an external and non-moral (which is to say, circumspective) point of view (Frithjof Cunningham, The Philosophical Radicals, Edin. 1907, p. 103; cf. p. 89).

These and all similar attempts to deny freedom shatter on the moral consciousness. W. James, in 'The Dilemma of Determinism' (op. cit. 145-183), has shown by a series of arguments a consequent materialism. Butler also dismissed necessity from the same point of view with a 'disrespect amounting to contempt' (W. E. Gladstone, Studies Subsidiary to Burke's Politics, Oxford, 1890, p. 169).

The problem of freedom may thus be said to be grounded in human nature. To discuss it is to raise the validity of the moral consciousness. It is a philosophical and theological question, not a question of physics or empirical psychology.

The admission of a freedom from co-action or compulsion is not merely a moral demand. To man in normal conditions this is not denied by any one. It may be impaired by disease, it may be limited by inadequacy of material, it may be compulsorily taken away, but otherwise it is a common human possession. Such a power, however, is purely non-moral. It does not distinguish man from life in general. But freedom has meaning only in reference to the moral nature of man. 'It is the reason's postulate for the dicta-
does it in the latter interest. ‘The action is as necessarily related to the character and circumstances as any event to the sum of its conditions’ (Fregey, p. 126; cf. p. 129). Logically, in either case, the question is, according to this view, things could not possibly have been otherwise; and praise and blame, punishments and the like, are illusions. In short, the moral point of view is disregarded. For, morally viewed, ‘action is referred back to time to the circumstances and predispositions of which it is the legitimate outcome, but the man brings his action face to face with a “thou shalt” which lies not within him, and according to its conformity or want of conformity with this law he approves or condemns his conduct’ (ibid., p. 126).

We must take our stand on the moral nature of man; and, while admitting the prevalence of habit, the power of inherited character, and the force of circumstances, and so refusing a literal a priori utter indifference which is dismissed now by indeterminists as a contradiction in terms (cf. Wendt, System der christi. Lehre, 1908), we at the same time have to determine whether the consciousness that things could have been otherwise—that evil might be avoided, that responsibility is a fact, that punishment is not fiction—is possible of vindication on any Wellestian theory that can gain the respect of the reason. This is the problem of Freedom.

1. PHILOSOPHY AND FREE WILL. I. Free Will and Naturalism. —Naturalism explains all Reality in terms of matter and motion. It carries necessity all through experience. On this view, freedom has no meaning. So the philosopher who believes in free will has to defend its possibility against this system. This can be done (1) by an argument from consequences.

2. The concept of the ‘Uniformity of Nature,’ which is the foundation of Naturalism, may be shown to be not opposed to mental activity, but a fruit of it. It is a reflection, in short, of the activity of the self into the realm of Nature—a metaphorical explanation of Nature in terms of human action. Natural laws are symbolic formulae of explanation, not ontological dogmas. They fail even to earmark individual cases in their own sphere. They are inadequate to explain all reality. This offspring, then, of the active self cannot be used to discredit its parent. (3) Again, in conscious life we find all along a subject as well as a matter. Our reason by its very nature is incapable of excluding a subject. Hume’s sensationalism is inadequate to explain cognition. For feeling and sensation depend on interest and attention. W. James finds that the ‘duration and intensity’ of mental effort are not dependent on the object, but on the subject. He calls this an ‘independent variable’ at which science has to stop (Text-Book of Psychology. N. Y., 1895, p. 456); but it is not so. It is only one phase of the activity of the subject which is all along present. This we may call the psychological possibility of freedom, and

3. Pluralism and Freedom.—Pluralism recognizes the distinction between the self and the character. Freedom is its watchword; but, as expounded by some, the objective element in experience is under-valued. As a reaction against Naturalism it makes truth wholly pragmatic. Nature is absolutely plastic. There are no laws that tie us to make them. The world is an θέρμη, and chance governs all. This ‘Tychism,’ however, errs in overlooking the possitiveness of character. For, even in the case of a sinner converted, his past is recognized somehow as his own. Moreover, civilization and Nature, impersonal and mechanical in some sense, are very media through which the self acts. Moral ideals, again, though self-accepted, have the characteristic of universality. We are in danger here of laying exclusive stress on a bare activity of the subject. But this is not enough; objectivity and unity are also required. These are given us in the physical and psychical orders in which our freedom is as well as in the universality of the moral ideal itself.

We have already attempted to give a view of the freedom of the subject in relation to the character. What is this freedom in relation to
outward reality? This is the most living problem in modern metaphysics. It involves not only the relation of man to Nature, but that of Nature to God and of man to God.

Freedom touches the problem in so far as the power of obeying the moral imperative is concerned, and thus it postulates at least that the mechanism of Nature must not be either indifferent or hostile to its own teleological activity. The difficulty of the problem is increased by the fact that between man and Nature there is what Comte called 'Humanität, i.e. Nature as modelled by man.

The aspect of Nature is the hope of the moral consciousness—that all Nature is in reality a fit vehicle of spirit. When moral endeavour has already done so much to make the world familiar and subervient, may it not also? On the other hand, 'Humanität often fills moral endeavour with despair. For here progress against evil customs and perverse institutions seems to be helpless; and even customs and institutions, good in themselves, hinder progress when taken as final resting-places of the living spirit.

The relation of persons to Nature, then, is actually one neither of freedom nor of slavery; but, ideally at least, moral effort demands that Nature become a fit mechanism for realizing worthy ends. This suggests that much of 'Humanität (in the Comscan sense) must and can be subtended; it does not imply, however, that Nature itself is inherently opposed to freedom; for mechanism here may become media of purposive acts (cf. R. H. Lotze, *Microcosmus*, Eng. tr., Edin. 1886, i. 261; and H. Bergson, *Creative Evolution*, Eng. tr., Lond. 1911, for the relation between persons and Nature).

III. Free Will and Theology.—Theology refers everything to God. Its great danger in so doing is that the personal attitude inherent in moral experience may be submerged. It is always difficult to do justice to God and man (cf. Pringle Pattison, *Hegelianism and Personality*, Lond. 1887, p. 163). Man's moral nature is threatened from this side even more than from the side of Nature, because, while the moral life rises up in self-defence against Nature, it feels secure in dependence on the Divine.

The religious consciousness asserts both the sovereignty of God and the freedom of man. Platonism and Judaeism both see God and man as closely related issues. The latter from the religious point of view is an *own rational*—every man is related to God, and is—within the movement of history—open to influences of sin and grace. For St. Paul, God is the author of redemption and his profound spiritual experience (G. Welles, *Paul and Jesus*, Eng. tr., Lond. 1906, p. 112).

St. Paul, however, did not deal with free will from the standpoint of an insulated individual. The latter from the religious point of view is an *own rational*. Every man is related to God, and is—within the movement of history—open to influences of sin and grace. For St. Paul, God is the author of redemption experience: they are not the effect of his free choice; they came to him from God. But they free him also to make free choice. They are a gift; they are also a task.

Within the individual religious experience, freedom thus tends to coalesce with necessity; this freedom is not Nature acting irrespective in the character, nor is this necessity physical coercion. This is the *fælisk necessitas hominum* of Augustine (cf. Luther's *Familie* and *Ohrenmenschen*, opening paragraphs). This freedom is perfect in God. It is the *non posse peccare* of a holy character. In man it is a progressive attainment nurtured by the Holy Spirit. The sovereignty of God is thus essential to this freedom, because of the conservation of spiritual values, and it gives the individual certainty of moral victory while it frees him from the tyranny of sin. Negatively, it is freedom from sin; positively, freedom for righteousness.

It was in the interests of this ideal freedom that Luther and Calvin tended to neglect its natural basis in man's moral nature (cf. J. Oman, *The Problem of Faith and Freedom*, London, 1906, p. 14). This ideal freedom (cf. T. H. Green, *Works*, iii. 308 f., for philosophical cognates) is not an attained reality in religious experience. 'A power of choice is not thought of in this freedom, but a state of the fixed and actual will of man, or God' (J. Müller, *Christian Doctrines of Sin*, ii. 12). Hence, till we reach that ideal, we need a conception of freedom to represent present experience. 'Freedom' in a world already perfect could only mean freedom to be worse, and who could be so insane as to wish that? (W. James, *Pragmatism*, New York, 1907, p. 120).

Can God's sovereignty be reconciled with such a freedom of choice as we require? It cannot if God's absoluteness is asserted without qualification; then the moral life becomes unintelligible. Butler has warned us against speculating on how God ought to reveal Himself. We ought rather to find out how He has revealed Himself. So, God's absoluteness and freedom are the two sides of the same coin. The defect of Augustinianism and Calvinism is that they start from a knowledge of God's absoluteness above experience, deduce logically from this eternal decrees, and so explain immediate experience. We must start from experience, however; and, doing so, the problem is to reconcile God's absoluteness in grace with man's freedom. If we deny the latter, we make the former, we are in a world which is a moral chaos, where ideals have no reality that can be depended on, where the world of men may never be satisfied. The history of Free Will within theology is an oscillation between these two interests. The Greek Church had to conserve human freedom against the Gnostic atomism, with its three fixed unalterable types of men (pneumatic, psychic, hyletic). This was done in such a way as to obscure the distinction between nature and grace. Augustinianism, made an impassable gulf between the moral consciousness of responsibility and the new life of grace. In any attempted reconciliation both interests must be conserved.

1. Freedom and Omnipotence.—It is not enough to admit freedom in *civitatem* or in *moralius* and deny it in *spiritualius*. That is not the way to safeguard religious experience. So even Calvinists like Chalmers, who adopt the Edwardian position, insist on their right to make a free gospel offer (cf. T. Chalmers, *Works*, Glasgow, 1849, iii. 312 f.). It may be said that this is speculatively inconsistent, and it is so because God's omnipotence is logically started from instead of being explained from experience. The power to embrace God's offer of salvation must be granted to man. The difficulty is created by starting with an individual cut loose from God, beyond the sphere of any individual, making an impassable gulf between the moral consciousness of responsibility and the new life of grace. In any attempted reconciliation both interests must be conserved.
of freedom can satisfy the moral demand as it shows itself negatively in guilt, and positively in responsibility for future obedience.

Nor can we be satisfied with a bare foreknowledge unrelated to experience. It is true that, on the human analogy, we have seen how a man acts without knowing being its efficient cause; and so some theologians (Rothe, Martensen; cf. Gladstone, op. cit. 273, and Jowett, Epistles of St. Paul, 1894, ii. 370) have regarded God's knowledge as a logical knowledge of everything apart from any causal connexion with anything; but we are in danger here of lapsing into the Epicurean view of God as careless of mankind. Again, thinkers (e.g. Royce) who regard God's knowledge as timeless, as knowledge at one glance of the whole of reality, are analogous to them. While God must thus be actively aware of all possibilities, and cannot be surprised, or His purposes ultimately frustrated, yet there is within this real contingency.

To regard the Divine presence as a logical knowledge of everything apart from any causal connexion with anything, but we are in danger of lapsing into the Epicurean view of God as careless of mankind. Again, thinkers (e.g. Royce) who regard God's knowledge as timeless, as knowledge at one glance of the whole of reality, are analogous to them. While God must thus be actively aware of all possibilities, and cannot be surprised, or His purposes ultimately frustrated, yet there is within this real contingency.

FRIENDLY SOCIETIES.—1. The theory of mutual aid.—Friendly Societies are institutions formed for the purpose of mutual insurance, and have been one of the chief means employed by the working classes for providing against the risks of sickness, old age, and funeral expenses. The inadequacy of purely shrewdness in the working classes as a result of the uncertainties of life and health among working people has been recognized from very early times, when religious and social fraternities have everywhere devoted some attention to granting relief to members from losses due to these vicissitudes. The Greek euripides appears frequently to have undertaken provident functions, and the medieval guild in Germany and England used its 'box' or 'chest' for the purpose of assisting members in distress.

Grants of burial money were a remarkably frequent, generous feature of such fraternities, and, when the common purse was used mainly for feasting, or when the primary object of association was the control of a craft. Some writers, indeed, assert that the modern Friendly Society is an actual descendant of the medieval guild; but, except for some similarities in their fraternal functions and the fact that the English guilds decayed about the time when Friendly Societies took shape, there is no evidence to warrant the belief in any direct connexion. Feasting, attendance at funerals of members, solemn entrance oaths, contributions to church, and assistance in times of distress, were common characteristics of fraternities of all kinds, and the fact that they appear in the earlier Friendly Societies does not prove that these institutions had any organic relation to the guilds. Possibly the customs of the guilds had an influence upon those of the Friendly Societies, but there is no evidence for any close connexion between England, although in Scotland, where the guilds continued in existence to a later period, some of them gradually merged into Friendly Societies as they lost their trade privileges. Cf. art. Gilds.

The Friendly Society is not a mere institution for promoting thrift. It must be sharply distinguished from Saving Banks, Building Societies, and similar organizations, which have afforded facilities for investment in small sums to the working classes. Its distinguishing characteristic is that of mutual insurance as contrasted with individual investment, and in some important respects the security and welfare of the contributor may be more adequately promoted by becoming a member of a Friendly Society than by depositing small savings in a bank. Death, though certain, may come early or late. Sickness may fall upon one before he has had time to make any savings commensurate with the burden; to another, who has saved more, it may be so protracted as to consume all his reserve long before he is again fit for work; to a third it may not come for twenty or thirty years, and even then may be only of brief duration. Old age, again, when the earning capacity is reached by a minority, and the power of being protracted in any particular case. Mutual insurance meets these contingencies as individual saving can seldom do, because the uncertainties of life and health for a single person may be almost translated into certainties when a large number of persons are concerned, so that, instead of taking account of the extreme possibility of the particular case, it is necessary only to proceed on the basis of average probabilities.

Many men could not possibly save sufficient to maintain themselves even on the lowest necessaries of life during a protracted old age; still more could not do so without undergoing very great privation during their working years. As it is also problematical whether they will ever reach old age, it may be quite unsafe in some cases for them to trust...
undergo the discomfort of saving much for this purpose, particularly if that would reduce their present income or affect the future support of their families. But if, on a calculation of average probabilities of life in that social class, it can be shown that a contribution of a few pence a week will suffice to provide for the superannuation of those who do attain a given age, it may be well within the means of most of them to pay on this basis of average probabilities, although it would be unwise to save on the assumption of the extreme possibility of the individual case.

The risk of illness is precisely similar. Any individual may be suddenly stricken down with a long illness or even permanent disablement, and few working men could by private thrift provide against this extreme possibility, while even a brief illness may occur before sufficient has been saved to meet it. But provision for the average probabilities may come within the reach of the vast majority. The mutual insurance of Friendly Societies is based upon this principle of average probabilities; and, while ensuring systematic contributions from each member, it also shares the risk among a large group.

2. Recent growth of scientific methods.—Although there has been always implicit in Friendly Society activities some recognition of the principle of averages, it is only during the present century that methods have been evolved to calculate the proper contributions and benefits are a late development. The fact that certain contingencies occur with remarkable regularity, when sufficiently large numbers of persons are considered, may be generally known before even approximate estimates of the degree of frequency can be made. But, when account is taken of the further circumstance that mortality and sickness vary according to the occupations, economic conditions, and habits of the people, so that a table which is adequate to one class of trade cannot be applied without modification to quite a different section of the population, it is scarcely surprising to find that a host of early Friendly Societies worked almost at random, and yielded a dismal story of insolvent and inability to meet the obligations which they had undertaken. For a few years, while the members were mainly at the healthiest periods of life, the Societies would appear to flourish; but it soon became manifest that, as the average age increased, the contributions and levies were insufficient to meet the higher risks, and dissolution precisely at the period when the needs of the members were greatest has been the melancholy experience of thousands of these institutions. Many of them had so little appreciation of the factors to be allowed for in the calculation of risks, that they proceeded on the assumption that a contribution from each member which sufficed to meet the outlay on benefits during the first year would also suffice permanently to cover all claims. It was not understood that the risks are largely prospective, so that even a Society with an accumulated fund might not be actuarially solvent. A valuation of its assets and liabilities might well show a deficiency. A Friendly Society is in a sound financial position only when the sum of its existing funds and the present value of the future contributions exceeds the present value of the benefits which those members may be expected to claim in the future, together with the expense of management. The value of these prospective benefits depends upon appropriate estimates of sickness and mortality, which, again, depend upon such factors as the age of the members, similarly, the present value of prospective contributions is dependent upon the expectation of life at different ages, as well as upon the rate of interest. It follows that a premium adequate to cover the risks must vary with the age of the Society and its average duration.

In the light of these general principles it is easy to account for the failure so abundantly manifested in the history of Friendly Societies. Ignorance of the actuarial factors, sometimes combined with disinclination of religious societies to disown, among the thrifty labouring people who sought to provide against the risk of pauperism through ill-health and old age. There are still many small Friendly Societies in existence which cannot stand before a valuation test, and every year adds a few of them to the long list of disasters. As, however, the long experience of some of the largest societies has been analyzed by competent actuaries and made available to the public, sound statistical data have accumulated, and a proper appreciation of the elements which must enter into calculations has become more generally diffused. One change which has there is a marked improvement both in methods and in stability during the last thirty years.

3. Historical development and legislative recognition.—The oldest existing Friendly Society is the United General Sea Box of Borrowmasterness in Scotland, which was founded in 1384. But England is interesting to note that the Societies which can trace their history farthest back are those founded about the beginning of the 18th century by the Huguenots in Spitalfields. Some of the earliest Societies were confined to workers in a particular trade, while others had distinctive religious restrictions, as in the case of the Society of Lintot, founded in 1708, in which the members must belong to the church of Lintot and be good Protestants, loyal to Queen Anne. These were all isolated local associations, and before the end of the 18th century such Societies had grown up in nearly every part of Great Britain. There are preserved in the British Museum the rules of a large number of these small clubs, including the Newcastle-on-Tyne in the second half of the 18th century; and there is abundant evidence that in most districts such organizations were then meeting at the village ale-houses, and included a large proportion of the population. The social and convivial side appears to have been pronounced, and one of the earliest references to them in the Statute book describes them as "societies of good fellowship."

Meanwhile there arose a new class, distinct from the local sick clubs, which has now become in some respects the most important form of Friendly Society, viz. the Affiliated Order, owing its inspiration mainly to Freemasonry (q.v.), and borrowing from that movement its rites and ceremonies, secret signs, and gorgeous costumes. Of greater moment is the fact that the Orders adopted the model of Friendly Societies in their organization and method of local branches or lodges; and, though the chief emphasis at first was convivial, by the end of the 19th century the Free Masons, Oddfellows, Druids, Foresters, and Comical Fellows had developed into Friendly Societies with many branches.

The growing importance of the associations led to a general interest in them and a desire to afford them a better legal status, and to this end in 1798
there was carried through an 'Act for the encouragement of Friendly Societies,' which granted to them valuable privileges on condition of sub-
mitting their rules to the approval of the justices in
Quarter Sessions. While a large number of local societies were enrolled and obtained a definite
legal status under this Act, the Affiliated Orders
were being repressed by other legislation aimed
at Secret Societies whose members took any oath
not required by law. Hitherto the enrolment of
Societies under the Act had not restricted their
financial management, and there were growing
complaints of their instability and failure. In
1858 Parliament demanded that it face this phase of
the problem by requiring the justices, before
confirming the tables of contributions and benefits,
to see that they had been approved, by at least
two persons who were professionally skilled
as persons skilled in calculation, as fit and proper
according to the most correct calculation of which
the nature of the case would admit. Yet this
bold attempt to secure financial soundness had
little effect in practice. On the one hand, there
was nothing to prevent Societies from operating
without becoming enrolled by the justices, and
any stringent requirements of this nature simply
led to a decrease in registration. On the other
hand, persons skilled in calculation in practice
freely passed on their knowledge to others who had no special training for the work, so that
numerous Societies were still enrolled without
sufficient qualification.

In 1859, provision was made for central regis-
tration, a barrister being appointed to examine
the rules of Societies; while, instead of the appro-
priation of fines demanded by law, Hitherto the enrolment
of persons, it was simply required that the justices
should be satisfied that the tables could be adopted
with safety to all parties concerned. This meant,
in practice, that the utmost care was exercised by
Societies to ensure that their tables were soundly
by legislation was relaxed; and in 1834
even this mild proviso was repealed, so that
thereafter the Societies could adopt whatever
rules, benefits, and levies they pleased, so long as
the barrister certified that they contained nothing
contrary to law. After this, Parliament vacillated
on the question. In 1866, when a registrar took
the place of the barrister, he was required to
obtain an actuarial certificate before registering a
Society; and it was enacted for the first time that
every registered Society should be valued
once in five years. But in 1860 these provisos
were repealed, and in the amended Act of that
year no arrangement for valuation was demanded,
while a distinction was drawn between certific-
ed and registered Societies. The former had their
tables approved by a qualified actuary, while
others were merely registered; but in point of
fact very few Societies sought to obtain certifica-
tion, and in 1855 a new repealing and consolidating
Act abandoned all pretence to regulation of the
financial tables of the Societies.

By this time the Affiliated Orders, which had
been studiously ignored by the Friendly Society
legislation until 1855, began to be recognized,
though prior to 1875 they could register only as
if each branch were a separate organization. They
were the pioneers in securing financial stability
by securing Actuarial disclosures. The importance is diminished to this day,
the basis of the Oddfellows made a complete valuation of all
its branches in 1870, and a partial valuation was
made by the Order of Druids, thus laying the
foundations for the future. In 1875, which,
in spite of later amendments and consolidations,
contained almost all the chief legislative regulations
affecting Friendly Societies before the National
Insurance Act of 1895, which, as in the case of
Friendly Societies, is very similar to that of the Industrial
Assurance Companies, which do an enormous
business in petty death polices; and from the
standpoint of thrift they have received
a criticism of high cost of management. Here, as

2. Burial clubs. — The Collecting Societies, which, while registered as Friendly Societies, are also
regulated by a Special Act of 1896, may be said
broadly to deal with a poorer section of the
population than do the other organizations, and to
insure only for burial money. In 1869 they were
63 in number, and had a larger membership than
the other two groups combined; but their relative
importance is diminished to this day. They had to
account for their accumulated funds and to the fact
that, as a rule, they do not provide for sickness or
old age. Moreover, the majority of the members
are young children. The work done by the
Societies is very similar to that of the Industrial
Assurance Companies, which do an enormous
business in petty death polices; and from the
standpoint of thrift they have received
in so many other cases, the poor have to pay proportionately much more than the well-to-do for the benefits they receive. The premiums are collected by cashiers at the houses of the insured, and the cost of this and of general administration absorbs about one-half of the contributions, so that for every penny invested for his own benefit the member pays to agents and their officials. Three Collecting Societies, the Royal Liver, the Liverpool Victoria Legal, and the Scottish Legal, together embrace about six millions of members, leaving under one million to the remaining ninety Societies. The accumulated funds appear to be very small relatively to the membership, but, in fact, a very high proportion of those who become members cease after a time to contribute, and the membership lapses. Thus, in the year 1909, 2,534,709 new members were admitted to Collecting Societies, 130,941 members died, while no fewer than 1,565,855 members lapsed in the single year. The melancholy conclusion at which the investigator arrives is that a large part of the membership is temporary, and never obtains any return for the premiums. That there is a claimant need for the institution of a system of such insurance payments at death, in which the poor would receive benefits commensurate with the premiums, is manifest to all who have practical acquaintance with the lives of the poor; but so long as the contributions have to be collected in pence from door to door every week, there seems to be little chance of meeting this need. Nor are the cost of management and the number of lapses the only drawbacks. Despite the small number of Collecting Societies, there are almost every year some that collapse after obtaining the money of the poor. Speculative assurances on the lives of persons in which the contributor has no real interest are believed to be frequent, although they are contrary to law. Sometimes, too, there is said to be danger to infant life in the practice of insuring babies, though for a child under five years of age the maximum payment at death is fixed by law at £5. It may be granted that the Collecting Societies induce some provision for burial, and for small benefits to survivors, among a poor and improvident class who would otherwise remain untouched by the institutions for thrift.

6. Sickness insurance by Friendly Societies.—The Affiliated Orders provide for sickness as well as for death, and are consequently for superannuation and other minor risks. Their aggregate funds are higher than those of the other two groups, although their membership is the lowest. They differ from the Collecting Societies in the following important respects. (1) They administer sickness benefits, which it is generally impossible for a Collecting Society to do because of the supervision required as a check on malingerers. These benefits usually include medical aid, as well as the more important grants of weekly sums to members who are ill and, consequently, incapacitated of earning. (2) They are organized on a basis of self-government by the insured, while the Collecting Societies are managed by a hierarchy of paid officials. Consequently, the expenses of management are about 10 per cent of the receipts as contrasted with 50 per cent in the Collecting Societies. (3) They permit of a common bond among the members who meet in the local lodges, courts, tents, or divisions, for social purposes and for the discussion of topics relating to their general welfare.

These advantages are generally found in the ordinary or single Friendly Societies as well as in the Affiliated Orders; but the latter have the distinctive merit of supplementing local independence with a salutary central control. The lodge manages its own affairs in an area sufficiently small to admit of thorough supervision and social life, thus providing an excellent unit for fostering political training, and discussion, as well as for checking malingerers; while the lodges are usually grouped into districts in which the claims for funeral money are met by the district lodge, and the funds invested to better advantage than could be done by the lodges themselves. It was customary until recently for the district body, composed of delegates from the lodges, to levy sums from the lodges to meet the funeral expenses when they occurred; but later this has developed into a system of charging premia in 1899. The centralization in accordance with the age-constitution of the members. Above these there is the central body, or general meeting of delegates from the districts and lodges, which is either held perniciously in some city or moves from place to place. This "high court," or "moveable committee," secures capable men for the guidance of the Order, makes general rules which the lodges must observe, often prescribes the rates of contributions, and administers a central fund for the aid of branches that are in difficulties, whose adherents are led by the fact that such assistance. This, however, does not amount to a guarantee of the solvency of each lodge by the central body. The relative importance of the different forms of sickness insurance is indicated by the fact that out of nearly £30,000,000 paid to the members of the Ancient Order of Foresters during the thirty years from 1876 to 1906, 72 per cent was devoted to sick pay for the maintenance of members during illness, 12 per cent to medical aid, and 16 per cent to funeral allowances.

The group designated "Ordinary Friendly Societies" includes a great variety of bodies, from the small local benefit club to the centralized class, the strongest of which is the Hearts of Oak, with a membership of over 200,000 in 1896. The centralised Societies dispense all benefits from the head office, and they are unable to check malingerers so efficiently as a local society or branch, since they must depend on the medical attendant without the aid of the visits of fellow-members. Consequently, the rate of sickness, even in the best centralized Society, is in excess of that experienced by the Foresters or Oddfellows, where the local court or lodge provides against fraud. There are also local Societies confined to particular trades, especially among the callers at public houses, the Societies of juveniles and of females. Moreover, in addition to the membership shown in the foregoing table, there are a great many village clubs and county Societies that have not registered and, therefore, do not enter the returns.

7. Dividing Societies.—Some of the small Societies still adhere because of the supervision required as a check on malingerers. These benefits usually include medical aid, as well as the more important grants of weekly sums to members who are ill and, consequently, incapacitated of earning. (2) They are organized on a basis of self-government by the insured, while the Collecting Societies are managed by a hierarchy of paid officials. Consequently, the expenses of management are about 10 per cent of the receipts as contrasted with 50 per cent in the Collecting Societies. (3) They permit of a common bond among the members who meet in the local lodges, courts, tents, or divisions, for social purposes and for the discussion of topics relating to their general welfare.

These advantages are generally found in the ordinary or single Friendly Societies as well as in the Affiliated Orders; but the latter have the distinctive merit of supplementing local independence with a salutary central control. The lodge manages its own affairs in an area sufficiently small to admit of thorough supervision and social life, thus providing an excellent unit for fostering political training, and discussion, as well as for checking malingerers; while the lodges are usually grouped into districts in which the claims for funeral money are met by the district lodge, and the funds invested to better advantage than could be done by the lodges themselves. It was customary until recently for the district body, composed of delegates from the lodges, to levy sums from the lodges to meet the funeral expenses when they occurred; but later this has developed into a system of charging premia in 1899. The centralization in accordance with the age-constitution of the members. Above these there is the central body, or general meeting of delegates from the districts and lodges, which is either held perniciously in some city or moves from place to place. This "high court," or "moveable committee," secures capable men for the guidance of the Order, makes general rules which the lodges must observe, often prescribes the rates of contribution, and administers a central fund for the aid of branches that are in difficulties, whose adherents are led by the fact that such assistance. This, however, does not amount to a guarantee of the solvency of each lodge by the central body. The relative importance of the different forms of sickness insurance is indicated by the fact that out of nearly £30,000,000 paid to the members of the Ancient Order of Foresters during the thirty years from 1876 to 1906, 72 per cent was devoted to sick pay for the maintenance of members during illness, 12 per cent to medical aid, and 16 per cent to funeral allowances.

The group designated "Ordinary Friendly Societies" includes a great variety of bodies, from the small local benefit club to the centralized class, the strongest of which is the Hearts of Oak, with a membership of over 200,000 in 1896. The centralised Societies dispense all benefits from the head office, and they are unable to check malingerers so efficiently as a local society or branch, since they must depend on the medical attendant without the aid of the visits of fellow-members. Consequently, the rate of sickness, even in the best centralized Society, is in excess of that experienced by the Foresters or Oddfellows, where the local court or lodge provides against fraud. There are also local Societies confined to particular trades, especially among the callers at public houses, the Societies of juveniles and of females. Moreover, in addition to the membership shown in the foregoing table, there are a great many village clubs and county Societies that have not registered and, therefore, do not enter the returns.
do not leave the club, the younger and healthier members break away and form another Society of their own, so that the original Society soon collapses. The inadequacy of a Dividing Society is manifest from the fact that, while the expectation of sickness is about one week per annum at the age of 20, at the age of 48 it is 2 weeks, and at 70 it is 77. Hence the expectation of sickness increases rapidly thereafter. Hence insurance against sickness is mainly a provision for the later years of life, and a Society which accumulates too much fund can scarcely be said to cope with the chief problem. Despite this disadvantage, however, the Dividing Societies attract large numbers of members, who use them for the purpose of saving for Christmases, expenditure as well as for sickness benefits; and since 1878 they have been permitted to register on condition that no division of funds takes place before existing sickness claims have been met.

3. Liabilities from membership and deficiencies of funds. One of the greatest weaknesses attaching to Friendly Societies as a whole, and, indeed, to every kind of friendly insurance, has been the large number of liases from membership. In recent years the Affiliated Orders and the Ordinary Societies have experienced about three liases from membership for every four new members added. Thus in 1905, while 456,854 new members were admitted, 44,833 members died, and 531,667 members lapsed. A large proportion of these liases would have been temporary difficulty in maintaining the contributions. In the Collecting Societies, as was observed above, the number of lapsed was a large percentage in the earlier years.

The other serious weakness is that a very large proportion of the small Societies still show a deficiency in their periodical valuations; and, beyond ensuring publicity in the case of registered Societies, the law imposes no obligation upon them to take steps towards solvency. A large Affiliated Order is usually financially sound, because the orders between them can often combine for an official valuation, but, if a deficiency is revealed, the branch is compelled to readjust its contributions or benefits. Lacking this salutary control, however, the small independent Societies promise benefits out of proportion to the contributions, which they may succeed in granting for many years when the average age of the members is low, but, as a result, many of them show increasing deficiencies at every valuation, until they finally fail to pieces when the rate of sickness and mortality becomes excessive.

0. The Friendly Society work of Trade Unions.

Many Trade Unions have undertaken the provision of sickness and burial benefits, in addition to the more distinctive unemployment and strike benefits. It is estimated that about 1,500,000 trade unionists subscribe for burial money, and about 900,000 for sick pay. But the friendly functions of Trade Unions have been carried on without reference to actuarial calculations, since the primary object has been to have all the funds available for strike purposes at any moment. No adequate reserves have been kept, and from the stand-point of mutual insurance the Unions have always been financially inferior to good Friendly Societies. They have never viewed their contract to pay sickness benefits as binding. They may expel a member at any time if he disobeys orders during a strike or otherwise offends the rules. Although he may have paid for years to the sick and superannuation funds, he can claim nothing. They may alter or abolish the benefits in any period when the fund is short, and the old, although paid for years to the sick and superannuation funds, can claim nothing. They may alter or abolish the benefits in any period when the fund is short. The advantage of the entire absence hitherto of any guarantee that the funds would be reserved to meet the sickness benefits, this system cannot be ranked with the health insurance of Friendly Societies.

10. Effect on Friendly Societies of the National Insurance Act. The National Insurance Act of 1911, which made insurance against sickness compulsory upon a large proportion of the population of the United Kingdom, is, in the main, being worked through the agency of the Friendly Societies, subject to the approval of their rules by the Insurance Commissioners. This measure has led to a great increase in the membership of the Societies, and to a strengthening of their financial position. Allowing for the many persons who belonged to more than one Friendly Society, and for the overlapping of membership between these Societies and the Trade Unions, it is probable that in 1911 net more than 8,000,000 individuals in the United Kingdom were insured against times of sickness by the voluntary system. The actuaries who worked out the statistical data for the Insurance Act estimated that in 1912 the persons compulsorily insured against sickness would number over 13,000,000, in addition to those who may voluntarily avail themselves of the provisions. From the data now available (Jan. 1913) this estimate seems likely to be realized, the vast majority of this number having already become members of existing Friendly Societies or formed new ones. The conditions attached to approval of Societies under the Act, and the financial supervision by the central Government for which provision is made, are sufficiently adequate to afford due protection to the members. Indeed, the plan of finance is so arranged as at the same time to increase the assets and to reduce the liabilities of existing Friendly Societies, thus putting most of the small insolvent Societies on a sound basis as a start, while it will keep them solvent in future by the rules and supervision imposed upon them. It will no longer be possible for a Society to run on indefinitely with a deficit, as it will cease to be approved under the Insurance Act, and so cannot receive the contributions of the workman, the employer, and the State. The benefits or contributions must be adjusted every three years to the position shown in the official valuations. A Collecting Society can be approved under the scheme of health insurance only if it institutes quite a separate branch for the purpose; while Trade Unions must keep the funds quite distinct from their 'fighting' resources, and must observe all the regulations applicable to other Societies, if they wish to take part in the administration of the Act. See also art. 19.

STANLEY H. TURNER.

FRIENDSHIP. One of the numerous 'essayists upon friendship' justly observes that 'there is no subject of morality which has been better handled and more exhaustively than this' (Addison, The Spectator, no. 68). The leading Greek thinkers represent the view of this subject propounded in the ancient world; and perhaps the things they said first on the subject are not only the most original, but the best. Roman friendship was formed on the model of the Greek, and the celebrated treatise of Cicero, de Amicitia, apart from its attractiveness of style and reminiscence, seems to have been drawn in substance from Aristotle's successor, Theophrastus. In viva loco the entire absence hitherto of any guarantee that the funds would be reserved to meet the sickness benefits, this system cannot be ranked with the health insurance of Friendly Societies.
ship, which knit together heroic pairs like Achilles and Patroclus in the Homeric age, and bound nations and the like-minded; you, in the gymnasia of Greece. Friendship, as a modern sentiment and force, is directed by ends and motives that were not present in pagan society. We shall see this by considering the subject in some of its historical phases.

1. PLACE AND DISCUSSION OF FRIENDSHIP IN ANTIQUITY. — In the poets, and especially the philosophers, of Greece who present the ancient view of friendship, and from them we see its extraordinary influence in intellectual discourse, and in social life and institutions. The conditions of society explain the rise of this sentiment, and the prominent place it was allowed to fill. Ordinarily the position of woman was inferior, and the State, as in Plato’s Republic, dwelt on the individual. The traditional religion failed to supply adequate motives for conduct, and thus friendship became a social distinction, a moral safety-valve, and an intellectual and religious inspiration. The citizen or politician who sought an escape from the hardness and corruption of society could say with Socrates, “I have a passion for friends” (Plato, Lytus, 211). Friendship, indeed, touched Greek life and morality with emotion, and acted with the explosive power of a new affection.”

Excerpts from “ friendship,” in Exposition of the Constitution, 1986, pp. 23-34. See, further, the following article.

II. FRIENDSHIP IN THE OT AND IN CHRISTIANITY. — I. Dignity and attractiveness of Hebrew friendship. Biblical religion (e.g., Judaism and Christianity) had much to do with this interest. The Bible is a book of friends, and friendship is a prominent feature in the Hebrew literature. Vexels points out that “the history of the Greek schools of philosophy is at the same time the history of friendship” (Excerpts from “ friends,” in Exposition of the Constitution, 1986, pp. 23-34). See, further, the following article.

p. 132

of ‘ friends’ of God (Ex 33:1, Is 41:6). This conception or relationship never entered the mind of a thinker like Plato, nor of the sociologists, nor of those who held that friendship is destroyed when persons are separated by a wide inequality; and therefore between God and man, or between personalities so far removed from one another, friendship or intercourse was not conceivable [Ezech. 33:1, Is 41:6]. We may glance at some of the examples contained in the OT. The friendship between Ruth and Naomi, recorded in a charming fragment of literature, is a specimen of what is not often celebrated in classical writings, viz., an independent and beautiful expression of affection and loyalty (Riv 115) corresponds to the warmth and disinterestedness of friendship incorporated in the Greek and Roman ideals, and in this age, the two composite elements which, in Emerson’s view (Essays, “Friendship”), make up friendship, and are named truth and tenderness. That author, in the course of his sparkling and paradoxical essay, describes unreservedly, in defining the end of friendship, the traits that distinguished the friendship of Ruth:

- It is the aid and comfort through all the relations and passages of life and death. It is for earnest days and for feasts, and for the gifts and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution.

More celebrated and influential is the relationship between Jonathan and David, who form the classic pair, the Pythias and Orestes, of the OT, and whose friendship was formed spontaneously, and was deeply and intimately bound. (1 Sam 18). Each of these noble characters, in their perfect intercourse and devotion, felt to the other as to himself, and their attachment was, in Aristotle’s words, “cable to the friendship of the good, incapable of being disturbed by accusations” (Grant’s Aristotle, ii. 259). No friendship on pagan soil can rival the qualities displayed in the stories of Jonathan and David, and it is the best that Greece and Rome have to show of friendship looks pale beside this” (J. C. Shirar, “Friendship in Ancient Poetry,” N. Amer. Rev., Nov. 1884). In the tale of a Jewish trial, required by prudent moralists, was unnecessary. As Jeremy Taylor puts it, in a sentence marked by less than his usual amplitude (Works, i. 86), “some friendships are made by nature, some by contract, some by interest, and some by souls.” The beauty of Jonathan’s friendship has been immortalized in David’s elegy (2 Sam 19), and the intercourse of these twin souls stirs fresh admiration in the historian, who sees in it a healthy testimony to the period in which it was realized, and the spectacle of a friendship which shines for all ages as an eternal type” (Ewald, Hist. of Isr., Eng. tr., i. 1878, p. 76). In the personal attendants who accompanied and ministered to the Hebrew prophets (e.g., Elisha, the servant of Elijah (2 K 5:2)), in the band of disciples who gathered round Isaiah as their spiritual leader and guide (Is 8:16), and in the circle of godly people who drew together in degenerate and dangerous times (Mal 3:1), we see further interesting developments of this principle, and how various are the sympathies and services that test and prove the worth of friends.

What may be termed the “Directory” of the OT on the subject of friendship is to be found in the Book of Proverbs. It pointed and scattered sayings crystallizing. But the story of the friendship of Israel the faculty of spiritual intuition was being trained, and God’s entrance into friendship with humanity is given to some of the most astonishing lines of experience. Abraham and Moses, the outstanding figures of Hebrew history, not only towered above their fellows in virtue of their leadership, but, on account of these supernatural experiences, they were admitted to, stood in the unique position as “natural relationship”: a friend loveth at all
times,' etc. (177, cf. the latter half of 198). This expression is noticed also by Cicero: 'whereas you may eliminate affection from natural relationship, you cannot do so from friendship' (de Amic. ch. v.).

5. Plain speaking is sometimes a duty, and is better than fiction: 'faithful are the wounds of a friend' (277).

4. A primary virtue in friendship is loyalty: 'thine own friend, and thy father's friend, forsake not' (Proverbs 17:17). Manners, whom he describes as:

'These friends thou best love, and their adoption tried, Grasp them to thy soul with hoops of steel.'

5. Intercourse is the life and soul of friendship: 'strong is sharpeneth iron; so a man sharpeneth the countenance of his friend' (277). Similarly, in Aristotle's judgment (Eth. Nic. ix. 12), men brighten each other's powers, and add to the rest of life, by frequently coming together; cf. Tennyson's tribute to Hallam, in Memoriam, canto cx., 'Thy converse drew us with delight.' So cordial and practical is the Hebrew appreciation of friendship and its blessings (cf. Sir 8:8 'a faithful friend is a medicine of life').

2. Distinctiveness and reality of Christian friendship.—It is an old and almost a stock objection that friendship occupies a subordinate place in the NT, compared with the prominence assigned to it in ancient ethics. Certainly, it is nowhere made the subject of formal discussion and of express precept. This reproach has been traced to the period of the Renaissance and the rise of Humanism. Since then, however, the models of classical art and literature, and when the worship of friendship became a romantic and religious passion. The objection has received attention. It has been less unfounded upon Christian ethics (Roth, followed by Luthardt, Martensen, and König, and is reproduced by Aristotle's sympathetic commentator in the passing judgment that 'Christian ignored friendship' (Grant, Aristotle, ii. 250).)

The difficulty is hardly solved, in Roth's manner, by distinguishing between the writings of the NT and Christianity, and still less by the admission that no proper examples of friendship meet us in these writings. It is true that the relationship of Jesus to the Twelve, and in particular to individuals like John and Lazarus, did not contain the element of 'equality' which marks ordinary friendship. But this feature should not be pressed much; that the love of the followers to his higher platform of His friendship, and made their admission to His confidence and intimacy a matter of distinct recognition: (158). It is right, therefore, to take the friendships we find in the NT in their natural and honest sense (see Stalker, Image Christi, 1889, ch. v. pp. 83–85, where this objection is vigorously challenged).

But, while Christianity does not ignore friendship, it absorbs it in a deeper current, and creates out of the ancient relationship a special and distinct type. The ordinary category of friendship is no longer prominent, and the virtue characteristic of pagan ethics is transformed. The contrast is noteworthy. The ancient world was distinguished by friendship, which was enjoyed as a privilege by few; the new world originated by Christ and the gospel is distinguished by love, which includes the highest of life and inspiration of all. While, therefore, Christianity enters into the natural order of society, and assimilates institutions like the family and friendship, it tranforms them, and to some extent algebra, knows the types and ideals that formerly prevailed. Love to Christ is the mainspring of the new moral world. 'All souls are knit together by a bond of their Divine Master and to each other; and this friendship, on the part of Christ's followers, is prompted as the response to His own supreme act of friendship, and must be evidenced in each case by the virtues of sincerity and obedience (159).

Apart from this general conception of friendship which distinguishes Christianity, and the use of the term 'friends' in its ordinary and natural sense (Lk 19, Jn 11), there are two instances that call for remark. In Ac 27, mention is made of Paul's friends (votis, a friend to whom someone has promised to visit. The expression may be taken as simply synonymous with Christian brethren and disciples, previously known. Again in 3 Jn they, the closing salutation runs: 'The friends (of all ages) salute thee. Salute the friends by name.' This shows that the primitive communities of the NT, or groups of Christians, constituted an inner circle of disciples and brethren, and that the term adopted by Jesus continued to carry a special and spiritual meaning. But in neither of these cases need we infer that the term is used in a technical sense, or that the first Christians applied this title to each other as it had been used professionally by Greek philosophers or the Epicurean school. Harnack points out that the early Christians, in accordance with the fellow-feeling which animated them, preferred the warm and close term of 'brethren' to that of 'friends,' and that later, in the 15th and 17th centuries, with the rise of the so-called Christian friends (FRIENDS OF GOD) in Germany and of the Quakers (see FRIENDS, SOCIETY OF) in England, the term 'friends' was appropriated to special usage (Expansion of Christianity, Eng. tr., ii. 31–34).

III. Questions in the Study of Friendship.—A few remaining points involved in the elucidation and appreciation of this subject may be presented.

1. Friendship and youth.—It is generally acknowledged that youth is the golden period of friendship. Aristotle did not fail to notice, however, the impulsive tendency of youth to enter on and dissolve friendships in one day (Eth. Nic. viii. ch. 3). On this account Cicero observes that such enthusiastic attachments, readily contracted at games, are not to be trusted, and that men must come to maturity before their friendships can be regarded as solid and permanent (de Amic. ch. xx.). On the other hand, modern ethical writers (e.g. Schleiermacher and Rothe) properly show that, when the two parties of the relationship are behind, and character is still open and imperishable, friendships may be considered not only natural but invaluable. This fact suggests that the friendships of youth should not be arbitrarily hindered, but wisely fostered and directed. The question as to the place of friendship in modern education arises here, and has been commonly neglected. The Greek custom of turning friendship at this stage into a recognized institution, and of laying down rules to guide older youths who are responsible for those under them, is worthy of imitation (Muirhead, Chapters from Aristotle's Ethics, 1900, p. 135; and E. Carpenter, art. 'Affection in Education,' in J.E., 1896, pp. 493–494). In a curious 'Fragment of an Essay on Friendship,' the poet Shelley refers to an attachment, at the age of eleven or twelve, to a school-companion as his introduction to 'the sacred sentiments of friendship.' In this sphere the discipline of healthy moral training is indispensable (cf. Locky, The Map of Life, London, 1898, p. 237).

2. The number and kinds of friends.—(1) If friendship is viewed as an example of the concentration of feeling and sentiment, then Aristotle's opinion that a plurality of friends is not possible or desirable seems justified. The classical friendships were in pairs, and it is contrary to human nature to stand the strain of intimacy or intense
where the requisite amount of installation in individuals or tribes, is not assumed, seems, The Emotions and the Conscience, 1903, vi. p. 67. In this case, artistic, literary, and scientific friendships may be examined. The criterion of friendship in these relationships is that same keep growing, and the same is of something to enrich the common stock of ideas. To keep friendships in repair, in accordance with Dr. Johnson's maxim, is a matter of intellectual as well as social duty and difficulty. The friendship of Goethe and Schiller is a celebrated example of this class, and shows how men of culture come gradually to appreciate each other, and the subordinate differences of temperament and character to community of aims in pursuit of art and truth (see Carlyle's Life of Schiller, pt. ii. and App. vol. 2). (3) Religious friendships. Here friendship reaches its highest intensity (Roths), and friends' 'treat of the deepest of human affairs' (Martensen). The respect and reverence due to persons are shown at their best in this circle of relationships, and it is in the practical religious life that the fruits of friendship are most valuable and necessary. In 'peace in the affections and support of the judgment' and 'aid and bearing a part in all actions and occasions!' (Lord Bacon). A typical example of such friendship is that of this class is when Melancthon—another evidence that friendship at its deepest rests not on agreement of opinions, or identity of constitution, but on those underlying principles and sentiments and are rooted in common spiritual experience.

The characteristics and atmosphere peculiarity type of friendship—friendship to the pagan world—are seen in volumes, now rare, published by Delespinse in 1843, consisting of essays by others, and two by himself, on the life of Jesus (quoted below). The titles are such as these: 'The Character of Christian Friendship,' 'The Observance of Good Habits in Christian Friendship,' 'On Friendly Prayer,' 'Indecent Tidings,' 'Godly Character': 'Christian Friendship.' One of the authors of these essays was Samuel Cath. von Ritterberg, a friend of Goethe's mother, the 'Schöns Ueberliefs' of Wilhelm Meister (Carlyle's 'Br. vol. iv. 221, 'The Fair Share').

Ordinary friendship, as seen long ago, is rooted in nature and society. This highest type of friendship is rooted in God, and is the goal of man's spiritual experience and endeavour.

The Seven Sages.—Each of the seven sages had his say on the matter. Thales of Miletus admonished men to remember their friends, present or absent (Diog. Laert., i. 77). Pittacus of Mytilene gave the advice, 'Speak not ill of a friend,' adding, 'or even of an enemy' (ib. 78). Bias of Priene suggested 'loving as though one might hate,' giving as his reason that 'most men are bad' (ib. 87). Solon's word of wisdom to the world was, 'Get not friends quickly; but, when you have got them, cherish them, and let not their friendship weaken, and cannot flourish under conditions.
book of the *Memorabilia*, with the exception of the first chapter, might be entitled *φίλας*.

The second chapter is a homily on filial affection. In the *Sophocles*, Socrates' son Jionas is exhorted to bear with his mother, in spite of her shrillness and tongue. He is reminded of all that a child owes to a parent, especially to his mother, and it is pointed out to him that, while the State neglects all other forms of ingratitude, ingratitude towards a parent is punishable by law. As a fitting sequel to this chapter there is a little sermon on brotherly love, which might have been preached from the text:

*Behold, how good and how pleasant it is
For brethren to dwell together in unity!* (Ps 133).

Then, extending his view beyond the family, Socrates dilates in ch. 4 on the value of friendship, and insists that a good friend is the most useful of all possessions. In ch. 5 he even appraises the money-value of friends. Ch. 6 begins with advice as to the choice of friends, and ends with directions as to how to gain them. It appears in the course of it that there is a natural basis for friendship in men's need of one another, in the instinct of pity, in the benefit derived from cooperation, and in the feeling of gratitude (παντός) which is thereby engendered; but it becomes plain also that friendship is possible only through the good. The rest of the book dwells on certain commercial aspects of friendship, closing with advice to a rich man to buy friends when they are cheap, on the principle enunciated by Horace (Ep. 1. xiv. 24):

*Ville umbilicum esse bona hosque uit quidem dese.*

Thus we see that the views of Socrates on friendship were, as on other matters, thoroughly utilitarian.

The *Lysis* is a very 'Socratic' dialogue, of the kind known as 'meant to elicit'. It is designed to stimulate, not to satisfy, inquiry; it discusses everything and decides nothing; it opens wide vistas, where we seem to be loyally told of a principle which shall carry us far beyond the immediate subject, and then suddenly blocks our view by interposing some logical obstacle. In its pictorial setting it is among the most charming of Plato's dialogues, but, like others which reach the highest point of artistic perfection, it is poisoned by the taint of perverted amoralism. The Socrates of *Lysis* begins where the Socrates of *Xenophon* left off. For the first position maintained in the *Lysis* is that whether a person will be loved must depend upon whether he is useful (210 c). Then, after some word-play, he introduces the new and passive meanings of *φίλας*, which lend themselves to verbal contradictions (212, 213), and during which the valuable idea is started that reciprocity is requisite for friendship (212 D), Socrates appeals to the poets as the fathers of philosophy (214 A). 1 Does not Homer authorize us to believe that likeness is the basis of friendship, when he says (Od. xvii. 218):

*aie...*  

But this principle, though it falls in with the philosophy of Empedocles (q.v.), 1 is soon found to be only a half-truth, since there can be no friendship between the bad. It amounts, therefore, to saying that friendship is confined to the good. Against this, however, there lies the objection that like is of no use to like. Therefore the good are friends to the good, not in the way like, but merely in so far as they are good. But against this, again, there lies the objection that the good man is supposed to be sufficient to himself.

1 Cf. *Philo*, ii. 467.

The quotation is put in a more gnomic form than it really possesses in the text of Homer, which reads not *aie...* but *ai...*  

friendship exists either among fools or sages. With the former authority, but sceptical of the latter it is superfluous (ib. 98). Of Simmias of Thebes, another of the immediate disciples of Socrates, we can say only this, that in his book containing two books of dialogues the fourteenth was περὶ φίλων (ib. 124).

Cicero mentions friendship among other topics connected with moral and political philosophy, which had been treated in orante and weighty language by ‘the old Peripatetics and Academics’ (de Fin. iv. 8), whom he always maintained to have been really the school under Plato. Plato was succeeded in the Academy by his sister’s son, Speusippus, among whose numerous works there was one περὶ φίλων (Diog. Laert. iv. 4). His successor Xenocrates had also a treatise in two books on the same subject (ib. 12).

5. Aristotle and his successors.—We come now to Aristotle, to whom, directly or indirectly, we owe the greatest pronouncements of antiquity on the subject of friendship. These are to be found in bk. viii. and ix. of the Eth. Nic.; bk. vii. chs. 1—12 of the Eth. Eud. and bk. ii. chs. 11—17 of the Magna Moralia. The treatment in Eth. Nic. is far more finished than in Eud., but the two treatises proceed ultimately from one mind. The author of the Magna Moralia seems to have both the other writers before him.

The Greek word φίλος, which we render so inadequately by ‘friendship’, corresponds more nearly to ‘love’. It is one of the basic concepts in human nature generally. It is to mind what gravitation is to matter. It has its roots in animal nature, in the desire to be close to others, especially to the mother, for offsprng. It is the bond of the family, the tribe, and of the State, and generally the principle of political cohesion, the main object of the bond. It is a love for one’s own, and the interlocutors in e of political thought are usually morally and religiously, especially of the mother, for offspring. It is the bond of the family, the tribe, and of the State, and generally the principle of political cohesion, the main object of the bond. It is a love for one’s own, and the interlocutors in e of political thought are usually morally and religiously, especially of the mother, for offspring.

Walving aside the wider and quasi-philosophical speculation as to whether it is likeness or unlikeliness that produces friendship, Aristotle confines himself to such questions as concern the philosophy of man. Friendships differ in kind according to the several objects of love. Now, there are three things that attract love—the good, the pleasant, and the useful. Hence there are three kinds of friendship according to the end that is sought to be attained. These are also three conditions of friendship: (1) that it should be a feeling of goodwill; (2) that this feeling should be reciprocated; (3) that the object of the feeling should be aware of its existence. Friendships for the sake of the useful and the pleasant are at bottom selfish, and are easily dissolved. The former is found chiefly among the young, the latter among the old. It is the friendship of the good, who love each other because they are good, which alone is lasting. And this includes the characteristics of the other two kinds, since the good are at once useful and pleasant, both in themselves and to one another. Such friendship is naturally rare, and is slow of formation, but, when formed, it is above calmness and distrust. It, therefore, is alone truly entitled to the name. Hence friendship in the highest sense is confined to the good, but the friendships of pleasure and utility are open to good, bad, and indifferent. He denied that sense also friendship implies equality and perfect reciprocity, though there are forms of friendship in all three kinds, in which there is a natural superiority on one side. In such forms reciprocity is not to be expected.

Any form of association among men, even down
to dining-clubs, is regarded by Aristotle as having its appropriate 'friendship.' And all these lesser associations are included in the great fellowship of the State, which aims at the common interest.

There are three normal forms of constitution—kingship, aristocracy, and commonwealth or timocracy (România). The examples of these—tyranny, oligarchy, and democracy. Among the latter, tyranny is the worst, as being the opposite of the best, and democracy the least evil, as it involves in the individual the same sort of action from the corresponding form. The analogues of the three normal forms of government may be discerned in family relations. Paternal rule corresponds to kingship, the relation between husband and wife to aristocracy, and that between brothers to timocracy. The relation between husband and wife is founded on a natural instinct, and continued on the principle of the division of labour. It involves both profit and pleasure, and its friendship may also be based upon virtue. Children constitute an additional bond, so that childish couples more often separate.

Returning to friendship as existing between individuals, Aristotle lays down that all the characters of friendship must be inherent in the material, and that friendship is the bond between two persons, so that if it is possible for the man to be the bond, and for the other to be the friend, then friendship is a relation between two different people, so that it is a bond between two different people, and not something inherent in the material, as it is in the case of some other relations, such as those of parent and child or husband and wife.

The friendship of the Stoics and Epicureans—The Stoics, of course, had their say upon friendship, but their style was excusable after that of their predecessors. It is told of Zeno that, when asked what a friend is, he replied, 'Another one.' (Diog. Laert. vii. 53) But we have seen that the idea was familiar to Aristotle, and that in substance it goes back to Pythagoras. The Stoics naturally confined friendship to the wise, as they did every thing else to which they attached value (Stob. Ec. i. 601, Gaisford). They made friendship to consist in social intercourse coupled with harmony of opinion in relation to life (ib. 600). They also displayed their usual verbal subtlety in the distinction of terms on this subject.

1 Cleanthes, who succeeded Zeno in the Peripatetic school, as is well known, was celebrated for the charm and fidelity of his friendships (Cic. de Fin. i. 65). Atticus, the friend of Cicero, inherited its traditions.

7. Cicero.—Theophrastus died in the year 287 B.C. Some two or a half centuries later Cicero, having enlisted his rhetoric in the service of philosophy, selected the work of Theophrastus as the basis of his celebrated treatise 'On Friendship.' The Laetus, end of Amicitia—to give the work its exact title (An. Gell. xvii. 5 1) it is part of Cicero's astonishing literary output during the year 44 B.C. when, his main duty must have warned him that his time was short. Admirable as this work is, it still does not possess quite the charm or the transparent lucidity of diction which characterize the companion treatise de Senectute, and therefore it suffers somewhat by comparison. While awaiting himself is provided by Theophrastus (Anl. Gell. i. 3), Cicero displayed his discretion by not following that philosopher into the case between friendship and justice, but by passing the matter over in a vague generality (Lec. 61). His purpose in his philosophical writings was always to edify. His practical solution of the problem raised by Theophrastus is 'write large' in the pro Milone. There is reason also to believe that Cicero in this treatise was indebted to Stoic works on the same subject. His obligation to Xenophon in one passage is obvious.

The definition of friendship given in the Laetus appears unsatisfactory. For to describe friendship as 'agreement on all subjects sacred and secular, coupled with goodwill and affection' (§ 20), is to put intellect before feeling, where the latter ought to come first, while he also leaves the question of the account. In his juvenile treatise, the de Intemisti (i. 165), Cicero gave a happier definition of friendship when he declared it to be 'the willing good to another person for his own sake, together with the same will on his part towards you.' Cicero follows the Peripatetics in tracing the origin of friendship to nature, not to utility. There is much in his work that reminds us of Aristotle, yet he has nowhere the air of directly borrowing from him. This fits in exactly with what we know of his relation to Theophrastus. The chapter 'de Amicitia' in Valerius Maximus (iv. 7) is merely anecdotal, after the manner of that writer.

8. Seneca.—Seneca has brilliant passages on friendship scattered up and down his works, especially in the Moral Epistles. His sentiments, indeed, are so fine as to suggest the question whether they were quite sincere. You ought to wish for a friend, he tells us, not, as Epicurus said, 'that you may have somebody to sit by your bedside when you are ill, and to succour you in imprisonment or poverty,' but that you may have somebody by whose bedside you may sit yourself, and whom you may rescue from the dungeon of the enemy (Ep. x. 8). Now there are a great number of things for one another, without being sages, but even a Florence Nightingale or a John Howard

1 a.g. γεωργίαν και οικονομίαν (Stob. Ec. 600). The four terms which follow—λαος, εφίτης, αμιας, φιλόκερος—were four species of friendship recognized by the Peripatetics (Stob. p. 602).

2 Cf. Lec. 29 with de Nat. Deor. i. 131.

4 Lec. 57; cf. Stob. Ec. i. 1, § 3.
FRIENDS OF GOD.

hardly regards them as choice-worthy in themselves. No one, however, will challenge the truth or beauty of the maxim which Seneca quotes from Hecaton, a pupil of Pannius, 'I will show you a lovely rose, but accord a black berry the spell: if you wish to be loved, love' (ib. 6). On the loss of friends, which he admits to be the greatest a man can sustain, Seneca, after the manner of his school, is not very sympathetic. Instead of mourning them, he tells us (Ep. civ. 11 f.), it is better to make new ones. 'But they will not be the same.' Neither will you be the same, is the rejoinder; 'you are changing every moment of your life.' Yet he allows a measure of tears in one of his terse and glittering antitheses (Ep. xil. 1):

'Neque amo semel neque solem. Letciantandam est, non plorandum.'

'For whoever is the "I" and "the mine," Neither the creature must needs insult.'

This is Epictetus' way of saying: 'For where thy treasure is, there will thy heart be also' (Mt 6:21).

10. Marcus Aurelius. — In the Meditations of Marcus Aurelius Antoninus there is much about fortitude and consideration for others, but no word on friendship. Was it part of the tragedy of that crown of thorns that the monarch who would fain have been a friend to all was himself without a friend? He is too fond and too rich to be saved and the ministry purged by unordained persons; but those men do not show any spirit of revolt from the existing system, they have not gained the Protestant temper, and they never demand grace or of the mediation of any form, though they occasionally admit that spiritual life is possible without such mediation.

Nevertheless, the prominence given to 'unordained persons,' whose authority as guides lay simply in the fact that they had been taught of God, marked a radical divergence in principle from the Church—a divergence which did not become 'Protestant' only because it had not yet become explicit.

3. The movement was necessarily supernatural. In this respect the Friends of God were children of their age. They shared the common belief in the virtue of relics, the objective reality of visions, the power of precognition, the gift of tongues, the ability of speaking in strange languages, and the ability to hear—being to the medium of a

1 Harnack, however, points out (Hist. of Dogma, Dogm. tr., 1894-95, ii. 60) that these errors—apostolical and non-apostolical—were not sharply opposed to the Church.

2 Justin, Dialogue with Tryphon, 100.
Divine revelation. Visions especially were looked for and often experienced—visions which declare themselves at once as hallucinations born of the abnormal psychic conditions into which the subjects of them are brought by their too rigorous treatment of the body. 1

(c) It was strongly apocalyptic. The influence, on the one hand, of the 'great German prophetesses' St. Hildegard, St. Bridget, St. Marguerite, and St. Matilda of Magdeburg—of which there are marked traces—and, on the other hand, the state of Christendom at the time of the Great Schism (1378-1417), during which each of two rival popes demanded the allegiance of the Church. In addition, there were the terrible social evils due to the great civil war which followed upon a double election of Emperors. Finally, these human terrors were accompanied by what seemed to be dreadful signs of the Divine wrath—notably the 'Black Death.' 2

The effect of such phenomena upon the Friends of God was such as might be expected from the simplicity and fervency of their faith. It made them seers and prophets of the End. 3

(d) Asceticism was a prominent feature in the practice of the Friends of God, but not so much for its own sake as for the sake of the higher stage of spiritual experience to which it was supposed to open the way. Asceticism disciplined the soul through the body for the purpose of reaching that mystical ladder whose top reached to the enjoyment of God by clear vision and perfect union. The leaders of the Friends, at least, were mystics at their own account for this. 4 And their idea of God as a Being absolutely transcendent, with their notion of the way to Him as a process of complete self-emptying, and with their yearning for those secret and hidden paths of spiritual communion, were the result of their ascetic practice.

The chief note in leaders and followers alike was not this or anything else abnormal. It was meekness—a life of simple faith, hope, and love derived from personal fellowship with God and flowing out in all the moral virtues. What these were, was a first-hand spiritual experience. They believed in the living actual eductive work of God in the soul. They were pupils in the 'upper school of the Holy Spirit,' a school to which every one of humble and sincere heart may have free access. 5

4. Leaders.—(1) For the friends of God the leader possessing intellectually and spiritually was Heinrich Eckhart (see MYSTICISM [Christian]). He was so, at least in two respects: (a) in the first place, by his constant emphasis on the capacity of the soul for God in virtue of its very nature. Not merely in the soul of prophet, priest, or scholar, but equally in the soul of 'every man,' there is something which is Divine. It may be designated 'the ground of the soul,' or 'the spark,' or 'the soul's eye,' or 'right Reason.' Names do not matter. The essential point is that there is in man what can rise to God and know Him and enjoy the bliss of friendship with Him. (b) In the second place, the type of piety prevailing among the Friends of God was Eckhart's. For he taught that the goal of religious living was practical as well as something inward and spiritual. He was a highly practical man, who did his day's work with fidelity and telling effect. 6 Similarly,

inward, and had also a clear understanding in those things which afterwards were dark to him, and he wondered greatly with which ease this came. His friend assured him that now at last he had received the light of the Holy Spirit; and that thus illuminated he could become a more clear interpreter of the Scriptures than he had before. He might now begin again to preach. He was not at all overcome by emotion. This made him a laughing-stock. But, being allowed to deliver a lecture in Latin at the university, he at last such an excellent lecture as they had never heard in their lives before, so grand and deep and godly was his doctrine. Next, therefore, he was permitted to preach in the church where he was 'wont to preach.' He did so with amazing power. Thereafter for full eight years the Master preached both to clergy and laity, his influence growing all the time. Thus he drew to his end. For more than twenty weeks he suffered sorely. His last hour was laden with dreadful and amazing anguish, which the Master himself, in an appearance to the Friend three days after his death, explained to his physiognomy.

This picturesque story was first questioned in 1719 by Quist and Ricard, who, in their Scriptores ordinis predicatirum, treated it as an allegory. More than a century later this view was accepted by Weiss in the Biographia universelle, art. "Tauler" (1836). But the traditional view held its ground until H. S. Denifle, the great Dominican scholar, published his pamphlet (Strassburg, 1879) entitled Taulers Bekehrung kritisch untersucht. Here he worked out the following conclusions:

1. The epithet "Master" means Master of Holy Scripture. This Tauler was not. (2) The Master's two years of seclusion (between 1454 and 1556) are placed between 1449 and 1552. Tauler during this time was active as a preacher. (3) The Master died in 1452. Denifle dates Tauler's death. (4) The Master shows himself (benevolent sich) a very sudden-acting, inexperienced, unimportant preacher. Tauler is seen in his sermon to have been entirely the reverse of this. (6) The Master exhibits a distracted nature. Tauler is a harmonious personality. (6) The Master gives no hints of obedience to his style. Tauler's mind is evident within him as one of the great German speakers of his time. (7) Tauler did not identify with Tauler until a hundred years after his death, and then as the result of conjecture, not evidence.

Who then, was the Master? Had he really existed? Denifle at this time did not fear contradiction when he identified him either with the "Gottesfreund" himself or with Ralman Merewin. Merewin was certainly a historical, participating, native of Strassburg, belonging to an important family of the city, and born in 1307. At the age of 21 he retired from his business as merchant with a large fortune, and devoted himself entirely to Divine things. Though married—to Gertrude of Bietenheim—he resolved to live henceforth as a celibate. But he did not then away his money; he kept it „for use for God“ as it might direct from time to time. In 1348, John Tauler became his confessor. In 1350 he found occasion for a pious use of his money in building a house for the Brethren of St. John on an island at Strassburg called the Grüneweicht ("Green Meadows"). In 1359 he died. Merewin is entitled „das Eichlein von den vier Jahren seines anfänglichen Lebens“; purporting to be autobiographical, not only tells the story of the "stages of spiritual experience" through which he passed during the first four years after his conversion, but also relates the first appearance of the Gottesfreund, and how, at his instigation, the book was written.

By Merewin the Friend is represented as the son of a rich family, who had spent a dissipated youth, was suddenly changed by the grace of God, withdrew into solitude and drew to his others like-minded, and by the illumination of the Holy Spirit became able, in the space of 30 weeks, to understand the Scriptures as thoroughly and speak as learnedly as any in the best university. He appears at the castles of nobles and knights—even in the palace of the Pope—holding up to all alike, in writing and speech, a mirror of themselves; and affecting conversation everywhere from the love of this

FRIENDS OF THE TEMPLE

Friend of God." 1 In 1863, Preger (in the third part—"Tauler, der Gottesfreund vom Oberlande"—of his Gesch. der deutschen Mystik), armed with overwhelming evidence, aimed a direct attack on Demiél's results, but utterly failed to do more than emend or correct them in details. Their foundation has stood sure. In fact, Demiél's view as to the second of the two foundations may be said to have found general acceptance among German scholars. See especially P. Strach's art. on 'Rulman Merwin,' in P.R.B.

FRED. J. FOWICK.

FRIENDS OF LIGHT. — See DEUTSCH-KATHOLICISMUS.

FRIENDS OF THE TEMPLE (Tempelfreunde, Templers). — A sect which originated in Württemberg in 1861; now Unitarian, with headquarters in Palestine, where the colonists form an important economic factor. It was derived from Pietism, as developed in Württemberg by J. A. Bengel, with a chiliasm trend. Early last century this gave rise to a scheme outlined by J. M. Hahn, and sanctioned by the king on the advice of G. W. Hoffmann. It contemplated new settlements, exempt from control by those Church authorities, where colonists should live model lives, morally, socially, and educationally. Germany has been prolific in such plans, the most famous being the Brethren of the Heavenly Father, the Holy Church, the Moravians in Moravia, the Moravians at Herrnhut, etc. The first of the new colonies was planted in 1819 at Kornthal, seven miles from Stuttgart, and was governed with much success by G. W. Hoffmann till his death in 1846. In its strongly chiliasm atmosphere, under the influence of Philip M. Hahn, grew up his son,

1 Bahr, Jves. p. 293. He adds: "This view, if proved sound, would be one of the most interesting psychological 'subjects' in the entire range of history."

2 Cf. Rieder, Der Gottesfreund vom Oberland, Innsbruck, 1906, p. 16.

5 See Strach's ed. of Schröder's, Halle, 1898, p. 55.

6 See "Nachtrag" to the article, where he says that it was written in 1897 and not published before 1906. Rieder's work was also written in 1894—at least the preface bears date, 2nd Nov. 1904—and came out in 1906.
FRIENDS, SOCIETY OF I.

The name — The first Friends called themselves 'Children of the Light' — a name used by the oldest Quaker community at Mansfield in 1648; and 'Friends in the Truth' or 'in the right way' (as in 1694).

The terms prevailed throughout practice and politics. An American colony under Adams settled at Jaffa, acted by the same general idea of transferring a body of Christians, under local autonomy, under the Treaty, destined to extend, and to leave the native population. It might have been expected that this would fare better than the 1648-53 migration led by Mrs. Minor, also with the intention of preparing for the Return of Christ. But both American schemes collapsed, and Hoffmann saw his opportunity. Negotiations were opened through Basel, when a previous German colony had gone to Jerusalem with slightly different aims; and by 1888 the Friends of the Temple acquired the Jaffa property. It was soon occupied, and a second plantation was opened at Sarona, a few miles away; also a new one close to the north-west of Haifa, which seemed better as a port, being sheltered by the Carmel, and lying at the mouth of the valley of Esdraslon, with easy access to the lake and to Damascus. These model villages absorbed most of the Kirschenhardt adherents; and in 1889 they had been the most numerous of all dissenters in Wurttemberg, though hard run by the Baptists, that centre rapidly sank to be little more than a recruiting and forwarding depot, so that Hardegg resigned in 1874. New colonies were planted at Nazareth and Tiberias, at Beirut and Ramlieh, and even at Alexandria. To secure immigrants, other depots were opened in Saron and Ras to, with which the Universalist church furnished an even better seed-plot. Finally, the headquarters were transferred to Jerusalem itself, and this phase of the movement closed with the death of Hoffmann in Frankfurt, through his guidance the religious movement had become Unitarian.

Eight years later, his son Christoph became Guardian of the Temple, and the movement received an impulse from the visit of the German Kaiser in 1889. The colonies are an important German asset in the complicated politics of Syria; their economic value seems now to exceed religious interest. After overcoming the legal difficulties as to holding land, they have settled down to steady work. Their example in agriculture and trade has greatly altered Jewish methods. They have introduced new industries — brewing, improved milling, soap-making, woodcraft, silk-spinning, and good hotels. The settlements are laid out as garden cities, with substantial stone buildings; the colonies have built good roads to link Nazareth and Jaffa with Haifa. Here the community numbers 300, with church and school of its own; the total number settled in Palestine is variously estimated at 1900-1400.

FRIENDS, SOCIETY OF I.
felt that Christ was come to teach His people Himself, and to call them away from the world's ways and teachers to His own living teaching.

The indwelling life of Christ became to him the supreme fact of religion.

The far-reaching consequences of this experience, with its spiritual, intellectual and ministry, and to the practical cross-bearings of daily life, are vividly shown in the following from Edward Burrough, who was 'convinced' in 1655:

"In all things we found the Light which we were enlightened withal, and all marked (which is Christ) to be alone and onely sufficient to lead us, to lead and direct us to God. . . . And so we crossed from the teachings of all men, and their words, and their worship, and their Temples, and all their heathenism, and Christ was met together open, and walked upon the Lord in pure silence, from our own words and all men's words, and heartened to the voice of the Lord and felt his word in our hearts to burn up and best all that was contrary to God, and we obeyed the Light of Christ in us, . . . and took up the Crosses to all earthly glory, Crowns and wages, and denied and yielded up the Crosses of the world, and the Light of Christ in us, . . . And, while walking upon the Lord in silence, as often we did for hours together, . . . we received often the pouring down of the spirit upon us, . . . and our hearts were made glad and our tongues loosed and our mouths opened, and the bright beams of the Light shone upon us, and made God's ordinances as his spirit led us, which was poured down upon us, on Sons and Daughters believers before the whole church was revealed, and then began we to sing praises to the Lord God Almighty and to the Lamb which was slain, and were not ashamed to confess our faith, and contended out of the captivity and bondage of the world, and put an end to sin and death, and all this was by and through and in the Light of Christ within us" (Burrough, Preface to his Works).

In this passage we see how naturally the 'distinctively religious' experiences of Friends flowed as corollaries from the main proposition— their distrust of an instituted ministry, their position as to the non-necessity of outward ordinances, their views as to a worship of creaturely silence and spiritual spontaneity, their encouragement of the ministry of women, their nonconformity to the customs of the world, and to make life a walking in the light. Seldom has a great spiritual truth been followed along its untried consequences with more resolute steps. In the indwelling Light of Christ, the whole of life became sacramental and incarnational, penetrated with religion of the prophetic type, which draws its strength and its vision from intercourse with God. The cardinal principle of the Inward Light was, however, very imperfectly formulated, even by the Quaker Apologist, Robert Barclay, who has to be studied in experience rather than in his statement. It was also held by Ranter, and other mystical groups, who sometimes believed themselves freed thereby from all law. But the Quakers, the 'House of God,' is from the first safeguarded the experience on the ethical side by insisting that there could be no real presence of Christ apart from a walking in the Light. In other respects their conception was seriously limited by the mental outlook of the age.

They tried in vain to express this (the 'Divine Immanence') in terms of the Augustinian doctrine which had moulded the religious thinking of the Western world. So long as God and man were placed in separate chambers of thought, the light was necessarily either wholly human or wholly Divine. To make it human meant denial of the need for both revelation and salvation; hence it was claimed as absolutely Divine. But this involved the inhumanity of each person to whom the Light was given, and the ceasing of human faculties from any place to dealing with the things of God. Man had no religious faculty requiring discipline, no spiritual instrument was necessary; the more his mind was emptied—the more it became like a sheet of paper—the more it would be for the writing upon it of divine creases' (Edward Grubb, Authority and the Light Within, p. 69).

The 'Light' as 'Seed' was, in Barclay's words, 'not only distinct, but of a different nature, from the soul of man and its faculties.' Especially was it 'not to be distinguished from the Light of Christ as God gave two lights to every spirit and the more the Body, so hath He given man the Light of His Son, a spiritual Divine Light to rule him in things spiritual, and the light of reason to rule him in things natural' (Barclay, Apology for the True Christian Divinity, prop. vi, sec. 16).

3. Congregational principles and organization.

The Church is regarded as a body of disciples of Jesus Christ, plus Jesus Christ Himself, as its very life and Head, the whole forming together 'one flock, one Shepherd' (Jn 10:16). Friends do not practise water-baptism as a condition of Church membership, lest it obscure the necessity for the vital spiritual experience (see art. Baptism [Later Christian] in vol. ii, p. 400), and they find their spiritual food and communion in Christ Himself, and not in the use of symbolic bread and wine. They distrust formal creeds, and their doctrinal statements have been intentionally framed with a close adherence to Scripture language. The earliest of these was put forth by the Quaker Mission to New England in 1667; the latest is the Declaration of Faith issued in America by the Richmond Conference in 1887. For Robert Barclay's Apology, see art. Confessions, in vol. iii, p. 888. Membership in the Society is now either by 'convinement' of the spiritual truths to which Friends witness, or, in England, by birth if both parents are Friends. Many American bodies give these children at first only an associate membership.

For fifty years or more after the founding of Quakerism there was no regular membership; those who were 'grown in the Truth' were invited to sit in the business meetings, but few such persons were kept. In 1737, in connexion with poor relief, a rule as to settlement was set up by the London Yearly Meeting, which incidentally directed 'the wife and children to be
deemed members of the Monthly Meeting of which the husband or father is a member, not only during his life, but likewise after his decease, until they shall gain another settlement elsewhere.'

The Society is opposed to aseccedantism, believing that all true disciples—men and women—are a chosen people, which grace may flow to others (Jn 7:26). This involves a responsibility upon the whole membership to be good stewards of the manifold grace of God. Persons—men and women—whose gifts are approved by the Church may be ‘recorded’ as ministers, but they have no salary or separate duties. The spiritual stimulus of Quakerism is a very real thing; but other types of meeting for teaching and evangelistic purposes are also found helpful, now that the Society is again expanding its borders. In them a group of selected believers, responsible, and spiritual guidance are usually emphasized. In many parts of America, however, a pastoral system has been established under the stress of local conditions.

The Quaker movement had at first little organization; it depended mainly on group-life and inspired leadership. General meetings of neighboring groups were held, and each group had its local leaders or ‘elders’, and received occasional visits from the itinerating leaders or ‘Publishers of Truth’.

In 1663 and 1665, business meetings for quarterly districts began in the North, and by 1680 we find a general business meeting for the whole country held at Skipton. This incipient organization did not survive the years of persecution after the Restoration, and the present system is due to the labours of Fox in 1667 and succeeding years. The Monthly Meeting, consisting of a group of meetings, is the executive unit of government, receiving and ‘disowning’ members, appointing ‘elders’ and ‘overseers’, and caring for the meetings’ composition. The superior meeting held quarterly links together a group of Monthly Meetings, while the Quarterly Meetings form the Yearly Meeting, which legislatively for the whole body and does centralize executive work through its own committees, the name of its general executive committee, ‘the Meeting for Sufferings’, placing us back to the old days of persecution. These Church-meetings are now open to all members, both men and women, and questions are not decided by voting, but by the ‘Clerk’ recording ‘the sense of the meeting’ in a minute that expresses the weight of spiritual judgment on the matter in hand. The practical result is conservative and unifying, for minorities are respected, and there is no squeeze into parties.

4. Antecedents,—The first Friends spoke of their experience as the revival of primitive Christianity after a long and dark night of apostasy. R. M. Jones, in Studies in Mystical Religion, has pointed out how the Separatists sects of the Long Parliament period were the product of centuries of striving after spiritual things in a material God. 'There was in England...a real contagion of the idea of God as indwelling' (p. 498). The Familists and Bookists on the one hand, and the General Baptists on the other, show many points of affinity to Quakerism, although the proof of direct connection is forthcoming only in the case of the Baptists (see below).

In Journ. Friends’ Hist. Soc. vii. 104–105, A. Neave Brayley mentions the death of Edwards' Gangraena (1646–47), that all the distinguishing views of Friends are found somewhere or other in Edwards' list of 'errors, hesireties, and blasphemies.' ‘A magnet into a mass of rubbish and drawn out what few bits of iron there were in it.' The 'Seekers' (cf. the parallel Dutch ‘Collegiantes’) were persons who had used the new religious liberty of the time to make a quest after truth, and, having found no rest in current forms or doctrines, were waiting, in a fellowship of prayer, for a further revelation and a new demonstration of the Spirit. The message of Fox found a quick response in the honest and good ground of their hearts. See SECKERS.

5. History.—George Fox, of Fenny Drayton, in Leicestershire (1624–1691), the founder and prophet of Quakerism, was the direct fore-runner of Quakerism, and developed a singular purity and sincerity of character. He spent some years, from 1643 onwards, in a fruitless quest for truth; no man could satisfy his search.

'And when all my hopes in...all men were gone' he says, 'so that I had nothing outwardly to help me, nor any toward me to do, then O then I heard a Voice which said, There is one, even Christ Jesus the Son of God, who can comfort thee; and when I heard it, my heart did leap for Joy...for, though I read the Scriptures, that speak of Christ and of God, yet I knew Him not, but by Revelation, as He who hath hid these things from me, and as the Father of Life drew me to His Son by His Spirit' (Journ. 1644 ed., p. 8).

A direct experience of truth came to Fox through these 'openings,' as he called them, and the Light and Life within him gave the young prophet a spiritual outlook on the whole of life, and forth with a burning message. At Mansfield, in 1648, a company of 'shattered' Baptists accepted his message, and became a group of 'Children of the Light.' In 1651 he gathered Quaker groups in Yorkshire, especially among Seekers at Bally, near Doncaster, and at Wakefield, where William Dewsbury (1691–1698) and James Nayler (1651–1680) were 'convinced.' But June 1655 was the creative moment in the history of Quakerism. Fox found 'a great people in white raiment,' waiting to be gathered in large numbers of Seekers in Westmorland, who had meetings throughout the district, and who met from all parts once a month, for religious fellowship, at Preston Patrick. They were men of deep religious temper and wide Bible knowledge, and many hundreds of them, under the influence of a few powerful meetings, won for themselves the same first-hand experience of a Living Christ which Fox enjoyed. Their leaders, Thomas Taylor (1617–1662), Francis Howgill (1618–1669), John Audaun (1630–1684), Edward Burrough (1633–1683), and others, furnished the movement with the 'Publishers of Truth' who, with help from the Yorkshire Seekers, carried the message through the North of England in 1653 and 1654, and then, in the summer of 1654, spread over the South, paying special attention to London, Bristol, and Norwich.

By the end of 1655, Quakerism had run like fire through England, and was being carried to Ireland and Scotland. It was readily accepted by many Seekers and some Baptists, but roused the dominant Puritan sects to great hostility.

'Gatan,' say the Cumberland and Westmorland ministers, 'despised from his lawful stomach a swarm of Quakers; these...comes upon us like a furious torment; all is on fire on the sudden, many are unseated, the foundations shaken, and some apostasize; here we are beaten off, and lay other things aside, that we might more fully blinde ourselves to quench those flames.' The Anti-Quaker Ministers, etc., 1660, cited from R. Nightingale, The Epistles of John, ch. 2, pp. 63, 64 in Cumberland and Westmorland, Manchester, 1911, i. 60.'
Extravagances of conduct attended the beginnings of the movement, especially in the disturbances of ministers, vituperative and aggressive controversy, and unwise testifying by signs, culminating in Naylor's Messianic entry into Bristol in October 1650. The new order 'expecting certain things that Christ was come and was revealed in His saints. In spite of much sporadic persecution, the qualified religious freedom of the Commonwealth gave the ardent itinerating 'Publishers of Truth' their opportunity, and Quaker groups multiplied throughout England. Opposition, known as the Wilkinson-Story controversy from its two chief leaders, showed itself from those who distrusted all human arrangements; it lasted from 1673 till after 1700, but at the time the strengthening of organization greatly assisted the Friends, and their numbers increased in spite of persecution. Ex cult of the Enclosures, which the movement, Isaac Penington (1616-1679), convinced in 1658; William Penn (1644-1718), convinced in 1667; Robert Barclay (1666-1748), also convinced about 1690; and Edward Bearman (1653-1692) led a separation from Friends. With the passing of the Toleration Act (1689) a period of uncertainty and traditionalism set in, in which the Society devoted itself to its discipline instead of to the raising of spiritual leaders and the aggressive work of the Church. In 1751, Samuel Bowmas (1752-1753) proposed 'a young generation of this age don't seem to come up so well as could be desired. The church seems very barren of young ministers to what it was in our youth, nor is there but very scanty witness of the Abolition to a living witness on great human causes, such as antislavery.

Friends, at their first entrance into America in 1660, had met with fierce hostility from the Puritan rulers of Massachusetts, and in 1659 and the following years four Quakers were hanged on Boston Common—William Robinson of London, Martha Dukes and William Dyer of Rhode Island, and William Leddra of Barbados. Quakerism, however, gained great importance in the New World. Rhode Island welcomed the message, and for more than a hundred years Friends were continually in office. They came into possession of West Jersey in 1674, and of East Jersey a few years later; and in 1811, William Penn began the 'holy experiment' of Pennsylvania. North Carolina also owed much to their influence, while in other colonies, and even in Massachusetts, they became a growing power.

'Their failure to appreciate the importance of the fullest expansion of human personality by education is the primary cause of their later failure to become the dominant force in American civilization of which their early history gave promise. They are described as a people, properly understood, 'called for a better education, for there is no safety in individualism, in personal responsibility, in democracy, in civil or religious masters, unless every individual is given a chance to combat his narrow individualism in the light of the experience of life. . . . The absence of constructive leaders, the later tendency to withdraw from civic tasks, the relaxing of the idea of reshaping the world, were due to the main to the lack of expansive education' (R. J. Jones, The Quakers in the American Colonies, xvi.).

This same failure, leading to lack of Bible knowledge and of teaching ministry, paved the way for the serious 'Hickite' errors of the 17th and 18th centuries. Elias Hicks (1748-1830) was a Quaker minister of commanding personal influence, whose emphasis on the 'spirit and power of God in the soul of man, as his Creator, Preserver, Comforter, Redeemer, Saviour, Sanctifier, and Justifier' (Journal, 1822 ed., p. 330) caused him to put himself in the background of the person of Christ. Towards the end of his life he came into conflict with the section of Friends who held 'evangelical' views with regard to Christ and the Scriptures. In 1797 and 1828 a division took place in Philadelphia and some of the other American Yearly Meetings, in consequence of action by the 'elders' against Hicks, those who withdrew not necessarily identifying themselves with his views, but taking the position that God alone is Sovereign of the conscience, and that this inalienable right must be preserved 'unstained by the hand of man and unalloyed with prescribed modes of faith, frame in the will and wisdom of the creature' (see Thomas, Hist. of Friends in America, 134 f.). The Society of Friends in America was left in two sects, losing the balancing influence of the other. English travelling ministers had supported American Friends of the 'orthodox' school, and the separations powerfully reacted on the London Yearly Meeting. In 1829 a declaratory minute was passed, affirming belief in the inspiration and authority of the Bible, and in the work of Christ. In 1835, Isaac Crewdson (1790-1844) of Manchester, a strong 'evangelical,' went beyond this by publishing A Beacon to the Society of Friends, in which he freely criticized the writings of Elias Hicks. The attack developed into a rejection of the central doctrine of Quakerism regarding the work of Christ in the heart; and, in 1836, Crewdson and about 200 of his friends left the Society. London Yearly Meeting, meanwhile, adopted a mediating position, asserting on the one hand, in 1835, the value of the writings of the early Friends, and on the other, in 1836, its faith in the authority of the Scriptures. The Society in England followed, as a whole, the leadership of men like Joseph John G. Division in 1843, an ardent philanthropist and Bible student, of evangelical but spiritual views, though a visit he paid to America in 1837 caused opposition from John Wilbur (1774-1850), who distrusted his views and his 'creaturiously activities,' and led to a series of small 'Wilburite' secessions in some of the American Yearly Meetings. That in Ohio in 1854, carried with it the sympathies of many Friends in the important Yearly Meeting of Philadelphia, which gradually retired into the semi-isolated position with respect to the other Yearly Meetings which it has since occupied. During the last half-century there has been much expansion and change in the group of Yearly Meetings styled 'Orthodox' in the United States Census, and a Pastoral System with arranged Services has gained great hold. This group has found a unifying and conserving force in a representative Five Years Meeting and a uniform discipline, which date from 1905, but sprang out of a Conference held at Richmond, Indiana, in 1887. Education is now provided for a number of good schools of which Haverford, Pennsylvania, is the best known. Philadelphia Yearly Meeting preserves a somewhat conservative type of its own. The so-called Hickite bodies have declined in numbers, but are now showing signs of fresh life, especially in philanthropic and educational directions.
FRIENDS, SOCIETY OF

'Willful' bodies, though reinforced by other Friends who disliked innovations made in some of the 'orthodox' Yearly Meetings, are reduced in numbers and have little outlook.

In England, a great deal of liberty has taken place as the fruit of a large tolerance. The fence-
in life of a peculiar people has passed away, and the spiritual experience and message of Friends has been freely expressed in home and foreign mission work, in philanthropy and education, in the service of business and public life. The effect of these have been by no means lessened, and most characteristically, in the great Adult School movement, with a membership of over 100,000, which bears throughout the impress of its Quaker origin.

In the year 1856, the Maplewood Conference, held at Oneida, showed that the Society was receptive to the fresh life and thought of the age, and a strong educational and spiritual stimulus has been given through Summer Schools and the Woodbrooke Settlement at Birmingham.

Irish Quakerism, begun by William Edmondson (1857-1712) in 1654, became organized as Dublin Yearly Meeting in 1798. Friends maintained their peace principles and succoured the distressed at the cost of great peril and suffering.

In the following year a separation took place, associated with the influence of an American travelling minister, of rationalistic views, Hannah Bannard. In more recent years the Society has responded to the same influences that have been at work in England.

Scotland forms part of London Yearly Meeting, which also includes some groups of Friends in Australia, New Zealand, and South Africa. Friends in Canada have their own organization.

English and Irish Friends have important foreign missions, to Madagascar, to the islands of China, Ceylon, Constantinople, and Pemba, mainly under the care of the Friends' Foreign Mission Association which was begun in 1838. American Friends' work in Alaska, Mexico, Cuba, Jamaica, Palestine, Africa, and Japan.

Consecration has almost crushed out Quakerism in France and Germany. Holland at one time had a number of Quaker groups, and produced the Quaker historian, William Sewell (1654-1720). There are several small groups of Friends in Belgium.

6. Ethical and social features. Quakerism has been called 'practical mysticism,' and has always had a moral earnestness and a social intensity which saved it from the easy pitfalls of mystical quests. Fox laid constant emphasis on walking in the Light. Seeking to see the Light and to obey it, Friends gained clear vision on moral and social issues. Their use of 'thee' and 'thou' to all ranks of men, and their refusal of 'hat-honour' and of oaths, were parts of their witness for reality in life and for a simple standard of conduct before God and man.

The Children of Light lived, as Fox said in 1651, 'in the virtue of that life and power that took away the occasion of all wars,' and the Society of Friends has steadily maintained the unrighteousness of war to the Christian. Friends were among the first champions of liberty of conscience, and kept their public meetings in the Restoration period. In the face of persecution, refusing to conceal or foign their meetings, 'for such practices are not consistent with the nobility of the truth, and therefore not to be owned in the Church of Christ' (Yearly Meeting Minutes, 1678). They were the first Christian body to free themselves from complicity in slavery, and became the most active of the anti-slavery agitation both in England and in America, and, later, of the anti-opium movement. They have taken a leading part in prison reform, temperance work, and popular education; they have originated and shaped the 'Adult School' movement, and are keenly interested in the investigation and improvement of social conditions. In the American colonies, especially in Rhode Island, New Jersey, and Pennsylvania, they attempted the difficult task of righteous government, and have no reason to be ashamed of their record. The following states their present standpoint as to the duty of public service:

'Our conviction of the unrighteousness of war to the Christian, which prevents its progress on the society of our country gladly rendered by many, should specially call us to voluntary service in other ways, even at the cost of much personal sacrifice. Those who devote themselves with public spirit to the building of national character, the shaping of righteous policy at home or abroad, or the manifold tasks of local or central government, are doing work of high value for the kingdom of God.' (Book of Christian Practice, London, 1871, p. 195.)

In private life, Quakerism has tended to produce a definite type of character—straight, strong, and serious—which has resulted from the habit of bringing the conduct of life to the test of the inward Light, and from the personal responsibility in matters of religion thrown upon each individual member. The younger generation of men as John Greenleaf Whittier (1807-1892) and John Bright (1811-1889), and such women as Elizabeth Fry (1788-1845). The way of love exercised by Friends seems primarily due to this cultivation of a spiritually enlightened judgment and an alert conscience.

7. Problems. In this section especially, the writer cannot do more than give expression to his own personal views. The Society of Friends has to-day an opportunity not unlike that which it enjoyed at the time of its formation. The existence of numbers of earnest-hearted seekers after truth, to whom the ascetic and institutional forms of religion make little appeal, but who look for the help that comes from group-fellowship, penetrated by the living Spirit of Christ. At their best the Friends have this to offer; but, while they are now alive to the adequate intellectual presentation of their message, its actual embodiment in worship and in life is often feeble. The two pressing problems which are now being faced are (1) to re-interpret Christian discipleship to meet the religious and intellectual conditions of the 20th cent., and (2) to give this group-discipleship free scope in moulding the meetings and other corporate activities of the Society. The social conditions and the aspirations of the age challenge such a body as Friends to a new taking up of the cross in daily life. George Fox 1856 laid bare a principle that has proved to be the besetting weakness of modern Christianity (Ep., no. 131):

'There is the danger and temptation to you of drawing your minds into your business and dogging them with it, so that ye can hardly do anything to the Service of God, but there will be crying, My business, My business, and your minds will go into the things and not over the things, and so therein ye do not come into the Image of God, in which is Dominion.'

As Friends open their hearts to see and obey the Light on the great social and moral problems of the day, their witness for truth will acquire fresh vigour, and they will be made 'friends of God and prophets.' True discipleship of this kind brings with it a kindling of group-fellowship which will make the meetings for worship and the other meetings of the Society grow with a new life. Thus only can Friends vindicate their great witness for the freedom and spirituality of the gospel order.

8. Statistics. The following statistics relate to members only: there is also a large number of adherents. The figures in most cases are for the year ending 31st Dec. 1910.
GABARS.—The name popularly applied to the Zoroastrians still residing in Persia, in contradis- 
tinction to their co-religionists in India, the Parsis (q.v.).

1. The Name.—The term 'Gabar,' 'Gahr,' or 'Gaher' is of uncertain origin; it is connected with some Persian lexicaophors with the Arabic kəfər, 'infidel,' which sense it bears, signifying both 'infidel' in general, and 'Zoroastrian' in particular (C. Ullers, Lexicon, Bonn, 1856-64, ii. 860). The abstract derivative Gabrī accordingly denotes 'the religion of Zoroaster;' the Perso-
Turkic Gədər (popular Turkish Gendar), which is given as the source of Gabr, is itself derived from kəfər. Other variants of the Pers. form Gəbr are Gədər and Gəwər. It is also noteworthy in this connection to observe that in Bohemian, here denoted, 'infidel,' and in Kurdish the corresponding loan-

words gəbər and gəwər connote 'Armenian' and 'Russian' respectively (Geiger, in ADAB IV, i. Cl. xix. [1881] section 2, p. 440), thus favouring the derivation of the Pers. Gabr from the Arab. kəfər. The view sometimes advanced that Gabr represents the modern Persian gubr, 'man,' is far less likely. It should also be noted that for kəfər the Kirghiz say kəms, first noted by Vambery as the name of an unidentified people who inhabited the Bokhara region; this family time as folkloric were collected by Wernicke in Wörterbuch der Türkdischen, St. Petersburg, 1889-98, ii. 51). Though in modern travellers the appellations 'Guébres,' 'Genuveys,' 'Genarev,' and 'Gaurt' are found, the latest Eng-

lish form is 'Gabar.' The Gabars designate them-
selves, however, as Zardasht, 'Zoroastrians,' or Bāh-dīnā, 'those of the good religion,' and also Pārshā, from Pārs or Pār, the old province of Persia Proper. Gabr, in other words, is a derogatory term not used among Zoroastrians.

2. Statistics.—It was impossible before the begin-
ing of the 19th cent. to form an idea of the numbers of the Persian Zoroastrians, after the Arab conquest, remained faithful to the old Zoro-

astrian creed. From this time, however, we can refer to some approximate figures by European travellers. Dupin (1807-1809) and Kin- 

neir (1813) give an estimate of 4000 families; 
Tressei (1807-1809) mentions 8000 Gabars at Yazd 
and in the surrounding vilayet; Dozy (1800) and 
Fraser (1821) 3000 families in the whole of Persia; 
Abbot (1845) 800 families at Yazd and in the 
neighbourhood; Petermann (1854) registers 3000 

crations in Persia, of which 1000 were at Yazd; 
Goldsmid (1856) 4000 at Yazd and Kirmān; 
Evan Smith (1870) 3800 families, etc. (cf. Houtum-
Schindler, ZDMG xxvi. [1869] 64).

If we omit the censuses taken in 1854 by order of the Persian Zoroastrian Amelioration 

Fund of Bombay, the first shows a total of 7711 
individuals, distributed as follows: at Yazd (3810 men and 3348 women); 922 at Kirmān; 
100 at Teheran; and 21 at Shērān (cf. Houtum-

Schindler, p. 56).
In October 1879, Hontum-Schindler obtained the following figures: total population, 8,499 individuals (4,947 men and 3,552 women), distributed as follows: Yezd 1,042, and in the neighbourhood 5,541; Kirmān 1,486, and in the neighbourhood 238; Bahānābād 58; Tahez 110; Kasbān 16; Baha 23; Husain 99. The figures, as it appears, indicate that the number of Zoroastrians is increasing slightly instead of declining.

3. Ethnography.—Ancient authors are agreed in placing the Persians, especially the women, amongst the most beautiful types of the human race (e.g., Xenoph. Anab. iii. 22; cf. Brison, Des peuples persans, ed. Lethurrin, Strassburg 1710, pp. 561-563). The sculptures of the Achaemenian and Sassanian periods have fixed the features not only of the Persians but also of the conquered nations, which allows the establishment of valuable comparisons. After the Muhammadan conquest one can follow the intermixture of races which have successively obtained the throne of Persia through conquest or invasion—the Semites with the Arabs, the Turanianes with the descendants of Tamerlane; under the Safavid dynasty (15th-17th cent.), the Tcherkin and Armenian elements prevailed and played a preponderant part in the crossings of race. It was only in the 19th cent. that Persia became restricted to its own national resources.

As for the Garbars, the isolation caused by their religious faith and by persecution must have created special conditions for them and perhaps explains the deviation of the type, if one could be perfectly sure that, in conformity with the sentiment which opposed marriage with non-Zoroastrians, legitimate or illegitimate unions were never contracted between the Garbars and the other nationalities. Travellers who have met them have often described them. It seems that the fine Persian type is absolutely Aryen with minor Garbars of Yezd—has suffered because of their persecutions, their difficult life, and their toilsome occupations. The amelioration of their material welfare will naturally tend to the physical elevation of the race.

4. History.—The battles of Buwiyāt and Qalīn, 635-637 and the last defeat of Nikawa at Dorkān (637) put an end to the great Sassanian empire which had lasted more than four centuries (522-627) (see art. Sassanians). The king Yazdagird III escaped, and after painful struggles at last fled for refuge to Merv, where he was murdered by a miller who coveted his jewels (651-2) (Tabari, tr. Zotenber, Paris 1887-84, ch. Ixivii.). The Arab conquest did not spread at once throughout the whole kingdom; the Persians continued for some time to resist, entrenched in different countries, especially in Fars, the heart of the dynasty and kingdom, and in the region of Tabaristan where the Ishapshadas, or military governors of the Sassanian rulers, maintained their independence till 760. It was probably from this that the Zoroastrians who settled in India came (see art. Parsis). The results of the conquest were neither so rapid nor so complete as is generally supposed. The choice between the Qur'an and the sword was not strictly imposed on the population. The Zoroastrians shared the same fate as the Christians and the Jews, and were allowed to profess their religion on condition of paying the jizya—a just arrangement, on the whole, as the non-Muslim subjects of the Caliphs were exempt from military service and the alms (zakat) of the Prophet's followers. According to al-Baladhuri, it was a rule (see below), but it did not prevent the storming of cities, bloodshed, and all the evils inseparable from military expeditions; hence the miserable fate of the conquered race, over which historians have always lamented.

If the position of the natives, including not only Zoroastrians, but also Jews and Christians, immediately after the conquest, was fairly tolerable, it grew worse under the Umayyad Caliphs; war had degenerated into mere robbery from Damascus obliged the Governors of the Persian provinces to grind down the population and to drain money from them. The subject races suffered much on account of that policy, and the burden of the exactions fell chiefly on the peasants, who were unable to make their complaints listened to by the ruler.

The old aristocracy and landed proprietors (dīdān) were able to preserve power, money, and property by embracing Islam and serving the conquerors, who put them over the Persians through conquest or invasion—the Semites with the Arabs, the Turanians with the descendants of Tamerlane; under the Safavid dynasty (15th-17th cent.), the Tcherkin and Armenian elements prevailed and played a preponderant part in the crossings of race. It was only in the 19th cent. that Persia became restricted to its own national resources.

Under the cruel government of Hādr ibn Yāmān, converts to Islam were compelled to pay the jizya, which caused great discontent among them, and led them to join a rebellion which was quashed in blood. The non-Arab Muslims were sent to the villages with their names branded on their hands. Their discontent was further increased by the loss of the hope of ever becoming the equals of their conquerors, and greatly contributed to the fall of the Umayyads and the rise of the Abbasids, in spite of the efforts of the tolerant and enlightened Umar ibn 'Abd-al-Aziz. The revolt of Sīnbadh the Magian (755-56) was connected with the Shi'ite movement, and is considered as the last effort of the Persian nation to recover its independence.

Sīnbadh was a great friend of 'Abī Musa, a pious and upright man who had embeemed the cause of the Shi'ites. He was the natural leader of the movement and chief of the region of Tabaristan, the land of the Ishapshadas, or military governors of the Sassanian rulers, maintaining their independence till 760. It was probably from this region that the Zoroastrians who settled in India came (see art. Parsis). The results of the conquest were neither so rapid nor so complete as is generally supposed. The choice between the Qur'an and the sword was not strictly imposed on the population.
Gabars

149

Tahbaristan, Shih advantages, and others, upon whom he persuaded that Abe
Muslim was not dead. Shahbod was defeated and killed by an
Abbasid force so strong that it had lasted about seven days according to some,
seven years according to others.

The fall of the Umayyad Khalifate marked the end of the purely Arab period,
and the accession of the Abbasid Khalifate inaugurated a new era. The invasion played an
important part. The seat of the Khalifate was transferred from Damascus to Iraq, and the
administration was more and more entrusted to the Persians. Some of the old customs were renounced;
the festival of the Nawwars (first day of the Persian year;
see FESTIVALS AND FARTS (Iranian)) was resuscitated: on the 2nd of the Khor. it appeared
clothed in the true Persian fashion, while the Persian garb was the official court-dress. During
fifty years a family (some say, of Zoroastrian origin), the Barmakids, directly the
affairs of the Khalifate, till the jealousy of Harun ar-Rashid led him to destroy the
grandsons of Barmak and many members of that family. The Barmakids glorified in being the descendants of
the Magian Barmak, the high priest of the temple of Newbahar at Balkh; and during the
time of their favours the Zoroastrians enjoyed a sort of protection, since the government appears to have
retained a certain partiality for their former co-religionists (cf. L. Bouvot, Les Barmakides, d'apres les

It was in the 9th cent. that some province began to separate from the Khalifate, and local
dynasties were founded by descendants of the Banu Ansar. Thus the Saffarids (872-907) were succeeded by the Samanids
(902-999), who were the grandsons of Saman; a Zoroastrian, converted to Islam by the caliph, was appointed as governor of
Khorasan; the other ruling families of Baluchistan (932), Ghaznavids (973-1088), and Seljüqs (1088-
1194) disappeared after the fall of the Seljüq dynasty.

The murder of the last Abbasid Khalif at Baghdad (1228) by the Mongols under Hulagu Khan, the grandson of Jenghiz Khan, put
an end to the Khalifate. Next came Timur and his horrors of invasion. It is supposed
that the small Zoroastrian communities of Gujarat were reinforced by the fugitives who fled before
the invasion. Gabars and Muslims alike contributed to Timur's ghastly pyramids of heads so often alluded to.

For a long period the Persians had gradually embraced Islam, and the number of the
faithful worshipers of Ahura Mazda yearly decreased. The Zoroastrians were still quartered in the
Fars and Kirman, but down to the present day their history is shrouded in obscurity. It was
only under the Safavid dynasty, after the conquest of Khorasan by Shah Ismael II, (1510), that Persia
recovered for the first time a political unity. Under Shah Abbas I we find the Gabars at Isfahan,
and we can obtain some particulars about them through the accounts of the traders who visited the
Safavid court. Shah Abbas had sent for them and allowed them to settle in the
outskirts of the city beyond the river Zandah-Mud.

We owe to Feste della Valla a good description of that settlement (1616-22):

"A few days ago I went to see their new town (that of the Gabars), which was near the new Choleh (the suburb Julfa) inhabited by the Christian Armenians. The new Tauris, or
Abbasid town, which the Gabars brought from Tauris, touches Isfahan as a suburb, and, though it is at present separated by gardens, etc., in course of time, the number of the inhabitants daily increasing in a wonderful way, Isfahan and that residence of the Gabars with the two adjacent towns is a place distinguished by the excellence of its buildings. The reason why I do not know whether I can call them either separate cities, or suburbs, is doubtless that same town of Isfahan. Like the region beyond the Tiber and the borough of our Rome, that place of the Gabars has no other name than

I know of than "the residence of unbelievers," just as we call the
place inhabited by the Jews "the Ghetto." It is well built; the streets are large and spacious, not less so than those of Choleh, because it was built more carefully; but all the houses are low, one in two-storied, and plated only with iron, the result of the poor condition of the tenants. In that respect they differ from Choleh, which are very good and rich; in which the Gabars are poor and destitute; at least they appear to be so." (Ed. Paris, 1821, ii. 144).

Don Garcia de Silva y Figueroa, in his description of Isfahan ('J. de Malacasa de Don Garcia de Silva y Figueroa en Persia, tr. Wimpfort, Paris, 1697, p. 179), says: "On the outskirts of the town, and in several places on the outskirts, there was a koum at the place, which he calls Garabed, which was 'within a walled spot' of the building where the ambassador had put up. He estimates the number of the houses about three thousand, forming streets and straight streets, in some places shaded by trees to protect the people against the heat of the climate, so that it passed for a large and handsome borough, and even for a city; but this was only ten years since the king of Persia had obliged the Gabars (called Garee by Don Garcia) to leave their
native land and to come and live near Isfahan. (This gives the approximate date of the foundation of Gabaristan, Figueroa being in Persia in 1613).

Tavernier, later on, referring to the bridge of the Gabars (Gabars) at Isfahan, says that it was built partly for the Gabars of Isfahan, who had their own ward beyond the river, in order to prevent them from passing through the great avenue of the Tashkar-Bag, and to allow them on their way home to take the shortest cut and reach their dwellings more rapidly. That ward was constituted by a big village of which the first houses were not far from the river. The avenue which led from Isfahan to that bridge was larger and longer than that of the Tashkar-Bag, and was usually planted on both sides with a handsome row of trees, but without any channel in the middle (cf. Tavernier, Voyages en Turquie, et en Perse, etc., 1699).

Chardin registers the destruction of that prosperous place. Besides the suburbs of Isfahan (already described by him), he mentions two others laid out beyond the river, built by Shah Abbas II - one with trees and houses, the other with a row of houses and a zoroastrian temple. (Ibid. pp. 97-98). Chardin also mentions the place surveyed by the Gabars in the 7th cent. of the Christian era, and rebuilt by Shah Abbas II, who transferred the Gabars to the other end of Julfa (cf. C. de Malacasa, et al., 1614). Chardin explains that the Abbas the Great had brought to Isfahan the Armenians and Gabars, who had been located outside the town, because they were artisans. Those families (Chardin says 1600) had come from Kirman, and at Abbas' death many returned
to their country (Ibid. pp. 97-98). Dastur still mentions Gabaristan as a
zoroastrian village. It was, of course, the new one on the (Tavernier, pp. 51-52). Its vestiges still existed in the early

Kar Porter mentions the settlement as follows: "The liberal spirit of Shah Abbas tolerated the existence of the Gabars at Isfahan, a location which afterwards the Agham Mahmoud gave them a mark and enlarged the suburb called "Gasabish," but, like that of the Armenian colonists in Julfa, it began to decay: nothing now inhabiting its ruined streets, but houseless dogs and the ruins of the people." (Tavernier in Georgia, Persia, etc., ii. 69).

No trace of Gabaristan can now be found. Three hundred yards below the bridge of Julfs, and at about the same distance above the Pul-i-Khas, the river is crossed by the Pul-i-Jumbl, a brick bridge of fourteen arches-a sort of aqueduct to convey water to the palace of Hafiz-dast on the northern bank. The suburb on the opposite bank at this spot was known as Gabaristan because it was inhabited by the Zoroastrians; but the ground was cleared by 'Abbeh II, who transformed the place into a royal residence (see above) which was named Sadat Ablâ, or 'Abode of Fidelity," where he kept his seraglio. The name alone has survived. Another sound trace of the Gabars' suburb is preserved in one of the many apppellations of the Pul-i-Khas; it was called 'Bridge of the Gabars,' because it led to the suburb of Gabaristan and was built by 'Abbeh II, in order that the Gabars might not pass across the main bridge of Julfa (Curzon, Persia, etc., ii. 47-49).

The condition of the Gabars under the Safavid kings, if not enviable, was still respectable; but it grew worse after the Afghan invasion. Mir Vâ'si having taken possession of Qandahar, the Persian king sent him emissaries who were imprisoned in contempt, and Mir Vâ'si's son and successor, in order to invade Persia, took advantage of the opportunity which occurred when the Afghan of Herat threatened the N.E. frontier of the
GABARS

kingdom and the Arab prince of Muskat settled on the shores of the Persian Gulf. That invasion caused the direct calamities to the Zoroastrian communities, while the Persians having chosen Kirman rather than the deserts of Stān, Kirman and Yazd were the places where the bulk of the Zoroastrians lived. Kirman was still more important, as Tavernier says (op. cit. p. 421) that, when he visited Kirman (1654), there were ten thousand Zoroastrians there. Slaughter and enforced conversion disturbed the faithful.

At the time of the second invasion of Mahbūd, the prince persuaded the Zoroastrians of Yazd and Kirman to join his troops and to save the villages they had sustained for centuries (Op. cit. p. 193). The Revolutions of Persia, i. 149). The simple Gabars were easily persuaded, and enlisted under the name of their religion. Their fate, after the siege of Isfahān (21st Oct. 1722), is unknown. One of the captains of a Gabar corps bore the Musalmān name of Naṣrallah, but Hānway considers him the Pāri or Gabar (op. cit. p. 182). Under Nādir Shāh and his successors enforced conversions, exactions, and slaughter again harassed the Zoroastrians.

The siege of Kirman by Muhammad Āghā dealt them a deadly blow, and they shared the general fate of the native population (1594). In 1610, H. Pieterse saw a body of six hundred skulls, a trophy of the Kajjar escutcheon's victory. As for Timur's old trophy, skulls of Gabars were certainly blanching in the same pile with those of the Muslim inhabitants. The ruin of the quarter of the Gabars is ascribed to that time as well as the loss of their valuable MSS. Khamnikoff says that their number amounted to at least 12,000 individuals (Mémoire sur la partie méridionale de l'Asie Centrale, p. 193).

Ker Porter, who visited them after those awful calamities, describes the Gabars 'with eyes bent on the ground and pouring tears for internal water on their disconsolate shrouds'. Yazd still offers a pyre of six hundred skulls, a trophy of the Kajjar escutcheon's victory. As the Timur old trophy, skulls of Gabars were certainly blanching in the same pile with those of the Muslim inhabitants. The ruin of the quarter of the Gabars is ascribed to that time as well as the loss of their valuable MSS. Khamnikoff says that their number amounted to at least 12,000 individuals (Mémoire sur la partie méridionale de l'Asie Centrale, p. 193).

At all times the fallen condition of the former lords of the land impressed travellers. We may quote the opinions of some of them.

Pietro della Valle, who saw them in their suburb of Gabarkhut near the tomb of the Safavid prince, describes them as poor, simple husbandmen, carrying on no trade, earning their livelihood (op. cit. p. 104). They were all dressed in the same manner, and dressed in the same mode, similar to the costume made of bricks (p. 106). Figueras, at Gabarkhut also (p. 179), points out the gentleness of their manners; the women were quite free and used to sit at their doors, spinning and weaving. At Kirman they were subdued their old habits of living, dress, and religion (p. 117).

According to Thémond, they were easily recognized by a dark yellowish colour that the men had adopted for their garments and the women for their veil; besides, the Gabar women, most of whom had fine features, never covered their faces (Rabatation d'un voyage fait au Levant, 216).

Chardin thinks them not so well made or so white as the Muhammadan Persians (op. cit. p. 127). The men, however, were lusty, of a lofty stature, and had a good complexion. The women were coarsely dressed, of a dark and olive-complexion, which he ascribes to their poverty rather than to their nature, some of them having handsome features. The men had long hair and a full beard; they wore a short tight jacket and a cap of the wool, very much like a hat. They dressed either in linen and wool stuff or mobah, preferring the brownish or blackish-coat colouring more suitable to their fallen condition. The women were coarsely dressed, and Chardin emphasizes the fact that the women had not even anything that was so ungainly and devoid of elegance. In fact, he thought that the dress of the Gabars was so much like that of the Arabs that one would be inclined to think that the Arabs had borrowed it from them when they conquered the land. They were agriculturists, traders, in and they wore carpet, caps, and staffs of a very fine wool.

Thémond (op. cit. p. 56) describes them as clad in a wollen stuff of a tawny colour; the dress of the men was of the same shape as that of the other Persians, but the women's dress was totally different. The latter used to go out unveiled, and were on their heads a sort loosely twisted up (sépecta à la ménagère) with another veil which covered their shoulders, after the fashion of the Bohemians. Their trousers were like the livre breeches which go down to the heels. Most of the materials wore by the Gabars were of cotton, and also noble and deserving—a view quite in keeping with their sacred books. Their manners were gentle and simple; they lived under the rule of their elders, who were their magistrates, recognized by the Persians (op. cit. p. 128).

That taste for agriculture was to be their chief characteristic up to the 19th century. Ker Porter found them employed as labourers and gardeners. At Teheran they were for a long time gardeners in the precincts of the Seraglio on account of their strict morality (Baudracco, 1769). In the middle of the 19th century in the north-west of Persia.

In the middle of the 19th century the poll-tax (jizya) had become more and more onerous to the non-Muslim subjects, not to speak of the Armenians and Jews. As regards the Zoroastrians, the annual taxation (it has been verified) amounted to the sum of 600 tomans (£230), but, since the governors and collectors used to increase it, in order to make a profit, it was raised to about 7000 tomans (£1000). According to statistics, a thousand Zoroastrians were compelled to pay; two hundred could not pay without difficulty; and the rest were unable to pay, even under the threat of death. Considering the prosperous position of the Zoroastrians of India and the renewal of the ties with their communities, it was highly desirable that something should be done through their influence in favour of their Iranian brethren.

The position of the latter was, in the main, as follows; they were branded with the appellation of 'Gabars' (inflates), and had to bear the same vexations as those experienced in India by the 'Mahārs' at the hands of the high-caste Hindus. Houtem-Schindler, before the abolition of the jizya, stated (op. cit. p. 69) that the position of the Gabars was better than that of the Jews at Teheran, Kāshān, Shirāz, and Bushire, while at Yazd and Kirman the status of the Jews was preferable. The chief grievances of the Zoroastrians were the following: they were threatened with forced conversion; the property belonging to a Zoroastrian family was forfeited for the use and benefit of the proselytes, in spite of the rights of the legitimate heirs, and property recently acquired could be taxed to the advantage of the mulâdah up to the fifth of its value; it was forbidden to build new houses or to repair old ones; the merchants were subjected to taxes besides the ordinary customs-duities. The murder of Zoroastrians was not punished; and their seances were often desecrated. The Gabars could not wear new clothes or ride a horse; they were obliged to put on dull yellow garments—a permanent reminder of the disabilities which had been equally shared by the Jews and Christians who, under the reign of Mottawaki, were compelled by enactments (A.D. 850) to wear honey-coloured gowns, parti-coloured badges, and caps and girdles of certain ignoble patterns; to ride only on mules and asses, with wooden stirrups and saddles of strange construction. Again, any intercourse with the Gabars being pollution, all lucrative occupations had been forbidden to them. Besides, the inequality of the law in any Muhammadan country, which gives only the Faithful help and assistance, but denies it to unbelievers, is.

The Parās, i.e., India, whose lot had been so different, could not see the miserable destiny of their brethren without trying to better it. In the middle of the 19th century a Bombay Parām wrote:
One who journeyed to Persia found the Zoroastrians in a state of great distress, alarmed at the prospect of becoming a conquered nation. They were, however, cheered by the knowledge that their faith was both inviolable and eternal, and that the Zoroastrian doctrine was rooted in the eternal principles of truth and justice. The Persians, on the other hand, were deeply concerned about their future, and the preservation of their language and culture. The Zoroastrians were also concerned about the future of their religion and the survival of their language, which were both threatened by the spread of Islam and the decline of the Persian Empire.

GABARS

The Persian Zoroastrian Amelioration Fund was started in 1864, and the trustees sent an agent, Manakli Limji Antara, who left India on 31st March and was soon able to communicate a report, which was quite calculated to rouse the general feelings of the Bombay Parsis. A meeting held under the presidency of Manakli N. Petik took place in January 1865, in order to pass resolutions according to the report. In spite of the numerous grievances and disabilities which were made known in that report, the abolition of the Jagoes was deemed the one most urgent reform, and efforts were made towards it, although it took twenty-five years to bring it about (1837–1862). During that long period not only the bloody Jagoes were quite safe, but public opinion in favour of the unfortunate Gaboras.

Manakli Limji Antara took advantage of the friendly disposition of Henry Rawlinson, British Ambassador at Tehran, to have an audience with the Shah and describe to him the miseries of his Zoroastrian subjects. Rawlinson obtained a revenue of £1000 for 1862 annuities wrongfully paid from Yazd and Kirman.

Another interview with the Shah was granted to a few members of the Bombay community, supported by E. B. Emerson, at Buckingham Palace, in June 1871. The Shah was pleased to give a sympathetic attention to the memorial presented by the Parsis, and, if he consented to the measures that you co-religionists are subject to any undue severity, he will take care that redress is afforded them. But, in spite of the kind dispositions of the prince, no change took place, and even a present appeal through the medium of the British Ambassador at Tehran did not reach the royal ear.

It was in 1893 that Dinsha Petik, the President of the Persian Zoroastrian Amelioration Fund, received through A. Thomson, of the British Embassy, the welcome news that the royal firman abolished the Jagoes-tax and relieved the Zoroastrian communities of its payment, beginning with 31st March 1892. The firmam issued in the month of August 1893. Thus ended their long campaign of twenty-five years, which had cost the Persian Amelioration Fund more than £20,000 (£10,000) for all particulars on the abolition of the Jagoes, see E. B. Petik, Parsi Prakasa (Imperial), pp. 467–483.

The affairs of the Iranian community are now managed by small committees appointed by the Bombay Fund, which has a capital of 287,000 rupees, and issues reports. At Baghdad there is a dhoramadi (‘inn’) at Chaukpati for the use of destitute Iranians who come to Indus to find employment and help (1881); and an asgiri (‘fire-temple’) for the exclusive benefit of the Persian Zoroastrians. The head-priest is an Iranian mohedd, and the ritual is purely Iranian.

5. Religion.—The Zoroastrians having lost for ever their political independence, we have now to describe the conditions under which they were allowed to outlive their national liberty and preserve their religion.

At the time of the Arab invasion, Zoroastrianism, divided by sectarian controversies, was exposed to the risk of perishing. The contact of Christians and Jews had created religious [469] fusion and consequently the primitive Zoroastrian doctrine was altered to such an extent that modern scholars have much difficulty in distinguishing the pure elements of the Mandaeans from foreign ones. To those sectarian controversies must also be added the intolerance of the Zoroastrian priesthood towards Persian sects such as the Manicheans and Gnostics—an intolerance which made them hateful.

Persecution had stirred up feelings of bitter hatred against the established religion and the dynasties that supported its oppressions and caused the Arab conquest to appear in the light of a deliverance (cf. T. W. Arnold, The Preaching of Islam, London, 1856, pp. 177–184).

Zoroastrianism did not disappear at once; the Magians were tolerated and treated like 'the people of the book.' In support of this statement, we may quote al-Baladuri:

'As soon as the Caliph Umar had some doubt as to how he ought to deal with them, but Abu'l-Bakr, b. Awt'st speaking to his feast and cried: 'I hear witness of the Apostle of God that he said: Deal with them as ye dealt with the people of the Book.' (ed. de Goeje, Leyden, 1856, p. 357).

We have another example in the treaty concluded with the people of Dabl in Armenia. The safety of the lives of the Christians, Magians, and Jews was guaranteed as long as their churches, temples, and city-walls, as long as they consented to pay the land- and the poll-tax. Conversions, it seems, were not compulsory at first; some were quite free, especially in the upper classes, and took place even before the conquest, such as that of Salmam, one of the very first converts and a revered companion of the Prophet, to whom he was most serviceable at the siege of Medina on account of his talents in engineering and military science. He gave up Zoroastrianism, forsaking his father and his luxurious home at Isfahan. The bent of his mind had led him to study religions, and in his youth he had frequented Christian sanctuaries.

After the defeat of Qasimiyas, four thousand soldiers from the shores of the Caspian Sea embraced Islam, joined the Arabs, whom they helped in the conquest of Jalib, and settled afterwards among Muslims in Kufra. It seems that the great influx of Persian converts made Omar anxious, as he could not reasonably trust them. His forebodings were unfortunately fulfilled; he died the victim of a Persian convert.

The great number of converts is explained by Arnold (op. cit. pp. 177–180), who points out the simplicity and elasticity of Islam, Kol, as well as the unusual enthusiasm borrowed from Zoroastrianism, and the relief from the purifications and elaborate ritualism imposed by that religion; and it is quite certain that the bulk of the converts were voluntary. But all converts were not sincere; the famous Ibn al-Muqaffa, appears to have been a bad Muslim, and, speaking of Mahyar, a native of Daylam, al-Karim ibn Bahram remarked that by embracing Islam 'he had merely passed from one corner of hell to another' (Ibn Khallikan, tr. de Sturs, London, 1842–71, i. 432 and iii. 51) (8th cent.). Ibn al-Muqaffa was one of the ten most eloquent writers of Arabic, and with this combined a thorough knowledge of Falsafi. He was put to death about A.D. 760.

E. G. Browne has admirably defined the period of the two or three centuries which followed the Arab conquest; that period is generally regarded to be a blank page in the intellectual life of the people.

'It is, on the contrary,' he says, 'a period of tumult and unique interest, of fusion between the old and the new, of transformation of forms and transmission of ideas, but in no wise of stagnation or death. Politically, it is true, Persia ceased for a while to enjoy a separate national existence, being merged into that great Muhammadan Empire which extended from Gibraltar to the Jazures, but in the intellectual domain
advised the young man to put it into verse; lest the traditions—the origin of which nobody could remember, no one being able to understand their writing—might be lost.

'You will do well to turn them into verses,' says the old man, 'in a pure language, which will not suffer from the degradation of time, and thus adorn this holy law with thy skill and restore its holy laws.'

We see how much rites and laws had suffered in the 18th cent.; they were doomed to suffer more even through Timur's invasion.

It was in the end of the 18th cent. that the intercourse with the Persians of India was renewed. The exodus of the little band of refugees to the shores of Gujarat had not been the only one (9th cent.); others had fled to foreign countries for security and liberty of conscience, but all record of them is lost; no one can trace the place of their settlements or tell the sad tale of their vicissitudes and collapses. Now and then the historian catches a glimpse of the intercourse of Iranians with India.

In the 18th cent., Mahb, a trader from the city of Udup, on the Indus, stayed six years with the barbarians of Sudan; he was taught by them the Zoroastrian faith and returned to India. He brought with him a copy of the Zend-Avesta which had been made in Sistan in 1506, by one Ardushah Behraman. From this copy other copies were made. The oldest now extant was made on a Cambay MS of the Zendavest brought by Mahb to Bhandark (13th cent.).

Westergaard says (Zend-Avesta, Copenhagen, 1824, Intro. p. 29) that the Parsis never troubled themselves with the books on which their faith was based. Had it not been for the commercial intercourse with Persia in modern times, Anquetil would probably not have found in India a vestige of a book. It is said elsewhere that, if those books had not been brought to India at the siege of Kirman, none would have survived in Parsia.

It was at the suggestion of Changah Shah, the Emir (head-man) of the Parsis of Navsari, that messengers were sent to Persia in order to obtain a satisfactory solution of several questions concerning religion and forms of ceremonies. In the year A.D. 1476/7 the Parsi Raja of Navsari, and Anklesar agreed to send Narmān Hoshang, a layman of Broach, to the learned dasturs and mobeds of Persia. Some passages of the answers transmitted by the Iranian brethren help us to see the position of the Zoroastrian communities at that time under the rule of the Turkomans. The Iranians pathetically declared:

'From Kayomars up to this day, no time has been harder and more calamitous than the end of this millennium; and neither the period of Zoroaster nor that of the Zoroastrians nor that of the Herodons nor that of the Alexander the Greek—of whom the Emperor Hormodas says that they are gross sinners—no period has been worse than this end of this millennium, of which Hormodas has made mention, of which 947 healthful centuries have passed. Moreover, at this time the faithful have little help to perform meritorious actions in the path of Hormodas; and only a little of the survivors, some young and some old, has remained; the rest has gone out of use' (Patel, in Camo, 1878, p. 572).

In a letter brought by Narmān, they similarly deplore their condition:

'Among us, poor people, there are four or five individuals who know their way in Pahlavi writing. But which is original is not known, for this reason, that, owing to oppression and tyranny, our fortunes, bodies, and clothes have all been contaminated' (Bombay University MS of Dari Hormozd's Nemat, 1, vol. i, p. 52.)

One of the messages—the first—concludes with a pressing invitation:

'We wish that two intelligent priests may come hither, and study the Pahlavi writings, and distinguish the proper from the improper. The traveller is carefully guided, the land-route is short, and from Kandahar to Sistan the distance is short; and from Sistan to Yezd there is no fear' (Patel, op. cit. p. 175).

Narmān Hoshang seems to have enjoyed the journey, as in 1496 he went a second time to Persia in order to elucidate new questions. It is stated in this reply that,

'(<since many years the Faithful ofPersia, who are few in number, are very anxious and desirous, that they may resolve some doubt as to the existence of the Faithful in other country>) (Patel, loc. cit.)'
In 1511 a third epistle came from Persia. The Zoroastrians of Iran had found their co-religionists' silence very long.

'Twelve-twenty such Ridyats were formed out of the explanations brought from Persia from 1470 to 1700. These Ridyats form our most precious source of information on the customs of the two communities, and through them old works, fragments of the most precious books of sacred literature, found their way to India, jumbled up with questions of pure ritualism or social life. Now and then Persian travellers happened to come to Gujrat. Two Persians, Kāṭa and Anfāz, visited the Meher in 1696, and got possession of the whole of a poem, a copy of which is in the Mulla Firoz Library at Bombay. Later on Arzashīr Kirmānī was summoned to the Meher court by Akbar in order to help the compiler of the Firdaws-i Bahār (end of the 16th cent.). In 1614 a dastur named Azar Kairān bin Azar Goeto died at Patna in the age of 85. He had discoursed on the Zend and Hinikins, and Hindus are said to have joined the latter (cf. Dastur, tr. Sheed and Trower, Paris, 1843, 1, 87, 88, 89). In the 18th cent. (28th Nov. 1729) a mobed, Jamasp Vilayati, came to India. He vainly attempted to enlighten his co-religionists in matters of religion (Patel, Pārvarī Pārvarī, p. 23; Anghelet du Perron, Zend Avesta, Paris, 1717, Prellin, Discours, p. 387). He brought several manuscripts which served Anghelet's teacher, Dastur Dārāb, and is the one from which his famous translation was dictated. Jamasp found that there was a difference of one month between the Persian and the Indian Zoroastrians in the ros eṣa (\textit{calendar}) reckoning. It is the starting-point of the kosmin or \textit{intercalation} controversy (see Act, CALENDAR [Persian]). He was able to teach Avesta to three intelligent priests--Dastur Dārāb Coomans of Surat, Dastur Jamasp Āsk of Navaari, and a dastur of Broach (now Vadodara). It was thought that he went back to Persia. In 1756 a dastur named Jamahdt, conversant with astronomical calculations, took up the reform of the Indian calendar. During the long discussion of the kosmin, which lasted for more than a century, applications were often made to Muhammadan authorities, \textit{e.g.} Hāji Nasim Isfahānī and Aghā Muhammad Shihāstā. All this shows that the Gabars were not absolutely ignorant.

The Gabars, who were so communicative with their Indian brethren, carefully kept aloof from the non-Zoroastrians. All the travellers have recorded this reserve, which was based upon the principles of self-defence.

"Never," says Chinsra, "was the Obedias of the Jews so averse to disclosing its secrets or so jealous of unveiling the mysteries of its science, or ancient Fire-worship, as to go to any place and to tell, lest they might suspect the design I had." \textit{Relations} (Rottier's edition, Lyon, 1672, p. 564). "They know by heart a big book written in characters differing from those of Persian or Arabic. They could read it, but they used to say that they did not understand it, and therefore held it in still greater reverence, stating that it was such that the creed of its author could not be heard by any alone." (ib. p. 287).

It was with a Gabar of Yazd that Chardin was able to converse about books. That Magian was one of the most erudite among the Isfahān Gabars. He used to read some passages to the stranger every day out of a book for which he asked '1500 Rura.' Chardin was allowed to keep the manuscript for three months, and, as he would not spend so much money on its purchase, the man disappeared (Chardin, \\textit{Perron}, iii, 190). Dastur found the Gabars so reserved about their religion that it was difficult to obtain any information from them (\textit{Beauches de la Perse}, p. 53). Saeedi was able to ascertain that the tenets of their religion were consigned to parchments, the contents of which their elders kept in a separate room, which was only opened on some occasions, and they considered it a point of religion not to show them to any one. Their mysteries and creed were known only to their Magians, who were not more clever than the bulk of the community, and not written in any language anywhere during this long interval of years, and we do not know anything about their condition of the Gabars on your side" (Potel, op. cit., p. 171.)

Inquiries and explanations were made in this way down to the year 1768. The collection of the reply or explanations is named Ridyat or report. Twenty-two such Ridyats were formed out of the explanations brought from Persia from 1470 to 1700. These Ridyats form our most precious source of information on the customs of the two communities, and through them old works, fragments of the most precious books of sacred literature, found their way to India, jumbled up with questions of pure ritualism or social life. Now and then Persian travellers happened to come to Gujrat. Two Persians, Kāṭa and Anfāz, visited the Meher in 1696, and got possession of the whole of a poem, a copy of which is in the Mulla Firoz Library at Bombay. Later on Arzashīr Kirmānī was summoned to the Meher court by Akbar in order to help the compiler of the Firdaws-i Bahār (end of the 16th cent.). In 1614 a dastur named Azar Kairān bin Azar Goeto died at Patna in the age of 85. He had discoursed on the Zend and Hinikins, and Hindus are said to have joined the latter (cf. Dastur, tr. Sheed and Trower, Paris, 1843, 1, 87, 88, 89). In the 18th cent. (28th Nov. 1729) a mobed, Jamasp Vilayati, came to India. He vainly attempted to enlighten his co-religionists in matters of religion (Patel, Pārvarī Pārvarī, p. 23; Anghelet du Perron, Zend Avesta, Paris, 1717, Prellin, Discours, p. 387). He brought several manuscripts which served Anghelet's teacher, Dastur Dārāb, and is the one from which his famous translation was dictated. Jamasp found that there was a difference of one month between the Persian and the Indian Zoroastrians in the ros eṣa ('calendar') reckoning. It is the starting-point of the kosmin or 'intercalation' controversy (see Act, CALENDAR [Persian]). He was able to teach Avesta to three intelligent priests--Dastur Dārāb Coomans of Surat, Dastur Jamasp Āsk of Navaari, and a dastur of Broach (now Vadodara). It was thought that he went back to Persia. In 1756 a dastur named Jamahdt, conversant with astronomical calculations, took up the reform of the Indian calendar. During the long discussion of the kosmin, which lasted for more than a century, applications were often made to Muhammadan authorities, \textit{e.g.} Hāji Nasim Isfahānī and Aghā Muhammad Shihāstā. All this shows that the Gabars were not absolutely ignorant.

The Gabars, who were so communicative with their Indian brethren, carefully kept aloof from the non-Zoroastrians. All the travellers have recorded this reserve, which was based upon the principles of self-defence. We have no reason to be surprised at the care taken to conceal the teachings of their religion, or at the obscurity in which their beliefs are involved, in view of the oblivion of their sacred language. It was in a sense the logical consequence of some of their religious injunctions. If we consult the old treaties, we find in them strict regulations to confine the teaching of the sacred language and the tenets of their religion to adepts alone. Some very curious things are said in the \textit{Sad Dar} on this subject.

The incompatibility of the priest in teaching is referred to in the following verses, such incompetence being considered as a sin, according to the words of Ormazd to Zoroaster: 'As to every priest and teacher who commits a blunder in teaching those of the good religion, I make him just as far distant from heaven as the width of the earth.'

The priests, moreover, were not allowed to teach Pahlavi to every one. Sāsānian emir of Hormuz thus: "To whom is it proper to teach Pahlavi?" And Hormuz, the good and propitious, answered: "To every one who is of thy family, anofficiating priest, a high-priest, a spiritual object, and every one who is an intelligent priest. Besides these that I have mentioned, if one teaches it to others it is a great sin for him; and if he has performed many duties and good works, the end for him may still be hell!" (ib. p. 262). We can easily understand that the more the Zoroastrians were persecuted, the more they kept aloof from the non-Zoroastrians. In fact, any intercourse with the latter was forbidden to the true believer. About that we find in the Ridyats injunctions which were as useful to the brethren of Persia as to those of India, who had just experienced the effects of the conquest of Gujarat by the Muhammadans; the main point was to keep the faith of the fathers. A Bidyat of Shapūr Bhrkhravz tells that if a Zoroastrian did not wish to become a Muhammadan with his family, it was better for him to poison himself and his family than to give up his religion. But if, after the Zoroastrian had changed his religion, he wished to be re-admitted among his co-religionists, he should be received after making him pray a pātak and giving zorndōm (Narimān Ḍōṣang, Bidyat, 18th cent.). Yet conversion to Zoroastrianism was allowed. A non-Zoroastrian could be admitted to the Zoroastrian religion if willing to observe carefully its laws, and provided that no harm was thereby done to the community (Kāta Māhdiya Bidyat, 18th cent.). The last sentence is suggestive, and shows a great deal of discrimination in the leaders. Above all, the Zoroastrian was enjoined to guard himself against contact with a non-Zoroastrian. A Zoroastrian should purify himself with cow's uṣa (narciss) after touching a non-Zoroastrian (Narimān Ḍōṣang, Bidyat, 16th cent.). Some other regulations, such as the following, have even a polemic character: A Zoroastrian should not partake of any food prepared by a non-Zoroastrian, nor travel with (Kāta Māhdiya Bidyat), neither of gāh (clarified butter), nor of honey prepared by non-Zoroastrians (ib.); fruit touched by the latter has to be washed before it is eaten (Narimān Ḍōṣang).}
inclined to tax the Gabars with an exaggerated degree of ignorance. A gratification of their religious practices, intimately connected as they are with their social customs, we may refer to their Bisedya, or correspondence with their brethren in India; for, though these Bisedyas contain no graphic account, they are still the best and surest sources of information in matters of their own faith.

The ceremonies which mark the life of a Gabar are:—(1) The investiture of the sudra and kusti, called the sanjot in India, and sudra kusti dadaan in Persia (cf. Jackson, op. cit. p. 300 f., where it is stated that the wearing of the sudra, and even the formal investiture of the kusti, are not common at Yazd).—(2) The marriage ceremony, stripped of the Hindu finery and pageant imposed on the Persian refugees by the Rana of Sanjan, and reduced to prayers and admonitions (Jackson, pp. 364–366). Any marriage with non-Zoroastrians is strictly prohibited, as Chirdi has pointed out. The Gabars, he says, could not marry wives of another faith; they asserted that the wife was to be by education and birth of the same religion and race as the husband (Voyages en Perse, lii. 128).

(3) Funerals. The burial rites are conducted in Iran, as in India, according to the pure Zoroastrian form (Jackson, p. 399). The body is sent to Iran by the messengers of the Parsi anjuman of Gujarat referred to funeral rites, prayers, purifications, and disposal of the dead on the platform of the dead (Jackson, p. 432). The dead are described by many travellers, who have even seen the inside and have given us particulars as to their structure. In the burial mound, the body could not ensure the inviolability of their dakhams, and keep at a respectful distance the curious wayfarers or mischievous Muhammadans, as their co-religionists endeavoured to make. But last succeeded in doing under British rule.

The dakhams in Persia are not numerous: at Yazd, there are 5–6 old ones and 5 new. At Kirmán we have to note a cluster of 8 towers: 5 are in use; 6 are old and out of repair. At Tehran there is a dakhma built at the expense of the Bombay Fund (A.R. 1912–1913). There is likewise a very ancient dakhma near Kábul, about 30 feet high, but with neither door, chandar (or central pit to receive the bones), nor sepulchral doors. The parts are arranged in rectangles instead of wheel-fashion (from the census of the Persian Administrative Fund; cf. the Annual Report of the Parsi Association of Great Britain (op. cit. 68 f.)). The people still retain the custom of wearing dark colours pointed out by ancient travellers. The men wear the turban, or dastar, rolled up around a small cap; the koldá, or plain wool cap of the Persians, is adopted only at Teheran, Káshán, Shirz, and Bushire; they put on the pendrá (mod. Pers. piráman), a shirt, over their sudra (mod. shahr), the korán (a thread) on their naked body; the trousers are called tomáb. There are three other garments: the dótá, a mere jacket, short and wadied; the alakáry, another sort of jacket worn under a third called kóma. A shál (mod. Pers. shál) is passed over the kóma. The stockings and shoes have Persian names.

The women retain the ancient custom of winding pieces of cloth around their head, 'fagottées à la négligénice,' as Daubler says (p. 51), and of using the same 'nippes collants' mentioned by Rapin de la Fosse (Dévots li de la Perse en 1680, p. 45). They wear five different head-cloths: the thin jál-sháur is bound round the head like a cap and kept in place by the locché (which is a ribbon or a cloth) tied under the chin. The dastdál-sháur falls on the shoulders, and is fastened under the chin; in fact, the head-cloths of these first European visitors, the eye-brows to the chin; the brow is covered by the makró. The women wear the kusti over the
shouldeurs on the under shirt, which is not the suada, but is called zhii-kuslit; over the zhii-kuslit is worn the short shirt or pendura. The women do not wear petticoats, but they are called chelari, made of coloured cloth, either wadded or light, according to the season; they are broad and loose, but they are tied with a belt in the waist. The light-fitting jacket with narrow sleeves is called manzarak. The other jackets have Persian names.

The women of rank, when they go out, throw over themselves a veil of striped stuff blue and white, called chador, which is worn only by the poorest Muhammadans. The other women, viz. the towns- women, go out unveiled; a Muhammadan never looks at them, as he considers them impure.

(c) Education.—After having so often alluded to the ignorance of the Gabars, let us consider their intellectual status during the great campaign made by Manukji Lini Antaria in favour of the amalgamation of the lot of his co-religionists. Houtum-Schindler gives reliable information (p. 82). At that time very few Irans Zoroastrians could read the Avesta characters; in the province of Kirmân there was only one man, the dastur, who could read Zend; at Yazd there were several. All except the agriculturists were illiterate Persian; many had some knowledge of Arabic. Among the women it would be hard to find one who could read or write. Some laymen were convenient with astrology, and knew as much of astronomy as was required for astrological calculations. They could, with the help of the astrologers, find the latitude of a place within a degree. They had limited notions of geography; all their knowledge of history was derived from Firdaus. A few could study the Avesta, Dastžir, DutÁstán, Dázbán, etc. A few studied Zend. Of all the classes the Qu’ran came from India. A Kirmân or Yazd Zoroastian was not permitted to attempt to read the Qu’ran in the presence of a Muhammadan, and no copy would be sold to him. The improvement, even since the beginning of the 19th. cent., is notable. Now there are 9 schools in Yazd, Kirmân, and Teheran. At Yazd there are 6 schools: a large madrasa built at the expense of Atabeg Mirhaban’s father (149 pupils); another where Avesta and English are taught (5 pupils); Shahzaman (5 pupils); Ta‘r (24 pupils); Sarabad (32 pupils); Mubaks (no pupils). These six schools are branches of the Yazd school. At Kirmân are two schools, one near the Atash-Bâhram (32 pupils); and one at Zafar (19 pupils). At Teheran there is one school built by N. M. Peth (13 pupils).

ii. Pazzrâ (nakhwasa).—The modern Iranian priesthood is the humble representative of the great clergy of the Sasanian period, but one would hardly recognize in the persecuted mobeds of Yazd and Kirmân the dastur and advisers of the mighty kings of Persia. Immediately after the Arab conquest, the priests were not ill-treated by the Muhammadans; we have seen that in the 9th. cent. there were still mobeds and eruditi who had learnt the manzarak and studied the commentaries. They were men of position, and were allowed to take a share in the religious discussions held in the presence of the Khalifs themselves. This is proved by the Ulama-i-Islam (ed. Mohi, Fragments relatifs à la religion de Zoroastre, Paris, 1858, pp. 1-10; tr. Vullers, Fragments relatifs à la Zoroastre, Rome, 1871). In 1831, 43-67), in which is preserved a controversy between Mazdean priests and Muhammadans in the presence of Ali; and again by the Mâqâth-i-Ishq-lashgâh, ed. and tr. Barthélémy, Paris, 1887), which relates another controversy between a Zendik called Abâlîsh and the Zoroastrian high-priest Ahr Farnaghr before the great Khalif al-Mâ€™un, whose taste for disputes

on the merits of different religions is attested by al-Masâ‘î (Prairies d’or, ed. Barbier de Meynard, Paris, 1861-77, i. 30).

The presence of the Zoroastrian priests was thus tolerated at the court of the Khalifs, and their evidence was even accepted in lawsuits—that of a dastur is cited in the case of Assur (7th cent.). (cf. Browne, Lit. Hist. of Persia, i. 381 f.;) but this toleration gradually disappeared, and the Zoroastrian priests were taught to expect obedience and respect from true believers only. The community continued to form a class separated from the rest of the community and to recruit new members from itself.

Nevertheless, an example of the possibility of admitting a layman into the priestly class is found in the 17th century. One dastur, Rustam Guhâsh, Andasht, is said to have sprung from the laity and not from a priestly family (SFR., i. 388) indeed, p. xliii). In the time of this dastur, the Muhammadan king of Persia had ordered a general massacre of Zoroastrians, unless they proved that they were not idol-worshippers. Rustam Guhâsh, though a layman, proved this to the satisfaction of the king, and he was made a dastur. It is quite in keeping with the old tradition of the division of men into four classes, restored by king Ardâshir, with the exception of those who, by special merits found a place as a profession different from that of their forebears. Such was the case of this Rustam Guhâsh Andasht.

In the 17th. cent., the heads of the Zoroastrian religious class was still Yazd. According to Chardin (op. cit. p. 131), the great pontiff had settled there, and was called Dastur Dastur; he was an example to the other priests who lived with him and to the students who formed a seminary under his auspices.

The Muhammadans allowed this liberty, since the officers derived handsome presents from such toleration.

The ignorance of the priests is emphasized by the traveller, but in many cases that reputation is due to the ignorance of the priestly class itself, as with the laity, so with the priestly class, a general darkening of the intellect was but too real, especially after the siege of Kirmân (1794). Westerners, at Yazd and Kirmân, noted that Pahlavi had been almost forgotten; Houtum-Schindler, as already stated, found in Yazd some priests who could read the Avesta characters, but at Kirmân only one—the dastur.

There is now at Yazd a madrasa where Persian and Avesta are taught, whilst in the village schools Khorda-Avesta and Persian only are taught. A certain number of young men come to study at Boubey. As a learned and distinguished priest, we must mention Dastur Tir Andâz Ardâshir, who has translated the Khorda Avesta into Persian.

The initiatory ceremonies for priesthood are the same as in India—naver and martâb, with some slight differences in the ritual (cf. art. PERSIA).

At Yazd the mobeds live in a separate quarter; the bashâr are spread over different villages and localities. They devote themselves in keeping up the sacred fire, the performance of the offices and religious ceremonies, and the like. For the distribution of the work and fees, they proceed as follows. Once a year, all the mobeds hold a meeting at the house of the high-priest and assign all the bashârs of the different places to as many divisions as there are mobeds. They write down the names of the different villages on small slips of paper, which are folded and distributed by a young mobed to the mobeds as in a lottery. The religious ceremonies of the locality inscribed on the paper are performed by those mobeds and by the bashars under their charge. Many of the mobeds appoint others to their place or ask others to help them; but they must always give their permission for any subdelegation. A mobed who has just been made a naver cannot be employed until three years have elapsed after the ceremonies have been performed. The distribution of work is made yearly, and according to the increase or decrease of the number of the mobeds.
Temples.—Fire, the symbol of the Mazdean faith, after having burnt in the Zoroastrian temples of the Sassanian period with all pomp and majesty, is now slighted, in Persia and as in India. It dwells behind the scenes...ings whose outside does not differ from that of other houses. It is the worship of, or rather reverence for, the Persians and Gaborians has earned them the appellation of šāhak-pardēšān, or ‘fire-worshippers,’ given to them by travellers. Before the abolition of the jizes, their sanctuaries were desecrated daily. The history of the post-Sassanian temples has still to be written; the remains of the old temples are few, and the poor modern druids have nothing to remind us of the splendour of the former.

It is said that after the battle of Nihkwand, King Yazdegird fled from Buz and took with him the sacred fire that was revered in that place, one of the oldest pyres of Persia. He went to Isfahan, then to Kirman, Sistamgar, and Merv, where he erected, in a place two passages from the town, a pyre, where he burned the sacred fire that he had brought with him. The town was surrounded by gardens (fazlak, bir, Zoleym, ch. iv.).

At first the Muhammadans seem to have given a special protection to the fire-temples and to have prevented their destruction. Thus in the 9th cent., under the reign of al-Mu'tasim (833-842), priests and doctors were fogged because they had destroyed the temple of Dschauv in a village in its place (Arnold, Preaching of Islam, p. 170).

At the time of Mas'udi (9th cent.) pyres were to be found at Kirman, Sistan, Tabaristan, Khorasan, and Gaboriau, (iii. 381). But on account of the invasions and wars the number of the Zoroastrians decreased, and the sanctuaries fell into decay. Travellers have all recorded how carefully the Gaborians concealed their fire from the eye of non-Zoroastrians. The exceptions are few. Chiron went to the temple, but could not see the fire (p. 448), although Careri saw it (Giro del mondo, 1899, p. 134). In modern times, E. G. Browne and Jaffry, in their researches into the sanctuaries of Yazdi and Kirman (A Year amongst the Persians, 1877, 411 f., and Persia, Past and Present, 386 f.), one of the first duties of the Persian American Relief Fund was to repair the fire-temples.

7. Language.—All the travellers noted that the Gaborians had a language of their own; they had retained the Avestan characters and their script, but the Mazdean language and literature had gradually disappeared and were replaced by a sort of jargon, unintelligible to strangers and different from the modern Persian. The Persian Zoroastrians is the Gabori, spoken at Yazdi, Kirman, Rafrinjan, etc. It seems that Hyde knew of the existence of the Gabri (Vestem Persicum, 1798, 263, 266, etc. cf. Anquetil du Perron, Zend-Avesta, ii. 429). There has been no literary activity amongst the Persian Zoroastrians of Yazdi and Kirman in recent times; and, though among themselves they continue to speak the peculiar Gabori dialect, their speech in mixed society scarcely differs from that of their Muhammadan fellow-citizens, and their letters are entirely copied from the ordinary models. E. G. Browne studied it at Yazdi. He says that the Dari (as he calls it) is used by the Gaborians only among themselves. When they speak their own dialect, even a Yazdi Muhammadan cannot understand what they are saying, or can understand it only very imperfectly; it is not written.

7. G A E L S.—See CELTS.

GALICCIANISM.—Under this name two doctrines are designated, which were once current in France, but which are quite distinct. The one was directed against the claims of the clergy, the other against the Papacy. The first, which was odious to the clergy, was supported by kings and parliaments, and may be called ‘royal or parliamentary Gallicanism.’ The second had the sympathy of the episcopate and of the French clergy, and is known as ‘episcopal Gallicanism.’ Each of these two doctrines, which have often been confused, has its own history, and they ought therefore to be separately treated.

I. ROYAL OR PARLIAMENTARY GALICCIANISM.

—Royal or parliamentary Gallicanism comprises three maxims. (1) The first proclaims the right that civil society possesses to defend itself against...
GALLICANISM

the invasions of the clergy. It may be formulated thus: the clergy ought to be confined to the spiritual domain. (2) The second affirms the superiority of civil over religious power. Its formula is the king is the head of the Catholic Church. (3) The third teaches that, to defend civil society against the encroachments of the clergy, the king has to rely on the latter, the king (represented by Parliament or the King’s Council) should act in a practical manner, viz., by appeal by writ of error, which entails various penalties, notably the seizure of temporal properties. According to the king (represented by Parliament or the King’s Council) should act in a practical manner, viz., by appeal by writ of error, which entails various penalties, notably the seizure of temporal properties.

1. Defence of civil society against the encroachments of the clergy. — This is the very soul of the disputes which broke out from time to time between laymen and ecclesiastics. Profiting by the disorder caused by the invasion of the barbarians, the Church, in the 6th century, had placed herself at the head of the social services. She had left her spiritual domain and invaded the domain of things temporal. But the day came when society became conscious of its growing strength. Then it thanked the Church for her past services and announced that it would henceforth look after its own administration. The Church, however, did not see things in the same light. She claimed a Divine sanction for rights which she owed to circumstances, and which she was unwilling to abandon. Hence arose the disputes which broke out as early as the reign of Clovis and Balduin, especially in the 13th century. In 1226, under Philip Augustus, then in 1229, under Louis VIII., the French barons formed a coalition to drive back the clergy into their spiritual domain and rescue laymen from their tribunals. At this latter date the Duke of Brittany, Pierre Manchere, assembled his vassals at Redon, urged them to work towards this end, and made them swear to support the cause of the laymen. At the Assembly of Saint-Denis (1226) the most powerful lords of France discussed the matter again, and wrote to Pope Gregory IX, asking him to put an end to the continual encroachments of the bishops. Finally, in 1246, another League was formed — this time at the instigation of the Emperor Frederick II., which proposed to limit the jurisdiction of the Church over laymen to cases of heresy, marriage, and usury. All these attempts failed. In 1235, Gregory IX. formed the lords that they were making an attempt against the 'liberty of the Church,' and threatened them with all sorts of penalties. He further: he communicated the members of the League of 1246. The bishops, supported by Rome, continued to bring before their tribunals a great number of civil affairs. The laymen, who thought themselves capable of administering their own affairs, continued to revolt against the humiliating guardianship to which they were subjected. During the whole of the 13th century matters underwent no change.

But, although the conflict went on as far as laymen and the Church were concerned, the interests of the former were no longer, towards the year 1300, entrusted to the same hands as formerly. At the time of Philip Augustus and Saint Louis, the opposition against the usurpations of ecclesiastical jurisdiction began with the barons. At the approach of the 14th century, the attack came from the king, Philip the Fair, an impious man and a great organizer, who proposed to entrust the execution of justice to lay officers nominated by himself, and to relegate the Church to the spiritual domain. The success of this project, however, was hampered by the king's quarrels with Boniface VIII., who compelled him to conciliate the clergy in order to secure their support. In fact, he had to concede to the Church unlimited jurisdiction in civil affairs. At the same time he instituted a body of royal legists and notaries who should represent the lay spirit and form a kind of fortress of anti-clericalism. In the 14th century, power arose over against the Church, which had always an open eye for the ambitious schemes of the clergy and was ever ready to thwart or curb them. To the king the Church replied with excommunication, but the legists seized the temporal belongings of the author of the ban and did not let their prey escape until the omissions were cancelled. These renewed disputes gave rise to a chorus of mutual recrimination. The Church complained that her 'liberty' had been violated; the legists, on their side, complained that the clergy interfered in the regulation of sale contracts, estates, etc. — in a word, that they interfered with many things that were altogether outside the spiritual sphere.

King Philip of Valois imagined that this discontent was occasioned by misunderstandings, and that, if light were thrown on the question of the two jurisdictions, harmony between the laymen and the clergy would be re-established. In order to obtain the necessary light, he called an assembly of the prelates and barons of his kingdom, and submitted the question of the question of the question of the jurisdiction of the Church.

Pierre de Cognine, knight and King's Councillor, took up the defence of the interests of the laymen. He contended, enforcing his arguments by frequent references to Scripture texts, that God had established two jurisdictions, one temporal, the other spiritual; and that these could not be in the same hands; from which he concluded that the Church, which had received spiritual jurisdiction, could not exercise temporal jurisdiction. Then, descending from the region of principles to the realm of facts, he enumerated the abuses committed by the clergy who encroached on the common interests of temporal jurisdiction.

The argument was replied to by Pierre Roger, Archbishop of Sens, and Pierre Bertrand, Bishop of Autun. These two advocates of the clergy argued that the two jurisdictions, the spiritual and the temporal, could be united without any inconvenience in the same person, and that, as a matter of fact, the Church had received the power of judging temporal as well as spiritual affairs. They admitted that abuses might have slipped in here and there, and promised to do what was necessary to correct them.

The most obvious result of this great debate was to show that the legists were separated from the clergy, not by misunderstandings, but by views irreconcilably opposed, and that any concessions by either must be imposed by the authority of the king. But Philip refused to take part in the strife. He made fair promises both to the clergy and to the legists, and left the quarrel where he had found it. It is not till the reign of Charles IV. that we find the intervention of royal authority — and that on the side of the laymen. At this time the usurpations of the clergy were more irritating than ever to the laymen, whose discontent found vent in a curious book entitled "Le Songe du Verray". Charles, who had inspired the book, justified its claims by the Ordinance of 8th March 1372, in terms of which the bishops were in future to have nothing to do with 'real' actions, i.e. with the sale of landed property, heritages, etc., and the royal officers were to prevent, by seizure of temporalities where necessary, all action of the ecclesiastical tribunal in such matters.

The Ordinance of 1372 was the first measure taken by the king of France to stem the flame of ecclesiastical power. It was confirmed, in the reign of Charles VI., by the Bill of 1385. Then came the Ordinance of Villers-Cotterets of 1398, and the Edict of 1399, which restrained ecclesiastical power in other directions. Jurisprudence, on its side, devoted itself to a similar task and obtained important results. In the 17th century the State had recovered possession of most of its essen-
tial privileges which had formerly been usurped by the Church. Nevertheless, the clergy still possessed the registers connected with civil affairs, and retained the monopoly of education. It was the Revolution which deprived them of this right. The king directed the appointment of the French episcopate under the control of the Pope, who confined himself to signing the commission which the king had issued to the bishop of the municipality. Several years later, the Convention, and afterwards the Empire, gave the management of education to laymen. The clergy were, by these means, expelled from two positions which they had held for many centuries. In the course of the 19th century, however, they had the consolation of partially recovering the losses which the Revolution had inflicted upon them in the domain of intellectual affairs. In 1833 they were authorized to provide, in line with the University, elementary education for the parishioners. This authorization was added in 1850—that of providing secondary education. Finally, in 1875 they obtained the liberty of providing higher education. The Church, then, even at the present day, may give instruction, but only under State control: education has been secularized.

The authority of the king over the Gallican Church. The king of France, with the authority head of the Gallican Church, the guardian of its teaching and discipline. We may add that he supervised it to prevent the great forces at its disposal from being turned against the monarchy. His authority was exercised by several means: the nomination of bishops, the convocation of councils, the royal, the taxe, the control of doctrine and worship.

(c) The nomination of bishops—Clovis, Charles, Marcel, Charles Marcl, Charles Marclamagne, and some others encountered no obstacle in the nomination of bishops. Richard of York complained and grievances made themselves heard not infrequently. These varied according to circumstances. Sometimes they were confined to protesting against the choice of incompetent bishops, and the shameful traffic which went on in this connexion. Such was the attitude of Pope Gregory (in his letters to Brunehaut and to the Frankish princes), of Boniface (742-744), and of the Council of Paris of 829. At other times a return was demanded to the electoral regime which had held sway before the Frankish period (Council of Paris of 614, Abbé Wala in the Council of Aix-la-Chapelle of 828, the Faux Decretals, Hineman, Gislaire, Wilard). A compromise was resorted to, and the king was authorized to confirm the choice of the electors (Council of Orleans of 549). It was this compromise which, theoretically, finally prevailed (the first time under Clothaire II. (615), then in the middle of the 9th century)—theoretically only, for in practice the elections were corrupted by official candidature. The king thrust his candidate upon the electors; the electoral regime was only a mask to disguise the royal nomination. Moreover, the bishops, before obtaining episcopal consecration, had to receive investiture from the king and take an oath of allegiance to him. This oath of allegiance, however, soon dwindled to a simple promise of fidelity, which, instead of preceding the episcopal consecration, followed it, and so lost much of its value. Nevertheless, during the whole of the 13th century, the king was still so to speak, recruiting officer of the Church. The bishop of Bonnay, with the Pope of France, proposed to reserve to itself the nomination of the French bishops, and little by little it made considerable progress in this direction. The Great Schism modified the situation. It was then, in fact, that the French clergy tried to re-establish election, and it succeeded, thanks to the Pragmatic Sanction of Bourges, 1438. But its success was fleeting, for the king gradually recovered lost ground and, in spite of the Pragmatic Sanction, nominated his bishops as often as he could. Finally, he completely consolidated his victory by the Concordat of 1616. In 1616, the king directed the appointment of the French episcopate under the control of the Pope, who confined himself to signing the commission which the king had issued to the bishop of the municipality. This was not a complete return to the tradition of the early Middle Ages, seeing that at that period the nomination of the bishops was completed without any intervention from the Pope; but it was full that the recent increase of Papal power would permit. So in the Concordat of 1616, on the part of the Pope, reserved for the civil power the right of nominating the bishops, accepted the conditions prescribed by the preceding Concordat, and granted the Pope the right of confirmation.

(d) The convocation of councils.—During the whole of the Merovingian period the councils did not assemble except by order, or, at least, with the authorization, of the king. From this fact arose the formula which we meet so frequently: for instance, 'A council of bishops assembled in the town of Orleans by order of His Most Glorious Majesty, King Clovis' (Council of Orleans of 511); 'By order of Their Most Glorious Majesty, we assembled in the town of Orleans to deliberate to the glory of God upon the observation of the Catholic law' (Council of Orleans of 649). It was the same in the time of Pépin, of Charlemagne, and of Louis le Débonnaire. But, in 843, the Empire fell to pieces with the Treaty of Verdun. Then the Pope, who had become powerful in the place of the kings, who were weakened by internal strife. As early as 846 the Council of Paris was assembled by Sergius II., who was on this occasion, however, in the minority. But in 871, Charles the Bald convoked the Council of Ponthion.

To find French councils again convoked by the king of France, one must go back to the end of the 10th century, when we see Hugues Capet assembling the Councils of Saint-Basle near Rheims (991) and of Chelles (993). This action is rendered still more curious by the fact that these Councils supported Hugues in his struggle against Rome. In the 12th century, King Louis le Gros assembled the Council of Étampes (1130). Then at the time of the Great Schism, Charles V. convoked in Paris the Councils of 1336, 1388, 1406, and 1408. Next appears the Council of Bourges, assembled by Charles VI. (1438). On this last occasion it was a question of adopting a definite attitude in the struggle which had arisen between the Council of Basle and Eugenius IV. In 1130 it was a case of deciding between two competing Popes. And it is well known that the Councils of Charles VI. had as their object the restoring of Christianity to unity of obedience.

On the whole, the Church of France for many centuries did not consult councils except in times of strife. In normal times it seemed to have forgotten the right which his Merovingian and Carolingian predecessors exercised. Yet, if we look into the matter closely, we find that he had not forgotten it, but had merely modified its use. From 1651 onwards, he periodically assembled the pre-
lates and the principal ecclesiastics of the kingdom to demand money from them. The councils of former times were succeeded by the 'Assemblies of the Clergy,' which were also convoked by the king to meet the expenses of the royal exchequer. These 'Assemblies' were often relegated to the background the financial questions, which were only the reason of their existence, and concentrated on the problems of theological or disciplinary character. They were, indeed, councils without being called by that name. In 1611, Pape Clement XI, reinforced the old tradition and convoked the Council of Paris.

(c) The 'regales.'—The king, who nominated his bishops and convoked the councils, also administered the property of the vacant bishoprics. He took possession of them through the medium of his officers, he managed them, and collected the revenues as long as the vacancy lasted—and it did not expire till the day when the new titular had registered his oath of fidelity at the Court of Accounts. Further, during the whole time of the episcopal vacancy, the king took the place of the bishop and filled up all vacant benefices that the latter had the right to confer. The king's collecting of the temporal revenues during the vacancy was called the temporal regales; the collection of the benefices which chance to become vacant during this time was called the spiritual regales. Both are described to us as early as the 13th cent., and no doubt go back still further. For a long time they gave rise to no difficulty. The spiritual regales was the logical consequence of the temporal regales, which itself appeared to belong to the king, inasmuch as he was the virtual owner, or, in any case, the guardian, of the church.

Not infrequently the king's officers plundered the property which they were commissioned to manage. These misdemeanours caused complaints, which were not always without effect. It was in 1574 that the second Council of Lyons (can. 12), and from that time onwards they were periodically renewed. As always happened, dissatisfaction did not long remain confined within its original limits. After the abuses of the regales had been protested against, a protest was next registered against the regales. In 1626, the chief censure on the councils of the clergy in the 15th cent., Charles VII promised to give the proceeds of the regales for some time to the chapter of the Sainte-Chapelle in Paris. But this temporary edict, rendered perpetual by Charles IX., was probably only a clever trick to deceive the public. In reality, the king of France, far from depriving himself of his right of regales, strove to extend it and introduce into provinces that had not yet submitted to it. It was thus that Brittany was, after 1596, included under the common law. At the beginning of the 17th cent., four provinces were still exempt, viz. Languedoc, Provence, the Dauphiné, and Guyenne. Louis XIV. put an end to their privilege by the Edict of 1673, which imposed the right of regales on all the bishops of the kingdom.

The measure of 1698 which brought Brittany under the yoke was accepted without a murmur by the episcopate as well as by Pope Clement VIII. The measure of 1673 was also accepted by Pope Clement X. then reigning, and by all the bishops of Aquitaine, Provence, Languedoc, and Caulet, Bishop of Pamiers. It did not at first seem as if it would be a difficult task to reduce these two reasons; but, contrary to all expectations, the government of the king, and, in 1789, Pope Innocent XI, whose help they demanded, sent to Louis XIV. two briefs of complaint, followed by a third threatening brief.

(29th Dec. 1879). Although irritated by the attitude of the Pope, the king attempted to avoid a rupture. He negotiated with Rome, made fair promises, and relied on time to put everything right. But all his set asides were nullified by a fourth brief—that of 1st Jan. 1681—in which Innocent encommodated the Archbishop of Toulouse and all the ecclesiastics who had sided with this prince in favouring the introduction of the regales into the diocese of Pamiers. Even bishops thought that the Church of France could not let this challenge pass without replying, and the convocation of a General Assembly of the Clergy was decided upon. It met in Paris at the end of October 1681, and opened its proceedings with the elegant discourse of Bossuet on the 'Pouvoir de l'Église.' On 3rd Feb. 1682 it gave a decision in favour of the claims of the king. The same day it advised Innocent XI. to come to terms. The Pope replied by the brief of 11th April, in which he annulled the Assembly's decision; but the brief had no effect.

(d) The taxes.—Ecclesiastical wealth was, during the feudal period, the property of the king and the lord who gave the use of it to the bishop. Gregory VII., thanks to the quarrel about the investitures, managed to turn the idea of the regales, absolutely abolishing it. After him and through his influence, the clergy began to foster sentiments of independence which found vent in the maxim that ecclesiastical property is exempt from the royal tax. This maxim, which remained unchallenged in theory, was without effect in practice. In 1146, Louis VII, to carry out the intention of the Second Crusade, imposed a tax on all his subjects. The clergy yielded on this and many other occasions, for Louis returned again to the charge. But they soon grew tired of paying, and in the Council of Tours of 1183 demanded that no subsidies on their property should be deducted without their being previously consulted. Philip Augustus accepted the idea in 1274 and asked the clergy for permission to take their money; but he took a great deal of it, notably in 1188 ('Saladin tithe'). Then Rome intervened. In the Lateran Council of 1215, Innocent III. forbade laymen to tax the property of the Church; he authorised bishops, however, in certain grave cases to come to the help of the temporal clergy when he was never without having first consulted the Apostolic See. Henceforth the ecclesiastical 'tithe'—so called because the king deducted the tenth part of the revenue of the clergy—was a contribution authorised by the Pope, who made this concession public in a Bull. But Philip the Fair, after 1294, freed himself from this humiliating subjection, and demanded a subsidy from the clergy without first obtaining the Pope's sanction. Boniface VIII. then launched the Bull 'Clericiae laicos,' which forbade princes, on pain of excommunication, to levy taxes on ecclesiastical property without the authorisation of the Apostolic See, and prohibited ecclesiastics, under the same penalty, from paying any tax not authorised by Rome (24th Feb. 1296). A year later, Boniface, terrified by the threats of the king of France, retracted (in the Bulla Romana mater et Etsi de statu, 1297) there was already a reined in drawal in the Bull 'Infestabit amor,' Sept. 12969). But on 5th Dec. 1301, he resumed the offensive by the two Bulls 'Salvator mundi' and 'Ascula,' which, as lord of Pavillon, Bishop of Cauter, Bishop of Pamiers. It did not at first seem as if it would be a difficult task to reduce these two reasons; but, contrary to all expectations, the government of the king, and, in 1789, Pope Innocent XI, whose help they demanded, sent to Louis XIV. two briefs of complaint, followed by a third threatening brief. But further, scarcely had the above dispute begun when Boniface turned it into another channel (the Bull 'Infestabit of Sept. 1296)
claiming to control the political authority of the king of France. He supported this claim, accompanied it in the *Unam sanctam*, and still more in the *Unam sanctam*, which led to the defeat of the Papacy. As to ecclesiastical property, it remained in the power to which it had been placd by the *Lateran Council of 1215*. Thus in 1337 we find Philip of Valois demanding tithes from Pope Benedict XI., who did not render them till 1346. And, in 1346, Innocent v., hearing that the States General of Paris had collected a tithe from the clergy, recalls that "these impositions are illicit without the permission of the *Pontifical Acts*." In the middle of the 14th cent., then, the king of France was still theoretically bound to ask permission from the Pope to demand money from the clergy. This practice, however, is not really to be continued, because he had been guilty of abuse of power, and he again claimed the right of control in the domain of religion. It was Saint Louis who formulated this claim. His demand was but a modest one. Summoned by the clergy to force all excommunicated persons to give satisfaction to the Church, he was quite willing to obey, on condition that the justice of the sentences should first be examined (1263). Forty years later, Philip the Fair went still further. He desired Clement v. to admit that Boniface viii., in his dispute with the king of France, had violated the rules of procedure. He obtained entire satisfaction, for Clement confirmed the abdication which his predecessor Benedict xi. had already granted Philip, annulled all the innovations contained in the Bull *Eradicanda*, and exempted France from the orders contained in the *Unam sanctam* (1305).

Since the time of Charles IV., however, no king of France had penetrated the domain of doctrine properly so called. Philip of Valois renewed the tradition.

Hearing in 1333 (p. 380) and John xxiv. held very divergent views on the subject of the *Boniface VIII*. He desired the most enlightened scholars, and received information as to the position of the matter; then, when he was thoroughly convinced on the subject, he wrote to the Pope and demanded that he should be annulled. His letters show his zeal (1334).

In a word, he defended orthodoxy against the Pope.

Two centuries later, Philip's successors fulfilled their task with much more success. Philip iv. had made its appearance in France; the object now was to get rid of it.

France proceeded with great vigour against heretics and had burned them at the stake from 1243. His son Henry iv. was more rigorous (*Edict of Chastelarot*, 1561). Catherine of Medici, after having concurred the Protestants a province liberty by the *Edict of Jan. 1, 1562*, had them massacred on St. Bartholomew's Eve (1572). Henry iv. prohibited in their favour the *Edict of Nantes* (1568), which guaranteed them liberty, but this Edict was revoked by Louis xiv. until the eve of the Revolution did Protestants recover their liberty (*Edict of Louis xiv. of 16th Nov. 1787*).

While the king of France was striving to preserve his subjects from heresy, he was attempting at the same time to free them from the yoke of Rome. It was towards this goal that the institution of the *Papal Bulls* had to be directed—a measure which subjected to royal authorization the circulation of the *Papal Bulls* in France. In the memorandum of 1447, Saint Louis complained bitterly of Papal administration and of the harm it did to the French; but at the same time he took no measures against this scourge. In 1302, Philip the Fair burned the Bull *Unam sanctam*, which, however, had raised the height of a legislative act. This act of legislation was developed by Louis xi. (*Ordinance of 1476*); after this date it was made use of by all succeeding governments in France down to 1870. It was on it that Catherine of Medici, Henry iii., and Henry iv. relied when forbidding the acceptance of the decrees of the Council of Trent relating to reform. In 1339 the *Lateran Council had recourse to it in order to set aside a decree of the Parliament of Bordeaux*, which had registered briefs from Rome. In 1802, Bonaparte inserted it in the *Organic Articles* of the *Concordat*. In 1805, Napoleon iii., taking as his authority the *Organic Articles*, forbade the French bishops to publish the *Syllabus*.

The king of France, who supervised Rome, also supervised his bishops and priests. He repressed the Jansenist theories which were spreading among...
GALLICANISM 161

the clergy; he represented the quietism of Fénelon. Although, as a rule, he only seconded the action of the Pope, sometimes he anticipated it. In 1706, Louis xiv. asked Innocent xii. to condemn Fénelon. In the following year (Dec. 1706) he reproached the Pope with having foreseen the situation, and declared that he desired without further delay a "clear and well-defined" condemnation. Some months later (March 1707), Fénelon, before the Congregation of Index, declared his innocence, and decided to consult "the Church of Rome." Fénelon expressed his violent displeasure with the Pope, and accused him for not sufficiently doing his duty. Finally, he had the joy of seeing the Pope obey, and lashed against the Archbishops of Milan for the condemnation which had been exordated from him. In 1706 he again, visited Rome, and demanded from Clement xi. a solemn Bull against the Jansenists. Clement, like Innocent xii. before him, yielded, and drew up the Bull "Vincit Dominus." Being pressed by the king a second time to issue a Bull against Fénelon, he again obeyed, and drew up the Bull "Unigenitus."

The anxiety which the civil power evinced to maintain orthodoxy took an unexpected turn in the 18th century. Parliament then protected the Jansenists, and protected them against the clergy, who, from time to time, refused these unfortunate men the last sacrament when they were dying. Each time that an act of this kind came to the knowledge of the Parliament, they condemned it and forced the bishops either to dispense the last sacrament themselves or have it dispensed by their priests to all Christians who asked for it. In 1731, Parliament drew up a measure in this direction, which was followed by other measures of a similar kind in 1749 and in 1759. The king tried to resist; but his resistance, though energetic at first, gradually grew weaker, and finally he capitulated. At the refusal of the sacrament to Jansenists who asked for it was forbidden by civil law.

3. Seizure of temporalities: appeal by writ of error. In the exercise of the rights which he possessed over the Church of France, the king was often in conflict with the clergy. He was then reduced to employing violent measures, the chief of which was the seizure of temporalities. In 1705, Charles the Bald, to avenge himself on Hincmar of Reims, confiscated the property of his church. In 1706, Philip l., who was dissatisfied with lines of Chartres, gave the belongings of his bishopric over to plunder. In 1107 the same king pillaged the church of St. Germain-en-Laye, to the point of setting fire to the church of St. Germain-even to plunder. The king tried to resist; but his resistance, though energetic at first, gradually grew weaker, and finally he capitulated. At the refusal of the sacrament to Jansenists who asked for it was forbidden by civil law.

Towards the end of the Middle Ages the seizure of temporalities was carried to its utmost extent, and occupied the court of France for the better control of laymen. The king was then permitted to take part in the attempts to restore the monarchy which had been made since the year 1682 onwards.

II. EPISCOPAL GALLICANISM. — Episcopal Galianism imposes two limits on Papal authority: the one, from the side of the monarchy, rescues political authority from Pontifical jurisdiction; the other, on the side of the General Council, places the latter above the Roman Pontiff. It comprises, then, two foundations, of which the Papacy and the Councils of Church are essential. It may be stated as follows: (1) The Pope may neither deprive kings nor exempt their subjects from the duty of obedience; in other words, kings are independent of the Pope. (2) In the domain of spiritual things the supreme authority belongs to General Councils and not to the Pope, who, on the contrary, must obey their decisions. It should be pointed out that this maxim is full of historical detail; consequently we shall study Episcopal Galianism only from the year 1682 onwards.

We have seen (above, p. 159) that the Assembly of the Clergy of 1682 was brought together to solve the matter of the regnal, and that it gave full satisfaction to the king on this point (23rd Feb. 1682). It must be noted here that the prejudices of the clergy carried them still further. They saw in the dispute between the French monarchy and Rome an opportunity for cutting short in a painful but salutary way the doctrinal and juridical pretensions of the Papacy; and they did not mean to let this opportunity slip. The Pope laid hands on us, he will repent of it," said de Harlay, Archbishop of Paris; and this expressed the sentiment of the other prelates. They wished it to be understood that Pontifical omnipotence was rejected by the Church of France; and, in

VOl. VI. — 11
order that Rome might not remain in ignorance of this fact, they asked Bossuet to draw up, in the name of the whole French clergy, a profession of faith combating this omnipotence. They intended the statement to be violent and radical—sham was hanging in the balance—but Bossuet drew it up with calculated moderation. This document was the famous Declaration of 1682. It comprised the following: (1) the substance. (1) Popes may not depose kings, for the reason that their authority concerns only things spiritual and does not extend to things temporal. (2) Even in the domain of things spiritual, the authority of Popes does not extend beyond the limits fixed by the Council of Constance. (3) So far as it is legislative and judicial, this authority is conformably to the decisions of the Council of Constance—limited by the canons and also by the usages and constitution of the kingdom of France. (4) So far as it is doctrinal, it is subordinate to the judgment of the Church, which may reform it.

The Church of France rallied round her king. The king, to show his gratitude, established the Declaration as a law of the State, and made the teaching of it compulsory throughout the kingdom (Edict of 23rd March, 1682, registered 23rd March). The French clergy and their king offered some resistance to Rome. But Rome well knew how to return the blows which were dealt her. Innocent xi.

Innocent xi. was the first to denounce the Declaration (Bossuet, letter of 28th Oct. 1682 to Diraud; letter of 30th Oct. to de Rancé); but, changing his tactics, he decided to refuse canonical induction to the new bishop whom the Papal measure had, as simple priests, sat in the Assembly of 1682. By this boycott he hoped to force the king to withdraw his edict. The king, by way of reaction, proceeded to the sanction the new bishop to provided themselves with their Bulls of investiture.

The hostilities, opened in 1682, had lost nothing of their sentience in 1688. They were even more violent than ever, for it was at this date (24th Sept. 1688) that Louis xiv. ordered the procurator general to bring an appeal with the coming Council against all the procedures taken or to be taken by the Pope against him. The Church of France was not a handbreadth from schism. But at this very time the king, who was at war with the whole of Europe, was obliged to have recourse to political intrigues of which Rome alone could ensure the success. And then, as he remembered very opportunely—his counsellors recalled it to his memory—that he owed to the concordat of 1686, i.e. to an agreement with Rome, the right of nominating his bishops himself, and that a schism, by restoring the episcopal elections, would reinforce the emancipation of the clergy. Obedient to the voice of his own interest, he conciliated the Pope and entered into negotiations with him. His first advance, the motive of which was clearly discerned at Rome, were cordially received; and, further, Alexander vii., the successor of Innocent xi., annulled the Declaration, but, however, brandishing it with any censure (30th Jan. 1689), under Innocent xii., matters were arranged. In a letter addressed to the Pope (14th Sept. 1689), Louis xiv. renounced his edict; in other words, he gave up making the doctrine of the Declaration an issue to the same day those of the nominated bishops who had participated in the Assembly of 1682 sent a letter to Rome, the ambiguous and cloyed chosen expressions of which might be construed either as a doctrinal retraction or as a simple apology. Innocent xii. was content to let bygones be bygones, and refused to open any canonical investiture.

Peace had been made; but each of the rival parties held to its old position. In 1695 the Spanish priest, Roccaberi, made a violent attack on Gallicanism in three volumes, to which Rome gave approving briefs. Immediately Bossuet presented a memorandum to Louis xiv., in which he expressed the following is his involuntary advantages of Roccaberi's work in France and demand from Innocent xii. 'explanations as to the intention of his briefs.' By a royal edict of 20th Dec. 1695, the sale of Roccaberi's book was forbidden. The Pope probably did not explain why and in what sense he approved of the work. In return, eighteen years later (1718) he asked the king for explanations as to the freedom with which Gallican maxims were circulating in France. The king replied that he had in 1685 given up enforcing those maxims as laws of the State, but that he had never undertaken to interdict them. Bossuet, who in 1682 had undertaken the Défense de la Déclaration, laboured till the end of his life to complete this important work. Fénélon, who strove to conciliate Rome, admitted nevertheless that she had 'too great pretensions' (letter of 3rd May 1710 to the Duke of Chervonne); he even maintained that the Pope 'had desired to crush the episcopate' (De summii pontificii auctoritati, 4). And in 1708 the assembly of the Clergy was called to receive the decree, and, after long deliberation, to it only after having submitted it to a thorough examination.

From all these and other indications, Rome could see that the papal legate had, at the beginning of the 18th cent., remained faithful to the doctrines of the Declaration of 1682. But a new proof of this was given in 1728. At this date the Pope Benedict xvi. gave himself to the new bishop to the Church the observance of the festival of Gregory vii., and inserted in the breviary prayers for this Pope—most warlike prayers, in which Gregory vii. was lauded for having deposed the Emperor Henry iv. On 27th July 1729 the Parliament of Paris—followed shortly afterwards by the Parliaments of Brittany, of Maine, and of Bordeaux—passed a statute suppressing the egg containing these prayers, and prohibiting its use in public under penalty of the seizure of the temporalities of the Church. The Papal legate in France, taking advantage of this occasion to rebel against Rome. They joined the campaign of Parliament, and solemnly condemned the cult of the Papal Legate. The great majority of the episcopate, without being so violent, were equally unprepared to submit to it. They did not condemn the cult of the Pope who had deposed Henry iv., but they rejected it as well as the prayers which had come from Rome. It was a case of revolt; but, instead of being violent like that of the Jansenists, it was silent (see, in the Assembly of the Clergy of 1730, the address to Louis xiv.).

In 1730 the Assembly Constituente established the civil constitution of the clergy, which broke the Concordat of Francis i., and reinforced the Pragmatic Sanction, but at the same time suppressed several bishoprics, overturned the dioceses, and restrained the authority of the bishops. This new state of affairs was in accordance with the wishes of the lesser clergy and of the fees etat. But the bishops, with four exceptions, began to wage war against Rome to whose side they gave an air of disinterestedness, they discovered most opportunely that the spiritual jurisdiction of the Pope over the Church of France was a dogma, and that they defended their action under the name of orthodoxy. These clever tactics made an impression on the people, and even on a considerable
part of the lesser clergy. By their means, the civil constitution of the clergy was rejected with horror by pious laymen, and in the ecclesiastical world it did not gain the support of more than a third of the curiae. Eleven years later, when Boniface concluded the Concordat of 1801 with Rome, it was seen what the theological dissertations of 1790 were worth. Many of those bishops who had been converted to the French Church at the time of their own interest demanded that they should rally round him refused to resign their office for Pius VII., when he required them to do so (15th Aug., 1801). Thirty-six out of the eighty remaining bishops rose in rebellion against Rome. And, among those who gave up their property, more than one died on a promise of advancement.

The episcopate of Napoleon I. was Gallican, and so were his clergy, with a few exceptions, amongst those of lower rank. Sixty years later, the French bishops and priests rejected most of the maxims of 1802. In the space of two generations the Church of France had changed its point of view. The evolution began from the bottom, with the clergy of the second rank. The principal workers were Lamennais, the Jesuits, and Veiloutot. The work of Lamennais was violent and brilliant. That of the Jesuits was silent, hidden, but more profound. Yet it was not more profound than that of Veiloutot, who from 1829 onwards, through the medium of the daily paper, L'Univers, never ceased from incitng one of the clergy of Rome into the mind of the clergy. The Concordat of 1801, by the prestige it gave to the Pope, may have had a certain influence, which, however, some historians have exaggerated. Finally, the books of Joseph de Maistre, who, after Pope Pius VII., and L'Eglise gallicaine (1820), did not fail to render some service to the Papacy.

Whatever was the reason, when the Vatican Council assembled (Dec. 1869) the Gallican doctrine of the superiority of Councils over Popes had only a small number of defenders in France, the best known of whom were Darboy, Archbishop of Paris; Dupanloup, Bishop of Orleans; Maret, Titular Bishop of Suria and Dean of the Faculty of Theology in Paris; Gretry, oratorian and member of the French Academy; Loyson, Carmelite and preacher at Notre-Dame in Paris; Montalembert, a layman. These defenders were vanquished in its fourth session (18th July, 1870) the Vatican Council for the infallibility and full jurisdiction over the whole Church. Henceforward Episcopalianism became a heresy, and its upholders had either to repudiate it or leave the Catholic Church. Loyson chose the latter course, and tried unsuccessfully to found a national Church. A few priests left the ranks of the Catholics and took refuge in Switzerland, where they were admitted into the party of the Old Catholics. Montalembert died before the decision. The other Gallicans submitted to the Vatican Council. Episcopalianism was dead, and in its place the maxims of Rome reigned. As a matter of fact, these maxims have since made some concessions to circumstances. Pontifical omnipotence, which, before the French Revolution, embraced the political as well as the religious world, has, since the Revolution, allowed the political to slip from its grasp. The Popes of the 19th cent. did not talk of deposing kings. No doubt they did not renounce the right, but they no longer exercised it (Pius VII., who had communicated Napoleon in 1809, says in his Bull that he does not mean to pass judgment against temporal power and the obedience of subjects); their influence is now restricted to the political, in terms which were purposely vague (Proposition xxiv. of the Syllabus). On the whole, it may be said that French Catholics—like those of other countries—think that they may be Gallican and yet escape from this point without violating orthodoxy.

GAMBLING.—I. Diffusion of the practice.—Games of chance are as old as and wide-spread as humanity (see art. GAMES). They are probably derived from the various forms of divination (see Divination), by which primitive man seeks to gain knowledge of the future, some of them serious, like the throwing or drawing of lots; some of them more playful, like the Greek kottabos and the 'willy yamb' (Hall Caine, Manxman). The game of chance is a kind of secularized divination. In order to give zest to the game, the player staked some possession on the turn of the chance. The N. American Indians bet on the different colour of pipe or stones, the Siamese on the musselelish, whether the opening turns upwards or downwards. The Greeks already in Homer had their δραματία (knuckle-bones from the hinder feet of sheep, goats, and calves) marked with numbers on four sides to serve as dice. Later came the six-sided die, derived, according to Hydæ, from Arab qib, qa'b). Among the Romans, children played at 'heads or tails' (opus aut nactus) and formulate it except at (a) the game of morra (miacra digitis). Knuckle-bones are found in Egyptian excavations as far back as the XVIIIth dynasty,
and imitation knuckle-bones for gaming purposes were made of glass and shell. A gaming-board of gold and silver inlaid with crystal, ivory, and jettons, discovered by Potters, dates back to between 1500 and 1650 a.c. Six-sided dice have also been found in pre-historic remains of Haradsch in Bohemia. In Babylon, headless arrows were used for gaming, and the practice of divination (Belshaanu, Esh 21[6]); these have a very wide distribution over both hemispheres. The principle of the roulette is found in the spinning scoop-nut (Tylor, PC i. 80) and the spinning dice of the Chinese. Card games are a later introduction; they give scope for calculation and skill. There is no mention of Achan among the Israelites (2 Kings 5. 23), nor of the days of the Exile (Le 23: 8) 'forsoaking Jehovah and forgetting my holy mountain, preparing a table for Luck and filling up mixed wine to Fortune'; cf. Fortune (Biblical and Christian). The Israelites used the drawing of lots to ascertain the Divine will in regard to such matters as assignment of lands (Nu 26: 55), choice of an officer (Ac 1: 7), determining the rotation of offices (1 Ch 24: 1, Le 1: 1), or to identify an offender (Jos 7: 1, 1 S 14: 2, Jon 1: 1); but, so long as they remained agricultural, there seemed to have been no singularity free from the evil of gambling. In Babylon they became mercantile, and mixed with people among whom games of chance were part of regular ordinary life. The gambling habit infected the purity of the early Christians. Instruments of gambling are found in their tombs. Councils of the Church forbade it to the clergy. Christian preachers denounced it as worldly; 'if you say that you are a Christian when you are a dice-player, you say what you are not, because you are a partner with the world' (cf. Tertullian, de Spectaculis, xvi.; Clem. Alex. i. 325 [Charles' tr.], p. 29 [Potters tr.]).

On the Aryan races gambling has had a special hold (cf. Vedic (x. 36) vividly sets forth the woes of the ruined gambler, and the length to which gambling was carried in India is well illustrated by the episode of Nala and Damayanty in the Nalokchakrata (i. 26: 41) wherein the prince loses all that he has. The Sanskrit drama Mṛchakṣatrabīdha (tr. Ryder, The Little Clay Court, Cambridge, Mass., 1905) contains its second act a lively picture of a gambler's quarrel, and Sanskrit literature abounds in allusions to the evils of play (Böhtlingk, Ind. Sprachle, St. Petersburg, 1870-73, p. 213), and gambling in ancient India generally, see Zimmer, Alind. Leben, Berlin, 1879, pp. 282-327; von Schroeder, Mysterium und Minus im Rigveda, Leipzig, 1908, pp. 317-386; Lüderitz, Wunderwelt im alten Indien, Göttingen, 1907). For Greece, reference may be made to the picture of the ruined gambler presented by Alcibiades (iii. 42). Greek boys gambled away their mothers' money (Herondas, Minus, 8; Isocrates, Areopag, 149 CD). The Germans, according to Tacitus (Germ. 24), when they had the dice in their hands, knew no bounds, and were ready to gamble away even that which they valued above everything else in the world, their personal freedom. Generally speaking, it may be said that gambling has its chief hold on races which exist by hunting, and also on the pastoral, military, and mercantile types of culture. These modes of life are by nature less stable, and seem to generate a craving for sudden and exciting reversals of fortune, without which life seems colourless. The peasants, on the other hand, who have to work steadily for their sustenance, are comparatively free from the habit.

2. Motives of gambling.—The demonic power of the passion seems due to three main causes: (a) the desire for gain, (b) the desire for excitement, (c) the instinct of combativeness.—(a) The desire for gain. Human nature is impatient of the delays of regular work. It wants to acquire at one stroke, without trouble, and without the laborious accumulation of little by little. (b) The desire for excitement is in one sense a revolt against the narrowness, the limitations, the ordinariness of existence, a lack of adventure, the smallness of the field; gambling, with its risk, its suspense, its thrill, its hope, and its shock of surprise, supplies all the necessary catastrophic elements. Hence it is, on the one hand, the last resource of the least who wishes to goad his jaded senses; and, on the other hand, the outlet of the energetic and adventurous nature which can be only partially satisfied by the humdrum and lacking in sensation.—(c) In betting, a man banks his own powers, his judgment, or his luck. In a game of pure chance men pit themselves against each other, and, if there is no deception, each has an equal chance.

...
brokers charge usually 25 per cent. In horse-
racing the percentage is much higher, and in foot-
ball betting, according to Ainalie Robertson (see
Literature at end), the brokerage charge is more
exorbitant still. It is, therefore, clear that, if it keeps it up long enough, the element of probability
will even itself out. Any one, however long his
purses have been, is bound to be ready to make a
more continual payment of brokerage. The brokerage charge is steadily with the amount of play and eats up the
gains, which have no tendency to increase with the
amount of play.

That the practice is on the increase is clear from
the large amount of space devoted by the evening
and morning papers to the publication not merely
of sporting but of betting intelligence. There is also
a notable increase in the number of papers devoted
entirely to sport, many of which circulate only
through post. At the time of the Limerick
increase, no fewer than 170,000 sixpenny postal orders
were issued in one day, and one publishing firm
received £41,586 in a single month in connexion
with Limerick competitions.

Gambling has exploited most successfully for
its own propagation the improved means of inter-
course afforded by modern civilization, viz, the Post
Office, the Telegraph, and the Printing Press. It
exploits also the work of the schools, for without
universal education it would be unable to carry on
its business.

4. Legislation affecting gambling.—The vicious
tendency of gambling has never been called in
question. Lord Beaconsfield spoke of it as 'a vast
evade of national moralization.' Side by side
with the betting odds and betting tips, the newspapers record the tragic results on those who yield
to the temptation. In 12 years (1865-6 to 1867-7)
there were 90 suicides or attempted suicides in
England assigned to this cause, as well as 479
cases of theft or embezzlement, and 442 bank-
ruptcies. In view of these facts, it is not surpris-
ing that, in all civilized countries, gambling is
subjected to definite legislative restrictions.

The earliest English statute in 1542 prohibited
'sundry new and crafty games' of a gambling
nature, and prescribed that no folk of the working
class should 'play at the tables, tennis, dice, cards,
bowls, chess, clashing, lotterying or any other un-
lawful game.' The main object of this statute was
to arrest the decay of archery, but the preamble
alludes also to impoverishment, crime, neglect of
Duty, and a insane at gambling, apart from playing games, was in 1695.
In 1688 lotteries were made illegal. Other Acts
were passed in 1710 and 1761. The Acts of 1845
and 1853 were directed towards the suppression of
public gaming-houses (though they did not touch
private clubs like Tattersall's). Also, in 1854, it
was made an offence to publish advertisements
showing that a house was kept for the purpose of
betting. The Act applied only to ready-money
betting, and did not cover bets by letter, telegram,
or telephone. The Act of 1886 prohibited the
playing of pitch and toss in the streets, which had
become a nuisance in the colliery districts, and the
Vagrancy Act of 1878 extended the prohibi-
tion to all kinds of betting and wagering in public
places. Municipal Boroughs and County Councils
in some cases adopted by-laws for the repressio
of betting in public places. In 1895, Lord Herschell's
Act made it an offence to publish 'false or
other publications or any paper inviting him to enter into a betting or
wagering transaction.' In 1901 a Select Committee
of the House of Lords was appointed 'to inquire
into the increase of public betting among all classes,
and whether any legislative measures are possible
and expedient for checking the abuses occasioned
thereby.' The inquiry brought to light the enorm-
ous increase in the numbers of the professional
bookmakers (estimated at over 20,000), and in the
practice of betting among working classes—a prac-
tice which, when carried to excess, they found to
be opposed to the true interests of sport, injurious
to the general community, and apt to degenerate
into one of the worst and most mischievous forms
of gambling. The Committee considered that the
best method of reducing the practice was to
make it as far as possible, by restricting it to race-courses
and other places where sport is carried on. With
a view to effecting this, they considered the ad-
visability of (a) the licensing of bookmakers, and
(b) the establishment of the totalisateur system.

But they rejected these expedients, because either
would imply legal recognition of the bookmaker,
and necessitate the making of betting debts re-
coverable by law.

The law does all it can to discourage gambling,
without attempting the impossibility of prohibiting
it. Betting or gambling in a private house has
never been treated as an offence at law, but no
gambling debt can be enforced at law. The con-
tract is void; it is not illegal. In bankruptcy, all
claims of 'debts of honour' are struck out. All
money deposited as cover before an event with
the consent of the bookmakers is recoverable on an
address in the United Kingdom, whether de-
posited with them or with their bankers, and can be
recoverd with costs (Le nox v. Stoddart, and
Davis v. Stoddart, 1902).

The present state of the law in Great Britain is
defined by the Street Betting Act of 1906. The
object of the Act is to suppress betting in certain
places and public places. It is a criminal offence to
frequent or loiter in a street or public place for
the purpose of bookmaking, betting, wagering, agree-
ing to bet or wager, placing or conducting
settling bets. This applies to all persons, whether
acting for themselves or on behalf of another. Any
constable may take into custody, without a war-
rant, any person committing an offence under the
Act, and may detain all books, cards, papers, and
other articles relating to betting which are found
in such person's possession. The public places
coming within the definitions of the Act include
all regular football and cricket fields, and generally
places where outdoor sports are carried on. But
race-courses and the places where outdoor sports are
run are excluded from the operation of the Act on the days when
horse-races take place. The exemption applies only
to horse-racing. The penalty is a fine not exceeding £20; for a second offence, not
exceeding £20; for a third or any subsequent
offence, (a) under the Summary Jurisdiction Acts
the penalty is a fine not exceeding £20, or impris-
oment with or without hard labour for a term not
exceeding 3 months; (b) on conviction on indi-
ment, the penalty is a fine not exceeding £50, or
imprisonment for a term not exceeding 6 months,
with or without hard labour. It is made a special
offence to bet with any person under 16 years of
age; and, if it is proved that any person, whilst
committing an offence under the Act, had 'any
betting transaction' with a person under 16 years
of age, he is to be treated as an offender for the third
time, and is liable to the penalties above
suggested.

The Betting and Gambling Bill of 1912 proposed
to suppress all gambling advertisements, and bet-
ting tips in newspapers and other publications;
also all incitements to gambling by means of foot-
ball coupons and gambling competitions.

Among the Redjiang of Sumatra gambling is
prohibited—excepting cock-fights at certain times
—under penalty of a fine of £50, a sum which is
also exacted from a householder who permits gam-
betting on his premises. Games of chance are for-
bitten in China; the keeper of a gambling house is liable to punishment, and his establishment is confiscated by the State; while in older Japan, the law the gambler appears to have been liable to capital punishment. Islamic law forbids gambling. In the other hand, gambling agreements were valid in Zieg law; the parties making the agreements were legally competent to enter into contracts of any nature. By early German law, gambling agreements were legally valid; gambling itself was prohibited. See, in general, Post, Grundrie der Ethologie, Jurisprudenz Oldenburg, 1894-95, ii. 419 sqq., and the authorities cited.

5. Ethical bearings of gambling. —That the results of immediate gambling are deplorable, no one will dispute. But, apart from the effects, it remains to inquire into the morality of the act in itself when kept within bounds. Usur non tollit absues. The economic aspect needs no discussion. Gamblers add nothing to the wealth of the community. They may claim that gambling provides a form of recreation and pleasure which is not only legitimate but helpful, so long as the sums staked are such as a man can afford to lose. But (a) such a contention draws a line of distinction between rich and poor; what is right for the rich man is pronounced wrong in the case of the poor man. (b) The argument implies that the wrongness of gambling consists in losing the money staked; it is right, if one wins, because one can afford to win; but it is wrong, if one loses, because one cannot afford to lose. Any argument based on prudential grounds is only an appeal to enlightened self-interest, and the spirit of selfishness cannot cast out selfishness. (c) Though it is in society that the temptation comes, gambling itself is anti-social. It is, as Herbert Spencer says, a kind of action by which pleasure is obtained at the cost of pain to another. The happiness of the winner is bought by the suffering of the loser: This kind of action, therefore, is essentially anti-social; it sears the sympathies, cultivates a hard egoism, and so produces a general deterioration of character. It is a habit intrinsically savage (see his Ethics, pt. iii. ch. 7. 'Amusements,' § 227; Facts and Comments, 'Essay on Rebarbarisation'). In an atmosphere of brotherhood no form of gambling could exist. In some cases, success appears to depend on superiority of judgment; but this is fallacious. It is never possible to be certain of a certain result, because all the factors that go to produce the result are not known. When the odds are 4 to 1 on a horse winning a particular race, and these odds are supposed to be 'fair,' the man who accepts the adverse odds does so because he relies upon the unknown factors of the problem; in fact, his appeal is to the unknown and incalculable element in human affairs, which may call chance. The appeal to chance implies a negation of all the nobler powers of man—reason, skill, the sense of justice and responsibility. In the habitual gambler, these higher faculties, through diæase, become atrophied, and his life, out of touch with honest labour, intoxicated by the excitement of his favourite passion, becomes sordid and depraved.

The Christian view of property exacts a still higher standard. Though in relation to his neighbours each man may be regarded as the proprietor of the goods he possesses, the law exacts that he act as a steward. This higher view, by destroying the right of property relatively to God, gives the true basis for its use in the relations between man and man. All that the law may demand from him is that he should use that which is his own, because what he possesses is not his own, and he must render exact account for his use of it. He must also respect the property of his neighbour, because it does not belong to his neighbour, but to God, who entrusted him with it.

It has been urged that Herbert Spencer's condemnation applies only to the after effects of gambling, and not to the act of gambling itself. But the reason why the loser feels no 'pain,' being so well off that they are not affected by the loss of the stakes. This is true; but an act must be judged by its general tendency, and not solely by the effect of the act in the selected circumstances. It is also urged that what the loser pays for is the pleasure of excitement and anticipation he feels before the wager is decided. This argument will not stand, because the winner experiences an equal pleasure without paying for it; indeed, he receives in addition the forfeited stakes.

But the immorality of gambling may be argued on higher grounds than a calculation of pleasure. (a) Every gambling transaction involves a transfer of property in one shape or another. When the gambler is asked why he stakes his money on a game or a race, his reply is, 'To add an interest to the game.' The interest thus added, simply stated, is the interest of acquisition. If the real object were, as is claimed, merely the sport and the excitement, then men might just as well wager counters, or, for that of the matter that agrees to hand over all winnings to public charities. But this is not done. The transfer of property, in one shape or another, is essential to the act. There are only three ways in which property can be legitimately acquired—by gift, by labour, and by exchange. Gambling stands outside all of these. (b) Its motive is, however cautiously defined, essentially an attempt to get property without paying the price for it. It is a violation of the law of equiva-

lents. It is a kind of robbery by mutual agreement; but it is still due to one party, because murder by mutual agreement, is still treated as murder. It is bogotten of covetousness; it leads to idleness. (c) It is, moreover, an appeal to chance. If in any context skill comes in, odds are given or handicaps arranged so as to equalize the chances as far as possible. To make chance the arbiter of conduct is to subvert the moral order and stability of life. (d) It concentrates attention upon lucre, and thereby withdraws attention from worthier objects of life.

Captious analogies have been drawn between gambling in sport and commercial speculation. There is, in truth, a kind of speculation which is merely betting on prices. Men buy or sell cotton or corn for future sale; but the fact that they may be unable to handle or distribute the actual commodities, but merely with a view to closing the contract before it is due, and profiting by the fluctuation of prices. A man may buy and sell stocks and shares in the same way. But there is also a commercial specu-

lation which is necessary and legitimate. The merchant has to make provision for a social need, and, in buying ahead, chance must inevitably enter into the calculation. The gambler's business is wholly self-centred; he subserves no need of the community. The merchant's whole policy is to eliminate risk as far as possible. The gambler desires risk. No special legislation has been de-

vised in Great Britain to restrict this commercial speculation; but Chief Baron Palles, in the King's Bench Division Court, Dublin, ruled that in the case of a contract for the purchase of any commodity, whether it be bought now or not, the price which the parties was that the commodity sold should never be delivered, and that the whole price of it should never be paid, but that at some future time and at the difference in which he loses when the price is his own, because what he possesses is not his own, and he must render exact account for his use of it; he must also respect the property of his neighbour, because it does not belong to his neighbour, but to God, who entrusted him with it;
GAMEs

in Switzerland (1881), Canada (1892), Germany (1894 and 1895), Russia (1893-1896), Belgium (1896), Norway (1894), Austria (1893). [See Board of Trade Returns, p. 77, for a statement of the number of children, whether savage or civilised, without being struck by the fact, on the one hand, that there are innumerable other ways of combining the inevitable chances of life, and equalising them by wide distribution. These risks are ascertainable in their aggregate incidence, though not ascertainable in any individual case. The general effect, therefore, of insurance is to add to the stability of life. The general effect of gambling is to destroy that stability.

J. L. PATON.

GAMES.—1. Definition and Classification.—A game is an organised occupation, undertaken either by two or more persons, the primary intention of which is not utility but pleasure or pastime by means of the exhibition of the skill or good fortune of the players. It proceeds according to definite rules, and sometimes necessitates special instruments or apparatus. Games may be broadly divided into three classes: games of skill, games of chance, and games of imitation. The rules of games of skill are framed to bring out the various qualities—physical, mental, or moral—strength, agility, dexterity of the senses, rapidity of calculation, and induction, endurance, patience, and so on—of the players. Games of chance, on the other hand, regard only the luck of the players, and are decided by events, such as the fall of dice, over which they have no control. The rules, therefore, are arbitrary conventions, designed to emphasise coincidental coincidences. Many games combine the elements of chance and skill in varying proportions. In games of imitation the rules are prescribed by the accidents to be imitated; limited, however, by certain conventions inappropriate to the circumstances of the players; and the result is measured by the verisimilitude of the performance as thus limited. Such games involve the germ of Drama (p. 154). Both in games of chance and in those of skill there is a contest. In games of imitation there is often little or none; and the pleasure sought is attained by co-operation, rhythm, and song.

Gaming as thus defined are social institutions, owing their origin to the inherent restlessness of human beings, and the necessity for constant use and practice in order to the development and preservation of their physical, mental, and moral powers. They enter very early into the life of the individual. The are of inestimable value in the training of children for the grave pursuits of adult years. To the adult—especially the adult savage—they are little less important; and from the lower stage of culture, and the form of contest or of rhythmic movement (dance), are among the commonest activities.

2. Religious (and magical) significance; origins.—1894.-In the same way, it is said, games have grown from vague and undefined beginnings. Their vague beginnings contained also the seeds of ritual, dance, and song. It is but gradually that they have been differentiated from these; even yet, as we shall see, complete separation has not been achieved. Games of imitation bear obvious witness to this origin. It is impossible to observe the imposition of orders of children, whether savage or civilised, without being struck by the fact, on the one hand, that ceremonies are the favourite subject of imitation, and, on the other hand, that ceremonies, the adoration and the utterance of a set of words, rhythmical also and married to musical notes, are essential features. In the game of 'Jenny Jones,' common throughout England, Scotland, and Ireland, for instance, the ritual of courting, death, and burial is the subject, while in some places the game becomes a regular drama, which ends with the restoration of the heroine to life, or her reappearance as a ghost, to the pretended terror of her companions. The dialogue is throughout sung to a tune. Nor is the distinction between ritual and games everywhere clear even in the case of adults. It is not altogether easy to mark the line between Toda games and Toda ceremonies. Among the Eskimos it is usual, when a stranger comes to a settlement, to receive him with a feast. In the south-eastern tribes of the Central Eskimo the natives arrange themselves in a row, one man standing in the rear of the stronger approaching slowly, his arms folded and his head inclined toward the right side. Then the native sings out a song: 'I give him all his right on the right (666 left) cheek and in his turn inclines his head awaiting the stranger's blow. While this is going on, the men opposite are playing at ball and selecting a new champion and thus they continue until one of the combatants is vanquished.' Among other peoples a 'hunting match' seems to indicate a ceremony, for the 'bock and crock' are regarded as played by various tribes. The latter is a trial of strength, at the end of which the victor has the right to kill his opponent; but generally, we are told, the feast ends peaceably. The account given by the Eskimos themselves is that: 'the men in meeting wish to know which of them is the better man.' (Boss, *Eskimo,* 1893, 409.)

Here we have contests of strength and skill, which possibly, as Frazier suggests (*GB* iii. 763), *Taboo* (1911, p. 108), has a magical significance, which in any case is ceremonial, yet which appears to be regarded by the people themselves as not entirely serious, but games leading up to a hospitable entertainment.

Many nations, in fact, play ceremonial games. These games, though the element of pleasure is large, are essentially rites of religious or magical import. Either the aborigines of America are specially addicted to such performances, or our information is unusually full on the subject of their games. The Zuni inhabit an arid tract of country in New Mexico. Rain is a prime necessity of life; but it comes rarely, and the droopings are long. The object of the game the Zuni play is, therefore, the bringing of rain, that their crops may grow.

We read of races, ball games, games of chance played with split reeds corresponding to our dice, round games, and others.

Shakes, a game of chance, was esteemed by the rain-people so efficacious in bringing rain that they called themselves ('Arrow-head people'), for the express purpose of playing the game for rain. The intensity of question has now degenerated into a body of professional gamblers; but the game is still played by the priests and others in accordances for rain (*ibid.* 1891, 282 f.).

The Omaha, a Siouan tribe dwelling in what is now the State of Nebraska, which had migrated, according to tribal traditions, from the east, was divided into two sections called the 'sky-people' and the 'earth-people.' The ten sectors of which the tribe was composed were distributed between these two sections. In their ceremonial encampments they were ranged in a circle with the entrance to the east, the earth-games, others in the southern side, and the sky-people on the northern.

In former times a ball game used to be ceremonially played between the young men of the two divisions. It was the occasion of a meeting convention. The Wind sub-gens of the Kootenay gens (one of the earth-people) to start the ball. A line of two circles crossing each other at right angles towards the points of the compass was drawn on the ground,
and the ball was placed at the centre. It was first rolled towards the north along the line drawn from the astrolabe to the right of the circle, and then back on the same line to the centre. It was then rolled in a similar way successively towards the east, south, and west, and back. On returning to the centre from the west, it was tossed into the air, and the game proper began. 'The game is said to have had a cosmic significance, and the initial movements of the ball referred to the winds, the bringers of life. It was played by the two divisions of the aouthuya (tribal circle) as representatives of the earth and the sky' (St. Beaw [1111], 198).

But we are not told what, if any, significance attached to the victory. The Wichita, a tribe of the Caddoan stock settled on the Red River in Oklahoma, however, played a game of shiny, which beyond all reasonable doubt represented the contest of winter and spring, and was played in the spring, doubtless for the purpose of assisting by magical means in the conquest of the evil power of winter and the renewal of life. Tradition declared that it was originally played by Afterbirth-boy and his brother, two mythical heroes of the tribe, against a headless monster, who used a black shiny-stick and black ball; and the stakes were the lives of the players. The tribal heroes tried to regulate for the jet of their ball, which was green; but the monster refused. So they knocked his ball to pieces, and thus compelled the use of their own. With it they succeeded in winning the game, and the Wichita now use it in the spring to assist against the evil power of winter. They still play the game, augmented by red and yellow, representing, we are expressly told, the spring of the year. 'Since that time the shiny game is played by the Afterbirth boy' (Dorsey, Myth. of the Wichita, Washington, 1904, p. 96). The Central Eskimo play a game resembling cup and ball, in the spring, to hasten the return of the sun. In the autumn, on the other hand, when the sun is going southward, they play the cat's cradle to catch the sun in the meshes of the string, and rope is a staff. The Mus. Nat. Hist. xv. [1801-7] 151, 422). The Kai of German New Guinea also play cat's cradle ceremonially, but for a different purpose. It is played after the yams are set, that their foliage may sprout luxuriantly and may become green and spread widely. Every figure in the game has its name (Nethan, Deutsch New- Guinea, Berlin, 1911, ii. 125, 256).

Indeed, wherever we find games played at a special season of the year, we may suspect that now, or at one time, they have, or had, a ritual value. In our own island the game of football, though doubtless not unknown at other times, used to be regarded as proper to Shrovetide. Sometimes it was played between two rival parishes. More usually, as in the parish of Soone, Perthsire, it took the form of a match between married and unmarried men. In the parish of Inveresk, in the county of Midlothian, it was reported in the latter years of the 18th cent. that 'on Shrove-Tuesday there is a standing match at Foot-ball between the married and unmarried women, in which the former are always victors' (Brand and Ellis, Pop. Antiq., London, 1813, i. 76), quoting Statist. Soc. of Scotl. Edinb. 1760, xvi. 10). This implies that the victory of the married women was pre-sædigious, and consequently that the game was not a real contest, but rather a piece of ritual. The object of the game was probably, like that of the shiny played by the Wichita, to aid in the conquest of winter by spring. The unmarried men and women represent the barren winter, and the married men and women the fruition of the spring. A similar ball-game, sometimes analogous to our football, sometimes to our hockey, is widely played in Algeria in the spring. It is called kouara. In Morocco it is equally prevalent; but in many other districts it is resisted, or those learned in the Muhammedan law; and, even where not so reserved, the foiba often play apart or in a special manner. Though played more particularly in spring, in cases of persistent drought, the men and women are divided, and the game is organized, the playing of which is believed, at Miliana, Laghouat, and other places, to bring the rain (Doutt, Impu. dans l'Afr. du Nord, Algiers, 1910, p. 554).

As an example of a ceremonial game of another kind, mention may be made of that played by the Khasi, a hill-tribe of Assam, for the purposes of expelling demons. 'The ceremony takes place in a fixed month of the year, and part of it consists in the dance between two funeral masts, which stand on opposite sides of a stream, each side tapping at the end of a rope which is stretched across the water' (P. F. G., 1905, i. 96).

This is what we call 'the tug of war.' Frazer (citing Bastian) suggests that the men on one side represent the demons. Comparison, however, with the ceremony as practised by the related tribe of the Syntangs, at their annual festival for driving away disease, renders it doubtful whether this explanation quite hits the mark. The Syntangs first cut down long poles, and, holding them across the stream where it is widest, tie a rope to them on each side, and then fasten the poles to the stream. The Syntangs then gather round the poles, and, pulling them bit by bit towards the bank opposite, the men on one side try to prevent the two parties from uniting. The contest is carried on for the coming year (P. R. T. Gurdon, The Khasis, London, 1901, p. 157). The contestants thus appear to be purely human, striving for superiority in neck. The tower of W. is applied in the Tanembar and Timorang archipelagoes in the Moluccas as a rain-charm whenever the westerly monsoon comes in without a fall of rain. Hymns are sung to Dulilas, the male principle resident in the sun, for rain. The assembly then divides into two parties—those of the eastern side of the village, and those of the western (Banna). The dancers are then arranged in about 30 metres in length. Men, women, and children all join and pull with all their strength. Those of the eastern side must, we are told, put forth more strength than those on the western, as if to draw forth the west wind which brings the rain (Riedel, Sltik en broschoarge rassen, Hague, 1886, p. 292). (Cf. the Burmanse game, Z.E.B. ii. 56.) The same game is, in fact, played for analogous purposes in both Eastern and Western hemispheres.

In many of these half-serious contests clan is pitted against clan, or community against community. Numerous examples are found in N. America; the Omaha game has already been cited. By no means all of them are regarded as having any magical influence—at least, if our information be complete. In California a game resembling shiny is played by the Hupa, village against village, 'or tribe against tribe.' It seems to have no greater result than our football or cricket played between team and team (Goddard, Life and Culture of the Hupa, Berkeley, 1903, p. 60; cf. pp. 149, 214). Such cases are to be found all over the world, in Great Britain as well as elsewhere; and every reader's memory will furnish him with illustrations. The games so played may take their origin from metrical or tribal singsong, and consequently that the game was not a real contest, but rather a piece of ritual. The object of the game was probably, like that of the shiny played by the Wichita, to aid in the conquest of winter by spring. The unmarried men and women represent the barren winter, and the married men and women the fruition of the spring. A similar ball-game, sometimes analogous to our football, sometimes to our hockey, is widely
Games

Games consecrated to special seasons are very common. In addition to those already mentioned, a few other typical instances may be adduced. In the south-west of England it is a common practice to play the game called "thread-the-needle" down all the street on Shrove Tuesday, or in some places, on Easter Monday. There can be little doubt that it once had a religious or magical significance. Syrian and Armenian immigrants at Boston have been found addicted to a game with eggs at Easter. It is played by two persons, each having an egg. One holds his egg, and the other player strikes with his. The game is a contest similar in principle to those which boys play in England with chestnuts (J.A.P. xii. (1902) 107-108; v. vi. (of 1835) 186). At the solemn harvest festival of the Natchees a game of ball was played for a prize by two parties, each estimated by an eye-witness on one occasion at 800 men (Swanton, Bull. Am. Eth. Soc. 11, 119, citing du Pratz and Dumont). By way of concluding the Green Corn, the Harvest, and the New Year festivals, the Iroquois used to play in the public council-houses a festive game with a bowl and peach-stones, in which the peach-stones were dice (Culin, A.R.B.E.W. (1867), 114). The Tigwa of New Mexico also played a game with a species of dice, which, on a specified night on the eve of the festival of the dead, Nov. 3, played by the people of the town, is thrown in a ceremonial way by each person, the bowl being held over a hearth and the pebbles being thrown into it. The game is called "the game of the dead." The ball is thrown in a similar way at the commencement of the New Year festival (Culin, Annual Rep. Nat. Mus. (of 1895) 186). At the Baganda, he paid a ceremonial visit to Nankere, a chief of the Lungi-land, who was never permitted to see the king on any other occasion. The object of the visit was the performance of a rite to prolong the life of the king. This involved the putting to a cruel death of Nankere's son. The king then went to another chief. On the way he stopped to play a game of spinning the stones of a wild fruit-tree. It is played ordinarily by two children, who spin their stones together, and the stone which spins the farthest or stands highest is called the winner. The king played with one of his attendants; and on reaching the chief's house he observed a ceremony. In coming he would again call for fruit-stones to play the game; but whoever ran to bring them would be caught and speared to death on the spot, with the object of giving the king long life (Roos, Annual Rep. Nat. Mus. (of 1895), 186). The game of "Elle" is one of several in which one of the children represents a tree, and a tree is the subject of the song. The children all take hands singing, and round the tree "the tree." Usually it ends with a rough and tumble; but in at least one case the string of players unwinds, under the direction of youths with long leafy branches in their hands as standards; and the operation is performed "with almost military precision." As thus played it is performed at St. Roch and some of the adjacent parishes in Corse, and is the annual feast in the second week of June (Lady Gomme, ii. 386). Lady Gomme refers to "some religious observances, such as encircling sacred trees or stones, accompanied by song and dance." Again, many games turn on love and marriage, and some of them doubtless ensnare archival ritual, such as bride-capture. One of the most striking of these is called in Scotland "Battles Bowater" (Dances with the bolster). There is evidence that it actually used to be the last dance at weddings and marriage-making. Lady Gomme's conjecture is only right that it was pre-eminently the nuptial dance at a wedding, and that the bride and bridegroom on performing their part in it retired from the company to their own chamber. But if so, it is even then the degenerate representative of a rite by which the bridegroom took forcible possession of his bride in spite of her real or pretended resistance (op. cit. i. 201). It is only in Britain that the process is found. Sicilian boys also play a game called A sola vola lo morirs, in which one of them shews death and lies stretched on the ground, another
stands at his head as a magician and utters incanta-
tions to restore him to life, four others stand round him,
and with the continuous whistle made by
drawing in the breath, extend their hands above
the corpse, gradually raising them with a slow
movement. The game is to keep up this movement
and whistling while the incantation is repeated
seven times without interruption by the magician.
It is said to be the children's firm belief that in this
way the corpse becomes as light as a feather, and
that he ought to be able to raise himself in the air
and remain suspended so long as the whist-
ling proceeds, but that with any interruption for
the purpose of taking breath by those who play the
spell, he again becomes heavy and falls. The
game, begun with more or less solemnity and secret,
terror, frequently ends with some trick upon the
corpse, and laughter, or blows, and a quarrel
(Pittr, Bibl. Trad. Pop. Sicil. xii. 283). But pro-
ably one of the most convincing examples is a game
played by the children in Java. It presents the
conjurings of a spirit, called Nini Towing, belong-
ting to the ancient Javanese mythology, into a
puppet, and its cult with prayers for help and pro-
tection. The serious worship of Nini Towing has
cessated; the significance of the ceremony is no
longer understood by the people; and the ceremony
itself has become degraded to a puerile amusement
Before quitting the subject, it may be observed
that the bull-roarer (q.v.), one of the most sacred
religions implements of the lower savagery, em-
ployed to produce sounds which the uninitiated are
taught are the voices of a supernatural being, and
carefully concealed at all times from the sight of
women, suffers the same society penalties as people
away from the stage of civilization which gave rise
to its ceremonial use. Among the Bangala of the
Upper Congo there is still, on the part of the elders,
some restriction of the use of the bull-roarer
among the Kikuyu of British East Africa, as
among ourselves, it is purely a toy (J.R.A.I. 1910)
427, 446.
Games of chance are usually played with instru-
ments of the kind familiar to us as playing-cards
and dice. In more barbarous states of the culture
the instruments are the stones of fruits, pebbles, shells,
split reeds, and so forth, marked in different ways.
They are drawn from a promiscuous heap, or
tossed in the air and allowed to fall on the ground
or come to rest on some other support. According as they
fall (or are drawn) the player scores. This process
is precisely the same as that by which divination
is practised and auguries obtained in almost all
parts of the world. Indeed, the very instruments
used are the same, even in Europe, where fortune-
tellers habitually exercise their profession by means of
playing-cards. There is, therefore, a very large
body of evidence in favour of Taylor's theory that
the primary purpose of the appeal to chance was
augury, and that games with the same or similar
instruments are secondary. Many American tribes
employ games of chance as well as games of skill
for divinatory objects. One example may stand
for all. The Onondaga play with peach-stones
tossed up from a bowl or dish struck on the floor.
It is common at the New Year's, or White Dog
feast.
When played against clan, the Long House against the Short
House, and to foretell the harvest the women play against the
men, the sister of the man who wins the ears of corn will be long like them;
but, if the women gain the game, they will be short, being the reverse, which is a proportion of the same.
This game is said to be intensely exciting. It was
once much used in divination. It is, like other
games, also still played for the sick; but,
whilst it is formally used to be a means of
healing, it is now regarded more as a diversion of
the patient's mind. In fact, it is ordinarily at the
present time a merely social amusement (J.A.P.L. ix.
(1896) 270), though specially played for divination
at the New Year's.

In India, where, as has been shown in the art
GAMBLING, dicing was carried to extremes, the
casting of dice was employed not merely to divine
the future, as with the primitive Kshatriya
Schröter, Born, 1900; tr. Weber, Ind. Streifen, i.
(1868) 298-307), but also as a part of the ritual of
the kindling of the sūrdhā, or 'fire of the
assembly-house' (it is highly significant in this con-
nection that sūrdhā means especially an assembly-
house for gamblers), who formed a portion of the
agnyāyākṣa, or setting up of the sacred fire.

According to the Apanonéesa Grāhyaśāstra, v. xii. 21, a
gambling table was set in the midst of the sūrdhā and sprinkled. Dice
were thrown on the table, and gold was cast on them, and all were
mixed up and then spread out; after two sacrifices had been
made, the dice (100 in number) were given to the sacrificer
with the words, 'Play for the cow against the rice,' etc. (see Shillingbrooth, Notibilis, 2/I. 186, 190, 191-192, 209, 121-123). It is plausibly suggested by von
Schröder (Mysteries and Meanings of Sūrdhā, Leipzig, 1929,
pp. 385) that the famous 'gaming hymn' of the Rigveda (xv. 34)
is intended for this portion of the Ritual; and Shillingbrooth,
theokrit, with good reason, that this ritual gaming was 'probably
the survival of an old dice oracle connected with the new moon'
(Rit. 106). In the ceremonial of vīratejas, or customary
rite of a king, ritual gaming is an important feature. Here the dice
are cast on gold, with the injunction that, 'whoever, by his many
rays, makes the king become the firm centre of the people';
and later on in on the vīratejas a second game of dice of minor
importance is played (Shillingbrooth, Rit. 146).

A large number of children's games are either
themselves uselessly similar to or directly based on
some of the ancient divinatory formula. This is especially noticeable in the
'counting-out,' which is preliminary to many
games. By the process of 'counting-out' it is
determined who is to take a certain part in the
game. Simple though it generally is, the number
of children concerned and the positions they take
in the counting series are so variable that to the
players, who do not attempt to calculate, the
result seems a chance. Nor is it only the counting-
out formule that betray a divinatory origin;
games of skill are often referable to the same
source. Lady Gomme assigns various ball-games (including
cricket) to this source, and Pittr reckons no fewer
than sixty games of Sicilian children, or one-third
of the entire collection he has made, as based
upon 'the sacred processes of divination' (op. cit.
xxv).

4. Prizes and stakes - Gambling. — The winning
of games, whether of chance or skill, is among
all nations frequently rewarded with prizes. By
an easy and natural gradation the prize passes
into the bet, and finally into the stake. This
enhances the excitement, and, therefore, the
pleasure of a game. Gambling is a passion con-
fined to no race or country, to no rank of society,
to no plane of civilization. The savage hunter is
as much addicted to it in his hours of ease as the
civilized stockbroker or horse-racer in his hours
of business. No peoples were ever more passionate
gamblers than the N. American Indians, both
men and women. Throughout the length and breadth
of the great continent they occupied, gambling was
the favourite pastime. Their feud on their games
of chance, they betted on their games of skill, they
betted on their most solemn ceremonial games.
They even ascribed to gambling a Divine origin,
and believed that it was the common occupation of
the departed in the spirit-world. We may expect
not to find that so wide-spread a passion as gambling
originated in very early times. The famous deposit
of painted pelh's in the cave of Maes-Azil may be
conjectured to yield evidence pointing in this direc-
tion. If so, something more than a respectable
antiquity may be assigned to this excitement. Yet hardly had the Ice Age and the reindor
appeared when the men of the south of France were
preparing their rude dice or counters, and enjoying the excitement of staking the produce of their more serious activities on games of chance. Certain it is that those of the peoples that represent numbers must have been painted with some end in view other than an introduction into the mysteries of the higher mathematics (L'Anthropologie, vii. [Paris 1887] 265, and the accompanying atlas of plates).

Gamblers are proverbially superstitions folk. Every gambler has his amulet or his prescribed observance, on which he depends for his luck. In this he does but emphasize a more general habit. But the emphasis is probably the natural product of his desire for the vicissitudes that represent numbers to be his sacrifice in the service of the most popular of his favourite amusement. Everywhere in N. America gambling is the subject of practices which are not merely superstitious—that is, performed with an unreasoned expectation of benefit—but distinctly religious. The gambler fasts and prays, he seeks supernatural aid in dreams, he observes continuence, he burns tobacco in honour of his muskets. Where the interest or the glory of a village or tribe is at stake, the whole community join in a religious ceremony, feasts ('medicine'), of course, are universal. The taking part in or coming with ceremonial games already alluded to may be thought to be responsible for such a development. The N. American Indians, however, are by no means singular in seeking remuneration and for victory in their games. To take only a single instance—the Fijians play a game of skill called tiga. It consists in throwing along a course a ball with a point end and like the head of an eagle, and a tail formed of a red one metre in length. It is played by two sides, often two villages or two tribes, and causes much excitement. Before playing, the Fijian weaves the grasses of his ancestors and offers sacrifice to their mases, to render them propitious. The stakes are a feast of pork, which the losing party gives to the victor (Charles 1911: 476).

Almost everywhere games have been played for stakes involving the entire possessions of the players, their wives and children, their freedom, their life itself. Not many centuries ago a Cheyenne, having lost all his property, put up his sister as the stake in a game of cards. He lost her. Though the occurrence aroused great indignation throughout the tribe, nobody suggested that the unfortunate girl should not go and live as the wife of the man who had won her (JAFD. xi. [1888] 301). This is a modern description of a social practice which has formed the basis of a many folk-tale east and west. In Irish legend, Midir, the fairy chief, plays with king Niall of Airgiall for the bride of Ethén. In the great Indian epic of the Mahabharata, Yudhishthira loses to Sakuni all his property, and finally Draupadi, the joint wife of the five brethren. In a Korean tale the hero is made to play chess for his bride (JAFD. xii. [1897] 291). The incident of playing for life or freedom is also common in folk-tales. A greater stake still—that of future happiness—is occasionally represented in European tales. A supernatural monk is said to haunt the mielles (dunes) of Normandy and play with passers-by for their clothes (Les Dunes. [1894] 304, quoting Souvestre, Les Derniers paysans, Paris, 1862, p. 79). More remarkable still is a dramatic ceremony annually performed at Lhasa for casting out the demon of ill-luck. In the course of the performance the Grand Lama is represented playing at dice with the demon, to prove the truth of his teaching. But the dice are false: the Lama can throw now and not throw the right one, but not the one he wants. Consequently the demon is hopelessly beaten and chased away, to the no small amusement, comfort, and satisfaction of the faithful (Waddell, Buddhism of Tibet, London, 1890, p. 615).

In view of the grave evils undoubtedly entailed on society by the practice of gambling, it may not be deemed impertinent to call attention to its utility at an early stage of culture. This can hardly be better done than in the words of the accomplished author of the History of the New World called America, whose untimely death a few years ago left the great work he had projected and partially executed no more than a precious fragment. He says:

"Among the nations of America, games are very common: they are either of the same kind and of the same use with ours, or are almost so. They are played in almost all countries, and at almost every age and time; they are of the greatest utility to the idle and in reality are very agreeable, and, in some respects, very beneficial. . . . They are played with cards, dice, and other instruments of a similar nature. They are played in all the streets and markets, and in the houses of the people, and in the public schools, and in the country houses; they are played by all sorts of people, and by all sorts of men, from the youth to the old man; and they are played in all sorts of weather, and in all sorts of seasons. They are played in the day-time and in the night-time; they are played in the winter and in the summer; they are played in the spring and in the autumn; they are played in the cold and in the heat; they are played in the dry and in the wet; they are played in the dry and in the wet; they are played in the dry; they are played in the wet. . . ." (Perry, Hist. of Amer., 1796, ii. 379.)

See, further, art. GAMBLING.

E. SIDNEY HARTLAND.

GAMES (Hebrew and Jewish)—For the purposes of the present article it will be convenient to divide the entire range of Hebrew-Jewish history into Biblical, Talmudic, and post-Talmudic times, the Biblical period extending, owing no doubt, to the age of the Maccaean rising; the Talmudic commencing at the epoch just named, and ending about A.D. 500; and the post-Talmudic reaching down to the present day.

1. In Biblical times.—The games and other amusements that were prevalent among the ancient Hebrews could not have been prominently bound up with the popular cult and the moral habits of the race; otherwise the authors and compilers of the Hebrew Scriptures, who were guided throughout by a religious purpose, would not have naturally introduced, with more or less frequency, some detailed references to these pastimes and recreations of their countrymen. The games and diversions indulged in were merely so far as the most part they are everywhere now, so many ways of recruiting strength and whiling away an idle hour in a pleasant and attractive manner; and that all can be found in the OT; on these matters consists of some general references and a number of more or less definite allusions to certain amusements and sports that were in vogue among the Hebrews of those days. Our task, therefore, in this part of the article is to collect the extant data in some orderly and serviceable manner.

The Hebrew verbs expressing something approximate to our idea of playing games and engaging in other social diversions are pa'am (inf. pa'am, pa'am, pa'am), pru (inf. pru, pru, pru), the use of the last-named form in.Ex 22:25 (in connexion with the rejoicing at the making of the golden calf) is quite indefinite, and may possibly be best translated 'to merriment.' But quite definite is the mention of a kind of tournament (or possibly best described as a game-of-wax) in 2 S 21:42, where the verb pru is employed. Aner said to Josab: 'Let the young
men arise and play before us,' and there seems to be no reason to doubt that a mere soldierly trial of skill and strength was originally intended, and not a facade to be blown on a large scale, although the hostile passions which were aroused by it quickly led to a disastrous result.

Other exercises requiring the employment of physical strength are all mentioned or alluded to in the OT are the lifting of stones (Zec 12:8), singing stones (e.g. Jg 20:6, 1 S 17:42, Zec 9:15), ball-games (Le 23:39), judging from the later use of the word, as can be seen from the Rabbinical dictionaries—the term for ball is שָׁונָה, and not מַשָּׁה. archery (1 S 30:31), Job 16:19, 2 S 23:5), razing (Ps 10:19), (1 S 18:4, Job 16:19, 2 S 23:5), and see also (Ps 69:24, 1 S 18:4, 2 S 23:5). One may also assume that the way in which Samson had to amuse the assembled Philistines at Gaza (Jg 16:24), where both the ruts psw and prs are used) was by exhibiting feats of physical strength. More popular than any other kind of physical exercise was naturally dancing. A reference to children's dances is found in Ec 11:19, and to that of adults on various occasions—e.g. Jg 21:21 ('the daughters of Shiloh' to be captured, whilst dancing, as wives by the Benjaminites), 1 S 10:29 (the women singing to the victorious David), 2 S 6:16 (David dancing before the ark).

With regard to the amusements of children, there is, besides the mention of dances already referred to, the significant fact that in Ezekiel, kinds of games indulged in are not mentioned, but one may safely fill in the canvas with frolicsome dances, racing, a primitive and quite innocent form of dice (see E. Sellin, 'Tell Tannim,' DB, vol. i. 109), and dimunutive terra-cotta figures of horticultural dogs, and other animals (see H. J. Van Lennep, Bible Lands, London, 1875, p. 578 f.). It is also possible that there was a reference to chariots displaying itself in children's games in Fr 20:31 ('even in his doings does a child make himself known, whether his work be pure, or whether it be right'). Another interesting though very vague reference to the diversions of young people is that contained in Job 40:12 (EV 412): 'Will thou play with him (i.e. Leviathan) as with a bird or wilt thou bind him for (unto) thy maidens?' 2 The vagueness of these two forms of amusement is in no way diminished by a reference to Ps 154:5, and Ps 139:4 ('those that had their pastime with the fowls of the air').

Instrumental music would naturally accompany any dances. Vocal music (of course, instrumental also) is, as may be expected, mostly referred to in the OT in connexion with religious services; but there are also a few passages relating to purposes of amusement, so particularly the 'men singers and women singers' spoken of in 2 S 19:19 (EV 19:19) and Ec 9:9.

As for amusement by means of dramatic performances, it is difficult to say to what extent—if at all—the ancient Hebrews engaged in it; but it is certain that their imaginative skill was lyrical rather than the dramatic. Not, indeed, the Song of Songs and the Book of Job are to be regarded as compositions of a more or less dramatic character, these great literary works would themselves justify the proposition just indicated; for it is in their lyrical elements that one particularly notices how their greatness consists rather than in elaborate dramatic representation.

The proposing and solving of riddles (נַשָּׁה, pl. נַשָּׁוֹת) is an intellectual pastime found in all ancient nations—e.g. 14th century B.C., (Samson's riddle). The riddles proposed to Solomon by the Queen of Sheba (1 K 10:8) are not specified, and in later Jewish writings may possibly embody some early amplifications. Akin to riddles proper is a certain kind of middilim (trifles), as exemplified in Ec 7:22. It has also been supposed that riddles lay originally at the base of Fr 30:24.

2. In the Talmudical period.—As the ancient Hebrews do not appear to have been addicted to games of chance, one may assume that such games were adopted by them from their neighbours during the Greek and Roman period, and in the countries in which they resided. In agreement with this supposition is the fact that ethical considerations in relation to games are first met with in Talmudical times. The Rabbis used to make a distinction between different places (Rosh haShanah, i. 8; Sanh. iii. 3) that dice-players and participants in pigeon-racing are disqualified to act as witnesses in a court of justice. The principles underlying the enactment is that the winner is, in the Rabbinc sense of the term, guilty of robbery, and that, therefore, the members of particular trades are prohibited from engaging in a criminal act. The general designation Ḥamor in all its varieties is אֵשֶׁת (asher). In modern works נָשָׁה (nashah, nashah) is often spoken of as another game, and in the Biblical text, though condemned, but it is in reality merely the principal variety of Ḥamor, other varieties named in Sanh. 25b being nut-shells and pieces of orange peel, each of these being a separate component of the game. The participants in pigeon-racing are called וַתַּנְעִית (benea), and it is explained in the same passage of Sanh. that racing on a similar principle carried on with וַתַּנְעִית (domesticated quadrupeds, wild quadrupeds, and any kind of bird) involves the same disabilities on its participants. The introduction of Greek athletic games into Jerusalem about 170 B.C. is recorded in 1 Mac 14:1 and 2 Mac 4:20. A place of exercise (γυμναστήριον) was built 'according to the custom of the gentiles' close to the Temple, where men and boys forthwith with ardently engaged in wrestling, boxing, archery, swimming, and other exercises, and such was, according to the account given in 2 Mac., the height of Greek fashions, and increase of heathenish manners, . . . that the priests had no courage to serve any more at the altar, but hastened to be partakers of the unlawful allowance in the place of exercise.'

The restoration of a conservative type of Judaism by the Hasmoneans naturally resulted in the abolition of these games and teats of strength, which were so revolting to the purer Hebrew spirit, partly on account of their close connexion with foreign cults, and partly because most of them were practised in puræ naturæ. But

1. In the Second Zechariah on Est 12 only three such riddles are recorded, but nineteen are given in a midrash from Talmud published in L. P. L. (1860) 364 ff.

2. The primitive kind of dice found at Tel Tell (above) was probably of a very innocent infantile kind. The spreading of sacrificial tables to God and Mene (dainties of luck and destiny), referred to in Is 14:10, not mentioned, be taken as an indication that the desire to seek fortune by methods of chance rather than by hard exercise; but it should be noted that the Purim and the two Hebrews of the Bible and of view, condemn the worship in question, besides, may have come in late in post-critical times (see, further, Forseth [Biblical and Christian]).
about a hundred years later the same un-Hebrew practices, under a different form, were introduced by Herod the Great. The pre-Hamansian high priestly gift of enjoying gymnastics and bear shows, and, similarly, Herod established circuses and theaters in order to ingratiate himself with Augustus. Both the theater at Jerusalem and the 'very famous' Theatrum, comprising both the circus and the Water Feast at Jerusalem, engaged in a grotesque dance with eight lighted torches in his hands (Bar. Sus. 53); cf. art. Fasting (in-Heb. and Jewish), vol. II, p. 2604. It states: Josephus (Ant. XV. 8. 1; see also ix. 6, and XVL VI. 1), 'were opposed to the Jewish customs; for we have nothing like the same games as fit to be used and exhibited by us; yet did he celebrate these games every five years, in the most solemn and splendid manner.' The general Talmudic attitude towards these innovations may be described as an intensification of the opinion expressed by Josephus. In Jerus. Aboda zara, 40a (ed. Krakau, 1869), the view is taken not without a certain amount of sarcasm that a circus is equivalent to an act of murder; in the Bab. recension of the same tractate (186) the close connexion of theaters and circuses with idolatrous worship is emphasized; and in Jerus. Berathoth, 75, col. 2 (ed. Krakau, 1869), a thanksgiving is offered by a pious Rabbi for having had his lot cast in the house of learning and the house of justice, 'and not in the houses of idlers andcircuses. It must not be supposed, however, that strict Hebraism laid all athletic exercises indiscriminately under a ban. The spirit fostered and cultivated by Talmudic Judaism, regarded, better than anything else, as trivial in comparison with the study of the Torah; but the Jews were at the same time sensitive to the danger of an obligatory amount of amusement and recreation—so long as the un-Hebrew and heathen element remained excluded. In his Com. on Zoar 19 (mentioned in § 1), Jerome relates how, when Napoleon was in the city, he saw 'large heavy stones which Jewish boys and youths handled and held aloft in the air to train their muscular strength.' In Bab. Nediva, 16a, a Roman Rabbi is quoted who said, 'great is our glory, greater than that of three, i.e., than the young legs are better than two old ones with a staff in addition.' The Talmudic elaboration of the riddles proposed to the Queen of Sheba has been referred to in § 1.

3. In post-Talmudic times.—Strict Rabbinism from the 5th cent. onwards down to the present day has continued to determine what was fitting and proper; but other amusements from a severely ethical point of view, treating with indifference or benevolent tolerance actions amusements and physical exercises of a harmless nature, but unhappily constantly indulged in, as gambling as well as sports and amusements involving cruelty, or likely to excite the passions.

4. Dances continued to exercise its baneful attractions, and in addition the Jews adopted from their Gentile neighbours such games of chance asOdd and Even' and 'Back or Edge,' besides lotteries and various kinds of gambling, and other amusements from a severely ethical point of view, treating with indifference or benevolent tolerance actions amusements and physical exercises of a harmless nature, but unhappily constantly indulged in, as gambling as well as sports and amusements involving cruelty, or likely to excite the passions.

1 Reference to a milder view are found, e.g., in Bab. Amid. 30a, Genesis Rabbah 12, Bava Batra, 13a, as 'amidah;' 'amidah,' 'amen.'

4 On the general reference is to n'ti n'si (Hebrew, 'writing, including marriage and other laws.')

5 This thanksgiving is still printed in several editions of the Jewish Prayer-book (at the beginning). In Bab. Sefer ha-Tob, 23b, the name of the pious man is not given. In the first edition (in 'Dersch Schach, in Orient, Jan. 1846, pp. 24-38) shows that the text could not have denoted the idea that in the Talmud, as the Persians, from whom the Jews might have heard the game, did not know it themselves before the close of the 8th century. Levy (in a manuscript, Wurtemburg, 1876-86) proposed the word by 'cheers'; but Jastrow (Dict. of the Targumim, New York, 1895) renders 'cheers.'

for a given number of years. Conscience tried in this way—and not always successfully—to protect itself against the inroads of overpowering temptation. Such examples of conscience are found written on the fly-leaves of sacred and cherished MSS in the possession of those wishing to free themselves from the ruinous vice, thus adding pathetic to the intensity of their desire for reform.

An example of a vow to be binding in perpetuity is found in the collection of banished MSS in the British Museum Additional MS 17,652. The entry is dated in the year 1530, and the resolution ‘not to play in any manner whatsoever’ was taken in the presence of several witnesses. As an example of a vow limited to a given period of time may be quoted the entry on fol. 394v of the British Museum Additional MS 4796. The entry is dated the 1st of April 1491, and the person concerned pledges himself by an oath on the truth of his words that he shall not engage himself to play, nor to engage himself in any manner to play for him, any game except ‘the game of the board’ (πάντα ἐξαίτης ὁ μαρτυρός, apparently draughts or chess), and to play even that game only occasionally, during the next ten years. No fewer than five persons were witnesses of the oath.

Of the most prominent Jewish victims to the attractions of card-games was Leon de Modena, who was Rabbi at Venice at the end of the 15th and the beginning of the 16th century. He must have been well aware of the dangerous tendency within him in his early youth, for he composed an interesting dialogue against gambling entitled πάντα ἐξαίτης or πάντα τοῦ παντελονίου. ‘The Gambling Scholar,’ or ‘Depart from Evil!’ when but fourteen years of age (see, e.g., R. Ginzberg’s English rendering in Translations from the Talmud and Midrashim, London, 1908). He was, however, never able to free himself from the vice. In 1523 he composed a protest against the vice, an order of excommunication was issued against any member of the community who should indulge in card-games, but within six years from the date of the decree, though not necessarily directed against Leon alone, must have been calculated to affect him as the most prominent offender. But he was unable to resist the temptation, and remained in it (see Abrahams, op. cit. p. 293).

Passing on to the game of chess, which, though not very prevalent among the Jews until the 12th century, was, no doubt, known for several centuries before, one may remark that the fondness of so many of them for the game and their frequent skill in playing it may be regarded as an additional testimony both to their sense of strategy and to the high degree of intellectual cleverness to which they were often able to play. The attitude taken up towards the game by Rabbinical authorities varied considerably. Maimonides (†1204) places persons who play chess for money in the same category as dice-players and participants in pigeon-racing (Com. on the Mishna Sanah, iii. 3), thus declaring them unfit to give evidence before a court of justice. Isaac Lampronti’s piri, iii. 54a, col. 1, we learn that in the year 1775 three Rabbis of Cremona decreed, in consequence of a plague, that neither men nor women, and not even young persons, from the age of ten upwards, living in that city should for a given time play any game except chess, provided that the latter was not played for money.

In 1729 (beginning of ch. 42) of Eliahu Kohen of Smyrna (†1729), on the other hand, chess is disapproved of absolutely on the ground that it is a waste of time, and that the mental energy spent on it should be reserved for sacred study. The preponderant view was, however, in favour of the game as an intellectual pastime, and it was, as a matter of fact, often played without companionship even on the Sabbath, when, in honour of the day, chessmen made of silver were used (see Abrahams, op. cit. p. 296).

The Jews have also produced a number of interesting works on chess, the three most important compositions in Hebrew being DuRo, or Rhymes on the game, attributed to Eliahu ben Rabbi Isaac of Erez, a poem by Benschoter ben Yakya (14th or 15th cent.), and a work entitled 32 32. ‘Delights of the King,’ which Steinhauser is inclined to attribute to Leon de Modena, the talented Rabbi already referred to in this part of the article.

An adequate idea of Jewish interest in chess is very easily obtained, as anyone having any spare time may be obtained from parts of the article ‘Chess’ in JEB; see particularly the page giving portraits of six eminent Jewish Chess Masters, and the list of tournaments ranging from 1831 to 1905. It may in addition be mentioned that it was through chess that M. Mendelssohn gained the friendship of Lessing. Another interesting, though legendary, point to note is that in Das Leben Nicolaus von Bach zu Rostock (Frankfurt a. M., 1753; see also, e.g., the English presentation of it by G. H. Handley, Rambam: The Legend of the Life of Moses ben Maimon, London, 1910) Rabbi Simon recognizes the Pope as his son, in the course of a game of chess, through a particular move which he had taught him in his youth.

The ethical considerations militating against games of chance, and, if played for money, also in a minor degree against chess, were, of course, absent in the case of amusements of an innocent athletic character. We thus find that in the 12th and 19th centuries, special dating was held in Venice in connection with festivals on public grounds (see Toedtli on Rab. Bezahl, 12a, near the bottom of the recto, where children’s games appear to be referred to). In Joseph Caro’s Shulhan Arukh, part Orach Chayim, 255, 306, on the other hand, ball-playing is prohibited on Sabbaths and festivals (the more lenient view of it being at the same time mentioned in a note).

Among other games borrowed by Jewish children from their neighbours, and specially mentioned in the sources, were skittles, blind-man’s buff, and leapfrog (see Depping, Les jeux dans le moyen-âge, Paris, 1884, p. 182).

For some further account of Rabbinical opinion for and against the game, see JEB iv. 30. It is, however, not correct to say that in the Sofer Hasidim (‘Book of the Pious’, 19th-20th cent.) the game is strongly recommended (ib. p. 10, col. 1). It is, indeed, very far from certain that chess is even meant by the ‘piece of wood wherewith one plays’ in the paragraph referred to (§ 400); see Steinhauser, Doktor bei den Juden, p. 87.

1 Steinhauser (p. 78) dates the authorship of the Erza, but the early date of the poem remains unquestioned. English readers may refer to the translation by Nina Davis (now Mrs. Dunlop) in Songs of Rabbi, issued in Philadelphia and London in 1901. In the JEB translation, the poet is identified by his full name with the addition of remarks on certain special moves’ indicated in this early composition.

2 For a letter list of works, see Steinhauser, op. cit., for modern Jewish publications on the game, see JEB iv. 30. The three Hebrew works mentioned were printed, with Latin translations, in Hyde’s De ludis originibus, Oxford, 1894.

3 Steinhauser, op. cit. p. 86, holds that the entire story can be traced to the beginning of the 18th cent., though the Rabbi Simon of the work is probably more than a century before the famous Rabbi who lived about the beginning of the 11th century.

4 See Abrahams, op. cit. p. 296.
GANAPATYAS

The drama as a species of literary art, and as calculated to rouse the emotions and inform the intellect, does not concern us here. It can only be referred to as a means of amusement and diversion. The pious Jew of the Middle Ages disliked the theatre quite as much as did his ancestors during the Roman domination of Palestine. He regarded every scene presented there as profligate and indecent. There were, however, two occasions in each year when he allowed himself considerable licence, not indeed by way of attending the theatrical performances of his neighbours, but by means of certain dramatic productions of his own. One of these occasions was the Feast of Purim, which falls in March; and the other was the Day of the Rejoicing of the Law (yoma Ṿeṣā), following the Feast of Booths (Ḥanukkah) in October. Besides the Ahasuerus Play, which, of course, was specially designed for Purim, representations of the sale of Joseph and of the encounter of David with Goliath were particularly popular.

The synagogue may be seen on these anniversaries; moreover, wrote Abba Yosef (p. 367)—for the Synagogue itself was often the scene of these festive amusements—simultaneously included, dancing is introduced; Talismans are affixed, the playing of musical instruments, the burning of incense, and even the expectancy of certain omen. All these by various customs of the real drama in its pantomimic phase, these early fall within the scope of the dramatic re-creations.

Riddles, popular— as we have seen—both in Biblical and Talmudical times, continued to be cultivated, and even the Jewish intellect having always loved to seek occasional relief from the severer tasks before it in the quibbles, quips, and cranks which are part and parcel of the making of riddles.

As prominent authors who seem to have taken a delight in composing riddles may be mentioned Moses the Ezra (1100-1125 cent.); Abba Yosef (Ezra), already referred to; Yehuda ha-Levi (1120); and Itsah and Natan of Rome (14th cent.).

Special mention should be made of a series of enigmas on the numbers 1 to 13 at the end of the Passover-night domestic ritual (beginning: 'One who knows not? One I know: One is our God in heaven and earth,' and ending: 'Thirteen who knowest? Thirteen I know: thirteen are the attributes of Deity' (i.e. the thirteen attributes of mercy or kindness in Ez 34:6). Special mention should also be made of the trick of gematria (נָאִיָּה), consisting in the manipulation of words in accordance with the numerical values of their letters. This kind of arithmetical amusement (for it can, in many instances, hardly be called by any other name) is common both in Talmudical and in post-Talmudical times. As an example, given the counting up of the full number of Haman's children by adding together the values of the letters in 364 (=206) in Estr 7:12 (נָאִיָּה, the multitude of his children). There is also a possibility of gematria having been employed in Biblical times as well (see zav, zav, zav, 1898, p. 132, where the number of sayings contained in Estr 19-24 is shown to be 375, i.e., numerically equal to ṣaw (Solomon) occurring in 10; and the 320 sayings comprised in chs. 25-29 are similarly believed to be indicated in ym (Hezkeliah) named in 26). LITERATURE. - Most of the sources used for this article (including parts of the OT and the Apocalypse, Talmud, Midrash, Josephus, etc.) and other works in different languages have been already mentioned.

1 One of the best known riddles of Abba Yosef is that on the grammatical use of the letters הֶוֶם.

2 See the article above referred to; also Hopkins, Religions of India, London, 1869, p. 6. A common name given to Ganapati is Viraghavan, 'Lord of obstacles.'

3 For details on this, see Ward, Pleas, etc., i. 99. The same author (1886) remarks that no Bengali who adopt Ganapati as a guardian deity is called 'Ganapatya.'
so-called 'left-hand' worship, considering Devi as the śakti, or energetic power, of Gāṇeṣa, not of Siva. The temple section, the Haṃmā-bāṣa, abandoned all obligatory ritual, distinction of caste, and the marriage tie. Promiscuous intercourse of the sexes was to them the highest sort of worship, the marrying herself of Gāṇeṣa with Haṃmā, i.e. Gāṇeṣa, and the female with her śakti. The name of the deity worshipped by this sect—Uchchhiṣṭa-Gaṇapati, 'left-footed or orta-Gaṇeṣa'—has been variously interpreted. The Sākasṭra-vijaya (xvii) states that he is so called because his followers follow the foul left-footed path; but, according to Hebrard (Pres. Acad. Sci. Éc., i. 212), the origin of the name is the fact that the worshipper pronounces his prayers with his mouth full of victuals, apparently in pursuance of the theory of abrogation of all secular ritual. The same authority states that the distinguishing sectarian mark of the Gaṇapatyas was a circle of red minium on the forehead.

The principal scriptures of these Gaṇapatyas were the Gaṇeṣa-Khandi of the Brahma-vaiṣṇava Purāṇa, and the Gaṇeṣa Purāṇa (one of the Main or Śaiva-dharmas). For an account of the former, see Wilson, Essays on Sanskrit Literature, London, 1864, i. 103. It narrates the birth and actions of Gaṇeṣa in a series of legends. It is no less than a subsequent section of the Brahma-vaiṣṇava Purāṇa dealing with Krṣṇa's life and adventures, his spouse, Rādhā, is represented as adoring Gaṇeṣa (Wilson, i. 117). For the Gaṇeṣa Purāṇa, see the analysis given by Stevenson in J.B.A.S., 1846, p. 319 ff. Besides containing, like the Gaṇeṣa-Khandi, a series of legends, it describes the ways of worshipping the god, in one, he is identified with the Supreme Spirit, Paramātma, and is to be worshipped by mystical contemplation alone. In the other, an image of the god is created and has offerings made it, on the occasion of the annual festival in his honour. Siva himself is represented as waiting on him with the most ardent devotion for ten years, and as thereby winning from him the boon of victory over the demon Tripūrāra. Monier Williams (Indians Wisdom, London, 1875, p. 130) also mentions a Gaṇeṣa-Ghūţa, which is identical in substance with the Bhaṇagad-Ghūţa (gs.), the name of Gaṇeṣa being substituted for that of Krṣṇa. In both the Gaṇeṣa Purāṇa and the Gaṇeṣa-Ghūţa, the doctrine to be noted is that Gaṇeṣa is identified with the Supreme Deity, and is superior even to Brahmā, Viṣṇu, and Śiva.

The worship of Gaṇeṣa, though not at the present day the cult of a particular sect, is, as we have seen, specially popular in Southern India. He seems to have been originally a Dravidian sun-god adopted into the Hindu pantheon. A well-known verse, attributed by tradition to the sage Mann, but not occurring in the lawbook associated with his name, says that Šambhu (i.e. Śiva) is the god of Brahman, Madhava (Viṣṇu) of warriors, Brahmā of the mercantile classes, and Gaṇeṣa of the Sūdras, or aboriginal population, and it is probably more than a coincidence that the term, according to Hindu mythology, Gaṇeṣa rides, is a totem of at least one Dravidian tribe, the Orama. We meet relics of the old cult still in

Southern India. The Travancore hōmas have been already mentioned, but much more striking is the celebrated case, the Haṃmā-bāṣa section, the Haṃmā-bāṣa of Gaṇeṣa in the village of Chinchăvād, near Poona in the Bombay Presidency. The story runs that some three hundred years ago a pious youth named Morobā was an identically handsome young man. As a reward the god came to him in a dream, and promised to live in him and his descendants for seven generations. Thenceforward the family was believed to possess miracles powers, and the temple founded by Morobā became richly endowed, even the Emperor Aurangzib giving the family a hereditary grant of eight villages. The representative of the seventh generation died childless in 1810, and a distant relative of the deceased was set up in his place by the priesthood in order to preserve the valuable grants to the temple. The present representative, although not a descendant of Morobā, is still venerated as a deity.1

LITERATURE.—The scriptures of the ancient sect have been noticed above. The only account in English of their tenets is to be found in H. T. Colebrooke's Miscellaneous Essays, London, 1837, i. 318. The Sākasṭra-vijaya mentioned above gives an analysis of their contents on p. 540 of its Catalogue Codicum Sanscritorum, Oxford, 1864.

For the modern worship of Gaṇeṣa and the so-called Gaṇapatyas of the present day, see H. W. Wilson, Religious Sects and Denominations of the Hindus, London, 1834, p. 243; Poussa Gazetteer, 1853, i. 545; Poussa Gazetteer, 1856, i. 465; and Poussa Gazetteer, 1860, i. 463. It will be observed that, with the exception of the first, all these refer to Southern India. For Northern India, the worship of Gaṇeṣa is so much mixed up with the worship of Śiva that separate accounts have been recorded concerning his cult. Cf., however, H. A. Sheringham, Black and Caste, Calcutta, 1879-81, i. 19, 19, 283. W. Ward, Views of the Hindu Literature, Religion, and Religious Customs of the Hindoos, London, 1817, i. 60 ff., may also be consulted.

There are many accounts of the human sacrifice at Chinchăvād. The earliest and fullest is that of E. Moor, written in the year 1866, during the lifetime of the seven incarnations, and published in his Observations on the Ritual of the McMukhas of Chinchăvād, which account will be found in the Poussa Gazetteer, 1866, iii. 153 ff.

The later quotes as authorities the Transactions of the Literary Society of Bombay, ii. (1830) 92; Murray's Handbook of the Bombay Presidency, 1851, i. 176; G. A. Valentine, Diaries and Travels, 1808-1809, published London, 1808 and 1831, ii. 163; and Maria Graham's Residence in India, Edinburgh, 1813, p. 379.

GANDHĀRA.—The Sanskrit name for the modern District of Poshaawar (British India). It is a vast undulating plain, almost entirely surrounded by a girdle of mountains which is linked in the S.E. by the Indus, and in the W. by the Swat, Kabul, and Hindu Kush ranges, which are of great heights and seclude the cultivation. The metals and the minerals are abundant, as coal, iron, copper, lead, and salt. The local tribe of the country, the Sānas, are a race of cotton-farmers, and live in tents. The soil is poor, but the climate is healthy. The chief seats are Rostamabad, Nandī, and the older Chot Alwar. The district is watered by the Rājgour, the Swāt, and the Indus. The native population is of two denominations, the Hindus and the Mohammedans.

1 Aurangzib Gazetteer, 1854, p. 543.
period, but had been allowed to fall into disuse by the Pathána. The greater part of the land, indeed, belongs at the present moment to the Yânial, Morá and Daurás of the Pathána Khakhái tribe, which is supposed to have spread over the districts in the 16th century. In spite of the persistence, in the village basars, of the ceremonial and ritualistic forms, and the recent immigration of Hindús (as the Pathánas call the natives of India proper), more than half of the 600,000 inhabitants are of Afghan race, and 80 per cent speak Pathána (Afghan) in the native tongue of Páníni, the great authority on Sanskrit grammar.

At all epochs the district has been traversed from W. to E. and from N. to S. by two main roads. The former is the great trade route and the road taken by the invaders of former times. Emerging from the famous Khair Bhai Pass beside Peshawar (Purkapur), it runs east through Pákhtá (Kandahar) and Persia, and finally reached, as Dehákán (Aher), on the India, which was crossed in winter by a ford and in summer by a ferry, and so to the English gateway of the town.

This natural road has been abandoned in modern times, owing to the exceptional facilities offered by the narrow gorge of Aícók (several miles down the river from Und) for the construction of a permanent bridge, either one of boats or arched viaducts; but nothing could be more artificial than the actual route of the Grand Trunk Road and the railway, all composed of broad and dip by the side of the river, and ravines, a triumph for the straight line and a feat of engineering skill. Finally, the new Dír (Bala Kuch), and old Chólit, road—branching off at Achabal, through Mazar and Dargah, reaches the Malakand Pass, while alongside of it a little narrow-gauge railway is now being laid as the monorail—has completely supplanted its old rivulet on the right and on the left. Neverthe less, the country still bears the stamp of Aískhán, the former, the ancient road of India, and the meeting of the ways to and from Upper Asia and the West.

It will readily be understood that the possession of this frontier-country was long disputed by the two races, the Indians having been back the earliest mention of it that we can trace in history, we find that Ghándhára was one of the earliest conquests of Dúntus (231-246 A.D.). According to the chronicles of Alexander, India, at the time of his raid in 323 B.C., the city was held by the king Kúshán, and in the same year it was visited by the Emperor Dúntus, who, in his turn, visited the country. In the time of the Kúshán, the country was divided into two parts, the north and the south, and the latter was called Ghándhára, or modern Ghándhára, being the name of the city, which was then the capital of the country.

In the beginning of the 6th century, by an invasion of the Huns, a Turkish people, the inhabitants of the country were driven out, and the land was left desolate. The government of the country was then given to the Ghándhára, or modern Ghándhára, being the name of the city, which was then the capital of the country.

The Ghándhára is a special feature of the history of Buddhism. If we judge by the terms of his 9th rock-edict, Aísákha still considered it as a country of the two river valleys of the Jánáb and the Bahlóla; if we believe the Sinhalese Chronicle it already was so, even in Aísákha's reign, though the working medium of the Bahlóla Mahâyâna is, by one thing certain is that the doctrine met with excep-

GANGÁ, GANGES

The great river of India, draining the lower Himalayas and the N. and E. slopes of the Vindhyas range. It is held sacred by a larger number of worshippers than any other river in the world.

1. Geography.-Under the name Phâbrâthrah, the river rises in the Tahri State (lat. 30° 52' N.; long. 79° 7' E.) from an ice-bed near Gangôtri (q.v.), 13,800 feet above sea-level. After receiving the Jânávati and the Alaknândâ (q.v.), it enters the Plains, passing Hardâwar (q.v.); and lower down its course, with the Jumna which joins it at Allahâbâd (q.v.), it encloses the fertile tract known as Pâm or Antârdvâ, 'the region between the two rivers.' In the upper tributaries are the Rângândâ, Jumna, Tons, Gumti, and Gogra. When it reaches the frontier of Bengal, it is joined by the Gândhâra and near Patna (the Pâlînagita of the ancient Hindus, the Pâlînagita of the British) by the Sôn; lower down by the Gândhâra; and, when it approaches the Bay of Bengal, by the greatest of the

GANDHARVA.—SEE BRAHMANISM, VEDA RELIGION.

GANGÁ, GANGES (Skr. Gangá, possibly from r. gán, 'to go'). The great river of India, draining the lower Himalayas and the N. and E. slopes of the Vindhyas range. It is held sacred by a larger number of worshippers than any other river in the world.

1. Geography.—Under the name Bhágri, the river rises in the Tahri State (lat. 30° 52' N.; long. 79° 7' E.) from an ice-bed near Gangôtri (q.v.), 13,800 feet above sea-level. After receiving the Jânávati and the Alaknândâ (q.v.), it enters the Plains, passing Hardâwar (q.v.); and lower down its course, with the Jumna which joins it at Allahâbâd (q.v.), it encloses the fertile tract known as Pâm or Antârdvâ, 'the region between the two rivers.' In the upper tributaries are the Rângândâ, Jumna, Tons, Gumti, and Gogra. When it reaches the frontier of Bengal, it is joined by the Gândhâra and near Patna (the Pâlînagita of the ancient Hindus, the Pâlînagita of the British) by the Sôn; lower down by the Gândhâra; and, when it approaches the Bay of Bengal, by the greatest of the

VOL. VI.—12
affluents, the Brahmaputra. The total length of its course is 1557 miles. From a religious point of view, the most important cities and towns situated on its banks are Haridwar, Rameswar, Allahabad, Benares, Patna, Sonpur (qq.e.v.); with Sagar Island (q.e.v.) at the mouth of the Hooghly.

2. Early allusions and legends. — The sanctity of the river does not date from the earliest Vedic period. According to the oldest traditions, the Hindus (then settled in the E. Punjab) regarded with special reverence the Sindhu or Indus, and the Saraswati, which at the present day, partially lost in the Râjputana desert, joins the Ganges within the Pâlî or State. The Ganges is mentioned once or twice in the Rigveda; in one place (v. 45, 31) its high banks form the subject of a simple; but in the hymn to the rivers (x. 75, 5) it is invoked with the Yamuna (Jumna), Sarasvati, Sindudi (Shandy), Parvati (Râvi), Ambika (Chinâb), with Arjyktâ (Bîla) (J. Muir, Original Sin, Texts, pt II., London, 1886, p. 338 f. A. A. Macdonell, Vedic Mythology, Strasburg, 1887, p. 92 f.). When the Hindoos moved eastward along the Ganges valley, their Holy Land was fixed between the Ganges and the Jumna at the point of Buchârastra, i.e., between Bhagirathi, i. 2, 10 (SBE xiv. 1882) 47, 147). In the Mahabharata the sanctity of the river and its holy places is fully established.

In the genealogy of the gods (II. 35, 90). He who bathes in Ganges purifies seven descendents. As long as the bones of a man lie on a river's bank, touch the man is meritorious in heaven. No place of pilgrimages is better than Ganges (II. 96, 46). W. E. Hopkins, The Religions of India, London, 1876, p. 372 f. J. H. P. Bennett, Buddha (q.e.v.), p. 148 f. Buddha writes naturally pay little attention to the river, though its cult must have prevailed in their time. Buddha uses the pilgrim's attempt to reach its source as an emblem of the unreality of earthly things, and the obstructions in its channel represent the many miseries experienced in the course of the golden year (Cf. v. 10, 179; H. C. Warren, Buddhism in Translations, Camb., Mass., 1886, pp. 153 f., 440). Anchorites live on its banks (Bhârata, I. 1866) 156, ii. (1897) 296). The 'heat of the Ganges' (Gâya) is mentioned, and the river is spoken of as 'Mother of rivers', known among men as Bhâgirathî (ib. iv. 1901) 263, v. (1905) 51, 54). The earliest knowledge of the river gained by the people of the West was due to Megasthenes (Arrian, Indica, iv.), who describes the river as greater than the Indus and possessing seventeen tributaries, which Phryn (ib. vi. 22, 1. 3) raises to nineteen. Strabo (xv. 35) calls the river the Ganges (Dârâm) the greatest in the three continents, next to it being the Indus, Danube, Nile; he states that the Indians worship Zeus Ombricius, the 'rainy' (Indra), the river Ganges, and local deities (see J. W. McOrindle, Ancient India as described in Classical Literature, London, 1901, p. 77, Ancient India as described by Megasthenes and Arrian, Bombay, 1877, p. 186 f.; W. Smith, Dict. Greek and Roman Geog., London, 1856, l, 972 f.).

Many legends naturally gathered round the sacred river. In the Ramayâna (i. 42) the royal saint Bhâgîratha, descendant of Sagaras, performs austerities to induce Ganges to descend from heaven and purify the ashes of the sons of Sagaras, who had been destroyed by the offended sage Kapila, and thus to elevate them to Paradise. On his failure, Brahm advices him to propitiate Siva, who satisfies the sages and leads them to another heaven. Gângâ and Siva. Accordingly Siva ascends the Himalaya and calls upon the goddess to come down. In her turn she goes to the hall of her father, Pâtiâla, the nether world. But Siva compels her to circle for ages in the labyrinth of his matted locks, perhaps the icicles at the river source. Hence he is named Gangadhura, Ganges-supporter. At last, being again propitiated by Bhagiratha, Siva allows her to flow to the sea and purify the ashes of Sagaras's sons (J. Muir, c. 173, p. 506; E. Oscar, Râma, Allahabad, Benares, 1895, p. 51 f.). Later bars endeavored to associate the heroines of the Mahabharata with the earlier nature-gods, describing, for instance, in the Bhagavata Purâna the origin of Siva from the sea. The story is told by Pitârach (Isha vartadar, ed. Paris, 1824, p. 1191 f.), in which the name of the river is explained by the tale that the nymph Kâlâra bore Indus a son named Gangadher, who committed incest with his mother, and in remorse threw himself into the river Chaliara, which was called after his name (see G. Cunningham, Notices and Antiquities of Bharatavarsha or India, Madras, 1839, p. 126 f.; for other legends in the Purânas, see E. T. Atkinson, Himmâlaya Gauâtâsa, Allahabad, 1888-94, ii. 296 f.).

3. Cult-titles, temples, images. — (a) The cult-titles of Gaṅgā are numerous. She is called Jñânavati, because she was drunk up by the offended sage, Jñâna; Yârâvati, excellent river; Dvârâha, 'flowing from heaven'; Harâkshâkha, 'crest of Sîva'; Mandakini, 'gently flowing'; Bhâgirathî, 'of the Bhagirathî', the river; Bhuris, Benâra, 'mother'; Târâ, 'triple-flowing'; i.e. in heaven, earth, and hell, under the respective titles of Mandakini, Bhâgirathî or Gangâ, and Bhogavati (see J. Dowson, Classical Dict., London, 1878, p. 21; J. S. Robson, Encycl. Ind. cult., Gangâ; B. Ziegenbalg, Genealogy of the S. Ind. Gods, Eng. tr., Madras, 1869, p. 67; The primitive, animistic spirit of the river is now completely anthropomorphized. — (b) Temples dedicated to Gangâ are found in many places, especially at the sacred places along the river-bank, of which one of the most important is that at Hardwar (q.e.v.). But in many places she is identified with Parâati, or one of the other forms of the Mother-goddess, like Amâsāpanâ, goddess of food at Benares; and many of the talking and speaking tribes have been adopted as her manifestations. Thus Tuîma, the river-goddess of the Tîpâra of E. Bengal, who is worshipped in AgraKhânya (Nov.-Dec.), by stretching from the nearest bathing-place to her shrine a thread which no one may cross, is now identified with Gangâ (R. A. Gail, Census Rep. Bengal, Calcutta, 1901, i. 186 f.). — (c) Her images appear in many of the W. cave-temples (Fergusson-Hutton, Cave Temples of India, London, 1890, pp. 335, 335, 455, 460, 470), and her image guard the entrances of Gupta temples, that is to say, they are in procession of admission to the orthodox pantheon (V. A. Smith, Hist. of Fine Art in India and Ceylon, Oxford, 1911, p. 26); and see a photograph of her image from Besnagar in Bhopal, ib. 160, fig. 119; for a photograph of the Hardwar image, FP, 1884, l. 35. In E. India she is represented as a siren, half-woman and half-fish, swimming in water and folding her hands as if in prayer; on her head she wears a crown, and on her forehead the Sâra mark in holy letters; she is covered with jewellry (Ziegenbalg, 56). In Bengal she is represented by a white woman, crowned, sitting on the sea-monster makara (a kind of crocodile), having in her right hand a water-ill, in her left a lute (W. Ward, The Hindoos, London, 1815, ii. 306). At the great temple of Râmâyâna near Benares, the three goddesses, Gângâ, Jñânavati, and Sûrya, have each a niche of the hand in another temple at the same place Gangâ is represented by a richly-dressed image in white marble, seated on a crocodile, with a conch in one hand and a lotus in the other, one hanging down, the second uplifted, the third grasping a lotus flower, the fourth holding a brass vessel (M. A. Sharng, The Sacred City of the Hindoos, London, 1885, pp. 170, 174).
4. The place of the Ganges in popular worship. — Gangai Kondapur is a sacred place where the Ganges is worshipping by virtue of the业数 connection with the Ganges, and bathing in it is considered as equal to bathing in the Ganges itself. The Ganges has been worshipped in this town by the name of Gangai Kondapur, and it is believed that the Ganges has been established in this place by the God Ganges, who has given his consent to the town being called Gangai Kondapur.

The river plays an important part in the domestic rites of the Hindus. If the river is pure, it is considered as sacred, and the deities are prayed to in the banks of the river. If the river is impure, the deities are not prayed to, and it is considered as an indication of the city's impurity. The Ganges is worshipped as a goddess, and her worship is performed by the people of the city.

The Ganges is considered as the mother of all the rivers, and her worship is performed by the people of the city. The Ganges is considered as the mother of all the people, and her worship is performed by the people of the city.

The Ganges is considered as the mother of all the rivers, and her worship is performed by the people of the city. The Ganges is considered as the mother of all the people, and her worship is performed by the people of the city.

from the well in the temple precincts, which is supposed to have a good and communication with that river; but the name is really a corruption of Gangrai-konda-chola, the Chola king who conquered the lands near the Ganges, a title of Rajaendra Chola I. [A.D. 1064-1113].—A town in the Trichinopoly District of the Madras Presidency, lat. 11° 12' N., long. 79° 28' E., containing one of the most magnificent temples in S. India. It has been fully described by B. R. Brannfield, who regards it as 'the largest and best specimen of S. Indian temple proper'; roughly speaking, it is a facsimile of the temple at Tanjore (q.v.); and is possibly its prototype, but perhaps more probably a copy of the latter. But, as it has never been restored, and was built of very hard stone, it retains more of its pristine design and purity which are wanting at Tanjore. It consists of a sanctuary-steeple 100 ft. square, the dimensions of that of Jaganath (q.v.) at Puri and that of Tanjore being 90 and 82 ft. respectively. Its height is 174 ft. It stands on a terrace decorated with a rail-ornament below, the uproot-ports being engraved with griffins, and on every third or fourth post an elaborately scroll-enveloped animal or figure. The double story below the pyramid and immediately above the terrace is vertical, with five compartments, or terraces, in each face of the temple, separated by four deep recesses, each containing a fine sculptural decoration. The figures are chiefly Sativate, but important Vedic representations are also found; and the plain intervals of the flat wall are covered with what pretend to be historical scenes of yore (ancient Hindu saints), kings, worshippers, and attendants celestial as well as terrestrial. The temple, in low relief. Above the double story rises the pyramidal steeple in seven storeys to the neck, which is spacious, and supports, as at Tanjore, four doors on each side. The whole building is of stone, and the domed top is carved to represent a copper tile or leaf-pattern covering, like that of the five halls (asada) at Chidambaram (q.v.). The only ornaments of the pyramidal tower are the square and oblong cocks of 'car' (rath) or 'spire-roofed' pattern, with elaborate fan-shaped windows, like spread peacock's tails. East of the great tower is the high court, a three-storied portico or transept, covering the cross-aisle between the N. and S. entrances to the temple, and is built to match the vimana, or pyramid-tower. To the E. is the outer court, planned on the most magnificent style, but never completed. The courtyard is 610 ft. E. and W., by 360 ft. N. and S., with a fine entrance-tower (gopura) on the E., not half the height of the temple itself. 'The architecture,' says Brannfield, 'struck me as grand, simple, and pure, with many traces of the wooden construction of which it is, in many respects, a copy.' The town was probably once an important city, one of the principal seats of the Chola kings. Ferguson fixes the date of the Tanjore temple in the beginning of the 14th cent., which is approximately the date of this edifice.

**GANGOTRI** (probably Gaṅgā-vatāra-puri, 'the sacred manifestation of the Ganges').—A temple and place of Hindu pilgrimage, situated in the Thirt District of Native Garwhal; lat. 31° N. long. 78° 57' E. At a short distance below the temple the Kedār Gaṅgā river meets the Bhāgārāth at a place called Gaṅgārāth (the pool of the goddess Gaṅgā), where pilgrims wash away their sins in the holy river. There is a small temple dedicated to Gaṅgā, the goddess of the Ganges, which was built by a Guṇkhā officer in the 18th cent.; and another of Bhairāv, one of the non-Aryan gods integrated into the Hindu pantheon, who, like all gods on their promotion, regarded as the warden (destroyāda) of the greater gods who have settled in the midst of the waters of the sacred river is called Gomukhā, 'the cow's mouth,' a glacier cavern from which the head waters of the river issue as the ice and snow melt. But Gangotri itself is regarded as the source of the river, and few pilgrims venture higher up its course, though it is a popular error to suppose that the route is impracticable.

**GAONISM.**—See RABINISM.

**GARHUKTESAR** (Skr. Gada-mukttvar, 'fort of the Lord of liberation,' a title of Siva).—A celebrated centre of pilgrimage, situated in the Meerut District of the United Provinces of Agra and Oudh, lat. 29° 47' N., long. 78° 6' E., a town of considerable antiquity, and popularly supposed to have been a ward of the capital, Hastinapur (q.v.). But the place now pointed out as the site of Hastinapur is 25 miles distant. The chief temple, like the place itself, is named after Mukttvar Mahadeva, and is dedicated to Siva. The whole building is of stone, and the domed top is carved to represent a copper tile or leaf-pattern covering, like that of the five halls (asada) at Chidambaram (q.v.). The only ornaments of the pyramidal tower are the square and oblong cocks of 'car' (rath) or 'spire-roofed' pattern, with elaborate fan-shaped windows, like spread peacock's tails. East of the great tower is the high court, a three-storied portico or transept, covering the cross-aisle between the N. and S. entrances to the temple, and is built to match the vimana, or pyramid-tower. To the E. is the outer court, planned on the most magnificent style, but never completed. The courtyard is 610 ft. E. and W., by 360 ft. N. and S., with a fine entrance-tower (gopura) on the E., not half the height of the temple itself. 'The architecture,' says Brannfield, 'struck me as grand, simple, and pure, with many traces of the wooden construction of which it is, in many respects, a copy.' The town was probably once an important city, one of the principal seats of the Chola kings. Ferguson fixes the date of the Tanjore temple in the beginning of the 14th cent., which is approximately the date of this edifice.

**GARLAND.**—See CROWN.

**GATE.**—See DOOR.

**GĀTHĀS.**—See AVESKA.

**GAUR** (Skr. Gauḍa, 'prepared from sugar or molasses,' the name being possibly derived from the characteristic product of that region). A ruined city, the site of the ancient capital of Bengal; lat. 24° 4' N., long. 88° 8' E. The ruins, known also by the name Lekhmati, or Lekha-matavi, are situated 8 miles E. of Patna, or 'English Bazaar,' the chief town of the Maldah District of Bengal, and on the E. bank of the Bhāgārāth, a stream which joins the Ganges below Gaur.

The city was not in existence in the time of Ptolemy; but he indicates the site (M. Crindle, *Ancient India*, 1885, p. 215). The Hindu history of the city is lost, save that it was the metropolis of the Hindu kings of Bengal, and all that is known is that the name
GAYA

181

was more strictly applied to the surrounding region than to the city itself. In A.D. 1194, or in 1196—
the latter the date fixed by Blochmann (J.A.S.B. xlix. 1880) for the conquest of Mahommedans,
and it was under them that it attained its magni-
ficence. The Portuguese historian, Faria y Sousa,
states that it contained 1,990,000 inhabitants, and
that its streets were so crowded that at religious festivals and processions numbers of people were trodden to death. It is now a scene of ruin, the destruction of the city being largely due to vandalism.

There is not a village, scarce a house in the district of Mitha, or in the surrounding country, that does not bear evidence of having been partially constructed from its ruins (Havenshaw, p. 3).
The original walled city was probably about 10 miles long by 4 miles broad; but the extensines extended to 90 by 3 or 4 miles, and it was surrounded by immense embankments faced with masonry. At present, the whole country within the fortifications and for many miles round is wild, studded with numerous reservoirs, generally overgrown with grass and reeds, and abounding in alligators.

The holy religious buildings now standing complete, or in a partially ruined condition, are: (1) the pretty tomb of the saint Mahdudin Akhtir Sarrata, who died in 1518, (2) an elegant mosque of embossed brick, known as Jan Jan Miyās, after a lady builder of that name, and dated A.D. 1534; (3) Ædulla=Dapur Châl, the only place connected with Hindooiu now used for the cremation of the dead; (4) Bârdhvâra (‘twelve-gated’), or Great Golden Mosque, perhaps the finest monument of Gaur, 100 feet long, 80 wide, and 30 high; it is placed on either side of the corridor, and one at each end (whence its name), built by Husain Shâh, and completed by his son, Nasrat Shâh, apparently in A.D. 1629; (5) Qudam-
bmâ Samadân, which contains a stone bearing the impress of the foot of the Prophet, said to have been brought from Medina by Husain Shâh, the benevolent of this city having ensured the safety of the building, which is dated A.D. 1580; (6) the fine minâr, or pillar, 80 feet high, which Ferguson (Hist. of Indiens and Easterns Archts., p. 596) dates between the years 1302-1315; he considers it to be a jaya-
stambha, or ‘pillar of victory’; but, according to Havenshaw, it was erected as a place to call the faithful to prayer, and was probably built about A.D. 1487-9; (7) Taqistâpa, or ‘the weaver’s mosque,’ dated about 1476; (8) the Lattan, or painted mosque, beautifully decorated with encaustic tiles of vivid colours, of which Frankelin (see Arch. Surv. Eup., 1902-03, p. 51 ff.) says: ‘I have not myself met with anything superior to it for elegance of style, lightness of construction, or tasteful decoration in any part of Upper Hindustan’; it is supposed to have been built by Ærâf Shâh, A.D. 1474-81; (9) the small Golden Mosque, better preserved than most of the Gaur ruins, which has been called ‘the gem of the city; oblong in form and roofed with fifteen domes, supported by massive pillars of hornblende stone, of which the whole building is constructed. The inscription is obliterated, but it is known to have been erected in the reign of Husain Shâh (A.D. 1441-59).

The series of inscriptions on the buildings of Gaur are in the Taghra character, and in two of them the penmanship is described by Blochmann as the work of the caliph, 1 A.D. 1069 to 1076, and are most important in fixing the chronology of the rulers of Bengal and as illustrations of the progress of Arabic calligraphy in the early centuries after the Hijra, or flight of the Prophet.

Reproductions of these beautiful works of art are given by Ravenna (p. 66 ff.).

The last king of the Musalmân dynasty of Gaur was Firsh Shâh III. (A.D. 1592-7). It was sacked by the Afghans in 1537. From that time its decay began, and its ruin is said to have been completed by an outbreak of plague about 1575. But this story is discredited by Buchanan Hanon. He states that the city was occupied from time to time by the Musalmân viceroys of Bengal, until the capital was removed to Rajpuțâla (‘Shah Shuja’), brother of Aurangzeb, after 1636, when the place was deserted. On the other hand, Hedges, Governor of the English Factory, who visited the place in 1638, found the chief buildings standing, and describes the ‘Palace, which has been (as appears by yea gates of it yet standing), in my judgment, considerably bigger and more beautiful than the Grand Seignior’s Seraglio at Constantin-
ople, or any other Palace that I have seen in Europe’ (Diary, l. 88).

LITERATURE.—The chief authority, on which this article is mainly based, is J. H. Ravenna, Gaur, its Ruins and In-

W. CROOK.

GAUTAMA.—See BUDDHA.

GAYA.—The name of a south-Gangetic District in the Bihar Province of British India, and also of its chief town. The area of the District is 4712 square miles, with a population (1911) of 10,07,590. It is bounded on the north by the District of Patna, on the east by the Districts of Monghyr and Hazaribagh, on the west by Bhagalpur, and on the south by the plateau of Chota Nagpur. As an administrative area the Gayâ District is of late origin, dating only from the year 1955. Before that it formed part of the Districts of Bihâr, and the whole roughly corresponded to the ancient kingdom known as Magadhâ (q.v.). At the present day the District is composed of two tracts—a northern and a southern—with very distinct characteristies. The northern half of the District, together with the present District of Patna, is still known as Magadhâ, ‘a corruption of Magadha,’ and is well irrigated and fertile. The southern half, which locally bears the name of ‘Râmgarh,’ is imperfectly irrigated and covered with forest. Magah, or Magadha, received its Aryan civilization from the North and West, and was the area from which Buddhism spread over India. Râmgarh has received such civilization as it possesses from the South and South-West. Although the religion has long disappeared, Magah to the present day is a Buddhist country. It is covered with ruins of Buddhist shrines, and Buddhist images are fre-

1 The boundary line runs east and west about two miles south of Gayâ Town, and a mile or two south of both Gaya.
Hindu, modern, half-cultivated, and sparsely populated.

GAYA—It will thus be seen that it is unnecessary to give any detailed account of the history of the District. The history of Magah is merged in that of Magadh, of which the capital cities of Magah, and of which Patna is now the capital, is now Patna District; for further information the reader is referred to the article MAGADHA. No historical events of importance have occurred in Râmâghat.

2. General aspect of the District.—From the Chota Nagpur plateau, which forms the southern boundary of the District, a number of ridges and spur projects into Râmâghat. These here and there attain to an altitude of nearly 1900 feet above sea-level. As one goes northwards from Magah, the country becomes a plain, with a decided slope, averaging four feet to the mile, towards the north.

From this plain there stand out numerous semi-isolated hills and ranges, and, still farther north, separate ridges and wholly isolated rocky peaks crop up at irregular intervals.

The most remarkable of these long, low, outlying ranges is the Gâhâli-Hâli, or Kondh range, which extends from near both Gaya north-eastwards for a distance of forty miles with only one small hill called the Bundark hill to a height of 1417 feet. The other ranges seldom exceed 1000 feet, and few of them rise higher than 600 feet above the plain. The highest hill being the Mahâr Hill (1513 ft.). All the other hills are the Barâh hills, lying partly in the head-quarters and partly in the subdivision of the town. These are the Brahmini Hills, which rise some 600 feet above the town, the Keshod Hill, the Lohâra Hill (579 fl.) in the head-quarters subdivision, and collected in the Nâlakot subdivision.

These hills have been mentioned in some detail, as many of them are intimately connected with the religious history of the country.

Sacred places.—The interest of Gaya District depends entirely on the numerous sacred places that lie within its boundaries, and upon its association with the history of the rise of Buddhism in India, rather than with the greater part of Asia. Every Hindu is expected to visit the town of Gaya at least once in his life, and to make offerings to the spirits of his ancestors, who were all the Gaya, that Gautama became "The Buddha," or "The Enlightened One"; and this little village is now the most holy spot on the earth to something like a hundred and forty millions of people.

4. Gaya Town.—The town of Gaya, a municipality with a population of 49,251 (1911), is divided into two parts, Old Gaya and Bihargan. The latter was laid out in the end of the 19th cent. by Mr. Law, then Collector, and possesses no archaeological interest. The old town is built upon a rocky hill, separated from a neighbouring hill, called Brahmani Hill (Skr. Brahmani), by a narrow defile, through which runs the road to Both Gaya. Brahmani Hill is a pile of blackened rock and boulders rising to a height of about 490 feet. The old town hill is not so high, and has to its north the Murli andRam Silla (372 ft.) hills, the town lying in the plain between. On its east runs the river Phalgu. A great part of Gaya, therefore, lies in a valley, and, owing to the reflection of the sun's heat from the black rocks by which it is encompassed, it is extremely hot and dusty.

The old town of Gaya is often called Brahman Gaya, as being sacred to Brahman, or else in order.

2. So holy is it that there are Tibetan Buddhists who believe that it is never on earth, but is now in heaven.

3. The Chinese pilgrim Hsien T'ang (7th cent. A.D.) noticed these rocky hills of black stone, which translators have turned into a 'sacred valley,' and 'steep dangerous gorge' (Hsien); and 'dark gorges and inaccessible cliffs' (Wallis). The valley is really very beautiful, and the dangers are supposed to be more in the course of the path than in the path itself.

5. See A. D. 204, iv. 142.

7. Given in full by the Pali catena, p. 16. In the Brahmanical literature, it is not the Brahman, but the Sakti, or on which the old town and the Vishnu temple have been built.

Though the hill is higher than the town, it is not the sacred hill of the old town or of the Vishnu temple. The town is situated on the banks of the river Phalgu, and the temple on the hill. The latter is the sacred hill of the old town, and the temple on which the old town and the Vishnu temple have been built.

Gaya is a town sacred to Hinduism. We next find it mentioned in a Buddhist text, the "Asokā-yoga" or "Asokā-vaccha," a paraphrase of a Mahākāvyâ or "Great Poem," in the Rāma-yâna (2205). Gaya is also mentioned as a holy spot remarkable for its sacred fig-tree (okha-yoga-vasa), a pilgrimage, a marvel, and a song [2345, 3260, xiii. 4645]; but there is nothing about any benefit secured to ancestors for further references, see Sorenson, Index to the Names in the Mahâkâvyâ of "Asokâ-yoga," or "Asokâ-vaccha," however, Gaya is said to have chanted a hymn at Gaya, offsets to the effect that a man should have many sons, so that one at least may go to Gaya and rescue him from hell.

So far Gaya has been represented as a town sacred to Hinduism. We next find it mentioned in a Buddhist text, the "Asokā-yoga," or "Asokā-vaccha," a pilgrimage, a marvel, and a song, (2205). Gaya is also mentioned as a holy spot remarkable for its sacred fig-tree (okha-yoga-vasa), a pilgrimage, a marvel, and a song [2345, 3260, xiii. 4645]; but there is nothing about any benefit secured to ancestors for further references, see Sorenson, Index to the Names in the Mahâkâvyâ of "Asokâ-yoga," or "Asokâ-vaccha," however, Gaya is said to have chanted a hymn at Gaya, offsets to the effect that a man should have many sons, so that one at least may go to Gaya and rescue him from hell.

GAYA 183

desert; but, when Hsuan T'ang visited it in the 7th cent. A.D., it was inhabited, but with
few inhabitants. There were only about 1000 Brahmans families, descendants of the original
set. These Brahmans were evidently the an-
ccestors of the people who resided there sub-
sequently. It appears, therefore, that Gaya was
originally a Hindu shrine with a sacred fig-tree
that became famous in the time of the Mahabharata.1

Having finished his round, the pilgrim offers pinda
s to the spirits of his ancestors and a final gift to the gopis, be-
fore whom he prostrates himself, to be described
below. Then he touches him on the back, and blesses him with the
word rupaka, or 'fruitful,' assuring him thereby
that his worship has been accepted.

Five shrines visited by pilgrims deserve particular
notice. These are Ram Sila, a hill close to Gaya
Town on the north, Pret Sila (540 ft.), about 6 miles
to the N. W., and three others, less important.
Although a visit to these forms part of the regular
tour of pilgrimage, the priests in charge are not
atheists, but an entirely distinct order, called
dharmakas. These shrines are devoted to Yama
and to evil spirits. An offering at Pret Sila, the
Hill of Ghosts, is enjoined, so that Yama may not
beat and bruise the ghosts of the dead. Similarly,
at Ram Sila, his hell-hounds must be worshipped
that they may not bark and bay at the unhappy
spirits. So, also, for the other three shrines. Here
apparently we have Brahmanism covering what is
mamal not Buddhism, but the aboriginal demon-
worship.

1.西安市 of the Gaya Pilgrimage.—Buchanan-Hamilton, the
History, Ascents, Temples, and Pilgrimages of Northern India...
collated from the original Documents at the R. I. House by Montgomery Martin, London, 1849, plate x, fig. 15. (this is fig. 11), 338 (1807-1810), edited by Martin, commonly
referred to as 'Martin's Eastern India'); and Brahman, the
Buddha, the Hermitage of Bajia, and Others, Calcutta, 1873,
p. 19 et seq., with maps.

2. Mahabodhi.—Gaya's chief title to fame lies in
the famous temple of the Mahabodi (the Great
Enlightenment), situated in the village of Bodh
Gaya (Gaya of the Enlightenment, often
misall, Buddha Gaya), about six miles to the south of Gaya
Town on the west bank of the river, named.
Here is the Bodhi-druma, under which Gautama sat
and received enlightenment. For nearly 2400 years this
tree has been sacred to Buddha as the cross is
to Christians. Pilgrimages to this holy spot,
Gaya has been celebrated
all over India as a great place of pilgrimage. The
various shrines are in charge of a caste of priests
known as gopis. This claim to be descended
from Brahmanas specially created by Brahma
on the occasion of the sacrifice on Gaya's body, when
the then existing Brahmans refused to accept the
offerings. With five important exceptions, these
priests preside over all the ceremonies performed
by the pilgrims. There are altogether 44 şrines,
or shrines, at each of which the pilgrim, under
the guidance of a gopis, has to make an offering.
If he is poor, or hurried, the list may be cut down,
but it is only necessary that pindas should be
offered to the spirits of the dead at three places
—the river Phalga, the Vijaya temple, and the
enduring fig-tree (akṣeya), which, we have
seen, is the real old object of worship, and
the

1 Real, Buddhist Records, ii. 118; Watters, iv. 111.
2 Real, Gaya, p. 18.
3 We know that, shortly before the time of Hsuan T'ang,
Buddhism had become extinct in the province of the
Hindu Brahmans.
4 The site of the Vijaya temple is almost certainly the
same as that of the steps built by Asoka on the place where
the Buddha uttered the Pas-Font and other discourses (Dharmasmita
5 Gaya Gazetteer, 71 f.
6 According to Bloch, 141, the worship of this sacred tree can
be traced back to very ancient times, long before the foundation
of Buddhism, and the Buddhists selected it as the actual site of the
Great Enlightenment merely on account of its previous
sanctity. At the same time, Bloch does not question the
Buddhist tradition as to the main facts of the Buddha's en-
lightenment occurring at Uruvilva.

1 This fig-tree must not be confused with the Bodhi-tree,
which is a pipal tree, an altogether different kind of fig. The
akṣeya is a banyan tree.
Buddhist worship. We have already seen that the Bodhi-druma is also worshipped by Hindus as part of the Gaya pilgrimage. When the new seedling was set up in the old site, another was planted a short distance off by J. D. Beglar, in charge of the restoration of the temple, and allotted specially to Hindus. This new Bodhi-druma—one Buddhist, and the other Hindu.

The legends of the miraculous resuscitation of the tree are no doubt to be explained by the simple expedient adopted on the last occasion, or by the method of dropping a seed into a hollow of the dead or dying tree. In the course of centuries, moving to and from built round the tree and on which it rested. In Imitation, the place where Gautama spread the grass, and on which he sat, was evidently the mud platform which in the present day becomes the terminal point of the eightfold path, the whole level of the ground has been greatly raised, and in 1880, Cunningham found, thirty feet below the present level of the Vajrāsana, two pieces of an old pillar which may well have been fragments of the tree destroyed by Śaṅkara 1300 years before.

7. The temple.—In the 3rd cent. B.C. the Emperor Asoka built a temple and a monastery close to the Bodhi tree at a cost of 100,000 pieces of gold. A representation of the temple as it stood in the 2nd cent. B.C. exists in a bas-relief of the Bharhut stūpa in Central India. It was an open pavilion, supported on pillars. In the middle lay the Vajrāsana, immediately behind which was the tree. Nothing now remains of Asoka's temple but the Vajrāsana and the small pillars which are the last vestiges of the former, the whole of the platform and the surrounding stone railings. The walk has been already referred to. The portion of the temple that has survived is in the southern row of pillars, which are now hidden within the foundations of the later temple. Much better preserved is the famous so-called Akṣoka railing from the Ānanda river in the four stone pillars connected by massive stone rails. It was altogether about 230 feet in length and surrounded the whole building. The pillars and rails are continuous, and the whole of the temple can be dated by the fact that the temple inscription in the Asoka 'Brahmi' character. When, in later times, the present temple was built, the southern row of pillars also exist, but are hidden within the foundations of the later temple.

Much better preserved is the famous so-called Asoka railing from the Ananda river, and the four stone pillars connected by massive stone rails. It was altogether about 230 feet in length and surrounded the whole building. The pillars and rails are continuous, and the whole of the temple can be dated by the fact that the temple inscription in the Asoka 'Brahmi' character. When, in later times, the present temple was built, the southern row of pillars also exist, but are hidden within the foundations of the later temple.

Asoka's temple fell into ruins from lapse of time, and we learn from a Burmese inscription found in the neighbourhood that a new one was built at a date not stated, but which Cunningham fixes as during the reign of the Indo-Scythian kings in the 2nd cent. A.D. This he considers to be the existing temple. It was visited by the Chinese pilgrim Fa Hian in the 6th, and by Huien Tsang in the 7th century. The latter gives a detailed description of the building as he saw it, and this closely agrees with that in the Chinese pilgrim Pe Hian in the 6th, and by Huien Tsang in the 7th century. The latter gives a detailed description of the building as he saw it, and this closely agrees with that in the Chinese pilgrim Pe Hian.

According to Buchanan Hamilton (p. 141) the object of Śaṅkara's destruction of the temple occurred in the course of a war on the Purana Varman, and is described in political considerations and not necessarily by hatred to Buddhism as a religion.

agrees, even to the measurements, with what we have before us now.\footnote{1} He also tells us of hundreds of stūpas and chaityas with which the precintes were crowded. These, together with numerous monasteries and minor temples erected in later times, are now represented by mounds covered with trees to the north of the main building. This in the 11th cent. had fallen into ruins and was twice repaired by missions from Burma. At the end of the 13th cent. came Muzammal dominants, as Pudda Gupta became a scene of desolation, although still visited by pilgrims. Cunningham believes that the holy tree and temple were, as above described, appropriated for Hindu worship in the 14th century.\footnote{2} At the end of the 18th cent. a Hindu ascetic founded a matha, or Saiva monastery, close to the temple. It was largely built from materials taken from the ruins, and several valuable sculptures have since been disintegrated from its wall. In or about the year 1727 the then mahārājā, or abbot, received the village in which the temple stood, in grant from the Emperor of Delhi, Muhammad Shah; and since then the Buddhist shrine has been in the possession of Saiva ascetics, although Buddhist priests are freely allowed to come and worship in their gifts being made to the mahārājā. In 1811, Buchanan-Hamilton\footnote{3} described it as 'in the last stages of decay compatible with anything like a preserve of its original form.' In 1876 the king of Burma deputed officers to visit it, and, the attention of the Government of Bengal being drawn to the matter, in 1877 a celebrated Sanskrit scholar, Rājānātha Bhattacharja, was sent to visit the spot and report as to what was being done. His report is embodied in the work entitled Pudda Gupta, published in 1878. It was evident that the Burmese repairs were being done without any regard for archeological fitness. The Government accordingly took the work of restoration in hand and completed it in 1884. This was carried out by J. D. Baglar, under the superintendence of Cunningham. The work done has been subjected to much adverse criticism; but, in the opinion of competent judges, the temple has been repaired as effectively and successfully as funds permitted, and the site immediately surrounding it has been excavated in a manner which will bear comparison with the best modern work elsewhere.\footnote{4}

As it now stands, the temple consists of a main tower, about a height of 180 feet, in the form of a slender pyramid springing from a square platform, on the four corners of which are similar towers of smaller size. The outside walls have niches for the reception of statues, and access to the temple is obtained through an eastern gate, supported by pillars, which opens into an ante-room in front of the sanctuary. In the latter is the principal image, a large medieval statue of the Buddha. On an upper floor another chamber contains a statue of Maya Devī, his mother. Owing to the general rise in the level of the country, the temple now stands in the centre of a great sunken courtyard, and one of the most interesting sights is the immense number of votive stupas of all sizes, from actual small temples to little stone models hardly a foot high, with which the surface of the latter is crowded. These are only a small proportion of those dug up. Room cannot be found in the temple for all. Several columns are stored in a bungalow near by; and, before their removal was forbidden, hundreds were

They may have been Hindu Vaishnavas, or Jainas, or Buddhists. Most of the caves have been left in the Burmah, with the marks of the chisel still visible, but in one or two the surface inside is highly polished, and there are handsome carved entrances. Near the Barabar Hills are Bharvar, one of the branches of the monastery of Gumana made of stone, and the less Kavvajal Hill, at the foot of which lay the monastery of Sibbhadra. Both were visited by Hiuen Tsang in the 7th century. Rājagiri, the old capital of Magadh, where the Buddha lived and preached for many years, is just beyond the border, in the Patna District, but in the Humla Valley leading into it.

This is full of remains, and many legends of the Buddha are connected with it. The name is a corruption of Yājñavalkya, or the forest of the staff, as called from a bamboo staff which was used to measure the Teacher's body, and then took root and developed into a forest. Hiuen Tsang has left a detailed account of the locality and of the associated legends.

The Kukkutāpada Giri, or Cook's-foot Hill, is another site mentioned by Hiuen Tsang. Here King Kapeutics, one of the earliest and greatest of the Buddha's disciples, lies buried, the mountain having been levelled to receive him. Here the Buddha himself, waiting his resurrection, when the company of the Buddha, Mahāpratīka, shall arise from him and cause him to enter into nirvāṇa.

Three different places have been suggested as the site, and Stein's identification of the Haars Hill, about 15 miles east of the spot which is now generally accepted. There are many other Buddhist sites of great archeological and historical interest in the District, regarding which more and more must be made of restorations, quoted at the end of this article.

9. Popular religion and folklore—The popular religion of Gaya does not differ in its general characteristics from the rest of Bengal (see E. E. ii. 202 ff. Uneducated Hindus and Muslims alike have a whole pantheon of village deities and demons, and malignant spirits, whom they worship, or, when occasion arises, exorcise. The most important of these is the Kshipra River, which is believed to have once been the River Ganges, and is regarded as sacred. The most prominent of these is the Ganges, which is believed to have once been the River Ganges, and is regarded as sacred. The most prominent of these is the Ganges, which is believed to have once been the River Ganges, and is regarded as sacred.

We have seen (p. 186) how Hinduism has absorbed a part of the folk-religion of demon-worship into the official cult at Rām Śūk and Preś Śūk. On the other hand, the Buddhist images and broken sculptures which can be dug up in most villages in Magadh have been utilized by the common folk as idols, representing in each case any particular god or goddess with whom the superstition of the finder wished it to be identified. As a good example, in the early nineties the writer discovered a line image of the Buddha buried in the ruins of Rājagiri. After cleaning it from the encrusted earth, he sent it off to his camp in charge of a village watchman of the Dusadh caste. When he himself returned to his camp in the evening he found the sculptured image covered with a layer of dust and vermin.

On inquiry, he learnt that on the way to camp the watchman had made up his mind that it was an image of his tribal god, had set it up on a stand, and warded and worshipping it. Evil spirits, called ṇākā and ṇākā, arc worshipped with intent to propitiate. If properly treated, they are useful as field-guardians, striking with disease any one who offends them.

In the jungle-covered Rāmgarh, such spirits have a market value, and an ojā (Skr. ujā) goes, with a piece of a one safely shut up in a bamboo bottle and delivered to a low-caste cultivator. Most of these malevolent spirits are ghosts of some one who has come to an untimely end. Sometimes they enter into and possess a man or woman, and the services of an ojā are required to expel them. Cf. DEMONS AND SPIRITS (Indian), vol. iv. p. 697.

Several of the caste were buried at Darjeeling, each having its own. Thus, the Bhogtā worship Bād Singh; the Dusadhī, Garaśī and Sālīsh; and the Gokha, Lōkī. The last two are the objects of great interest. Sālīsh was the great Master-Watchman, who conquered Chānār Māl, the corresponding Master-Thief. Dusadhī themselves are unknown, and the Gokha, Lōkī is of uncertain length, and his exploits were not confined to Gaya. He was an Indian Parshu who carried off a dusky Helen, and ultimately became a hero. In the end he conquered Sālīsh, here a thief, and ended his days at Bānarares, where, with the members of his family, he was turned into stone. He is also localized and sung of by Gokha in other northern India, such as Shahābād, Mīrāpur, and Bālī.

Muslim villagers also have their own goddesses. The most famous are those of the few nāma who have come to live in the countryside, who are the objects of great worship. All that is required is that a pūr must be holy, and that he has departed this life. Another Muslim saint of wide celebrity, Chand Sandōa, is said to have been buried at Darjeeling, in the north-east of the District. The shrine at which he is worshipped is on the site of an ancient Buddhist stūpa, and the holy water, which is drawn by lookers on charge of the village, is said to commemorate one of the Buddha's miracles.

Other mythical personages are also worshipped by Muslims. Amongst them we may mention Shahāk Mān, a sort of Aladdin, who found a wondrous lamp that controlled genius, and who lost his life through its misuse. Kamālo Mān, a female saint, who is said to have lived in the time of a Buddhist Rāj, Kanaka, and according to whom many wondrous miracles are reported, is especially worshipped by women who desire offspring; but Hindus and Muslims of both sexes resort to her shrine for exorcism or the cure of any disease.

More distinctly Hindu is the worship of Sūlim Sālī, both Muslims and low-caste Hindus pay adoration to him. His shrine is commonly close to a temple of the Hindu goddess Devī, and offerings are offered in his honour before the worship of Hindus directed to her. Some regard him as a god of the bodyguard, and others as the Parameswara, the Lord of the Universe.
GENIZAH—The name of the room in which damaged or unprinted copies of the Bible or other writings withdrawn from use are preserved, as well as a collective term for the writings so preserved. The term is derived from the use of the verb ד旮דוק (d-gad, ‘to preserve, as nomens actionis to the verb דadget, and occurs in the ancient Jewish literature which has been handed down to us only in the collocations ד겐דוק-idebar, which in (the Daniel ‘treasure-house’ an old Tannaitic note explains the word ד겐דוק in II 26 [see Tosefta, 115]). דגדיא is the same as אasjon, דגדיא (Ex 5:27), from which the New Hebrew word דגדיא (Ibid. 26:18) is derived (occurring in many passages of the Bah. Talmud: Shabb. 105, 106; Pesah. 116; Kiddush. 111; Sanhed. 104a, 104b). The verb דגדיא means ‘to preserve carefully,’ ‘as one preserves things of value or treasures. In the Halakha the tradition of relying on דגדיא in handwriting is widespread, and by the laying aside and concealing of such sacred objects as for some reason or other can no longer be used or may not be destroyed. In order to prevent such objects from being profaned, they must be carefully concealed and preserved. In the instructions on the subject, the expression is גראס, or in the passive יגראס or כאנס (plural יגראס, יגראס) כאנס (‘marked for preservation’). Besides the Instruction of the Halakha there are also reports, partly of a historical and partly of a legendary character, which correlate with the use of the verb דגדיא and relate of certain articles that they were ‘concealed.’ The Hammonians, when they purified the temple, concealed the stones of the desecrated altar in one of the temple chambers (M. Maaseh 1:6); it is the same fact which is mentioned in 1 Macc. 2:1. (According to Tosetta, Megila iv. 15, the stones of the temple building which had become worn and decayed were concealed.) In the case of the concealment of a priestly family, there was a room in the temple where the sacred ark was concealed (M. Megila vi. 1, 2). It was said that king Josiah, in order to prevent the ark from being carried away to Babylon, concealed it, and 2 Ch 35:23 was added in support of this view (Tose. Sof. xiii. 1; Yoma, 62b, and elsewhere). In connection with this view it was also asserted that the intent of meeting, i.e. the sanctuary erected by Moses, was concealed at the building of Solomon’s temple (Tose. Sof. 1b). According to the view expressed by the Palestinian Jews in the writing at the beginning of 2 Macc. 2, it was not King Josiah, but the prophet Jeremiah (cf. Jer 29), who concealed the ark, along with the tent and the altar of incense, and in fact hid them in a cave on the mountain (Nebo) which Moses had ascended before his death. In the same source we read: ‘when he entered the temple, the priests, before they went into captivity, had concealed the fire of the altar. Here the Greek word used (αιπενεσυρ) is the same as we find in Amos 7:12; Isa. 36:3, and elsewhere. In connection with this, the information supplied by a well-known Tannaitic reporter, Abba Saul, seems quite credible, namely, that such a practice had become noted and unift for killing the sacrificial animals, was concealed in accordance with a resolute of the priests (Zechariah, 8:10). In an old commentary on Lv 14:1 we are told that the linen garments wore by the high priest in the Day of Atonement must be concealed and not used again on the next Day of Atonement (Jifshv, i.e. 82, ed. Weiss; Tosefta, 26a, etc.). The command to conceal is especially emphasized with reference to the very text of the Bible and the writing of the Divine name. Those copies of the Bible which present an abnormal form of letters, or in which the sections are not divided in the traditional way, or in which portions of the text which ought to be written in stichoi are written continuously and in normal fashion, are to be concealed as well as those in the preparation of which the prescribed ink was not used in which the Divine names were written in gold (Jifshv on Ex 6:1; Bar. Shabb. 106b). It is also related (Sopherim i. 10) that the scribes ordered a manuscript belonging to a certain Alexander (i.e. ‘the Alexandrians’), which had been shown to them and which had the Divine names written in gold, to be concealed. The command to conceal refers also to copies of the Bible which a heathen had written (Tose. Megila iii. 15; Arakh. 6a). The same instruction is found on which the name of God is written (M. Sopherim, i. 13), to handle of house utensils, or the feet of sinews on which the Divine names had been inscribed (Shabb. 61a; Arakh. 6a). The scribes belonging to the casuistry of the Tannaim on this subject, as it meets us in the Halakha, are the following: If a wife suspected of unfaithfulness refuses to drink the ‘bitter water that causeth the curse’ prescribed for her in Nu 5:12, then the record on which the words of cursing are written (5MWM) must be concealed and not used on another occasion (M. Sof. iii. 8). If the whole property of a city which has gone over to idolatry (Dt 13:29) is given up to destruction, then the tenth of all that is found in it as well as all the written parts must be concealed (Sanhed. 1123). From the casuistry of the Amoraim we have the decision that a roll of the Pentateuch which had on every page (column) three errors must be hidden (Menach. 20b). With regard to sacred books written in any other language than Hebrew, the Tannaitic tradition tells us (M. Shabb. xvi. 1) that they must be concealed. That is a command which is to be treated with the same consideration as the prohibition of the use of written translations of the Bible, which, in fact, remained only theory, like the prohibition of fixing the original tradition in writing. But, as an ancient piece of evidence for that command, the instance of Gamaliel IV is added (Tose. Shabb. xiv. 12; Bar. Shabb. 115b), who ordered a Job Targum, which was laid before him as he stood on the temple mountain, to be walled into a layer of the first temple the priests, before they went into captivity, had concealed the fire of the altar. Here the Greek word used (αιπενεσυρ) is the same as we find in Amos 7:12; Isa. 36:3, and elsewhere. In connection with this, the information supplied by a well-known Tannaitic reporter, Abba Saul, seems quite credible, namely, that such a practice had become noted and unift for killing the sacrificial animals, was concealed in accordance with a resolute of the priests (Zechariah, 8:10).
forgotten. Regarding the intentional 'concealment' of individual books of the Bible, we possess definite information about the prophecy of Ezekiel (Shabb. 135) and the writings of Solomon (Proverbs [Shabb. 36b]; Qoheleth [ib. Leviticus Rabba, c. 25 ad nos. Qok. R. to 11 and 11]); both along with Canticles (Yeb. 129b), and in the last-mentioned source (ed. Schechter, p. 2) the tradition held by Abba Saul, the Tannaitic teacher already referred to, is as follows: In the beginning people said that Proverbs, Canticles, and Ecclesiastes were "concealed" (grăvăsin), because they were only fictitious and did not belong to the world or Synagogues, and for this reason they ought to be concealed. It was the men of the Great Synagogue who first came and, by means of their explanation of those passages of these books which gave offence, brought it about that they were again received among the sacred writings. This tradition is the only one in which the expression grăvăsin (A. Apocalypse) occurs as the term for such writings as are no longer in use. King Rezeshia is praised for having concealed a 'book of means of healing' (M. Pesahim vi. 56c; Berak. 106; cf. Jarna, Shaked. 14th). Regarding the 'Book of the Genealogies,' which, according to Pesharim (692), was 'concealed,' see Schechter in Ex. T. xvi. (1905) 186. In relation to the Apocalypse of the OT, especially the Book of Sirach, which alone is mentioned in the Jewish traditional literature, there is no mention in the Tannaitic sources that it had been 'concealed.' But the Amora Joseph (head of the sect of Pardes, who died 333) spend the express of the fact that the scribes (the old authorities) have 'concealed' (găvăsin) the Book of the Son of Siraj (Shaked. 1035; see Ex. T. xvi. 236).

No particulars regarding the act — how the 'concealment' of sacred writings no longer in use and of fragments which are to be carried out — are contained in the traditions either of the Tannaim or of the Amoraim. Only a 4th cent. utterance of a Babylonian authority (Raba) is preserved, according to which Pardes, who as a writer of the seventh generation of the Amoraim, was the author of the 'Book of the Genealogies,' is mentioned in the Book of Sirach, which alone is mentioned in the Jewish traditional literature, there is no mention in the Tannaitic sources that it had been 'concealed.' But the Amora Joseph (head of the sect of Pardes, who died 333) spends the expression of the fact that the scribes (the old authorities) have 'concealed' (găvăsin) the Book of the Son of Siraj (Shaked. 1035; see Ex. T. xvi. 236).

The practice of the Jewish congregations has so developed that not only Bible manuscripts (and in later times printed Bibles) which have become unfit for use, but all Hebrew writings or fragments of these, as soon as they were useless, were brought to some room or other in the synagogue-building which was difficult to reach, and in this way preserved from profanation. Since the special aim here in view was to protect the Divine names contained in the books, and the whole of the latter came to be called Shemădat (names, i.e., Divine names). From time to time the contents of the Genizah, in accordance with the instructions mentioned in the thirteenth century, were brought to the cemetery. But the whole of the latter came to be called Shemădat (Names, i.e., Divine names).

In the Beaune des Écoles de l'Alliance Jésidatis, 1901 (p. 103), there is an article on the Shemădat of the manuscript of the handwritings of Moses Maimonides. With regard to the Arabic portion of the Cairo Genizah in Cambridge, H. Hirschfeld commenced his researches in January 1903 (JQR. p. 16), and published a number of valuable communications. From his introductory
These Ghair-Mahdi sects display an intensely fanatical spirit towards orthodox Muslims, and, in fact, regard them as unbelievers. Their creed ends with the words: 'The Imam Mahdi has come and has gone away; whose belief is accepted by the majority', and they find support for this article in the hadith saying, 'man kadhkhaba bi-l-mahdi faqad kafara' ('he who denies the Mahdi is thereby an unbeliever'). Sell is undoubtedly right in holding that the Mahdi pretensions of the 10th cent. A.H. were an outcome of millenarian expectations, and purported to be a fulfillment of prophecy. The rise of the sects which thus stigmatized all other Muslims as heretics is the subject of a fatwa, given by Ibn Hajjar al-Haitami (+ A.H. 973-A.D. 1066) against them, in which he called upon the Muslim authorities to take drastic measures against their adherents.

GIANTS.—At the present day there is no human race of 'giants,' taking that word to denote men greatly above the average human stature. There are, indeed, families or groups of exceptional height. In his Anthropological History of Europe (Paisley, 1915, p. 165.) John Beddoes observes, selecting Scotland as the home of the tallest Europeans:

"The men of the Hebrides are among the stoutest in Britain. Probably the average stature is about 5 feet 9 inches (1744 millimeters); the fishermen are not so tall as the peasantry, but of the latter, of pure local descent, who were measured and weighed by Dr. Charles Stewart of Chrimesdale, yielded the remarkable average of 5 feet 10 inches (1744 millimeters), and 190 pounds in weight. Here the weight exceeds, though the stature falls short of, the huge proportions of the men of Balmoral in Upper Galloway, who as yet, I believe, hold the record as to stature among all tested communities in Europe."

As Beddoes places the average height of the Balmoral men at 5 ft. 10-44 in., or nearly 1790 mm., that may be taken as the average stature of any race in Europe—leaving out of consideration the exceptional cases of individuals whose height is greatly above that of their kinsmen. Probably, also, the figures just quoted represent the maximum average height of any human family. The Tehuelches of Patagonia, although long regarded as of gigantic stature, are now ascertained to possess an average male height of 5 ft. 10 in., or 1775 mm. Some individuals among them are as tall as 6 ft. 4 in., or 1830 mm., but the same thing can be said of other races. The statements made by Bourne cannot be quite ignored, but the subsequent information supplied by more accurate observers points to exaggeration on his part. He thus describes the Patagonian natives:

'In person they are large; on first sight, they appear absolutely gigantic. They are taller than any other race, even, though it is impossible to give any accurate description. The only standard of measurement I had was my own height, which is about five feet ten inches. I could stretch from the ground to the arms of many of them, and all the men were at least a head taller than myself. Their average height, therefore, is nearly six feet and a half feet, and there were specimens that were little less than seven feet high.'

1 The Giants of Patagonia: Captain Bourne's Account of his Captivity amongst the extraordinary Savages of Patagonia, London, 1858, p. 29.
It is possible that at the time of Bourne’s captivity (1850) a sub-division of the Tehuelches contained a larger proportion of tall men than can now be seen in any Patagonian tribe. His statements are very explicit, and he undoubtedly indicates a race exceeding in height a very small race, or a very small race, the Belmarchen men reported to us by Beddoes, even if some allowance is made for exaggeration on the part of Bourne. In any case, however, the alleged stature of those Patagonians is not so much above that of normal Europeans as to entitle them to be seriously spoken of as ‘giants.’ Nor is there any other Russian Macnach, 9 ft. 6 inches long, at the present day, which has a greater claim to that title.

There are, however, many individual instances of abnormal height in modern times. The case of the Russian giant Macnach, who was exhibited in London in 1806, is perhaps the most striking. Although a well-made man, and free from the physical defects which often accompany ‘giantism,’ Macnach’s stature reaches the amazing height of 9 ft. 3 in., or 2819 mm. A famous instance in the 19th cent. is that of Chang, the Chinese giant, who was 7 ft. 7 in., or 2283 mm., in height. Like Macnach, Chang was in all other respects normal, in mind and body. The same cannot be said of the 18th cent. Irish giant Magrath, whose great height (7 ft. 6 in., or 2268 mm.) was due to disease. Magrath lived only to the age of twenty-four, and he had the feeble intellect and figure associated with ‘giantism’ regarded as a disease.

In his book ‘The gigantic and Dwarfs’ (London, 1888), Edward J. Wood gives numerous cases of individuals of giant stature in the past. Thus, he refers to John Macnach, who was born on Hailes Hill, near Oxford, in 1757, who was 7 ft. 3 inches high. He lived on among the smaller races, and his portrait is preserved in the library of Brasenose College, Oxford. Then there is a painting by F. Zuccheri in Hampton Court Palace, representing a giant, the Lowen, who was a household servant of Elizabeth of England, and whose height was 7 ft. 6 inches. Contemporary with him was a Piedmontese seen by Martin del Rio at Rouen, in 1792, who was 9 feet high. In 1831, Stow records in his ‘Chronicles’ a Dutchman whose height was 7 ft. 7 inches.

‘Beasty Britannia’ refers to the giant, the Emperor Charles X., in his ‘Orphæus Antiquus’ (1689), and as a boy, he was said to have measured nearly 9 feet and a man almost, and a woman quite, 10 feet in height. The man lived within a few miles of the author’s own residence in Finsbury (Wood, p. 91). In considering the possibility of a woman quite 10 feet in height, one must keep in view the following statement: ‘The Brown Gougeus in his ‘Memorials’ tells us that giants were introduced into the British race, and that on May 10th, 1544, there was a giant in St. Martin’s-in-the-Fields (London) with, among other accompaniments, giant’s, which were in fact men on stilts’ (Wood, p. 94).

This suggests an easy explanation of the great stature of the woman referred to by Becanous, as well as of many other nominal ‘giants.’ Nevertheless, it will not explain every instance. There is no reason to suppose, for example, that John Middleton, whose portrait is preserved in Oxford, was anything else than a real giant; and, although his height was immense (9 ft. 8 in.), it is exactly paralleled by that of the existing Russian giant Macnach.

With the exception of Magrath, the giants here cited were not of the same race as any other, or of the same people as his stated people. Their great stature was not, therefore, the result of disease. To what cause was it due? The usual explanation is that such abnormal stature is merely caused in the same way as any other exceptional development in the animal or vegetable world; that is, by a favourable environment accompanying a happy combination of elementals. On the other hand, Macnach, the Tehuelches contained a larger proportion of tall men than can now be seen in any Patagonian tribe. His statements are very explicit, and he undoubtedly indicates a race exceeding in height a very small race, or a very small race, the Belmarchen men reported to us by Beddoes, even if some allowance is made for exaggeration on the part of Bourne. In any case, however, the alleged stature of those Patagonians is not so much above that of normal Europeans as to entitle them to be seriously spoken of as ‘giants.’ Nor is there any other Russian Macnach, 9 ft. 6 inches long, at the present day, which has a greater claim to that title.

There are, however, many individual instances of abnormal height in modern times. The case of the Russian giant Macnach, who was exhibited in London in 1806, is perhaps the most striking. The usual explanation is that such abnormal stature is merely caused in the same way as any other exceptional development in the animal or vegetable world; that is, by a favourable environment accompanying a
GIANTS

the common tradition among the people is that a giant with his wife lived in this isle of Hoy, who had this stone for their castle.' As the hollowed-out chamber, or bedroom, in which this giant was supposed to lie was 20 ft. long, it is obvious that the word 'giant' did not convey the idea of a person of tall stature, in the minds of the common people. A similar problem is presented by the Gaelic word fomhair, or fomhair, which J. F. Campbell and other translators of Scottish Highland tales render by the English word 'giant.' But O'Reilly, in his Irish Dictionary, defines it as 'a pirate, a sea robber, a giant.' The Irish forms of the word are fomhar, or fomnor, with plural fomnori. Sir John Mills speaks of 'the fomnor, so well known in Irish legend, which, however, does not always represent them as giants, but rather as monsters.' Mr. F. A. Band: 'I remember hearing, however, years ago, a mention made of the fombaircacht (an alternative spelling), which, without conveying any definite alliance to their stature, associated them with subterraneous places. An inundation from the neighbourhood of Kilbride, in Kerry, happened to make his bowing bow, when he was exploring some underground reefs near his house, he was warned by his father, 'to beware of the fombaircacht.'

When it is understood that the dimensions of the underground structures referred to are often so large that these men have difficulty in entering them, it will be seen that here, again, we have the idea of 'giants' whose stature did not exceed that of medium-sized men. In modern Gaelic a word fomair, (literally 'mole-man,' or 'mole-lodger') is used to denote a mole-catcher, fombaircacht signifying 'mole;' and it is not unlikely that the legends, it was a contemptuous nickname, given to a race of 'mole-men,' the builders and occupants of underground dwellings, of which numerous specimens are still extant in Ireland and Scotland. To be this it may, the foregoing references show that in Scottish and Irish tradition 'giants' are frequently noted, not for their great stature, but as being pirates, searovers, cave-dwellers, savages, and offensively-smelling people. Cf. art. CELTS, ii. 321.

That giants were regarded in some vague way as abnormal is further indicated by Teutonic references. The Old Norse óttaðma or ótjama, Swedish jätte, Anglo-Saxon sētum, Scotish stín or stín, represents a being whose attributes are only partly human. In the translations of the Scandinavian Eddas, where the jotun occupies a prominent place, its name is usually rendered by 'giant' (Lat. gigas). Like the Irish fomnor, they are associated with Teutonic buildings. Eternæ of old days, when early, was said of the underground house wherein Tristan and Isolde lay (Tristram, 5, 17). Grimms states that the jotun, 'when at rest, is good-humoured and unblamable, but when provoked, gets wild, spiteful, and violent' (i. 530). The jotun-mother, or rage of the jotun, is strongly suggestive of the 'Berserk-fury.' Grimm further points out (iv. 1411) that one passage (Isanm. 55a) describes the jotuns as pithoed beings, 'drittrinar ope, simiarum cognitus.' The Red King of Northern Scotland is similarly remembered as a savage cannibal, scarcely human. Under other names, the 'giants' of Teutonic and Scandinavian tradition are intellectually inferior to men, Gothic tan, 'giant,' being translated by Latin gigas. From many sides, therefore, there are indications that 'giants' differed from men chiefly on account of their more brutal nature, the question of stature being frequently left out of consideration.

How complex the evidence relating to giants is made clear by the data brought together by Jacob Grimm. There is no clear line to be drawn between giants and the wild hairy wood村干部, he observes in one place (ii. 553); while on another page (ii. 538) he speaks of 'a giantess or merwoman, as though these two names were synonymous. Many of his statements support the view that the giants of Europe were a primitive race that preceded the modern European.

The old giant race have to give way to agricultural man, agriculture is an eyesore to them' (4). This problem is presented by the idea of the giant race being driven out, or supplanted, by the new race, and their place taken by men, who are at first only a smaller race, but who gradually increase in number and strength, and in the end completely drive out the giants. The giants are said to have been driven out of the land, and to have given place to sowers of corn, hunters to husbandmen. Giants consider themselves the older race, yet they are driven out by the new one. The new race is called 'men,' from the old one the 'giants.'

In pointing out their similarity to the 'wild hairy wood村干部,' he further remarks (ii. 533): 'In the woods of the Ringenholm Mark are seen the stone seats of the giant folk who once lived there, and the print of their hands on the stones. In the vale of Gatan, says Echthe, (p. 117), wild men have lived within the memory of man, but the breed has died out since... They were the strongest giants. Their dwelling was an inaccessible cavern on the left bank of the Arbe, as the Lauf to the Easum. To the inhabitants of the valley they were rather friendly than otherwise, and often put a quantity of butter and milk before their house-doors. This last feature, he adds, is 'more of a piece with the habits of dwarfs and elves than of giants.'

The mention of the stone seats of those wild folk agrees well with the ascription to giants of numerous stone structures of primitive character which are found throughout Europe. The names onda bury, riordan bury, and Hanum scott, all denote giants' castles, and the Gaelic term ciosan na fuas, found in Scotland, has the same meaning. It is of much significance that such names are specially, perhaps exclusively, associated with buildings of the character known as 'cyclopean,' in which the chief features are the rudeness and size of the stones, the absence of mortar, and the use of the 'false' arch instead of the true or 'Roman' arch. The former is made by approaching the upper courses of the opposing walls together, until the space between them is narrow enough to admit of large flag-stones being superimposed. Architectures of this kind is found in Palestine, Greece, Malta,1 Sardinia, the Balearic Isles, and Scotland, its most striking manifestation being displayed in the three localities last named, in the form of the massive circular towers known respectively as merpeople, lighthouse, and Brodick. No fewer than 3000 of these towers are known to have existed in Sardinia, and 500 in Scotland. Besides those towers there are unnumbered megalithic structures above and below ground, of the same general order, not only in the localities just indicated, but throughout the Continent of Europe and in the British Isles. These are known by various names. The remarkable cairns, akin to dolmen, which are found in the province of Drenthe, in the Netherlands, are called Hanumbeuten, or Hanumbedden, while the similar structures in North Germany are known as 'Giants' Graves.' There is great difference of opinion as to the age of these structures, some being known within the Christian era, and others assigning to them a much greater antiquity. The cyclopean buildings in the Levantine region are believed to date from 3000 B.C., and on the other hand, the brochs of Scotland are understood to have been built only ten or fifteen centuries ago. Both inferences may be correct, assuming that the more modern structures were built by the modified descendants of a more primitive race. Perhaps the most important point, in connexion with the present theme, is that in Greece, Sardinia, Germany, and the British Isles—presumably elsewhere—the builders of these rude stone structures are often, in popular tradition, regarded as giants. That word is

not invariably held to denote people of great stature is shown by the fact that some traditions speak of them as dwarfs.

Nevertheless, there is no doubt that the prevailing opinion with regard to giants is that they were beings of immense stature. It is possible that the term "giants" might have given rise to this conception. If a long mound of 15 or 20 feet once became known as a giant's grave, then the inevitable deduction would be that a race of men 15 or 20 feet high once existed. Out of this, beings of much greater stature and power might be evolved, in the popular imagination. From whatever cause, the existence of beings of great stature is called "giants," was once an article of faith in folklore. Innumerable instances of this might be adduced.

'I am told,' says Grimm (U. 548), 'of two giant con-

nades on opposite sides of a river, and holding converse. In Osterrichtsholz, near Tumbo-

to, there was a giant named Funam, who, when he wished to speak to his comrade Oden at Hermanns, two or three miles off, he went up a neighbouring hill, and from which you can see all over Tumo. . . . Two horses, one near the bottom, the other on top, had but one axe between them; but when the Eberstein hills was going to work, he hooted across to Homborg four miles off, and, without further ado or ado, threw the axe over. . . . The hills of the Brunsberg and Wittberg, between Godesheim and Assenheim, played at bows together across the Weser.'

The same kind of story is found in other countries. In R. Hunt's Popular Romances of the West of England (London, 1865, 1881), he shows that the Cornish people have parallel traditions.

'Some told me,' says Grimm (U. 143), 'that the giants on the Mount and the giant on Treveoban Hill were very friendly. They had only one cobbling-hammer between them, and they would throw from one to the other, as either required it.'

This is a Celtic tradition, of the Cymric family. Gaelic tradition in Ireland, Man, and Scotland tells us of similar beings. Improbable as these stories may be, they are true, and impossible beings are wholly the creatures of popular fancy, or have been gradually evolved from a race of beings of real stature, a problem that remains to be solved.

Although certain localities have received special consideration in these remarks, it is not to be supposed that the question can be limited to those regions, or to Europe; for it belongs practically to all countries and all peoples. Hebrew references, for example, are in accord with those of Europe.

Giants in Hebrew story are variously known as Gibeon, Nephilim, Repham, Anakim, Emim, and Zamzummim. The first of these terms, Gibeon, corresponds to the word 'giant' in the Septuagint, and is held to mean nothing more than 'strong men,' 'heroes,' or 'warriors.' Nephilim is a word of wholly uncertain signification. It is applied to an antediluvian race in the well-known passage (Ge 6:4), 'there were giants in the earth in those days; the word is retained as Nephilim in RV. Most of the English translations have 'giants,' but John Rogers (1537) merely uses 'tyrants.' With regard to the Rephaim, or Raphaim, they are referred to as the descendants of the Rephaim, a Philistine of Gath (2 S. 21:20). It is not improbable that this Rapha is merely the eponym of the race. During the Philistine war in the reign of King David, the Rephaim figure prominently, and indeed they are included under the term 'Philistines.' It is recorded that in a battle fought between the Israelites and the Philistines at Gezer, Sibbechai the Hushathite slew a giant of the Rephaim, 'and they were numbered among the subdued.' Again, in a subsequent campaign, Elhanan the son of Jair slew Lahmi, the brother of Goliath the Gittite, 'the staff of whose spear was like a weaver's beam.' In a third war there figured another of the Rephaim, 'a man of great stature,' distinguished by the peculiarity of having six fingers on each hand and six toes on each foot, who was slain by Jonathan, the son of Shimea,

David's brother. These three, Sippai, Lahmi, and the unnamed warrior just described, are all said to have been born in the land of the Rephaim in Gath. 'And they fell by the hand of David, and by the hand of his servants' (1 Ch 20:9). David's famous encounter with Goliath had, of course, some influence.

On more than one occasion 'the Valley of the Rephaim,' on the Philistine border, to the west of Jerusalem, was the scene of conflict (2 S. 21:20). This seems to be the 'valley of the giants,' which is referred to in Joshua (15:20-21 AV). 'The land of the Philistines and of the Rephaim' (Jos 17:11), an interesting connotation of the names, seen again in Genesis (15:16), indicates the more northern territories of Geissle and Bashan. The reference, however, apparently signifies nothing more than that the Philistines were neighbours to the Rephaim. But undoubted kinship is asserted in the mention of the Emim who preceded the Rephaim on the east side of the Dead Sea; for it is stated that 'the Emim dwelt therein a long time; a people great, and many, and tall, as the Anakim; these are accounted Rephaim, as the Anakim; but the Moabites call them Emim' (De 2:10). This statement is repeated, with some amplification, in the same chapter (v. 11), where it is said of Ar of Moab: 'That also is accounted a land of Rephaim; Rephaim dwelt therein in old time; but the Ammonites call them Zamzummim; a people great, and many, and tall, as the Anakim; but the Lord destroyed them before them; and they succeeded them, and dwelt in their stead.' In these references (Dt 2) the AV always renders Rephaim by 'giants.' Thus we have the names of Emim, Anakim, and Zamzummim (or Ezem) variously given to tribes of the race of Rephaim, or giants, formerly inhabiting Southern Palestine, the Anakim occupying territory on the west of the Dead Sea, and the Emim or Zamzummim inhabiting Ar of Moab, on its eastern borders.

The last refuge of the Rephaim was N.E. Palestine, in the lands of Bashan. At the time of the Israelite conquest under the leadership of Moses, Bashan was called 'the land of giants' (Dt 3:9), and the latest representative of Rephaim sovereignty was Og, king of Bashan: 'for only Og king of Bashan remained of the remnant of the Rephaim.' The great stature attributed to him is demonstrated in the account of his body being a bedstead of iron (is it not in Rabbah of the children of Ammon?), nine cubits was the length thereof, and four cubits the breadth of it, after the end of a man' (Dt 3:11). It is worth noting that these dimensions are consistent with the height ascribed to Goliath of Gath, which was about 11 feet, or 6 cubits 1 span (1 S. 17), and that consequently the Rephaim, whether in Bashan or in Philistia, were believed to be of that immense stature. In passing, it may also be remarked that the iron bedstead of the king of the Rephaim, and the iron chariots with which their probable kindred are credited (Jos 17:12), point to a civilization superior to that of the Israelites. The same conclusion may be made from the statement that the Anakim were, as a nation, 'greater and mightier than the Israelites, having cities great and fenced up to heaven' (Dt 2:10). The armour of the Rephaim—"the breastplate of Goliath—happened to have been born into the champion of the Rephaim and his Jewish opponent, who was similarly equipped. Nevertheless, the Israelites regarded their giant foes as
GIANTS (Greek and Roman).—The English word 'giant' is derived from the Greek γίγας, pl. γίγαντες; and γίγαντας was the name of a certain mythical group of beings. There is no mention of Gigantes or their exploits in the Odyssey, the word occurs three times. 

(1) In Od. vii. 59 the king and queen of the Phalakae descended from a daughter of Eurymedon, who once was king of the haughty Giants; but he brought his intoxicated people in a panic to their downfall. 

(2) In Od. xiv. 347, the genealogy was presumably invented as a by the poet; it serves to indicate that his Phalakae belong to the same order of being as the Gigantes. The name Byrgymede ("wide-ruling"), here assigned to the Gigas-king, also looks like an invention of the narrator. The passing mention of the "wickedness" and "destruction" of the Gigantes implies that a story which had something at least in common with the later Gigantomachia was already known to the poet and his audience. 

(3) In Ov. Met. x. 150 the Leucarce, a tribe of man-eating savage beings, are classified among the Giants.

To the poet of the Odyssey the Gigantes were a tribe dwelling upon earth in the distant past; they were mortals, but surpassed men in size and strength, and stood in close relation to the gods; they were wild and savage in their ways, and, having committed some great wickedness, they were exterminated. 

In the Hesiodic Theogony (185), we are told the story of the Gigantes. When Uranos (Sky) was mutilated by his son Kronos, Gaia (Earth), impregnated by the blood-drops which fell upon her from the wound, gave birth to the Erinyes, (2) the great Gigantes, flashing in armour, holding long spears in their hands, and (3) the Melian Nymphs (i.e. nymphs of the ash-tree). The three appeared, it seems, in the very presence of the god, and were driven by him from the earth. Since from this time the human blood stream has been defiled by the blood of the gods (see art. Eumenides, Erinyes); the ash-tree grows out of the earth; and the Gigantes also sprang directly from the earth. The connexion of their origin with the mutilation of Uranos is, no doubt, a piece of deliberate systematization. But the notion that the Gigantes were the sons of Earth stands on firmer ground, and is based on primitive folk-lore, and forms part of the connoted purity of the term Gigantes throughout all later literature. 

The notion is allied to a tradition as to the origin of man which was widely current among the Greeks, namely, that the first human generation grew out of the soil, like vegetables (cf. Paus. v. n. xii. 6). This tradition was largely overshadowed by the prevailing tendency to trace man's first ancestors to some divine ancestor; but the belief persisted that at least some of the Greek races were staked-human, i.e. that their first ancestors had sprung from the soil; and the origin of the Gigantes was explained in the same way as that of other primitive races. A parallel instance may be seen in the legend of the Thessalian Sperchios, the man who sprang out of the earth (fully equipped for battle, like the Hesiodic Gigantes) from the dragon's teeth sown by Kadmos; and a variant of the same legend occurs in the story of Jason. 

The Gigantes were, in other words, men whose birth was suitable to the Gigantes for another reason also, when they came to be identified with personifications of subterranean Nature-forces: but there is no evidence that they were thus regarded in Hesiod's time.

In the prelude of the Theogony (50) the Muses are described as singing first the birth of the gods and the rule of Zeus, and, next to the birth of men and of the mighty Gigantes. The poet here distinguishes the Gigantes from the Giants, as if he did not think of them to be a species which had once dwelt on the earth, but had been long extinct; so that his notion of them is comparable with that of the 'Race of Bronze' and Iron (see art. Iron, p. 143 ff.)—a race of fierce warriors 'sprung from ash-trees,' who occupied the earth before the age of the Homeric heroes, and perished by mutual slaughter. 

So far, we have found no mention of the Gigantomachia ("battle of the Gigantes"), with the exception of the doubtful allusion in the Odyssey, vii. 99 ff. But in all later times, the interest in the Gigantes centred in this battle. The story that the Gigantes made war against the gods, and were destroyed in battle by their divine confreres, is told in some of the later Epic poems which have perished; but the earliest positive evidence of its existence appears in certain vase-paintings of about 600 B.C. Xenophanes (c. 575-500 B.C.) speaks of the battles of the Titans and the Gigantes, and tales of the Centaurs, as familiar themes; frequent references to the Gigantomachia occur in the poets from Pindar onwards; and its popularity is shown by the numerous vases on which it is depicted. But the first continuous and detailed narrative of the battle, to us, is to be found in the compendium of mythology which passes under the name of Apollodorus, and, in its present form, dates perhaps from the 1st or 2nd cent. A.D. That narrative (Apoll. i. vi. 1) runs as follows: 

Earth, in her indignation at the overthrow of the Titans, gave birth to the Gigantes; their father was Uranos. They were of huge bulk, of irresistible strength, and of frightful aspect; their hair and beards were long and thick, and they had scaly serpent-coats in place of legs. They were produced, according to some accounts, in Phingal, according to others, in Pallen. They hurled rocks and blazing tree-trunks against heaven. Emicent above the rest were Pheriphrygus and Alkyoneus. The Gigantes was immortal as long as he bought in the land of his birth. (He had driven off the cows of the Sun from Erythia.) Now the giants had been told by an oracle that the Gigantes could not be slain by gods, but would meet their death if a mortal joined in the fight against them. It happened that, informed of this, was seeking a magic herb, by which the Gigantes might be secured against death, as a part of his mode of life. But Zeus, with homeward Alka, and to withdraw his flight, gathered the herb before the mortal could find it, and, by the agency of Athena, summoned the mortal Herakles to take part in the fight. Herakles first shot a cloud of arrows at the Gigantes; the latter were put to flight. 

1 The Greeks accordingly assumed the name Gigantes to be derived from γίγας ("earth") and γενή ("birth"), and this etymology is inadmissible. A derivation from the root of γένος is possible, but has not been proved of absolute ground, and that the ash-tree was, consequently, associated with bloodshed, may help to account for the juxtaposition. 

VOL. VI.—13
down Alkyoneus with an arrow; and, as he revived through contact with Hera, the suggestion of Alkyoneus, as it was his cost, dragged him away out of Pallene, whereupon he died. Porphyrion assailed Herakles and Hera; but Zeus caused him to be killed by the lightning of Hera, and, when he sought to do her violence, she cried for help; whereupon Zeus struck him with a thunderbolt. Then Herakles killed him with his arrows. Reptalius was hit in the left eye by an arrow shot by Apollo, and in the right by an arrow shot by Hera. Dicynus killed Bryces with his Ixion; Nereus killed Lycus [with his Ixion]; and Reptalius struck down Alkyoneus [with his Ixion]. Poseidon, through the sea, Poseidon, had reached the land of Koé, when Poseidon broke off a piece of the land and flung it upon him; the little island called Niýros is the fragment which Poseidon flung. Hermes, wearing in the battle the cap of Hades (which makes its wearer invisible), saw Hippolytos; Artemis slew [Aigisthos]; the Moera, [fighting 1] with claws of brass, killed Agamemnon. Zeus struck and dashed with thunderbolts the rest of the Gigantes; and Herakles shot them all with his arrows as they were dying.

Here we have the fully developed story of the Gigantomachia—or, rather, the dry bones of it, stripped of the poetic flesh and blood. How did this story arise? The narrative is built up of discrete elements; most of the several incidents were current separately before they were included in the Gigantomachia. Thus, the combat of Herakles with Alkyoneus was known to Pindar (Isthm. v. 38, Nem. iv. 27) as an incident belonging to the story of Herakles, but unconnected with the battle of the Gigantes; his name has not yet become a Gigas; but in a lyric fragment of later date (Bergk, ii. 719), Alkyoneus is called 'the most of the Gigantes.' For instance, Porphyrion was the son of Aethra, two monstrous brothers, named Otoe and Ephialtes, who, while still beardless boys, made war on the immortals; they strove to pile Mount Ossa on Olympia, but their father, Erechtheus, cut them off at the foot of the mountain. They had a hundred hands and fifty heads. Their father, Uranos, horrified at their threatening aspect, imprisoned them beneath the earth; but, when Zeus was engaged in war with the Titaes, he was told by Gaia and the Erinyes that one of the two brothers would win him victory. Accordingly, he released Briares and his brothers from their unmerciful prison, and made a compact with them; and so, in the crisis of the fight, the monsters struck in on the side of Zeus and his adherents, and won the day for them. They hurled three hundred rocks at ones with their stout hands, and darkened the air with missiles, and sent the Titaes down to Tartare, and bound them in grievous bonds; and there (keeping guard over the imprisoned Titaes) dwelt Gyge, Kottos, and Briares, trusty warders in the service of Zeus.

These monsters seem to be personifications of the forces of storm and earthquake (cf. Earth, Earth-gods, § 4). Their abode is in the depths of the earth, in which they were imprisoned from their birth; and Gaia, they were hoped, saw that in the war with Uranos, and then return to their home in the abyss. They side with the supreme god; yet a suggestion that they were by nature enemies of heaven appears in the fact that the original name of one of them is Zeus; and ultimately a doublet of Zeus) imprisoned them in

1 It occurs (in the form Hylas) as the name of one of the Gigantes on the vase of Oesa. The word Hylas usually means 'seawater,' and was used by the Greeks in the sense of 'nightmares.'
GIANTS (Greek and Roman)

the depths. Storm and earthquake, in fact, admit of two different interpretations. They are clearly manifestations of conflict between superhuman combatants; but are these terrible forces brought about by the Giants’ battle against the ruling god, or by the ruling god himself against his enemies?

In the Homeric story of the Hundred-handed Brothers, it is the latter notion that happens to have prevailed.

In the Iliad also (i. 408) Briareus appears as an ally of Zeus.

Here, Poseidon, and Athena once sought to put Zeus in bonds; while the hundred-armed, hand and foot. From his shoulders rose a hundred heads with locking tongues and fire-flashing eyes; and from those heads there issued sounds of roaring lion and prying hound, or piercing hisses; and many were the heads of gods and men; but Zeus struck the darts of Athena and the earth ran like molten metal. Thus did Zeus hurl him down to Tartaro. And from Typhon spring the evil windstorms which wreck ships at sea, and ruin the works of men on land.

Here the narrator is clearly conscious of the meaning of the Nature-myth. Typhon is the fire-demon whose work is seen in panic eruptions, and in the blasting winds which were thought to be of similar origin; and the description of the conflict is probably based on accounts of some eruption of Mount Etna, transmitted by the Greek colonists of Sicily.

The resemblance of Typhon’s fight to the various combats included in the Gigantomachia (some of which at least had arisen out of similar Nature-myths) was sufficiently close to cause Typhon also to be associated with the Giants; and through assimilation to the abode of monsters the shape and aspect of the Giants underwent a change. In the earlier form of the myth (Hes. Thesp.) they are armed as depicted on the vases, they are indistinguishable in appearance from civilized combatants. Later, they appear in the form of savage men, clothed in beast-skins, and bearing weapons and tree-trunks in place of weapons. But from the time of Alexander the Great they commonly take the shape described in Apollodorus: head, arms, and trunk are human, but in place of legs they have a pair of serpent-coils. (The serpent form was the more appropriate, because the snake was among the Greeks a symbol of the earth and of the powers beneath the earth.) They are depicted with wings, after the analogy of the wind-gods—which is again a sign of their assimilation to Typhon, the father of wind-storms.

Moreover, it was probably through their association with Typhon that the Giants came to be specially connected with volcanic forces; and this notion led to fresh localization. The battle was commonly placed in Phlegra. But Phlegra (’Land of burning’) was a mythical land unknown to geography, the birthplace of the various myths which entered into the composite picture had its own original site, one in Arcadia, another in Attica, a third in Euboea, and so on; but a certain consensus arose in favour of Pallene, the westernmost of the three Chalkidic promontories on the north coast of the Ægean. We may suppose that the growing myth was carried to that region by the colonists from Chalkis in Euboea who settled there. Confusions between similar names may have helped to fix the site of the battle in the Chalkidic Pallene. (A personage named Pallas, who came to be included among the Giants, was known to local tradition in the Arcadian Pallasion, in the Achaean Pallene near Sikyon, and in the Attic district of Pallene.) Moreover, the place was well situated for an assault on Olympus, which stood in full view across the Gulf of Salonika. Thus it came about that, at least as early as the 7th century (vii 150), Phlegra, the scene of the Gigantomachia, was identified with Pallene.

There are no conspicuous signs of volcanic action in Pallene. But, through the westward colonization...
tion, the Greeks became familiar with two volcanic regions, the neighbourhoods of Etna and Vesuvius; and the settlers accounted for the outbreaks of subterranean fire by the fancy that some enemy of the gods lay hid alive beneath the soil. Thus, in the Hesiodic Theogony, Typhoeus appears to be already located at Etna. But the imprisoned monster might equally well bear other names, as was often with one or other of the Gigantes; hence comes, for instance, the statement in Apollodorus that Athens threw the island of Sicily on her opponent Enkelados. The volcanic district of the Campanian coast was, for like reasons, regarded as the scene of the Gigantomachia, and the name of Phlegra was accordingly applied to it (Polyb. iii. 37. i.).

Again, after Alexander’s conquests, the Greek emigrants carried their myths with them to fresh regions, and located many of them in their new settlements in the East. Thus Syrian Antioch, for instance, developed a local Gigantomachia of its own.

A precedent in the Greek-Syrian legend will serve to illustrate the process of myth-making. The name of the city of Damascus sounded to Greek ears as if it were derived from the Gr. *daemos* (Demeter), and was therefore invented a Gigas named Askos, who was slain by Zeus or Dionysus, and was afterwards deified and made the patron of Damascus (Curt. de Bibl. Sid. 13, ed. Bekker, Berlin, 1824–25; Dict. Myth., s.v. Damascus).

The popularity of the Gigantomachia was increased by the readiness with which the story lent itself to moral and political applications; for it might be made the type of any victory won by the forces of order and legitimate authority in conflict with lawless violence. A good example of such applications may be seen in the first Pythian Ode of Pindar. Addressing Hiero, the monarch of Syracuse, the poet deals with the story of Typhon, and in his hands the myth becomes a parable, in which Zeus stands for harmony, and Typhon for discord. Hiero is the human Zeus, whose life-task is to keep the monster down, and to keep him safely bound; that is, to maintain peace and prosperity against unruly factions within his realm; to crush the foreign foes who threatened Western Hellenism—the barbarous Carthaginians and Etruscans—and, further (so the poet hints), to see to it that within his own soul, too, the forces of order and harmony prevail; else, he whom men now praise as a king might come to find them curbing him as a tyrant.

Pindar elsewhere (Pyth. viii. 16) couples Typhon with the king of the Gigantes. Under whichever name the enemies of the gods are spoken of, the significance of the story is the same; and it was with some such meaning that the myth of the Gigantes was repeatedly employed in plastic art. Thus the Megarians (c. 550 B.C.) sculptured the Gigantomachia on the treasure-house which they dedicated at Olympia as a thank-offering for a victory over their neighbours of Corinth. At Athens, before the Persian invasion, the same subject was already represented in the sculptures of the earlier temple of Athens on the Akropolis; after the Persian war, it was carved on the metopes of the Parthenon, and on the shield of Pheidias’ colossal statue of Athene; and it was depicted in the embroideries of the robe which the Athenians presented to the goddesses of their city at each Panathenaic festival.

The Gigantomachia was an appropriate subject for an offering to the warlike goddess, who was prominent in the story of the fight. At the same time, the Gigantes might be taken to represent the Persian enemy, and the battle-scene served to symbolize the victories won against barbarism and impious presumption in the fights of Marathon and Salamis. A Gigantomachia was also the sculptural decoration of the temple of Apollo at Delphi (Eurip. Ifig. 306 f.).

The irritation of Gallic horde into northern Greece the Asia Minor expedition of C. Tiberius Crassus (65 B.C.) got a fresh illustration of the story. Kaillimachos (Hymn. Del. 174) speaks of the Gauls as ‘late-born Titans’ (i.e. Gigantes) from the furthest West.’ Attalus I. of Pergamum (Paus. i. 22. 2) sets up, after his great victory over the Gauls, set up at Athens four groups of sculpture, representing respectively the battle he had won, the battle of Marathon, the Gigantomachia, and the fight of the Athenians against the Amazons; thus coupling his own victory with that of Marathon, and placing beside each of them a mythical prototype. So in the Battle of the Gigantes was the subject chosen for the decoration of the monument erected on the citadel of Pergamum by a successor of Attalus I. (c. 180 B.C.) to commemorate the defeat of the barbarous invaders by the forces of Hellenic civilization. This monument took the shape of a great altar; and along the sides of the rectangular block of building which it formed there ran a continuous band of sculpture, over 400 feet in length, in which all the chief deities of the Greek Pantheon were represented, each engaged in combat with some special adversary. Of the Gigantes, who are falling stricken before the victorious gods, or offering hopeless resistance, some are in wholly human shape, and might be taken for idealized portraits of Gallic combatants; some are men with serpent-legs; some have wings springing from their shoulders; and here and there appears some more bestial monster.

References to the Gigantomachia are frequent in Latin poetry. Horace (Od. iii. 4. 62 ff., ii. xii. 5 ff.) found in it a type of the work accomplished by Augustus in suppressing the anarchy of the Civil Wars, and establishing the peace and order of the Roman Empire. Ovid began a poem on the subject in his youth (Amor. ii. 11). In the last song of Pagan literature, Nonnos, in his Dionysiaka, makes numerous references to the myth, and (bk. 48) introduces an episode of his own invention, in which Dionysos single-handed kills the whole tribe of Gigantes, but refrains from destroying them, in order that something may be left for Zeus to do; Claudian (c. A.D. 440) wrote a Latin poem on the Gigantomachia, the first 129 lines of which are extant; and a portion of a Greek poem on the same subject has also come down to us under the name of Claudian.

The Cyclopes (Kyklopes), as described in the Odyssey, are giants in the sense in which the word ‘giant’ is used in our nursery tales; but they were not called Gigantes by the Greeks. The story of the encounter of Odysseus with the wounding ogre Polyphemus is told in Od. ix. Polyphemus, a son of Poseidon and a sea-nymph (Od. i. 71), is one of a tribe of wild men called Kyklopes, who dwell on the coast of some unspecified land in the western seas. The Kyklopes are housed in caves; they do not cultivate the soil, but live on the natural products of the earth, and the milk of their flocks of sheep and goats. They are ‘a lawless folk;’ they have no gatherings for council; each lives apart, ‘giving law to his children and wives,’ and ‘they rock not one of another.’ So far, the poet might be describing a tribe of savages (cf. Od. vi. 5, where we are told that the Phaeacians migrated to Scheria); but in their earlier abode they suffered from the raids of the Kyklopes, ‘over-bearing men, who used to harry them.’ But Polyphemus is distinguished from ordinary men
by his huge bulk and strength (he can lift a rock which could not be moved by two- and twenty wagons), and it is implied that in place of two eyes he has a single eye in his forehead.

The Homeric narrative of the Kyklopes persists through all later Greek and Roman literature; e.g., Euripides adheres to it closely in his satyric drama of the Kyklopes. In Homer's time the abode of these Kyklopes was localized on the coast of Sicily at the foot of Etna (Eur. *Kyk. 20*; Thuc. vi. 2). A later addition to the tale of Polyphemus was the story of his love of the beautiful Galatia, which was told in a poem of Philonoeus (c. 386 B.C.), and may have been invented by that poet.

But the name Kyklopes was also used in a different sense, which first occurs in the Hesiodic *Theogonia*. The Kyklopes there spoken of are three sons of Uranus and Gaia, born after the twelve Titans, and before the three hundred-handed Brothers. The three Kyklopes are named Brontes ("Thunder"), Steropes ("Lightning"), and Arges ("Flash," or "Flashy Thunderbolt"); and they gave Zeus the thunder, and made for him the thunderbolt. They were like to the gods, except in this, that each of them had a single eye in the middle of his forehead. They had mighty strength, and were skilled in handiwork (Theog. 130-146). Those parts of the narrative which have to do with the Kyklopes are somewhat obscure, but the meaning appears to be that they were imprisoned beneath the earth by their father, Uranus (ib. 154 ff.), and that Zeus, when about to fight the Titans, released them from their bonds, and they, in gratitude, *gave him thunder, thunderbolt, and lightning* (501-506). Armed in this fashion, Zeus was victorious against the Titans (506-512). In post-in, in gratitude for their services, Zeus *bestowed on Poseidon the Isthmus of Corinth* (Paus. ii. 2). The Kyklopes were thus transformed into powerful deities, and they were accorded a prominent role in the religious and cultural life of ancient Greece.

The Homeric narrative of the Titanomachia seems to have been constructed by interweaving two distinct versions of the story. In one of the two, Zeus wins his victory over the Titans with the help of the hundred-handed Brothers; in the other, he owes it to the lightning-weapons with which he is provided by the Kyklopes.

The Hesiodic Kyklopes have nothing in common with the Kyklopes of the *Odyssey*, except that they are one-eyed. They are not men, but immortal; they are beings of the same order as the Thunderers, and they stand in the same relationship to Zeus as the Thunderers. It is probable that they were originally demons of the thunderstorm, who were *enraged* by Zeus and defeated by him. In post-in, in gratitude for their services, Zeus bestowed on Poseidon the Isthmus of Corinth (Paus. ii. 2). The Kyklopes to whom sacrifices were offered on an altar in or near the sanctuary of Poseidon at the Isthmus of Corinth (Paus. ii. 2) were presumably storm-demons of this kind.

The Homeric conception of the Kyklopes survived in later literature side by side with the different conception of them which is presented in the *Odyssey*. As forgers of thunderbolts, they were associated with Hephaestus, the metal-worker of the gods (Orph. Theog. fr. 92; Abel), and were described by Alexandrian and Roman poets as workers employed in his service (Kallim. *Hymnus a Artemis*, 48); and the smithy in which they worked was located in some volcano (Lipara *Kallim. l.c.); an island near Lipara (Verg. *Aen.* vii. 418 ff.); Etna (Verg. *Georg.* iv. 173). The immortal and cunning-makers of the Homeric *Theogonia* seem to be confused with the mortal savages of the *Odyssey* in the story that the Kyklopes were killed by Apollo, who was angered with them because they had supplied Zeus with the thunderbolt with which he slew Apollo's son Asklepios (Hes. *Theog.* fr. 47; Gotting; Therskydes, schol. Eur. *Adv.* 1; Apollod. iii. 4).

The Kyklopes were also spoken of as the builders of certain ancient fortress-walls, especially those of Tiryns, Mykenai, and Argos (Pindar, fr. 169; Perg. *Eur. Herc.* Par. 15, 244; *Ib. Aut.* 1600; Strabo, viii. 372; Paus. ii. 26). As the walls of Tiryns were constructed of huge blocks of stone, it was natural to assume that their builders were beings possessed of more human strength; and the notion that these builders were the Kyklopes may have been suggested either by the Homeric narrative, in which the Kyklopes Poliphemos heaves vast masses of rock, or by the Homeric conception of the Kyklopes as skilled artificers.

The origin of the name Kyklopes is unknown. The Greek word *kyklopes* might mean "round-eyed" (it was used by Parmenides as an epithet of the moon), but this meaning is not specifically appropriate either to the one-eyed Poliphemos of the *Odyssey* or to the one-eyed or the Homeric *Hesiod*. As to the notion of a being with one eye in his forehead, compare the description given by Pausanias (ii. xxiv. 8) of an old statue of Zeus in the citadel of Argos, which had a third eye in the forehead. This may have been a statue of a lightning-god; and it is possible that the god whom it represented may have been originally called 'Kyklop', though in later times it was supposed to be a statue of Zeus. The 'one-eyed Arimaspai' of Aristaeas (Apoll. *Prom.* .50; Herod. iv. 27) are comparable rather with the Kyklopes of the *Odyssey*.

It may be conjectured that the name Kyklopes was first used to signify demons of the thunderstorm, and that the power of the *Odysseus* (as in the earlier story-teller whom he followed), working into his narrative an old tale of an ogre outwitted and blinded by a bold and cunning hero, made the ogre a member of the same tribe of savages, and transferred to this tribe the name of the storm-demons.

Among the many representations of the Gigantomachia in art, the following are specially noteworthy: statue from Cnossus, Louvre (Overbeck, *Kunstgraph.* Atlas, Leipzig, 1875-81, tav. iv. 8); Mazarin Treasury at the Louvre; portrait of a Gigantomachia, Berlin, 1907, pl. 5-10, and Tafelband iii. (fig. lii.); Venetian painting of Aristophanes, Berlin, 1911 (Berger, *Gr. und d. Thronfall.* Berlin, iii. 8; Overbeck, v. 8); Amphora from Minoic Labyrinth, Munich, *Monuments press.* Paris, 1876, pl. 1; *JHS* iii. 349; altar-treise of Pergamon, Berlin (Puchstein, *Bemerkungen der Bildwerke aus Pergamon*, 2, 3, 1896); Pergamon-Museum in Photographien, do., 1898; Fuentrell-Dallongue, *Pergamon*, Paris, 1890, pl. 12.

W. BOOTT.

**GIFTS (Primitive and Savage).**—I. General conception among uncivilised peoples as to the nature of the transaction of giving.—(1) it has commonly been assumed that the 'presents' of savages and barbarians are the outcome of the same feelings and intentions as those of the modern man. Our act in giving is (in theory, at all events) an act of spontaneous bounty without thought of a return. It springs from good-will, or generosity, or gratitude, or sympathy. But we are a practical, selfish and sentimental gift is he absolutely ignorant.1

(2) Of course, there are exceptions, real or apparent, to be found.

GIFTS (Primitive and Savage)

Thus Parry tells us that on one occasion he received a present from a grateful Eskimo, who looked for nothing in return although the gift was the habitual practice of his people; and Howitt says of the Dieri that they made presents not for mutual utility but to preserve a friendly intercourse and save the life of one of their members. Finlay states expressly of natives on the east coast of Cape York that they expected no return for the presents of food and water, but that they gave them to strangers. Among the Bawo and Bapuk, the donor can demand a counter-gift only if it is greater than the recipient's. Among the Bagoes and Abyneeans, a gift called masjat is given by the female and takes the latter is given to a relative impoverished or ruined by war, on condition that the donor may recover it if he falls on evil days, or if the recipient revives his position. Again, it is not unusual for a tribe on the occasion of a visit to a friendly tribe to make presents; and of this we have an instance in the gift-dance of the Wundj. But it is to be kept in view that the gift-dancers receive similar gifts when the visit is returned.

(3) Further, it is to be observed that amongst many peoples—the Yaghan of Cape Horn, for example, and some of the natives of North Queensland, the distributor, in sharing food, keeps little or nothing for himself; and it is a commonplace that the rudest savage is often profuse in his hospitality, which frequently includes a parting gift to his guest, it may be in the form of provisions for his journey (see § 9 below), and art. STRANGERS. But it does not follow that such conduct is due to a spirit of usurious liberality. For, where the supply of foods is abundant, and procurable only by the joint exertions of the community, it is not unnatural that he who has a superfluity will give, on the understanding that he will receive a return which requires no exertion, and where there is no provision for public entertainment, to travel, especially if the country is insecure, would be highly dangerous, if not impossible, were it not for a hospitality based upon the experience that 'he who is the host to-day may be the guest tomorrow.'

(4) In the vast majority of instances, however, the gift is given on the understanding or, at all events, in the expectation that the recipient will make a return, either by giving something, or by doing or abstaining from doing something.

2. Return in the form of a material thing.—(1) The New Zealander sometimes gave away every article which he possessed; but he always expected an equivalent, and frequently, like the natives of Tahiti, dropped a hint of what he wanted in return. The Yaghan are ready to share what they have with others. They desire to possess in

determined by purely commercial considerations. See below, p. 82. (1)

g. Return consisting of an act or of an abstention from acting.—(1) We come now to the second class of instances—those, namely, in which the recipient makes a return, not by giving something, but by doing or abstaining from doing something. It is stated to be ‘the universal custom of the East for none to present himself before a superior, more especially the king, without making a present;’ 2 for will offerings were brought to the chief-men of old Germany; 3 and a similar practice prevailed in Mexico, and among the Chibchas, and has been observed in Tahiti and Fiji, 4 in New Caledonia, 5 among the Mombutsu, 6 and in Sumatra. 7 On the Lucalla, each district from which representatives attend the fair must give a present to the chief within whose territory it is held. 8 Very frequently the protection of a king or a headman, his permission to enter the country, to trade within it, to leave it, must be purchased with gifts (see art. STRANGERS); and it has been observed that the stranger may have less to suffer from beggars in a despotic than in a republican country, it being presumed that on his first arrival he had satisfied the greatest beggar of all—namely, the king. 9

It may be noted by the way, that of the presents, of which the original purpose was to secure the protectorate of the foreigner, many less in course of time their voluntary character. In Fiji, forced presents were made to nurses by the under-nurses; 10 and in New Zealand, 11 and among certain Kaffir tribes, 12 chiefs who kept a sitting place to receive large presents from their under-chiefs, the revenue they derive being really a tax. 13 Spencer points out that, where the political head assumes universal ownership, he recompenses his subordinates for giving them gifts. 14 Thus, liberality is expected from the chief; so, that, especially the Aborigines, for example, he must give what he has, even when asked for the garment on his back. 15 ‘We still have in vails and Christmas-boxes to servants, etc., the remains of a system under which fixed remuneration was paid out by gift—a system itself sequel upon the earlier system under which gratuities formed the only remuneration.’ 16 The system to which Spencer alludes is in full force in the East. An Oriental expects not only to be paid for his services at the stipulated rate, but to receive a gift on leaving his employer; and this expectation prevails among persons in all ranks of life.

(2) No one consults a prophet, 17 or a priest or priestess, 18 without giving presents; and, in New Guinea, the Toarip tribe members obtain the prayers of the sorcerous by means of gifts. 19 If beggars are not growing well, the Murray Islander takes some

of them as a gift to the sokele, who makes a charm to ensure a plentiful crop; and presents are given to the men on a buffalo hunt in return for their skill in hunting the

nick; and, if the latter dies, in ascertaining whose witchcraft slew him. If he fails to cure, he must return the gift. 5

(2) Often the purpose of the gift is to procure the abandonment of rights. Among the Jekris, Soboas, and Ijos, the son-in-law gives his father-in-law a desk, 6 (i.e. a present) on the birth of the first child; while, among the Be-Yaka, on a child's birth, the chief of the mother's village gives a gift of fowls to the father; and, as soon as it can walk, it is sent to the chief's village, to which it legally belongs, and from which the father cannot even purchase it. 7 Again, there are cases in which the bridgegroom is resisted, as he meets the bride, by his own kimmen, until he gives them something, and cases in which the bride refuses to enter the bridegroom's house until she has received a present from her friends. Sometimes a present is given by the bridegroom to his mother-in-law, to signify that the bride is thenceforth separated from the home of her girlhood; 8 and with this gift may be compared that given, among the Chamorro, by members of the bride's and bridegroom's families to the latter's mother. 9 Somewhat similar is the case of a bride in Uganda. During the first month of her marriage she veils her face; and the bridegroom is permitted to lift the veil only on giving her a goat to be eaten by her and her friends. A present of money procures a similar privilege in modern Egypt. 10

(3) Sometimes a gift serves as compensation for loss. Thus, among the Banaka and Bapukra, it is a custom of the husband whose wife has died to give something to her family; while the kindfolk of a dead man must make a present to the relatives of his mother. The Déné recognize the former obligation. 11

(4) In Ashango-land, if a stranger accepts a present from the natives, he is bound to make some stay in their district. 12

(5) Crime is expiated, 13 and peace is purchased, 14 by making presents. Again, a taboo may be removed by a gift of food; and by presents the impotency of a taboo may be bought off. 15

(7) It is a world-wide custom for the wife to open his suit by making a gift, it may be to the

pracised in the world of Homer, and in the northern countries; and it is in observance in the Aztecs, the Benaeka and the Rapu, in New Guinea, and among the Alteus, in New Zealand, and among the Ostoks. It may be noted that a gift is sometimes given by the guest to the host that he may gain a reputation for generosity (see (3) above). The donor's present to the guest's parents may be due to his desire to ingratitude himself with them (see (7) and (8) above) and the host's parting gift may express nothing more than a wish to kindle friendly feelings in the breast of his guest (see (9) above). We shall return to the consideration of this question in (3) (6) above.

(11) In connexion with the last two instances mentioned in the preceding paragraph, it is to be noted that the purpose of the donor—the suitor who gives to the host's parents, and the host who gives to his departing guest—is not always and everywhere one and the same. The donor gives sometimes to the parents to train their children to be brought up right, and sometimes to buy off their rights in their daughter; and the host gives sometimes to strengthen the ties of friendship, and sometimes, it may be, to secure the host's good will. If it is his turn to be entertained (see (1) above). These instances might easily be multiplied. Moreover, it is not to be forgotten that, in making a present, the donor may have in view more personal than that. He may, for example, be seeking, by one and the same act, to obtain the donor's favour, to acquire a material benefit for himself and his family, and to take part in the performance of a religious or magical ceremony. The ground upon which the donor rests his expectation that a return will be made.—(a) Where there is no form of a material thing. It is obvious from the evidence which has been adduced that, among uncivilized peoples, gifts are given in the expectation that a return will be made; and the ground on which this expectation rests is what we may term an exchange. In other words, whatever it is which induces or constrains the recipient to make a return? We shall take, first of all, the case of a material return. (1) Now, it is strictly in accordance with primitive notions to regard 'the nature of anything as including in all its parts, even when the parts are separated from it, and to treat as part of a man's substance not only his blood, saliva, umbilical cord, sweat, sweet, hair, snuff, nail-paing, and the like, but earth from his foot.

14 See (3) above. It is considered dangerous, not only for the recipient to receive it without saying, "I give it to you, but also for the giver to give it without uttering the same formula, by way of protestation. . . . It seems likely that the custom of not receiving partial payment at the hand of the guest is largely due to that same general law which underlies many other rules of hospitality" (E. Westerman, G.L. 1890, 26). (2) To give is frequently regarded as perilous to the donor. Thus, among the Australian tribes other than those of the centre, hair is never given by the owner, lest he should put it into the power of the recipient to injure him. Again, it is thought to be dangerous to give salt or leave out of the house, for, if it pass into the hands of any person who has the power of wishing, i.e., of bringing down the result of wishing or of wishing the possession of it to pass given entirely within the power of the wish-material." (3) In some cases a gift will ward off harm at the hands of witch or fairy. In the Isle of Man, in Somersetshire, and in some parts of Scotland, it was customary for the woman who carried a child to be christened to give bread and cheese to the first person who met her and would do her no harm, and a refusal of the gifts was regarded as an expression of evil wills towards the child. With this practice we may perhaps compare that of the Sidh (or Lillieeets), among whom visitors to the parents on the birth of a child receive presents from its father. In the Highlands of Scotland, if a stranger has looked over a cow, the dangers of the evil eye are averted by offering him some of its milk to drink; and in Australia a tabu is removed by a present of food. Thus, among the Unnius and Kaitiah tribes, a widow is under a ban of silence after her husband's death, usually for many months, until she is released from it by the dead man's youngest brother.

Thus, when this takes place she makes an offering to him of a very considerable quantity of food, with a fragment of which he licks her mouth, thus indicating to her that she has no more free to talk and to take part in the ordinary duties of a woman." accept Wallis's presents until his men had taken all the articles which they offered in return. 1 The Islanders of Manana, with whom the whites were on terms of enmity, and left untouched the articles placed there as a counter-gift. 2

With these instances may be compared those supplied by popular superstition: the case, for example, of the Durham schoolmaster, who dared not give a knife to one of his pupils without receiving a penny, in order that it 3 might be purchased, not given; 4 and the widely prevalent belief that it is unlucky to give a knife or a pair of scissors, unless some return be made to the donor. 5 We are told that, in South Germany, the dwarfs were always careful to make a return for anything which they had received; 6 and that, in Allenburg and Silesia, if anything is given out of a house, the luck is given away unless some trifle, such as a needle, be given in return. 7

(7) We have seen that the principle of exchange is that of giving in order to receive—that the gift is made in the expectation, if not on the understanding, that a return will be made. Further, the evidence adduced seems to warrant the view that this expectation rests to some extent, at all events, upon the notion that it is dangerous to accept the thing given without giving something in exchange for it, and that, if each of the parties both gives and takes, the danger is avoided. Is it then that this is the nature of this new relation? It is that of union, brought about by an interchange of substance—a union, therefore, of the most intimate character. 8

The closeness of the connection is illustrated by the fact that, among the Estimos of Baringa, people exchanging presents at the 'Walking Festival' are considered to have established a certain temporary relationship. Formerly they gave and received presents at the festival every successive year. A somewhat similar instance is that of the Tarahumara, with whom a purchase establishes a kind of brotherhood between the parties to it. Thenceforward they call each other 'soulmates,' and a confederacy is established between those who have so exchanged, as that which subsists between 'comrades' among the Mexicans. 9

(8) The duration of this substantial union appears to differ in different cases. Where, for instance, men have been made 'brothers' by an exchange of blood or by the use of some other rite, the relation so constituted is often a lifelong, and sometimes a hereditary, relation (see BROTHERHOOD). Among the central Australians, a connexion which appears to be temporary is created between those who are about to take part in an avenging expedition, by an exchange of blood, which has the effect of rendering trecerych impossible. 10 So, too, when the uninitiated is told by his, and not about by an exchange of food or drink, or by eating together—which is regarded as virtually the same thing—it is often merely temporary. Thus Doughty 11 tells us of a cattle band among the Aborigines of the desert that salt and peace is established with the stranger for a time—for, that is to say, two nights and the intervening day—whilst their food is in him; and Burton 12 says that some tribes required the bond to be renewed every twenty-four hours, as

7. ib. 137.
8. O. Criddle, Tjapukai, 1897.
otherwise, to use their own phrase, 'the salt is not in their stomachs.'

(9) It would seem, then, that in every case of a breach of this union the wronged one lays himself open to the vengeance of the man whom he has wronged. But this is not the only or the greatest danger to which he exposes himself. For, where the relationship is intimate and complete, that each of the parties is, in a very literal sense, the alter ego of the other, its rupture may be productive of the direst consequences to him who is in fault; and these consequences are due not to the action of the injured party, but to that automatic retribution—in the form, it may be, of disease, or death—which follows upon the breach of a taboo.1

(10) If an exchange of presents can produce a union such as this, it is easy to understand why it is that so solemn a ceremony as savage or barbaric life are almost invariably celebrated by such an exchange. It signalises the birth of a child,2 and it accompanies marriage,3 circumcision,4 initiation,5 and the constitution of such relations as those of brotherhood by choice (see BROTHERHOOD [Artificial]), and those between partner and protector of club and privileged stranger.6 In China, it has a place in betrothal,7 and in mourning ceremonies;8 and it is practised at inter-tribal assemblies,9 on the occasion of a death,10 and in evidence of intimate friendships.11 Visits are frequently the occasion of an interchange of gifts, as, for example, those made to a woman on her confinement;12 while in the Lapp sup, the female visitors, who bring presents to the young mother, are, at a later date, entertained by the father to a feast.13 Among the Mowachs, visits are always accompanied by an exchange of presents;14 and similar accounts are given of the Andaman Islanders,15 of the Eskimos of Greenland,16 of the Yanomamo,17 and of the natives of Samoa.18

On days of feasting and rejoicing the Jews sent portions to one another;19 and a similar practice was followed in the Homeric world.20

The Lapps give and receive gifts on coming into the presence of a superior;21 and, in Brutan,22 an inferior on approaching a superior presents the white silk scarf, and, when dismissed, has it thrown over his neck, with the ends hanging down in front. Equals exchange scars on meeting, bending towards each other with an inclination of the body.23

(11) This view of the operation of an exchange of gifts makes it readily intelligible why the refusal of a gift is generally regarded as the highest degree insulting,24 or injurious.25 In old Germany, such a refusal had its special forms. Thus, in order to show that it did not proceed from selfish motives, it was accompanied by the invocation of a blessing upon the object returned—'got lose in furer bone heiden aussein.'26

(5) Where the return consists of an act, or of an abstinence from acting. We have seen that, where the return takes the form of a material thing, each of the parties to the transaction—donee as well as donor—gives part of himself to the other. Each puts himself in the other's power. There is an exchange of substance which creates a union. But, in the case in which we are considering, neither act nor abstinence from acting passes to the donor as part of the donee's substance. Suppose, for example, that an inferior makes a present to a superior in order to obtain his protection, and that the latter accepts it on the footing that he will see to the security of the donor's person and property. The acts with which the possession of the completed engagement are not parts of himself which he gives to the donor in exchange for his gift. They are not elements out of which a union is created. They are, rather, results of the donor's giving, a union already in existence, of which the elements are the donor's gift on the one hand, and the donee's acceptance of it on the other. This operation of acceptance appears quite in those cases in which the return consists rather in a state of feeling towards the donor than in an overt act or abstinence in his favour. In this connection we may perhaps make those cases, in which we have noted above (see 4 (a) (3)), where a gift to the person, or by the person, whose ill-will is feared averts the danger; and, further, we may refer to the world-wide in accordance with which a girl sends a gift to her lover, in order to transmit to him her feelings and to quicken his affections. The gift may be, as in the case of the women of Timor, a flower from her hair or a scarf-pin from her bosom,27 or an article, such as a head-band, which, having been 'sung,' acts upon the wearer as a charm.28 It seems that, in all these instances, the acceptance of the gift by the recipient as his makes it part of himself, just as it is already part of the donor. Donor and recipient are thus united in and through it, to precisely the same effect as they are united by an interchange of presents; and precisely the same relation of reciprocal good-will is brought into being (see above, 4 (a) (3) (6) and Crawley, pp. 257, 239). If these views be sound, it is plain why presents are given on days of friendly intercourse or family reunion, as in China, where valuable gifts are made to parents and heads of clans on their birthday festivals;29 and why gifts are distributed as part of ceremonies in which the community is interested, as on the 1 C. Lommel, De Lapponum Piscatorum, Copenhagen, 1784, p. 272.

admission of a child into a gens among the Kwakiutl; at the initiation of novices into the secret societies of the Bismarck Archipelago and Solomon Islands; among the Brahmins of the Deccan and Madras Presidency at ceremonies of adoption; on the bestowal of a family name among the Lekonos; and on the burial of a living being at York’s Island. At a Yahgan burial presents are liberally distributed.

5. The completion of the transaction.—(1) The primitive transaction to which we in ordinary parlance assign the name of ‘gift’ is thus really a bilateral transaction; and the position of the donor is really that of a person who makes an offer which he can recall, until it has been accepted. In many instances acceptance is signified by some trifling payment or present—a survival, it seems, of the return gift of which we have so often heard among the primitive peoples, and which is given under the name ‘lanegigl,’ ‘guidarod,’ ‘gueretorn,’ ‘galar- don,’ and recognizable in the earnest, or the eucharistic meal, which is sometimes given in evidence of the completion of the bargain. Edmond de Bryon quotes from Haran, Le Folklore de Godarville (Antwerp, 1893), the statement that, in cases of sale,

‘en échange d’un objet qu’on vous offre, vous devez faire un cadeau, quit de la plus mince importance. Ainsi l’est d’usage de donner une pièce d’orisel ou une épingle laquelle vous cherchez du petit fait à la ferme.’

(2) There are to be found in which other methods are employed to complete the transaction, and to place the object transferred beyond the donor’s or seller’s reach. Of these a common one is that by which the recipient makes the object his own, or, rather, part of himself, by some act of appropriation. Thus, Cook says of the natives of Tahiti that

‘they return to their heads, by way of thanks, as we conjectured. . . . When we gave things to the children, the mother lifted up the child’s hand to her head. They also used this custom in their exchanges with us; whichever we gave them for their goods was put to their head, just as it had been given them for nothing. Sometimes they would look at our goods, and, if not approved, return them back; but, whenever they applied them to the head, the bargain was infallibly struck.’

A similar practice seems to have prevailed in Fiji. So, too, the Eskimos of Baffin Island ‘lick with their tongue everything that comes into their possession,’ ‘as a finish to the bargain and as an act of appropriation.’

The significance of these acts appears clearly from the converse practice of the Eskimos of Bering Strait, who retain and, in some cases, swallow part of the article which they are trading, in order to keep possession of its essential essence, and move, through its agency, to obtain another article of the same kind; and from other instances. Again, it is not unusual for farmers, market-women, hawkers, and the like, to spit for profit.

GIFTS (Primitive and Savage) 205

The bond of a common language is no security for kindly offices. A stranger and an enemy are almost synonymous terms.

On the other hand, it has been observed by Spencer and Gillen that, among the tribes with which they are acquainted,

"there is nothing so common as a tribe being in a constant state of enmity with another. ... The members of one tribe will tell your tale in a way in which they are not even new to the other; and the same tribe may be living upon most friendly terms with its immediate neighbours, and some of the latter will be doing precisely the same thing with the tribe of which your informant is afraid and suspicious. At the same time it is quite true, that, if a member of an unknown tribe made his appearance, except, of course, he came accredited as a sacred messenger, he would most probably be promptly scared. Anything strange is uncanny to the native, who has a peculiar dread of evil magic from a distance."

In many instances the conception that the stranger is a being to be feared and hated is held most strongly by that portion of the population which is most remote from and, therefore, least familiar with him. Thus, those of the Yaghn who have never met with the Ona regard them as mortal enemies; while those of them who are their neighbours intermarry with them and fall, to some extent, at all events, under their influence. So, too, among some of the N. Queensland natives, that they will hunt down and slay and eat the stranger who trespasses on their territory; while those of their divisions which lie north of them are said to live out of their reach. It is not always easy to determine whether this exchange is or is not subject to the same limitations as the practice of lending, which occurs only between members of the same tribe or clan. The Bakali are not themselves traders, and they do not possess the stone suitable for axes. Accordingly, they procure these articles from their neighbours. An exchange presents to his host some article peculiar to his tribe or locale; and the latter, either on receiving him, or, more generally, on parting, gives him something in return. But, until our informant's visit to them, the Bakali knew nothing of exchanging specific object for specific objects. The guest expected to receive something, but it remained with the host to determine what he should receive. Again, it is said of the Indians of Guiana that each tribe has some special manufacture; and that its members constantly visit other tribes, hosts though they be, for the purpose of exchanging the products of their labour for articles which they themselves do not produce. These trading Indians are allowed to pass through an enemy's country without let or hindrance. The New Zealand affords another instance of the circulation of property by exchange of specialties. The inhabitants on the upper Wanganui send preserved parrots and other birds which are considered a delicacy as presents to other parts of the country where they are scarce; and, in due time, a return present of dried fish, or something else not to be obtained easily in the inland country, is received. Of the Bushmen we are told that they had no contact with people beyond their own communities, except in war, for they were without a conception of commerce; 12 while R. Moffat 13 informs us that they supplied Hottentots, Coranas, and Namaquas with quivers, bows, and poisoned arrows. S. Passmore, 14 relying on the information of a Bushman attendant, speaks of the commercial relations of the latter's countrymen with Bechuana tribes, and adds that large prices were obtained for certain commodities; but as to the modes of these transactions he leaves us in ignorance.

The most remarkable example of this primitive traffic is afforded by the aborigines of Australia. In their case it seems to reach its highest point of organization among those tribes of Queensland of which W. E. Roth supplies an admirable account. He tells us that certain unde-rottei led down from time immemorial along the score of their own or nearest tribe" are followed by the members of a tribe or tribes, along which each knows that he is free to go, and the others are to be present."

---

2. Hyades-Deniker, viii, 12.
GIFTS (Primitive and Savage)

travel unainted; these routes, of greater or less extent, are rigidly adhered to. The opening of the local market, so steeped in the usages of the time, of the older or "houses" as one of the larger camps. . . . where instructions are often given to all who go, what to take, and what to return with.1

Roth gives a list of trade routes and of the articles bartered at the various 'swapping stations,' and observes that this intercourse is productive of the same exchange not only of material things but of ideas.2

In the case of the tribes of S.E. Australia, commerce is less systematic in form. Trade-centres exist among them, but barter takes place only on certain solemn occasions, such as the settling of a blood feud, the celebration of an initiation ceremony, or the occurrence of a great tribal gathering;3 and it is worthy of note that the very tribes which frequent these resorts make annual expeditions to obtain pitchers and red ochre, during which they are permitted to fight every inch of the way.

But, besides this trading at recognized places, articles pass from one tribe to another by way of barter. Thus, the Yarrurwoote obtained wooden shields from their neighbours higher up Cooper's Creek, who got them from tribes farther to the north-east4; and, in the case of the central Australian aborigines, the hunting clubs made by the Karrabri and Warnamunna are traded down to the Macowan Range and right away to the south of the Arunta and Larithina.5 In this way ornaments,6 alluvial stones,7 spears, plumed girders, bones (diorites),8 stones for axes and hatchets,10 articles of food,11 red ochre, sandstone, slabs for grinding grass and other seeds,12 and skins13 pass from tribe to tribe by way of barter. It is, of course, true that in many instances, widely separated from one another,

There are two Australian usages with regard to trade which deserve special mention. Of the first, called yateke, prevailing among the Pitjantjara, and which is known to be a very old practice,6 it is this that the chief is said to bring back with him articles for his yateke, while he is away, to collect presents for him. Under no circumstances is such a pleasure forgotten.14 The second usage is practised by the Murngin. When a tribesman has a child born to him, he preserves its umbilical cord, and gives it to a man of another tribe, who has children. In this way these children become adopted by the child's tribe. If they do not touch, or approach, or address each other; and, when they have arrived at adult age, they become the agents through whom their respective tribes carry on barter. Their arrangement is said to answer two purposes. It gives security to the tribe of a protection of their agents for their own benefit, and also compels the two always to consult the tribes through which they trade.15 It is a matter of indifference whether the children do or do not belong to the same tribe.

(3) These instances from Australia establish the fact that the tribes of which Roth speaks possess a far more highly organized system of commerce than is to be found among the natives of the centre. They show us further that the S.E. aborigines engage in barter with strangers as well as friends at certain established trading-centres on certain recognized occasions; and they supply ample evidence of the passage of commodities from tribe to tribe, sometimes directly and sometimes through the medium of friendly tribes or of a special class of persons. At the same time, it is obvious that, except perhaps in the case of the tribes first mentioned, such trafficking is exceptional. Yet the mere fact that it exists indicates that the parties to it have made a notable advance along the path of commercial progress. The privileges accorded to the trader among the natives of Giau have been productive of the same exchange not only of material things but of ideas.12

The practice of exchanging guest-gifts has a wider range among the Bakali than among the Andaman Islanders. Among the former, it may take place between strangers; and, on the other hand, it takes place only between friends, or between a host and an accredited stranger. Accordingly, it is plain that in each of the three last instances we meet with a personal exception to the general rule of treating the stranger as an enemy—an exception that is to say, in favour of the stranger-trader and the commercial guest.

(4) Now, a large body of evidence attests the prevalence, both in the past and in the present, in almost every quarter of the globe, of a mode of trading which throws, it is thought, so little light upon the origin of this exception. This so-called 'silent trade' is, in its simplest form, a transaction by way of exchange between persons who are unseen by one another; and examples of it are supplied by European and Asiatic Russia, by many parts of Africa, by Sumatra, Borneo, and the Moluccas, and by the Central and South America.1 Here we propose to consider only those instances which occur amongst peoples regarding whose life and surroundings we have adequate if not full information.

It has been said that this form does not represent the first beginnings of intercourse with the stranger—that it is, rather, a device adopted by traders of a higher civilisation in order to evade the suspicions and fears of those belonging to a lower civilisation and to induce them to trade. It is undoubted that so many primitive peoples the practice of making exchanges with persons outside of their own clan or tribe was unknown until it was introduced among them or forced upon them by strangers of a culture superior to their own. Thus, while there is no evidence of exchange between the extinct Tasmanians or Botocudos or Seris with the tribes in their neighbourhood, it is reported of the two former that they exchanged with the Europeans with whom they were brought into touch, and of the last named that they learned to practise it from the whites of Sumatra, with whose missions and military expeditions they came frequently into contact. It would be unjustifiable, however, in view of the evidence, to attribute the origin of this curious form to the ingenuity of civilized traders; for, while it is true that not infrequently such traders employ this method in dealing with rude peoples, it is no less true than in many cases it is practised by such peoples in opening a trade with those outside their borders.

(5) The Veddas of Ceylon, the Sakais (Senoi) of Malaya, the Todas of Celebes, and the Kubus of Sumatra are regarded by the latest authorities as related races, on the ground of the similarity not only of their somatological characteristics, but of their habits and modes of life; and, consequently,

it is of especial interest to us to find that all these peoples practice this method of exchange in its simplest form. Fa Hian is apparently speaking of the Veddas, when he says of Ceylon that
'...it is a country of demons, goblins, and dragon-dwellers. Nevertheless merchants of other countries trafficked with them. When the season for trade came, taxes and demons appeared not, but set forward their precious commodities marked with the same price. If the merchants of other countries sold them cheaper, they raised the price and took the goods.'

Many instances might be collected in which the merchant is said to have been uncertain whether he was trading with men or demons. According to E. Schürer, 8 the coast-people of Laccad (Ceylon) traded clothes in accordance with this method. It is possible, however, that his account applies not to Ceylon, but to those lands in the Indian Ocean, where, according to Gavrilin, 9 a close trade was conducted in this manner. The method is still practised by the Veddas of Nilgiri. 10 Accordingly, the statement of Saley 11 to the contrary appears to be contrary.

Robert Knox's account—which is corroborated by many other reports to the same effect—inform us that, when the Veddas want arrows, they 'will carry their load of fish in the night, and hang it up in a Smith's, also a leaf cut in the form they will have their bow made, and wait them. Which the Smith makes also according to their pattern they will require, they bring him more fish; but if he makes them not they will do him apresent of money and a leaf for the night. If the Smith makes the arrows he leaves them in the same place as the Veddas hung the fish.' It may be noted that in the case of the Sinom and the Trukka, who employ a similar method of trade, each article is subject to it as a sample of what is wanted in return; and a similar indication is given by the natives of the Rio del Norte in bartering with the whites.

The wild Sakais of Peru, in trafficking with the Malays, either employ a 'tame' Sakai as an intermediary, or deposit their wares, which consist of jungle produce, on the banks of rivers, at certain times and places known to the trader. They then withdraw, and return after an interval to take the articles offered in exchange. Hugh Clifford 12 speaks of the 'tame' Sakai only as exchanging with the Malays, who deposit the articles of commerce, river by river, wherever the Sakais remove them, replacing them with their wares. The Todias of Celebes formerly practised this mode of trading, laying down their produce in the forest, without which any one could take it on leaving something in exchange. Winter tells us that the Orang Kuba of Sumatra deposit such articles as rattan, beeswax, and tobacco on a river-bank where they may catch the eye of the Malay trader, and then retire. They return from time to time; and the article offered, which suits their taste has been laid down beside their offer, they take it away with them, leaving their barker for the trader to carry on board his procui.
to exchange fresh or dried flesh for maize. As to the manner of the exchange, we have, unfortunately, no precise information.

The accounts of the trading methods of the Negritos of the Philippines are somewhat wanting in precision. We are told of the Aetas that they deal only with the Malay tribes which are their neighbors, for their honey and beeswax, such articles as arrow-heads, knives, blades, cloth, etc., which they cannot provide for themselves. It is said that they always, as far as possible, employ the same persons to conduct this traffic. Further, it is stated by a recent American authority that 'in many places in the Archipelago to-day, especially in Mindanao, periodic commerce is carried on regularly on neutral territory. Market-places are selected where products are put down by one party, which then retires temporarily, and are taken up by the other party, which comes and leaves its own productions in exchange.'

Blumentritt's informants spoke of the Mamansas of Mindanao as exchanging, but said nothing of the method of the process. The 'silent trade' is employed by the wild Apoyoses of Luzon in barter their tobacco with the Christian natives.

Wright's description of the Kuba's mode of exchange is remarkably similar to Bell's account of that employed by the Smoos and Twakas of the Mosquito country.

Similar accounts are given of peoples regarding whom we have little information. Thus, we hear of the practice at Mosambique, and, if we credit a native story, at Amboyna. It was employed by the Palomino in exchanging their tea with the Burmans, and the legends of the invisible smith in Berkshire, and in the Aolian Isles of Lipari, and an echo in Denmark, in Westphalia, and other parts of Germany, and on the West Coast of Africa.

(10) We are told of the natives of Cumberland's Island, by the writer of Martin Frobisher's second voyage to the coast, 'that on their manner of traffic is thus: they use to lay down of their merchandize upon the ground so much as they mean to part with, and so looking that the other party with whom they make trade should do the like, they do se themselves depart, and then if they do like of their Mars they come again and take in exchange the others merchandize, otherwise if they like not, they take their own and depart.' It is not quite clear whether those who carried on this trade were mutually unseen, or whether this instance is an example of another form of the practice, in which the parties are seen by one another, but keep at a safe distance. Of the latter form many examples might be cited. In some of these a considerable interval separates those engaged in the trade, while, in others, a mere line drawn on the sand is the only division between them.

A very instructive instance of another form of the practice is supplied by Landar. His object was to obtain yams, and some of the natives with him proceeded well-armed to a town near the river, and returned followed by many armed people carrying bundles of yams. They were accompanied by an old woman, who seemed to be a person of authority. On arriving at the river, she directed the yams to be placed beside the bundles before Landar's natives, and ordered the owner to retire to a short distance. The purchaser then inspected the bundles, and, having selected one to his own satisfaction, placed beside it what he considered to be its value in cloth, flints, etc. The old woman looked on while this was being done, and, if she thought that what was given was sufficient, she took up the cloth and gave it to the owner of the bundles, the purchaser taking away the yams. If, on the contrary, she thought that the purchaser's offer was insufficient, she allowed it to remain a short time, so as to give him an opportunity of adding something to it. If he did not add anything, she directed the owner of the yams to move them out of the way, and left the purchaser to remove his cloth. 'All this was carried on without a word passing between the parties.'

With Landar's account may be compared what is said of the Alents.

'They never transact business with each other personally, but always through some one third person. When they come to barter anything, sends it into another house by this agent, who, without mentioning the owner's name, says 'take your yam.' To such an object. The agent sees what is wanted in return, and sends as much as he thinks fit of what is required. The agent then takes the object he has, and, if it is not to the bargaining is remarkably similar

GIFTS (Greek and Roman) — 209

familiar with exchange as practised within his own group, and he believed that the parties to it were brought into a relation of such a sort as to secure their good faith. Here, then, was a method to his hand. He would exchange with the savage, but only by keeping out of sight—by neither seeing nor being seen by him—would limit his contact with him to that affected by the exchange itself. The stranger would not dare to take his goods without making a return; and the good faith of both parties would be guaranteed by the nature of the relation which he thus united them for the time. Thus, the method, in its simplest form, is an application of the principles which operate in exchange, as adapted to the special circumstances of the case. Among the Alemis, the contact of the parties is limited to that implied in the act of exchanging; but, in other instances, the case is different. Sometimes the parties come into view of one another; sometimes they even approach one another; sometimes they transact wholly through intermediaries; and sometimes they take the additional precaution of making silence as long as the traffic lasts. Lastly, there are instances in which honest dealing and peaceable conduct are assured by fear, not of the mysterious retribution which follows upon a breach of taboo, but of the punishment inflicted on the cheat and the trouble-breaker by the god of the market. It will be seen from the facts which have been adduced that the mutual avoidance of the parties, accompanying, as it does, the mysterious union which exchange creates, serves more than one purpose. It begins, so to speak, by being a safeguard, and it becomes a rite, without, however, in many cases at least, losing its primary character. It seems impossible, notwithstanding Smol's observations1 to the contrary, that the method of trade practised by traders of the Aborigines among the members of the Alemis tribe, being with a rude form of the taboos of persons in use among the Narrinyeri (see 6 (2)) to be regarded as a survival of practices formerly prevalent among the natives of Australia before they had reached the stage of commercial development which they now occupy; and a like explanation may hold good in the instance supplied by Melville1 of trading through the medium of a 'tabooed Kannaka,' and in the case of the Alemts and the Eskimos of Bering Strait already referred to (see 6 (11)).

In only one account of this method of trade, and that a very vague one, is it expressly stated that the place of its occurrence is regarded as neutral ground. This matter will be dealt with in art. MARKET.

LITERATURE.—This is indicated in the footnotes.

P. J. HAMILTON-GRIFFIN.

GIFTS (Greek and Roman).—1. There was an old Greek proverb that gifts persuade the gods and the majesty of kings (Plat. Rep. 380 E). Besides testifying to the universal efficacy of gifts, it serves to mark a natural division of the subject-matter. Gifts made to the gods will form no part of the present article; for information concerning them the reader is referred to SACRIFICE. But, even if these are excluded, the giving of presents on particular occasions was often dictated by superstitious fears, as in the case of the sacrifices, which have survived from an immemorial antiquity to the present day, because that which was formerly accounted to possess a magic virtue has endured as a symbol of affection, and a feeling of great act of courtesy (cf. BIRTH-DAYS). It is true that valuable gifts could never be out of season, when an enemy was to be won over or a friend had been estranged. Nevertheless, in heroic times the customs regulating the giving of presents had a

2 'Here is a Four Months' Residence among the Natives of a Valley of the Marysassey Islands, London, 1864, p. 61.
3 Junius, 150; see 2 (1).
serious importance, which the growth of civilization subsequently assailed (Monro on Hom. Od. xiv. 269). This may be illustrated by the survival of ceremonial gifts in the East, as well as by the dealings of travellers or political agents with the chieftains of savage tribes (see preceding ars.). The gifV was not merely a token of esteem as a compliment, but coveted for its intrinsic value.

In Od. xiv. 282 ff. Thebom inion is represented as showing to another the parting gifts which Odysseus had collected on his travels—brass, gold, and iron enough to support one another's youth—father to the ten year guest. In Od. xiv. 282 ff. Menelaus offers to accompany Telemachus on a journey through the Peloponnese, and assures him that from every household he may visit he will take away something valuable—a brass tripod or a bowl, a pair of mules, or a golden cup. In Od. xiv. 282 the disguised Odysseus rejoices at the coming shown by Penelope in procuring gifts from the suitors without any intention of choosing one of them as her husband. The most instructive case in Homer is that of the embassy to Achilles in H. ix. The return of Achilles to accept the handsomely recompense offered by Agamemnon is clearly contrary to public opinion, as expressed by Phoinix (406 ff.) and by Ajax (428 ff.).

Even the gods are open to permutation, if the sacrifice and vows made to them are adequate to the occasion; for Achilles to reject the gifts of Agamemnon is not less an act of god-like honour which the Achaeans are anxious to bestow upon him. Even when, as in the case of the offer of the shield of Hector, if the blood-price is offended, no one persists in his resentment; but Achilles is stubborn and resolute in an inconsiderable affair.

In primitive times hospitality to the stranger is a binding obligation, enforced by the belief that his person is under the special protection of the gods, and that a return (hale) for his wants will be visited with divine displeasure. All strangers and beggars are favoured by Zeus; a gift, though small, is welcome, says Nicias to Odysseus (Od. vi. 200). It is thus easy to understand how a fit gift was to provide for food and lodging suitably to his means for any stranger who arrived at his homestead; and such gifts were known as the guest-portion (past, pastin), which no prudent man would refuse (see H. xi. 778, xviii. 387)

It is possible that the motive which originally inspired the institution of hospitality was not so much pious as fear. Plenty of evidence has been collected by anthropologists to show that strangers (q.e.) were regarded by uncivilized men as a source of danger, and that special precautions must be taken to guard against their influence. Hence the reception of the stranger with particular marks of honour may have been in its inception intended to exercise the evil spirits surrounding him, or to counteract his magical powers. Instances of this kind from the practices of savage tribes are quoted by J. G. Frazer, G. ff. i. 193, but the earliest civilization known to us in Greek literature has reached a much higher stage of development, and what was originally a mere act of superstition has become a religious and social duty.

The progress of civilization in later times tended to reduce to a formality the observance of hospitable relations; but that in critical circumstances the person of the stranger continued to be sacrosanct is shown by the story of Themistocles, when an outlaw, throwing himself upon the mercy of his enemy, the king of the Molossians (Thuc. i. 196). Normally, however, hospitality became less an obligation than a sign of good-will—a point of view which is illustrated by the sovereignty conferred on the Daedalic upon Miltiades, who had offered board and lodging to their envoys when passing through Athens (Herod. vi. 35).

Gifting is specially appropriate to the recurrence of particular occasions. The earliest allusion to a birthday feast is in the Pseudolus of Plautus, the original of which belonged to the year 309 or 308 B.C. But there can be no doubt that the celebration of birthdays prevailed at a much earlier date. For its special purpose was to invoke the aid of the Good Demon (epi So), a silver pencil (at 350) at a time when one the two men—sot spirits were especially prone to extend their influence. It may be inferred from Aesch. Eum. 7 that, at any rate as early as the time of Aeschylus, children's presents were of oenanthia (peach). At a later date there is plenty of evidence for the custom: as examples of such gifts we find the mention of golden rings and charms (Plant. Epid. 563), a silver pencil (at 327), and a garland of flowers (at 346). In the same connexion it may be added that at the Amphiphonia, a purificatory festival which took place five days after the birth of a child, presents were made by friends and relatives (66666 and 86666, according to Hecroc. p. 15, 8), as at a marriage. The gift is also expected to have a present when the child is born, then again on his birthday, and a third when he is weaned.

Gifts made on the occasion of marriage require special treatment. In the Homeric age we find clear traces of the time when marriage was an affair of bargain and sale. Aristotle (Pol. ii. 8. 1296 sq., 61) testifies to the fact that the Greeks of old bought their wives from each other. The bride-price paid to the father by the suitor is called foon (66666) in Homer (A. xiii. 492) and Iliad 778, 175). The value of the bride is sometimes reckoned in oxen. In H. xi. 243 the premature death of the husband prevents him from getting his own bride-price paid down on marriage, with the promise of 1000 sheep and goats afterwards from the increase of his flocks. Hence the epithet 6xv-emitting' (666666666) (400000000) and 666666666 for 666666666. In exceptional instances, or as a special compliment, the father might remit the price, as when Agamemnon offered to Achilles one of his own daughters in marriage (H. ii. 146, 666666).

In Od. i. 277, where the 666666 seem to come from the wife's family, we may detect a changing custom: there may perhaps that they were sometimes expedited for the bride's outfit, and to that extent were returned to the bridegroom. However this may be, it is unquestionable that, at least in the case of ladies of high rank, it was customary for their family to provide a suitable portion (666666). This is also true of Or. xiv. 204, Od. xxi. 324; cf. H. xi. 61).

When we examine the records of the Attic period, we find that an entirely different system has come into play. The principal evidence concerning the change by which the revolution in custom was effected. But the change is evidenced by the shifting sense attached to the word 666666666 by the poets who still continued to use it. Thus in Aesch. Prom. 579 it is applied to presents made by the bridegroom to the bride to induce her consent to the marriage; in Pind. Pyth. ii. 94, to gifts made by those who were present at a wedding—like our wedding presents; and in Pind. Op. ii. 11 and Eur. Andr. 163, to the portion of the bride. The practice of providing a daughter with a dowry eventually became the rule in Greece. The terms 666666666 and 666666, generally interchangeable, were in use to denote a dowry; but some authorities hold that 666666666 was originally limited to the outfit or 666666 of the bride, and that it must be so understood in Plut. Sol. 30, to be presently quoted. Aristotle (Pol. ii. 666666666) accurs that the curious information that two-fifths of the land at Spart had passed into female ownership in consequence of the number of heiresses (666666666) no doubt that the celebration of birthdays prevailed at a much earlier date. For its special purpose was to invoke the aid of the Good Demon (epi So) at a time when one of the two men—sot spirits were especially prone to extend their in-
was no such limitation at Athens, except the law of Solon forbidding any woman other than an ἀνέπτυχος to receive any ὑπαρχόν in excess of a few clothes and articles of furniture. If ὑπαρχόν is to be understood in the full sense, it is clear that the law soon became obsolete; for it was so general a custom at Athens to provide a dowry for daughters that a regiments disability which was obliged to make sacrifices for that purpose (see Plant. Tris. 639; Dem. xl. 25). The reason was to be found in the facilities for divorces permitted by Athenian law. In such a case the wife’s dowry became repayable to her guardian (ἐπιφανῆς), and the husband was often required at the time of the marriage to provide security (ἀνεπτυχόμενος) by a mortgage of real property (Dem. xxvii. 17, etc.). The position of a dowless wife was not only precarious but degrading (Men. Μοισεί. 39). The law required that an heiress (ἀνέπτυχος) without estate must either be taken in marriage by her nearest male kinsman or portioned by him suitably to his means, if bestowed upon another (Dem. xlix. 54).

5. In these cases family pride and natural affection, apart from legal obligation, combined to supply the necessary motives stimulating to action. Otherwise there is little to show that liberality in giving was highly esteemed among the Greeks. The philosophers may be taken to stand upon a higher plane of morality than was attained by the ordinary citizens towards the distribution of the means of life. Plato (Republic iv. 1) of liberality (Ἀλεξανδρινος) is typical of the most elevated Greek sentiment. The action of liberality is thus described:

"The discriminator (Sto. 39), then, will give from a noble motive and in a right spirit; for he will give the right answer to the question, 'What is to give it to the right person and at the right time, and will satisfy all the other conditions of right giving."

But the Christian precept, 'It is more blessed to give than to receive' (Ac. 20. 35), ushered in an entirely new conception of liberality as founded upon love. Sir A. Grant, in an excellent note on Eth. Nic. iv. 1. 16, remarked:

"Aristotle’s statement would be, ‘It is better to give than to receive, because it is more noble.’...In Aristotle’s whole account we do not find a word about benevolence or love to others, or the giving of alms to the poor. We find other motives but the ‘spleendour’ (στέλεχος) of the act itself was nothing.’

The strictly prudential attitude of the average man (ὁ προστατικὸς) is clearly indicated by the common usage when he is said to be a rich man. The word "rich" constantly implies a reciprocal relation. He who has received a boon lies under an obligation to return the favor. Here a person is to bestow an obligation, much as a deposit is made of a valuable property which on a convenient occasion may be reclaimed (cf. Thuc. i. 35). The philosopher may protest that a boon causes to be such, if it is conferred with the ulterior object of prospective gain (Arist. Ethik. ii. 7. 1386c, 18), but is compelled to acknowledge that, so soon as the action is done, a return is contemplated; and the giver is as prone to overrate the value of his beneficence as is the recipient to disparage it (Eth. Nic. viii. 13. 1162a, 9).

6. Voluntary contributions to meet the needs of the State were known as ἀνέπτυχος. It seems, however, that, like the 'benevolences' of English history, the name was largely euphemistic. In a small community indirect pressure could readily be applied as a spur to the unwilling. From an inscription of the 3rd cent. B.C. (CIL ii. 934) we learn that a minimum and a maximum amount were sometimes prescribed—in that case 500 and 200 drachmas respectively: the appeal was followed by a list of subscribes with the amounts given. Isaeus (v. 37) tells of a man who, when challenged to subscribe, offered 300 drachmas on a critical occasion, but failed to make good his word, and was posted with other defaulters. The mean man, according to the description of Theophrastus (Char. xxii. 3), is apt to rise in his place as if to make an offer, but then quietly slips out of the assembly.

7. We pass to the juristic aspect of gifts (Μετακινήσεως), although our knowledge of the provisions applicable to them by Greek law is extremely limited. (a) As regards gifts inter vivos, in view of the testamentary disability which was imposed upon the alienation of their property by public officials who had not passed their audit, and by freedmen dying without issue. In the latter case the bar operated in favor of their former owners (Ziebarth, in Pauly-Wissowa, v. 1599). Bastards were not allowed to receive gifts from their putative parents in excess of the amount fixed by law, which was 1000 drachmae (Harpoc. p. 133. 1).—(b) Gifts made in contemplation of death occupy a middle place between gifts inter vivos and testamentary dispositions. A valid gift of this kind could be made by the deposit of a sum of money or valuables with another, to be retained by him in the event of the owner’s death, but to be returned if he should survive a journey or other adventure about to be undertaken (see Dem. lli. 23, 24).—(c) An early instance of what we call a testamentary charitable trust is to be found in Nicias of a piece of land at Delos, which he had bought for 10,000 drachmae, on condition that the revenue should be used by the Delians in defraying the costs of a solemn feast (Plut. Nicias. 3). In the Graeco-Roman age the endowment of foundations for religious or secular use became increasingly common. Thus, the erection and maintenance of public buildings, such as theaters, gymnasiums, were often due to the munificence of rich private citizens. In such cases a corporation was formed to undertake the ownership of the property and management of the trust so as to secure its perpetuation. A right was sometimes reserved for the founder or his representatives to intervene, in case the management failed to carry out the terms of the trust; or the State might visit a supervising control through its own officers.—(d) Gifts by testamentary disposition require only a brief mention here (Greek and Roman). A general right of disposition by will did not exist throughout Greece, and is not recognized by the law as it is construed in the Hellenistic era. Our information is naturally most complete in regard to Athens. The right of disposition outside the family, but subject to certain restrictions, was first conferred by a law of Solon. All citizens of full age and of proper capacity were competent to make a will, but no one could disinherit a son (Dem. xx. 102), or, if he had no son, leave his property away from his daughter, although he might direct that a particular person should succeed on condition of marrying her (Isaeus, viii. 68). When a man had no issue, he was at liberty to adopt a son either in his lifetime or by will (ib. vii. 1). Subject to these limitations, legacies might be given to friends or relatives.

8. It was customary at Rome for presents to be made by friends and relatives to each other at certain of the annual festivals. The first of March was the beginning of the year according to the Roman religious calendar, and was also the dius natalis of the temple of Janus Novus on the Esquiline. On that day, to which Horace refers in a well-known ode (iii. 8) as celebrated by married folk, husbands were accustomed to make presents to their wives (Mart. v. 84. 10). Juvenal (ix. 50) mentions green parasols and amber balls as gifts
which a woman is likely then to receive. After the year 153 B.C., when the beginning of the civil year was transferred to the 1st of January, it became customary to give New Year presents on that day. There the feeling—nevertheless unceasing (see chapter 2.2) —of the custom underlay the custom—if the importance of an auspicious start is acknowledged in Prov. 1:19. The gifts might be of trivial value—a gilded date (Mart. viii. 21. 11), like our Easter eggs; or a dried fig; or honey in a white jar (Ov. Fast. i. 192). Especially, it was usual to tender small brass coins, as a symbolical gift of wealth. These gifts were called stenon; and the name, if not the custom, is preserved in the French stennes. Susianus (Cat. 46) describes Caligula, who had announced that he would accept stennes on New Year’s Day, as giving present to his herd, while a crowd of persons of every class pressed round him with their hands full of coppers. On the other hand, Tiburtius often absented himself from Saturnalia, with the beginning of January in order to avoid the nuisance (Dio Cass. viii. 5).

All these occasions the best known to us is the festival of the Saturnalia, which lasted for several days from the 17th December, and was kept as a popular holiday, characterized by every kind of merry-making and licence. The giving of presents then was as common as it still is at Christmas, and there is no doubt that the sports of the Saturnalia have been perpetuated for after-ages in the games of Christianized festive. Martial’s xivth book is entirely occupied with epigrams on specimens of rich or poor gifts suitable to the Saturnalia. The same idea (vii. 43) gives an appalling list of useless presents supposed to be sent to him at the Saturnalia, in order to remark in conclusion how much simpler it would have been to present him with the money which they cost. The serci and sigillaria deserve special mention. The former were wax taper (fusciculi cereri), which may originally have had a symbolical reference to the revival of the sun’s power after the winter solution. They afterwards passed into the Christian ritual of the Latin Church. The latter were lighted images of a then, and sometimes of dough; Martial (xiv. 182) mentions the earth-ware figure of a humpback (gibber). These also survived into Christian times; and even in England it is reported that bakers made little images of paste at this season (Brand, Pop. Antiq. 1870, p. 180).

The significance of the giving of presents on the Kalends of January says March is to be found in the same superstitions feeling which has already been mentioned as operative in relation to birthday-giving. Magic indices must be excised. This is a practice, which must be distinguished from the division of spoils on the occasion of a triumph, appeared for the first time in the last century of the Republic. The earliest instance is associated with the name of Sulla, and his example was followed by Julius Cesar, Octavian, and Brutus and Cassius. In Imperial times the donative to the legions, and especially to the praetorians, became a regular institution. A new Emperor invariably sought to ingratiate himself with the troops by a liberal gift, and the refusal of Galba to confirm the donative promised in his name was the immediate cause of his downfall. In connexion with the gifts of rich men to their clients, the practices of the sportula deserves notice. In acknowledgment of the homage rendered by the clients who attended the house of their patron, and escorted him when he went abroad, it was customary to invite them to share a dining meal. Subsequently, under the Empire, those who attended to render their morning salutations also received a dose of sportula, which they carried away in a basket (hence the name sportula). This dose was soon commuted, as convenience dictated, for a money gift of 25 asses, or about 1s. 3d. (Juv. I. 129). An edict of Domitian enforced for a short
time the revival of the cosa restit., or regular meal (Suet. Dom. 7; Mart. iii. 7).

12. The conditions necessary to a valid gift were minutely investigated by the Roman lawyers. A gift was a mode of acquisition by which the husband, without the consent of the wife, transferred to a person to whom he had a personal interest in it, the property belonging to her, and gave it to him as the property of the husband. The donor was therefore, before and after the marriage grew up in order to provide for the husband. For this purpose, a sum of money put into settlement by the intending husband, in order to provide for the wife, if she became the survivor. It was considered the property of the wife, but could not be alienated even with her consent. Justinian provided that these gifts might not only be increased, but might be made, after marriage; and, accordingly, that they should be styled donatio propter not ante seipsum. Dowries were placed on exactly the same footing.

14. Donations mortis causa are contrasted with donations inter vivos as being gifts made upon condition that, if anything happens to the donor, the donee's title shall accrue, but if the donee dies before the donor, the latter shall receive back the gift. The gift was always revocable at the pleasure of the donor. It differed from a legacy as being a disposition made in the lifetime of the donor, and not merely as a residue of his estate. Hence, it was considered as a part of the property of the donor, and was not affected by the prevalence of present-giving on particular occasions which has been mentioned above. These latter gifts were generally trivial in value, and were considered as differing in kind (mensa, dona) from voluntary benefactions. The growth of wealth and the increase of political and social consolidation, led to the passing of the Lex Falcidia, forbidding a testator to give more than three-fourths of his estate in legacies to the Dei Fantorum. The English Law has adopted the doctrine of donatio mortis causa from the Roman, but has still further restricted it by insisting on the necessity of delivery, and making the immediate expectation of death an indispensable condition to the validity of the gift. The provisions of the Roman law concerning gifts made under a will are described in art. Inheritance and Wills (Greek and Roman).

Inheritance — On the legal aspect of gifts, see L. Blanchet, Hist. des droits privés de la République algérienne, Paris, 1897, iii. 132; O. Kaizens, Rom. Rechtsgesch. 2, Leipzig, 1902; H. Burckhardt, Die Gesetze der Strafbarkeit in der deutschen Völkerrechtsgesetze, Würzburg, 1891; and for consequences and donatismen: J. Markgraf, Rom. Staatsurore, 2, Leipzig, 1861-1884. See for the donatio intest. of. Douguier, "Donat." (Dono.), "Donatum," "Dono," and "Donis," in Pontif., Wisn., and other articles in Smith's Dict. Of. Rom. Law, London, 1880. For birthday customs, see Wilhelm Schmidt, Geburtstage im Alterthum, Giessen, 1826. A. Carbor. GIFTs (Hindu.) — Gifts, especially religious gifts to Brahmans, form an important subject with the early legislators of India. The receipt of gifts, according to the Sanskrit lawbooks, is one of the principal sources of income of a Brahmam. What has been once promised to a Brahmam may be claimed by him like an outstanding debt. Their greatest means of support consisted in the grants of land, including sometimes houses, gardens, etc., given in perpetuity to gods or the priest. There is no lack of special Sanskrit treatises on the subject of donas, i.e. gifts to the Brahmans. The gift of a man's weight in gold or silver, called tulāpusaras, was considered specially meritorious. Thus Chapdevilla, a minister of Mihiragauraha, presented in A.D. 1214 an sum of 25,000 gold and 50,000 silver coins to Brahmans with his own weight in gold. Great grants of land on copper-plates have been found in great numbers all over India, and have furnished many interesting historical dates. The
land was generally granted rent-free, and with other privileges. Many agraharas, or villages occupied by Brahmans, held either rent-free under special grants, or on a reduced rate of assessment, are still in existence. There is a rule that desivera, landed property, i.e. lands dedicated to an idol, to a temple, to the maintenance of Brahmins, or to religious purposes, cannot be subjected to payment of Government revenue, if they were so dedicated before A.D. 1765. Funeral ceremonies were a special occasion for making gifts to Brahmins, likewise a marriage, a thread-girding, and other family festivities and religious celebrations.

GILDS.—There exist among many barbarous peoples certain systems of confraternity and association which are analogous to the gilds of medieval Europe. The concurrence is inevitable in social evolution from primitive continuity cannot be established, as, for instance, it can be established in the case of the State or of marriage. An attempt has been made to trace the Teutonic gild to the blood bonds of the ancient Scandinavian peoples, in which occurred the ceremony of mingling the blood of the parties in a footprint. This would connect the system continuously with the various methods of forming the brotherhoods which are a feature of the lowest wild societies (see BROTHERHOOD [Artificial]). But the thread is too slender. Similar social impulses acting in different conditions and in different ages will produce similar forms of union. An earlier hypothesis has been discredited, viz. that the gild originated in the drinking feasts of the ancient Teutons. Herbert Spencer traced the origin of the gild system to customs of paternal inheritance; Maine, to customs of adoption. But it is merely analogous to these, as it is to the family itself. Alone among peoples other than the Western, the Chinese and Hindus possess a similar system. The comparison of the three groups suggests that the gild belongs to particular types of humanity at a particular stage of social evolution. It is generalizing somewhat too broadly to say that 'the conception of the gild is common to all particular age and to no particular country.' The gilds of medieval Europe were a growth from the crossing of Teutonic and Graeco-Roman ideas and institutions. In this connexion it is to be noted that intercourse between the peoples of Europe and their knowledge of one another was, in spite of relative slowness and difficulty of communication, not less, but probably more, than it is to-day. Half a century later than the Code of Justinian, which takes cognizance of the classical collegia optima, a craft gild of soap-masters was established at Naples, and in 7th cent. England the 'Laws of Ine' illustrate the conception of the gild. It has been suggested that the corps des métiers of early France were directly connected with the Roman collegia. On the other hand, the influence of the Christian Church is to be taken into account; for an essential characteristic of the gild is the religious conception of brotherhood. When,' says Gresw, 'the old bond or uswath was beginning to weaken or dissolve and the State did not yet afford adequate protection to its citizens, individuals naturally united for mutual help.'

The reference is to England in the 5th and 6th centuries, and we may compare the fact that the first mention of Continental gilds is in the Carolingian Capitulare of A.D. 779, and that Charlemagne regarded these 'conspirations' as dangerous to the State. It might be said that the early Christians were the first gildsmen.

Three classes of gilds are distinguished: (1) social and historical, often described in German by 'reliigious' (religious gilds proper, such as were formed from the clergy, are a sub-species of the social); (2) gilds merchant; (3) craft and trade gilds. Roughly, this order represents the order of development. The second and third classes are not prominent until the 19th century. Even these, as perhaps may be said of every medieval institution, had a strong religious element, and possessed the functions of social and benevolent gilds.

In the O.E. and O.N. terms several formations have apparently coalesced. The O.E. gild has the meaning both of 'payment' and of 'gild,' and also of 'offering' and of 'idol.' O.N. gildr is 'payment'; Goth. gild is 'tribute.' The decision of the earliest meaning of the root, however, is a matter of conjecture. It involves the question whether gildsmen were originally those who contributed to a common fund or those who worshipped and feasted together. The question is perhaps irrelevant; in all likelihood the distinction was never made either in theory or in practice. The one function involves the other in all 'societies' formed in early Europe from classical times onwards.

It is convenient to bear in mind the analogy already suggested of the Christian Church, while tracing the history of the gilds. They were the precursors of the microcosms. In gilds of the social class, life generally, in its social aspect, was the main object. In other gilds other objects preponderated, such as the furthering of commerce, or of a craft; in short, livelihood was the main object.

A gild, in general, is a confraternity, brotherhood, or association formed for the mutual aid and protection of its members, or for the prosecution of some common purpose. It is for Europe essentially a medieval institution; other applications of the term are secondary or metaphorical; in several cases, as in Scottish burghs, the modern use is directly continuous with the mediæval. Such a confraternity in its social aspect performed functions similar to those of modern benefit clubs, benefit, insurance, and friendly societies, the most important of the last-named being direct descendents of the medieval type. The earliest included the payment of the overgild; all included the saying of Masses, and the holding both of religious services and of an annual feast. The majority had a saint as patron. In the commercial and craft gilds, the religious and social functions of the benevolent gild were retained, though the worldly ideal was predominant. This in the gilds merchant was the best use of the monopoly of the town market; in the craft gild it was the furthest of the art or trade in question, the maintenance of good work, the fixing of a reasonable price, and the organization of employment on the system of apprenticeship. The gild was essentially a local institution; its members were neighbours.

The gild had a master and various officials. Each member took an oath, and paid an entrance

Gilds 215

fee and annual subscriiption. Regular business meetings and an annual gild day were held. The
livery of the gild was held at fairs and at all
meetings of a ceremonial nature. Small parish gilds met in a room or in members' houses. Large
and wealthy gilds possessed a gild hall. Legacies and
were made to
members, and gifts of charity to poor guildsmen
out of the gild funds. The gild possessed a chapel or chantry, where its Masses were said, and where
members met on the day of the patron saint.
Every town had many social, religious, and trade

1) The frith gild, or peace gild, so called, refers to
an occasional feature of town life in Northern
Europe from the 8th century. The 7th cent.,
Laws of Ise, and the 10th cent., Dooms of London,
show that the frith gild was a matter of
consequence throughout Europe, though not in form.
The intention is to suppress the
defensive nature of town constitutions, not merely
as a matter of peace. The
idea of the gild was implicit, and occasionally expressed, as in the
of thames at Cambridge, which gave its
members assistance in the blood feud and provided the

2) The oldest gild ordinances of Europe are those of Cambridge, Abbeysbury, and Exeter,
belonging to the first half of the 12th century. It
is often supposed that the Normans brought over to
England the idea of craft gilds which had been
so largely exploited in the Frank empire for three
centuries. The Anglo-Saxon gilds themselves were of
the social type, apart from a few traces of
co-operation in monastic orders. But the fact that
religious gilds properly flourished under the Anglo-
Norman kings was due to the Normans themselves.

Among the most famous social-religious English
gilds was that of Corpus Christi. Organisations
of a gild type have been traced to a period prior
to the 7th cent. among English monasteries. The
modern Catholic confraternities are lineage descend-

ants of religious gilds. Gilds of Kalendars, so
called because the gild met on the first of each
month, were formed among the clergy. Gilds of the
higher clergy were major, those of the lower
were minor. But the social gilds were strongly

1) The frith gild was also called "peace" gilds. The Lord Mayor is derived from such.
3) On religious gilds generally, see Lambert, 100-119.
were usually large landowners. The Gild Merchant was exempt from the town tolls, their chief obligation being that of "soot and lot," participation in the Government. On occasion they supplied the town with money. The majority of householders became members, but not all gildsmen were burghers; the status of burgher in the 14th and 15th centuries. There was some friction in London, which was soon removed. In Scotland the large admixture of a Flemish element in the population led to a division of the inhabitants into guilds and burghers, just as was the case in Bruges and Ghent, for example. The guilds, as elsewhere, were the mercantile aristocracy. The prohibition of the 17th century and the 18th century did not become important till the 18th century. Each gild, as it was created, was regulated by a deacon appointed by the town. The craft gilds struggled during the 16th and 17th centuries for the right of electing their own deacons and for a share in the government of the burgh. They succeeded at the end of the 17th century. The privileges survived till 1846. The guilds are still applied to the municipal corporations of the Royal Burghs. By the 18th century the guilds practically formed the Corporation. In Edinburgh, Glasgow, and Aberdeen, the "Dean of Guild" is still elected by the Guilds; elsewhere the choice is by the Town Council from its members. This Dean of Guild is technically the Dean of Guild of the city.

(8) By far the most clearly defined, and historically most influential, were the craft guilds and trade guilds. The former term frequently implies the connotation of the latter. Members of the craft guilds, industry, or trade, working in the same town, combined in association to protect and promote their common interests, but on principles very different from those followed by modern industrial organizations. Their lineal descendants in London are the Livery Companies, whose title retains the fact of the uniformity of the gilds, and also one of the synonyms for the guilds, and also one of the synonyms for the guilds—"company" and "mystery." The latter is a reduction of the Late Latin, "misteriwm," and is frequent in the dual term "craft and mystery." The North German term, "Zunft," the South German, "métier" the French, and "arte" the Italian. They have been traced—not without success, as noted above—to the Roman collegia opificum. It is unlikely that they had any evolutionary connection with the manorial groups of the serfs. In the Frankish empires the "Craft and Craftsmen" are considered as brotherhoods of artisan serfs. In England they are first mentioned in the reigns of Henry I, and were probably due to Norman and Flemish influence combined. The Weavers of London, Oxford, Winchester, Lincoln, and Huntingdon, the Cordwainers of Oxford, and the fullers of Winchester were among the first to be formed. In the 14th century, they were extremely numerous, their number and importance growing with the growth of the respective trades. In Normandy, Flanders, and Germany they were prominent in the 15th century. They were

brethren, providing against the enticement away of apprentices, and fixing terms of payment. At their complete development, already attained in France by the 13th century, the gild comprised the three ranks of Masters having apprentices, Journeymen or Yeomen, and Apprentices. An eldest son was free of the craft by patrimony. The central figure in the Master Craftman, who owned and sold his wares. The executive consisted of these and two Wardens, who had the duty of supervising the competency of apprentices and the right of search. There was a board of three Assistants: two stewards, a clerk, and later a treasurer; with a beadle who summoned meetings and issued bills of mortality.

The religious aspect of the gild has already been noticed. The town authority, the Convenors, was careful to maintain control over the gilds (the histories, in town records, and aimed. On the other hand, it is entirely unconnected with the modern Employers' Association or Capitalist Syndicate. The gild represented capital, manual labor, and consumer alike. It has been described as an 'aristocracy of labour,' so far as the labor element was concerned. Considering all its elements, we can reach no modern analogy except the district of a modern city. It was forerunner of a guild, the latter resembling rather the older Gild Merchant. Large numbers of half-taught helpers and unskilled workers were connected with, but had no share in, or membership of, the gilds. At Newcastle and elsewhere the aggregate of craft gilds was spoken of as the Gild Merchant. In many towns 'the old Gild Merchant lived on, not so much as a distinct body, but in the life of the separate crafts into which it had been specialized.' In short, they 'can hardly be regarded as democratic bodies, for they are the 'elite of each trade,' closely attached to the interest of a particular town.'

The economic principles which they expressed are significant of the age of their best work, most of which is the glory of their respective countries.

The purpose of these gilds was the regulation of work in such fashion that the public might be well served and that the trades might therefore flourish. But, whereas nowadays the same purpose is carried out on the following principle that each manufacturer produces at so low a price as possible to force a man by his goods for their cheapness another avenue of profit being the exorbitant price of articles of the best material and workmanship, so-called luxuries, in old times, continues our saddest student of economic evolution, the effort was to secure satisfactory conditions for production—skilled workers and honest materials—and to suppress those which should be 'reasonable' to trade and therefore reasonable to pay for such wares thus made. It was on these principles that all gild ordinances were framed. Hence the Wardens' right of search, and the proviso in articles that those members of the craft should be resident. A gild was a police system, an association of artisans, and a Christian brotherhood. Its members included consumers; its status and functions were closely connected with municipal government.

England was not, as Brentano supposed, the
GILDS 517

The gilds of Scotland are to be classified. First heard of in Italy, they became important in pre-Carolynian France. Not till the 11th century did they becum important in Norway and the Netherlands, at which period their revival in France, after their suppression by Charlemagne, is to be placed. Denmark and Sweden developed them in the 12th and 14th centuries respectively. The Gild Merchant on the Continent is the Kapitel Gild. The Gild Merchant, or the Commanguild, the Comman Guilds of the Netherlands and Northern France (Home is a synonym in both cases, Mercon scam, Université de Mercanti di. Often identified with 'patrician governments,' these Gilds Merchant kept up a conflict with the craft gilds during the 13th and 14th centuries, a conflict extending from Italy to Scotland. The gilds in the guilds in the end succeeded in obtaining a share of authority. Such a struggle, but against the nobles alone, was carried on in Florence by the arti majori. The Reformation, by disallowing the religious and social gilds and crimes against the craft gilds, prepared the way for Poor Law reform and the changes in industrial evolution which were then shaping. An intermediate process remains to be noticed. England, as well during the 14th cent. the class of gildsmen known as journeymen or yeomen set up confraternities of their own. The movement was analogous to a struggle between workers and employers, and to a similar movement in Germany in the following century. The result was the formation of sub-sidiary craft guilds. 'Journeymen's Companies,' and 'Merchant's Companies' (the latter not to be confused with the old Gilds Merchant) became important in 15th cent. England. Agamemnon followed in the 16th and 17th centuries, often resulting in a more or less definite identification of the gilds with borough organizations. The privileges of the craft gilds were not formally abolished till 1835, in Scotland 1846, some still surviving. But the new economic forces broke the old principles in the 18th and 19th centuries. The gilds of France were abolished in 1789; gilds of European origin survived in Constantinople till 1877. Their break-up, generally speaking, was more rapid and clearly marked in Northern Europe, where the new commercial and industrial factors had most influence.

The gilds of France were abolished in 1789; gilds of European origin survived in Constantinople till 1877. Their break-up, generally speaking, was more rapid and clearly marked in Northern Europe, where the new commercial and industrial factors had most influence.
GILDS (Greek and Roman).—I. Origin, etc.—The word 'gild,' which is here employed in default of a better, is in some respects unsuitable to the alliances which had to be considered, because it carries with it ideas which are foreign to the ancient world, as will presently appear. The Greek and Roman gilds had a long history, and their character varied greatly under the manifold influences, local and general, which were continually remoulding the social structure. Broadly, the association of a number of men in origin is a feature rather of the later Greek and later Roman civilization than of the earlier. Few of these unions or brotherhoods or corporations (as a somewhat loose use of this designation be permissible) existed on the Greek side of the Mediterranean earlier than the 4th cent. B.C., and on the Roman side few were older than the Imperial age. It is natural to connect the vast outgrowth of private associations in both cases with the reign of freedom. When the liberties of the Greek city-State on the one hand, and of the Roman burgesses on the other, were impaired, men naturally sought to compensate themselves by extending and strengthening social bonds of various kinds. It is, however, important to observe that in the Greek and Hellenized lands after Alexander, and in the whole Roman world after the inauguration of the Empire, peace became more stable, international intercourse increased with improved communication, and forms of cult spread from their centres of origin over ever-widening areas. Religion, in the social aspect—these were the main sources from which the ancient gilds sprang, and these naturally became more productive as political and municipal liberty declined. In some communities a gild is usually named collegium or corpus. On the side of the Roman dominions where Greek influence was paramount, the titles were varied, and nothing like a common designation was in use. The evidence for the history of the Greek as well as the Roman corporations, in the period before they were wholly subjected to public control, is to be found almost entirely in a vast multitude of inscriptions, chiefly brought to light by very recent research. The details thus revealed are of intense human interest as opening up the social evolution of which literature betrays almost nothing. From the 4th cent. A.D. onwards the gilds were enslaved to the State, and participation in the universal misery. The severe regulations then enacted form a great element in the history of the age, and the Theodosian code supplies not a little information. The ancient gilds were intimately bound up with the ancient municipality. In one of its most momentous aspects the old Greek and Roman world consisted of a vast complex of municipalities, each retaining some semblance of State sovereignty. The gild was a group within a town, and rarely had any links connecting it with similar groups outside. A notable exception is that of the 'Dionysiac artists' (vexia), a union of men who served the theatres and exhibitions cognate with it—actors, dancers, musicians, and the like. Exceptionally large gilds of these persons were early formed, and they gradually coalesced, until, in the Imperial age, they acquired an organization which covered the whole Empire. Their traces are often found in subject communities. The position of the gilds within the cities of the romanized West was more definite than that which they occupied in the communities of the hellenized East, and in public ceremonies they had a precedence allotted to them. After the municipal senates came the peculiar religious bodies called Augustales, then the gilds, then the unorganized common people (plebs).

2. Classification.—The gilds may be considered with reference to their three main purposes. Some had religion as their chief bond, others trade or labour, others combined, and it is impossible to draw sharp lines of severance.

(i) Gilds for religious purposes.—On Greek soil the earliest voluntary unions came into existence for purposes of worship. The process was gradual and showed a certain divergence between the cults sanctioned by the rituals of the city-states and those beloved by the masses. Among the first to be established together to satisfy their yearning after gods not publicly recognized. The attraction which a divinity introduced by foreign residents might have for the Athenians even in the great classical age, is illustrated by the mention of the festivity of the Thracian goddess Bendis in the introduction to Plato's Republic. But it must be noted that hardly any gilds, either Greek or Roman, were entirely dissociated from religion. As religion was primarily a municipal concern, and citizenship was intrinsically connected with it, the religious body of persons within a town could live without a cult. But the degrees of importance which the religious element possessed in the organizations were very various. In some it was the principal, in others it was only a few of its points, in others article. Such gilds are far more characteristic of Roman or romanized cities than of those which were or became Hellenic. An early propaganda, obscurely recorded, gave birth to many brotherhoods in regions where Greeks dwelt, which spread far and wide the ideas known as Orphic. Another remarkable movement began in the 2nd cent. B.C., in favour of cryptic and ecstatic forms of worship. It gave rise to many unions of men who described themselves as mystics. It embodied a revolution from unbelief similar to that which created the great drift of the Western world towards forms of pagan faith in the 2nd and succeeding Christian centuries.

At Rome the more antique brotherhoods which served the gods (sodalitiae or sodalicia), apart from the great State colleges, were organized and supervised by the State. Such were the associations for the worship of the Great Mother, introduced from Asia in 206 B.C. In Italy, private religious groups were first called into life by Greek influence. Many societies for the veneration of Bacchus sprang up as a consequence of the passionate superstition which the disasters of the Hannibalic War engendered. The secrecy of these brotherhoods led the Roman government to regard them as criminal, and to believe the wildest allegations concerning them. In 189 B.C. and the following years, in the conflict with Carthage, the movement was suppressed by judicial murder on an enormous scale. For a very long time the societies for the service of Oriental divinities—Anis, Osiris, Serapis, Anubis, Mithras, and others—struggled for existence in the West. It was not until the age of Sulla that any collegium of this type could live unmolested. The Jews were specially favored in this respect both in and outside of Italy, al-
though the ordinary Roman deemed their creed an odious superstition. The persecution of Christian societies is partly to be explained by the fact that they appeared to be a secret, and therefore a dangerous character.

With religious gilds may conveniently be classified those which were maintained to provide for the decent burial of deceased members of the trade, whose spirits were treated with a veneration not unlike that accorded to divine beings. These were generally formed by the very poor, and sometimes even by freedmen or slaves, except by the great groups of both classes which were in the Imperial service. The inscriptions (to be found in the work of Vossius) are a vast amount of interesting and minute information about these collegia funeraticia, as scholars are accustomed to call them, though in the actual titles no ill-omened word is used. Many describe their members as worshippers of a particular divinity. In some cases these colleges are called officially 'health-giving' (salutaria). The regulations testify to the extraordinary depth of the devotion among these obscure people, not only to secure a distinguished burial, but to make certain of remembrance after death. The practice was almost universal in the Western half of the Roman Empire, while on the Eastern side, in spite of the Greek scrupulousness about funerary rites, few were founded and most of these owe their existence to Roman influence. Strange as it seems to moderns, the burial clubs, like almost all others, subserved to some extent the purpose of common enjoyment. The place of interment provided by the contributions of the members often had attached to it rooms for reunions, in which feasts were celebrated, and meetings held to keep alive the memory of the dead. These were a bright line of light in the dark, and a sacred place where the Hellenic spirit was potent. Athletic, gymnastic, and artistic brotherhoods were rare and exotic in the West, whereas on the Eastern side of the Empire they were a natural growth, alone a little make the proud claim to be Hellenic if it did not possess them. Apart from these, many social unions, both in the East and in the West, must be regarded as ephemeral. Such are the numerous companies of 'life-comrades' (sympathers in Greek, confratres in Latin), and also associations with eccentric titles, such as the 'sleepers' (dormientes) and the 'late-drinkers' (seribias). The little thieves' (furunculi) and the 'assassins' (scrofarii) remind us of the young men at Athens who called themselves by the name of a local tribe, the Triballi, and of the 'Mohocks' in London during the reign of Queen Anne. With the athletic gilds may be included the clubs of boys for military training—boys who at that stage were called epidon. These were not so much gilds as educational institutions originating with the State. From Athens they passed to every land where Greek culture was adopted. In many places, as their age advanced, the epidon entered clubs of younger men (moc), and later on became members of elder men's gilds, which bore the designation gynia (to be distinguished from the municipal councils or senates which had the same name). The numerous colleges of younger men found in the West (collegia juniorum) may have originated in an imitation of Greek custom.

3. Constitution and activity. We shall now give a brief sketch of the constitution of the gilds by the manner in which their purposes were achieved, during their flourishing period. In their organization, the voluntary associations imitated that of the municipalities, and the code of rules which inscriptions have preserved resemble greatly the codes by which the cities were governed. Greek lines were followed in the Eastern half of the Roman Empire, Roman lines in the Western half. The gild always had officers elected by the members, just as in the towns local magistrates were chosen. The members paid regular contribu
tions, usually month by month, into a common chest, and the general body sanctioned the disposal of the funds. Fines for neglect or malfeasance on the part of officers and members alike were laid down with much elaboration, as was the case in the municipal statutes. The office-bearers were, as a rule, the richer members. These were expected to contribute on objects of common interest. Money might be given; or buildings, or statues, or other benefits for the enrichment or adornment of the society might be bestowed. In course of time such contributions were more and more regularized until, as in the towns, there was a tariff of payments to be made on accession to office, whether of a sacred or a secular character. Of course, there was no universal tariff; each city and each guild enacted its own. In this way there was a great continuous outflow of wealth from private coffers for the advantage of the guild, and especially of its less wealthy members. This is a great feature of the Roman Imperial age. Ambition led many holders of office to exceed the stipulated gifts, and generosity was repaid by many kinds of honours—in particular, eulogistic inscriptions, special titles, and statues. These were full of effigies of benefactors, and the maus for erecting them was a common subject of ridicule. Cassiodorus, in the 6th cent. A.D., spoke of the statues in Rome as surpassing in number the population. The resources of the guilds were further increased by a device commonly practised also by the municipalities. Rich persons were adopted as patrons, and were honoured in proportion to their benefactions. The wealth of the guilds naturally increased when Marcus Aurelius made them legally capable of taking benefits under wills. We have many records of extensive endowments and rich properties acquired in this manner.

The expenditure out of the common chest was largely made in the various ways, of the members by banquets, exhibitions of games, and other spectacles, and social enjoyment. In the case of the funerary guilds the main expense was incurred in granting sums to the representatives of the deceased, wherewith to carry out the obsequies. Benefactions to the associations, like those made to the municipalities, had the effect of enabling the poor to profit in a certain degree by the generosity of those better endowed. But the ancient guilds, unlike their medieval successors, did not regard as charity that which we should regard as charity. In all the multitude of inscriptions which have left behind them there is hardly a single instance of benefaction in aid of the sick and needy (cf. further, 'Greek' and 'Roman' sections of art. CHARITY, ALMSGIVING). In this aspect the Christian societies from the first contrasted strikingly with those which were pagan, and they won thereby the admiration of their bitter enemy, the Emperor Julian. Indeed, the poorer the guild, the less likely was it to be the recipient of important gifts. The burial clubs, composed of the poorest of the poor, had hardly any resources beyond the contributions of the members. It is very notable that, when distributions of money (opporta) were made on feast occasions, the members of a guild who were higher in social station received a larger sum than those of humblest rank. This fact shows the Christian societies were more liberal than the layman's.

As the guilds were not charitable institutions, so they were not societies for mutual benefits, like the clubs for mutual insurance and pensions. Exceptions are rare. Some Greek unions which bore the name of èporeta advanced money for certain purposes, to be repaid by the recipient (see Poland's work, mentioned below). These societies were characteristic of Attica and the Greek islands. Here and there similar practices may be traced in connexion with guilds bearing other titles, but not often. In the 3rd and 4th centuries the minor officers were allowed to form societies for mutual aid. Records of such unions have been found especially in Africa (Walting, i. 371). In towns or in large villages, advancement or change of station were met out of the common funds. The institution provided, in effect, an insurance against possible sudden requirements.

Modern writers have often been tempted to compare closely the ancient guilds of artisans with the workmen's trade unions of our day, and with the guilds of the Middle Ages. There is not a single true point of comparison. By combining, the ancient workmen might procure from local or central authorities a grant of legal privileges and immunities which scattered individuals could not have secured. But apart from this consideration, it is not too much to say that the trade bond, which was vital in the medieval guild, as it is in the modern trade union, was merely incidental in the ancient association. No league of artisans in ancient times made any attempt to force a rise in wages, to prescribe the conditions of work, or to regulate apprenticeship. Still less were the workmen's collegia companies for the carrying out of contracts, as the medieval guilds were. The expression of existence of slavery partly accounts for the fact. But among the free workers, who were far more numerous in the cities than modern scholars often suppose, the strike was so rare an event that the known examples of it may be almost counted on the fingers of one hand. We have an instance of a strike in Magnesia in BCH, 1888, p. 594 of a Roman governor compelling the bakers of a city to work; but in the Imperial age the bakers were more and more under local or imperial direction, in order that the supply of food might not be endangered. A decree of the island of Paros (Ch. 337) tells us that the emperor erected a statue to an official of the community who compelled the artisans to resume the work which they had stopped for the purpose of forcing the baker to pay wages without the necessity of legal procedure. What was the exact nature of the quarrel does not appear.

It may be observed that the inscriptions show not a few examples of freedmen, and even slaves, being admitted to membership of unions mainly composed of free workmen, and even to offices (Walting, i. 369). The case is not uncommon when we remember that, in the times of the Empire, capitalists often entrusted large operations to men who were technically slaves, but actually subordinate partners. Another noticeable circumstance is that women appear among the members of the funerary guilds; even in the earlier Imperial centuries they were not disincluded as 'patronesses' (patronae) of other guilds, and were sometimes given the title 'mother' of the guild (see Walting, f. 369, 373).

4. Relations to the Government.—The process by which the guilds were, in the end, subjected to the most stringent control by Government fills a chapter in the history of the ancient world which is of the utmost moment. The earliest interferences with the freedom of private association were due to religious causes, as in the case of the so-called 'Ecclesiarum conciliat' mentioned above, or to the misuse of liberty for political purposes. Numerous secret societies sprang up from time to time which were really dangerous to the common weal. Such were the 'conrad-bands' (Bruderschaft) at Athens during the Peloponnesian War, and the groups of ruffians organised by Clodius and others in the dying days of the Roman Republic. In 84 B.C. the Senate of Rome dissolved a number of these pernicious associations. Six years later Clodius passed a law which established complete freedom. This range of freedom the Emperor naturally could not tolerate, and to the Senate was given jurisdiction over all guilds and private societies within the Roman dominions. Many of them record in the inscriptions the fact that they possessed the Senate's licence (Walting, i. 125). But in this field, as in all others, the Emperors could intervene, and did intervene with ever increasing frequency. Some of the letters which
GILYAKS—Ethnology, etc.—A tribe of unknown racial affinities living among many other native tribes, especially the Tunguses, in the northern part of Sakhalin, on the shore of the mainland opposite, and on the lower course of the Amur (between 49° and 54° 4' N. lat.). The Gilyaks are below middle height; the average height of twelve men measured by Ziebold was 162.2 cm. (5 ft. 4 in.); that of eight women measured was 150.4 cm. (4 ft. 11 in.). They are squarely built, with a short neck and well-developed chest, rather short and crooked legs, small hands and feet, a fairly big and broad head, swarthy complexion, dark eyes, and straight black hair, which comes down to the men's plait in one tail. The Gilyaks are of two types: the Mongolian or Tungus, and a type less far removed from the European, with a long-shaped face, moderate cheekbones, more open features, and very dark hair and black eyes. There is every ground for believing that the original pure racial type has vanished owing to age-long crossing with various alien elements. What marks out the Gilyak among the Mongoloid tribes round about is his language, which has nothing in common either with that of the Alains or with that of the Tunguses. So far we can only say that certain grammatical peculiarities allow of our comparing Gilyak with the languages of the aborigines of N. America (see below, § 8). Ethnographers have accepted the view first set forth by Schrenck, according to which the original location of the Gilyaks was the island of Sakhalin, from which they migrated to the mainland. But the latter supposes that the Gilyaks are immigrants from the distant north, from the Arctic regions. The most characteristic survival of this kind is the fact that on certain solemn occasions a Gilyak is compelled to use not the door but the smoke-hole of his pit-house, which among Arctic tribes serves as the regular entrance into the hut. The actual terms used to express the ideas of entrance (lit. 'diving down') and exit (lit. 'popping up out of') confirm this view of such survival. The modern name Gilyak is probably not of Chinese origin (as Schrenck, who derived it from the words Kile, Kileung, supposed), but rather spread to the Gilyaks from the Tungus tribes which bear the name Gilyagai, Gilyakha. The Gilyaks' own name for themselves is Nivakhi, Nizyoga, i.e. 'inhabitant of my place.'

The Gilyaks numbered in all, according to Sternberg's repeated enumerations made in the nineties, 4365 souls (2392 males, 1973 females); of those, Sakhalin contained 1854 (1089 males, 865 females), and the mainland 2411 (1308 males, 1103 females). Since the appearance of the Russians the numbers of the Gilyaks have noticeably fallen off. Epidemics of smallpox, typhus, and measles in the sixties and seventies carried off 20 or 40 per cent of
the population. Something must also be ascribed to periodic famines, along with the scurry which inevitably accompanies them. According to tribal traditions, the nation of the Gilyaks would long ago have disappeared for the constant immigration into its territory of solitary exiles and refugees from neighboring peoples. These energetic immigrants, however, by natural selection and to crossing, produced vigorous and healthy progeny, which delayed the process of extinction.

2. Mode of life, etc.—The Gilyaks live in settlements whose numbers depend on the fishing conditions of the locality. There are small settlements with only five or six inhabitants, and large ones with two hundred. They follow a half-nomadic life, changing their place of abode several times in the year, in accordance with the movements of the fish, their own occupations, and the seasons of the year. Their summer quarters are generally near the sea at the mouths of rivers; in the winter they move away from the sea to the edge of the taiga (Siberian jungle). Their winter huts are of two types. On the mainland and on the shore of Sakhalin which looks towards it they have adopted a hut of the Manchurian type. It is a great shed-like house of timber, squared or un squared, with a two-storeyed roof supported by pillars inside, no ceiling, but windows filled in with fish-skin; along the walls under the sleeping-benches are rectangular big heating pipes daubed with clay, and connected with two low stoves which are placed on each side of the entrance to the house. The pipes are generally made of whole trunks of hollow trees. Another type of winter quarters is the pit-house, half sunk in the earth, and having above its level only a pyramidal superstructure of timber with soil heaped upon it. It is surrounded by a wooden fence surrounded by a low wooden fence. Above the hearth is the smoke-hole. The way into the hut is through a movable door giving upon a vestibule. Round three sides of the hearth are the sleeping-benches, of which the one opposite the entrance is reckoned the most honourable. The interior of the habitation is not unattractive: smoke, cold, darkness, dirt, and plenty of parasites. The Gilyaks' chief occupation is fishing. Two species of the gill-net (Stenurus and Tephalus) yearly visit their territory in countless numbers, and form the basis of their subsistence. Of the other kinds of big fish the most important are two species of sturgeon (Acipenser Sturca and orientalis). They use the fish not only cooked but in a raw or frozen state. They catch them with hand-nets, hooks, cast-nets, and seine made of nettle-fibre; they also spear big fish. The second principal occupation of the Gilyaks is the chase of big sea-beasts. Their vegetable food consists of berries. Hunting is a secondary occupation. They kill bearsChiefly in the time when the fish are passing, and the bears come down to the banks of the streams in whole crowds. Hunting sabers, cartridges, on pins of moose, palkins, and traps yields most of the money with which they purchase necessaries.

The weapons of the Gilyaks are the bow and arrows with iron heads. It is particularly to be noticed that they use dogs for food, which is quite contrary to the custom of the other hunting tribes. The means of transportation are boats and, in the winter, sledges (narsk) drawn by dogs. Their boats are of two kinds: (1) sea-boats after the Manchurian model; (2) river-boats of native production, dug-out made from a whole poplar, with round bottoms, long and narrow. The saddle is, like the boat, a dug-out, and very narrow, so that the driver sits astride upon it and his legs slide on snow-shoes on each side. The dogs, from five up to thirteen, get out as much as 12 verst (7.5 miles) in an hour.

The Gilyaks' winter costume is a tunic of dog-skin, with the natural selection and to crossing, produced vigorous and healthy progeny, which delayed the process of extinction.

3. Family and domestic life.—The structure of the family among the Gilyaks has peculiar features. At first sight, in an earth-created world, the family would appear to be both non-individualistic. As a matter of fact, monogamy is the commonest form; polygamy is rare, and owes its occurrence to circumstances. According to the accounts given by the Gilyaks themselves, polygamy hardly exists at all either on Sakhalin or on the estuary of the Amur or on the coast of the Sea of Okhotsk; it is fairly frequent along the course of the Amur; but, even where it is found, there are seldom more than two wives. A Gilyak buys his wives from outside his kin, and pays a bride-price for them, according to their value in various precious goods. A Gilyak's wives and his children are reckoned his wives and children in the eye of the public; but the group of men—his younger brothers, cousins in every degree of kinship, and also the husbands of his sisters and his wife's sisters—who have the right to sexual intercourse with his wife. A group of brothers possesses the same right over all the sisters of the wives of each of them. Accordingly, any man who is joined in individual obedience to any woman has rights over a whole group of women. Likewise, each woman who is married to a single Gilyak is at the same time participant in a group marriage with the whole group, consisting of the husbands of her own sisters and the brothers of her husband. This regulation of sexual intercourse, discovered by Sternberg in 1891, is in exact accordance with the words expressing relationship. Each man applies the word an'kes ('wife') not only to his individual wife, but to all his own wife's sisters and also to all the wives of his elder brother; and the woman gives the name pan'ess ('husband') not only to her own individual husband, but also to the whole group of persons mentioned above. In the language of the Gilyaks, therefore, 'son,' the like, are applied to whole groups of persons; the wives of brothers call each other 'sister,' and a daughter's husband calls his wife's father's sister 'mother.' The men of each kin
marry, for the most part (and formerly this was obligatory), the daughters of their mother's brothers, and women wed the sons of their father's sisters. The reason for this is the objection that among the Gilyaks can by no means be called immoral, as much as towards persons in forbidden classes the strictest condemnation is shown. In all cases: with such, not only jests, but even ordinary conversation, are forbidden. The position of women is one of subjection. Their marriage is often forced; betrothal is often arranged between children not yet married. The special sentiment of love is well known to the Gilyaks. The death of a beloved wife, or the impossibility of marrying one's beloved, is often a motive for suicide. This sentiment is often the cause of women being carried off. Kinship among the Gilyaks is exogamous, founded on the agnatic principle; its signs are having (1) the same heart or lord of the heart; (2) the same kind-gods and sacrifices; (3) the same kins into which the women are given in marriage, and from which the men take their wives; (4) the same common obligation of kin-vengeance; (5) the same cemeteries in common; (6) mutual rights of inheritance; (7) the bear-festival in common.

In the tenderest principle, the Gilyaks do not recognize any patriarchal power of the elder. The elders of the kin or the richer members of it, are respected and obeyed, but not in power. Juridical relations are to a great extent regulated by the kin organization. By the agnatic principle only sons inherit, or, in their absence, brothers. The eldest son takes over the wife of the deceased; but in any case the property does not pass out of the kin. Only by testamentary disposition can part of the property pass to daughters. The law into one's own hands is the proclamation, by force of arms, of a woman who has been carried off. But more frequently recourse is had to the decision of the kinmen. An insult leads to a duel with sticks. Not long ago, if a kinsman was slain by an outsider, the kin of the slain man would all unite in sangunary warfare with the murderer's kin, but the women and property were not touched. Sometimes such struggles ended in a peace, upon condition of the payment of a blood-price. Murder within the kin is not punished.

In general, juridical morality among the Gilyaks stands very high. Thefts are almost unknown; murders not committed for the sake of gain. But the evil example of the Russian traders is beginning to have its destructive effect. The moral feeling which animates the Gilyaks is visible among them in the general propriety and in the modesty of the women. They live all together; but shameless nakedness is not allowed, nor the disgusting scenes which are met with among the Ainu. Of course, even among the Gilyaks, cases of unchastity outside wedlock occur; but the parents of a girl who commits such a fault treat her with severity; the mother, according to the Gilyaks, subjects her to corporal punishment; and the father, in case of an illegitimate child being born, tries to set the evil right by killing the child and hiding its body. The marriages, though based upon sale, generally run a peaceful course. As long as the wife is young, the husband guards her jealously, and she most carefully avoids giving him cause for anger. Moreover, both sides are kept under a check by the fact that a husband who sends back his wife to her parents for any reason has no right to ask for the return of what he had formerly paid her for. If a wife has any wishes, she can demand that the payment made for her be given back to him. In allowing the labor of keeping up the domestic economy, incomparably the greater share falls to the wife. The husband is responsible only for winning the most necessary means of subsistence. Hunting, fishing, trading, and the journeys connected with them, are the main sphere of his activity. The time when the Salmonide pass up the Amur in masses perhaps requires of him re-doubled energy; but, the wife, too, in such cases gives him no considerable help. When the fish has been brought to the bank, she has to clean it, gut it, split it, and arrange it on the drying stages to be parched in marring. It is also the women, partly with the help of the children, that lay up, for the winter, stores of food derived from the local flora, and collect berries, roots, herbs, mosses, etc. The Gilyak children are kept in an extremely dirty state. The mothers wash them only in very rare cases. Nevertheless they are usually, at any rate in winter, well and decently dressed. Their clothing exactly reproduces in miniature the adults' garb, down to the smallest details and all the ornamentation. From the belt which secures the coat and apron of the little Gilyaks hang all the same objects as the adults carry—tinder, flint and steel, pipe-cleaner, etc. In their amusements and games the children love to imitate the work and pastimes of their elders.

In cases of polygamy all the wives live together in one and the same room, and each has for herself an arbor bed and her children on their own hanging-benches. All the wives have equal rights, and each gives her share of labour to the domestic economy. But the division of labour is not always equal. The wife who is the favorite of the husband is generally given only the lighter work; the heavier is allotted to the rest. According to local testimony, a Gilyak often contracts a second or third marriage, in order to render easier the life of one or other of his former wives, by putting her disposal a fresh worker. Men of the richer class, who from their ostentation, in order to make a show of their wealth, allow themselves the luxury of several wives, not infrequently adopt another means of lightening the labour of the latter. They allot to their eldest wife the husband's work, the burden of the house to slaves, usually female, but occasionally male, bought for this purpose. The Gilyaks have a special word for them, kry-gihkry's, or, according to their words, kry-gihkry's-wings for women, and kry-gihkry's-sag for men. It is to be noticed that they have no slaves of their own tribe; and the number of slaves, especially of male ones, is rather limited. The reason for this is the high price which they have to pay in getting them either directly from the Ainus, or Guf'da, or, more frequently, from other Gilyaks at second hand. The price of a female slave is much higher than that of a man. Slaves male and female are without any civil rights, and are entirely dependent on their lord; they are treated humanely only as far as the lord's own interests dictate, and he has perfect freedom to sell them whenever he likes. The business of slaves is to obey and to serve, but their chief suffering, especially in the case of the females, comes from their having no rights at all, and from the contempt with which they are treated by their masters, who do not allow themselves any human relations with them. Gilyaks are not allowed to marry female slaves, or have sexual intercourse with them; the latter rule, however, is not always obeyed by young unmarried men. But no Gilyak would ever allow himself to acknowledge progeny resulting from such intercourse. A child that comes into the world by such circumstances is reckoned to belong to its mother's tribe, and is the property of her owner. It is allowed to grow up along with its mother, and when it is adult it is kept or sold just like any other slave.
In view of what has been said about marriage, it is obvious that the right of inheriting extends only to persons of the same sex, and woman herself passes in inheritance like a chattel. The only direct heirs of a deceased Gilyak are his sons, however many they may be, on absolutely equal terms, no regard being had to the wife and daughters, whether married or single, have no rights in the inheritance. The only modification is when a man leaves behind him a wife with young children. The relict, along with all the property of the deceased, passes to his next eldest brother as his wife, whether he is single or married, and several wives. The levirate, however, is not quite obligatory. Any other person may, if he wish, marry the widow, with the consent of the brother-in-law and on payment of a certain sum. The children according to custom, are not forbidden to follow their mother. Finally, if a deceased Gilyak leaves neither sons nor brothers, the right to the inheritance passes to his nearest male relative. In the words of the Gilyaks themselves, the deceased is succeeded by his so-called kalt. A clear distinction is made between relatives on the father's and on the mother's side. The former are called agafka, and are reckoned blood relations; the latter amal, 'friends.' It is only the former who are subject to the obligations connected with the matter of blood-revenge, which plays such an important part in Gilyak life. Like all primitive peoples, the Gilyaks hold strongly to the feeling that every shedding of blood requires a corresponding retribution exacted by the victim or his kin. Not less deeply seated in their minds is the belief that any one who omits to fulfil this duty inevitably pays for the omission by misfortune or even death. This belief, which is universal among them, has in the execution of blood-revenge a powerful, decisive, and permanent influence upon them in both life and death. The laws of blood-revenge unconditionally require agafka to avenge a kinsman who has been slain outright or has died from wounds received and cannot avenge it himself. If his hurt is not fatal, he is himself the avenger, and his agafka only help him. The same obligations are imposed upon the agafka on the other side. The feeling of solidarity in the matter of blood-revenge, which binds together all the agafka of one and the same kin, especially a large one, serves as some guarantee against attacks being readily made upon any of them.

4. Government.—When Schrenck was on the Amur the Gilyaks were subject to no one, and paid no tribute either to China or to Russia. It is true that in the beginning of last century they were still to some extent subject to the Chinese power both on the Amur and on Saghalien. In the twenties of the 19th cent. this state of things was altered. The authorities of Manchuria chose headmen in many places from among the natives, and upon them lay the duty of collecting tribute, each in his own district, and delivering it at Deren. Later, the Chinese rule sensibly weakened in these parts, and concentrated itself exclusively in that region. The lower Amur, which extends up to the mouth of the river to the Sungari. The Gilyaks and Ochots remained only nominally subject to China and paid no more tribute; when Schrenck lived among them they were independent and they had no talk of any headmen among them, so that Schrenck even failed in ascertaining the Gilyak name for them. In the fifties the Russians extended their administration, while the Russians had not yet had time to introduce any new arrangements. Accordingly the people was left to itself, and within certain limits nothing interfered with its action. This was the most favourable time for studying its native manners and customs, and it is these we shall keep in view in our surveys.

With the exception of the regulations concerning the family and the parental kin, the Gilyaks have no legal rules or accepted organization to determine the course of self-government. They do not elect from among themselves any persons with authoritative power to preserve proper order in the community, settle any differences which may arise, or the like. Indeed, there seems no need for anything of the kind. They have no wars with their neighbours or internal strife; they make no preda- tries on neighbouring lands and exact no tribute; hence they need no leaders or headmen or such governing persons. On the other hand, there is a sharp difference among them in the matter of wealth. Some of the Gilyaks are reckoned rich who can make frequent journeys to trade with the Manchus and Sisams (the Gilyak name for the Japanese), and among them get a store not only of all the necessaries of life but of various articles of luxury. Further, journeys and intercourses with foreigners give the prosperous Gilyak such a breadth of view and experience, and make him so much more clear-sighted and logical, that, quite apart from his material importance, he acquires a great influence with his company. As he becomes, as it were, the soul of his village. It is his house that is chosen for the cheerful assemblies and feasts which accompany the bear-festival. The help a rich Gilyak gives to a poor or sick person is a matter of sending something or other to his house, but of supplying him with all the necessary means of subsistence gratis (in Gilyak pos). The chief ground of this is the communist spirit which pervades all primitive peoples.

5. Calendar, etc.—The Gilyaks have no exact ideas of time, but there are certain notions. Besides the usual expressions like 'day' (mow), 'night' (urk), 'morning' (tyt), and 'evening' (pruf), the time of day is defined according as the sun is rising or setting (keng-myur or paden), 'being born'; keng-myur or much, 'dying'; mounting the sky (keng-tsytrashkabir), slanting down (keng-bollich), or standing at its highest point at noon (keng-munudch). It is especially difficult for them to define some day long past but in some way memorable, as it is exactly like the whole series of similar days spent at one place amid the ordinary duties. In spite of this, they follow very attentively the phases of the moon. They have separate terms for full moon and new moon (long-chornik, 'the moon is full'; and long-much, 'the moon is dead'), its waxing and waning, and also for the various stages of these phases of the moon. The year is divided into twelve months, but the names of the months differ in various parts of the country. Some are current among the Gilyaks living on the lower Amur, while others are used in the interior and on the east coast of Saghalien. The following are the names of the months of the year as used on the west coast of Saghalien and on the mainland:
The Gilyaks divide the twelve months very unequally into seasons, of which, strictly speaking, they recognize only two—winter (turf or tuf-an') and summer (tolf or tof-an'), corresponding to the times that they live in winter-houses and summer-houses. In general their year falls into the following divisions: winter, consisting of five months, November to March; spring, one month, April; summer, five months, May to September; autumn, one month, October.

Seeing the daily rising and setting of the sun, they naturally think that the earth (miy) stands immovable and the sun (len) moves round it; further, the circle of the horizon makes them imagine the earth as a disk. But as to where the sun hides when he has set and night has come on, they do not inquire.

"When I asked them about this," says Schrenck, "they laughingly answered my questions with others, such as whether I had ever eaten a hare or other game after he had set. The more intelligent of them, such as Yushin and Belgor, immediately began to revolve the problem of the regular succession of day and night, and there came into their heads the idea of the unintermittent motion of the sun about the earth, of the earth's immobility, and, beneath the earth, of the heavenly bodies, and, as its direct consequence, that of the possibility that the sun is equally distant from the animals and people everywhere. I found it much easier than I expected to get the Gilyaks to believe that the latter."

The stars also, in their opinion, revolve round the earth, just as the sun does. Indeed, in regard to the stars, the Gilyaks have got so far in their conception of the universe that they reckon them similar world-bodies to the earth, supposing that it is only their enormous distance that makes them appear so small. This can be seen from the fact that the words wghlikr, 'star,' and wghlikr-em, 'star-earth,' are with them identical. For some of the constellations they have their special names: e.g., three stars in the tail of the Great Bear are called chowribikl, four others waygry-nyo, 'the mouse's store.' A constellation with many stars, perhaps the Pleiades, is called on the Amur "rum," 'cabal'; on Sakhalin taqgh-rino, 'the store of the little beast' (Tomias striatus), and also tammul-wghbrk, 'many stars.' Orion's sword is called chibikl; the Milky Way, wayhikon-nyi, 'the umbilicus of the earth,' and the most important of the commonest questions of the Gilyaks concerns the existence of people on the stars. When Schrenck said that the stars are so far that people on them, if they do exist, could not be seen even through a telescope, the Gilyaks always replied that the shamans do succeed in seeing them. According to the Gilyaks it is positively known that upon the stars there grow tall trees and whole forests with plenty of all kinds of animals—sables, minks, foxes, bears, dogs—and, finally, people whose the Gilyaks call sot-an', 'star people,' sometimes wghlikr-em-nibalh, 'earth-star-people.' These people are of gigantic stature, with thick brows, long noses, and so on. The inhabitants of the earth occasionally meet the star-people, and the shamans know what to do in these cases.

In festivals, etc.—The bear-festivals take the first place. These are festivals for the rich, who secure the bears for this pastime. When the beast has been caught the hunters fetter him securely, and every family, either by the pair or alone, goes to the bear and ties together. Old and young run out to meet him with joyful cries. In Gilyak villages there is nearly always a plane reserved for a bear; if there is none ready-made, it is erected without delay. This place consists of a square log-hut, open above, with a small door fastened from the outside, and a small window-opening which is never closed. After dressing the bear by force and untying him, they cover the hut over with planks, and pile heavy stones upon these so that there is not the slightest possibility of the prisoner's escaping. From that moment the bear becomes the object of the care of the village, which is bound to look after him and supply him with food, so acquiring the right to participate in the bear-festival. Thus the bear-festival is entirely communal. It unites all the members of the village, and thereby offers a kind of centre about which the whole village-life revolves. The day of the festival is commonly fixed by the original owner of the bear, i.e., the man who bought him or caught him at the time of the trapping. He also figures as the leader of the feast, keeping strictly to the customs consecrated by time. Besides the chief delicacy, bear-meat, the leader of the feast enriches the festive board with other culinary productions in the Gilyak taste. In his anxiety for greater splendour, he invites to the feast not only his kinsmen, but all his friends and acquaintances.

After the close of the festival the bear's skin is allotted to the organizer of the feast. The feeding of the imprisoned bear proceeds according to well-established rules. The food is introduced through the window-opening; it consists of first raw or dried (yubali), and mosi, a kind of thick gruel. At rare intervals the bear is brought out of his prison chiefly in order that the hut may be cleaned. Before he is put back into it, he is led round the village several times. The period for which the animal is kept depends upon its age. Grown-up bears are kept in captivity only a few months, but cubs for several years until they have grown and put on fat. Bear-festivals are celebrated in the winter months, as at that time of the year the Gilyaks live on the mountain-inlands, i.e., after the Chinese fashion. The greater part of the bear-festivals occur in the month Aw-long (December). During the opening days of the festival the bear is led solemnly round the village; there is a farewell feeding of him; he is set up as a target and, after he has been killed, he is cut up and skinned, and his head and skin are borne to the hut. The following days are given to feasting, games, contests, dances, singing, sledging-races, and other pastimes. Throughout the festival an original kind of music is incessantly played, and the blows of a stick on a hanging beam, to the accompaniment of humorous songs. The last act of the drama is the sacrifice of dogs, and the scattering off of the bear's head and bones to the common resting-place for the remains of bears.

7. Religion.—The religion of the Gilyaks is pure Animism. Regarding all Nature as animate, they give it a completely anthropomorphous expression. The island of Sakhalin is regarded as a live creature, with its head at Cape Mary and its feet touching La Perouse Strait. Every more or less important headland or hill is a live creature, to which are attached many romantic and tragic legends of a purely human character. As he sees in inanimate objects of Nature a living anthropomorphic existence, the Gilyak takes a yet more anthropomorphic view of animals, regarding them as beings to whom are granted the highest reason and power for whom the animal envelope is only a mask hiding a human being. Every element, every force of Nature, has its own lord, in all his attributes and social conditions, a pair of sledges tied together. These gods likewise, in their turn, occasionally take the form of some animal or another. The chief gods or 'lords' are the lord of the mountains, the lord of the sea, an
old man with a long beard, who throws handfuls of 'ashes' rose about in all directions; Ty-ye', the lord of the heavens; Mu-ye', the lord of the earth; and others. All these lords are in other worlds, and to them from time to time sacrifices are offered in the shape of various sweet roots, rice, tobacco, etc. In more important cases the sacrifice is a dog. Often such sacrifices are performed in the jungle to the lord of the jungle, or in the sea or the river to the lords of these. The Gilyaks burn a dead man after dressing him in his best clothes (several suits). After the cremation they break his canidoms and sledge and kill his dogs. Not far from the place of burning they set up a little house. In it they put a doll which represents the dead man, dressed up in presentable state. Above the doll they set a wooden representation of a cackoo, and round about cups, plates, pipes, tobacco, sugar, and various things. During the time immediately following death, before the dead man is settled in his new place, his kinsmen visit his little house at intervals, make libations, and present provisions. Disease and death are regarded by the Gilyaks as the results of the will of an evil spirit, who either seizes the soul or gradually eats it away. The Gilyaks believe in a world that exists beyond the world of the living, and this world is inhabited by the ancestors of the dead. Gilyaks are invited to drive this evil spirit forth. In social relations the shamans are not at all to be distinguished from common Gilyaks, but the gift of shaman-craft is ordinarily handed down from father to son.

The worship of idols among the Gilyaks must be regarded as borrowed from the Tungus tribes. Mangute, Gol'da, and Orochi, and also from the Ainu. The Sagaheil Gilyaks have scarcely any idols. Special reverence is paid to a representation of a beer which is kept in a toy-houses, into which they also put a store of victuals—tobacco, sugar, etc.—and other things belonging to the sacred animal. Gilyaks are also indicated in the sacred images as far back as the IInd and IIIrd dynasties. The ancient races of India appear to have employed the girdle in dress, and richly embroidered girdles still persist in Indian costumes; in ancient Norse mythology, e.g. Frigg's golden girdle, and amongst the Chaldeans and Babylonians (Ezek 23:2) reference is also made to them.

Coming to Biblical girdles, it is necessary to point out that in the EV the word 'dārā is frequently translated 'girdle,' whereas it is more properly rendered 'cincture.' Such were the 'girdles' of Elijah and John (2 K 1, Mt 3, Mk 1). The true girdle of the Bible consisted of a long strip of cloth wound round the waist above the tunic, with or without the ends hanging down in front; but, in other cases, it varied from a simple rope (Is 38:4) to the elaborate waist-belts of the priests and the 'golden girdles' of Rev 1:10. The 'curious girdle, who has his seat' (ch. 4:2) was 'of gold, of blue and scarlet, and fine twined linen' (Ex 28:30); it was wound several times round the waist and tied in front, the ends being fastened together on the left side.
GIRDLE

falling to the ankles. The girdle also served as a sword-belt (2 S 209); as a purse (Mt 10:9 RVm); and as a support for the inkhorn (Exk 25:9). The application of the girdle in most cases in the Scriptures is used to indicate the completeness of the dress and readiness for action—e.g. 'gird thyself and serve me' (Lk 17:11). Among the Romans, the girdle consisted of linen, and was used to confine the tunica. It was worn by both sexes, and also formed part of the dress of the soldier and gymnast. The Grecian athletes also wore girdles; in the games, and Hercules is depicted at Olympia as 'wresting from the Amazon her girdle.' Amongst both Greeks and Romans the girdle was the usual receptacle for money, etc. And Gaius also named to top this town Gabili) was the term applied to the method used by the early Romans in warfare of wearing the top, the end of which, instead of being thrown over the shoulder, was drawn tightly round the body as a girdle, thus leaving the arm's free. In Tibullus we read that at funeral ceremonies the girdle was worn by the boy or girl, with which every Zoroastrian child, whether boy or girl, is invested when about fifteen years of age, consists of a string, about the size of a stay-wool, which is first passed twice round the waist very loosely, over the sacred shirt, and tied in front with a loose double knot (right-handed and left-handed); and the long ends are then passed under the arms and round the waist and tied again behind with a similar double knot. This string contains six strands, each consisting of two fibres, white, woollen threads twisted together, or seventy-two made in all. Near each end of the six strands are twisted rope, instead of being twisted, and for the last inch they are braided into three separate string-ends of two strands each; these string-ends, therefore, contain twenty-four threads each, and form a kind of fringed end to the string. This fringe is a sort of remembrance, as its six strands are supposed to symbolise the six Gharanias or season-festivals, the twelve threads in each string symbolises the twelve months, the twenty-four threads in each string symbolises the twenty-four karats or sections of the Vipatra, and the seventy-two threads in the whole string symbolises the seventy-two books or chapters of the Yasa.

The importance of the girdle in India is shown by the fact that its absence, before which the religious rite may be performed, is the second birth. The rules regarding the northern Indians are noted below; among the southern Dravidian Brahmas the girdle is made of three strands of cotton, in each of which are nine threads; and, similarly, a three-knotted girdle is worn by the Dervishos of S.W. Asia. The Vihāra woman uses a simple cord to wear the girdle over the right shoulder, but during funeral ceremonies, when the custom connected with the living are frequently reversed for the dead (IEE, vol. iii. p. 652, vol. iv. p. 430, p. 60), the girdle is removed to the left shoulder.

At the annual May procession of the boundaries of Iguvium (Gubbio), a sacred girdle (cringatore) was worn on the right shoulder.

For different castes the girdle is of different materials.

The girdle of a Brahman is to be made of a triple cord of māraja (Sibakuram muṣa), smooth and glibble; but of a Kshatriya it should be a bewitching of muslin (Candraśaya ṣeṣṭeva); of a Vaisyas, a triple thread of hemp. If māraja cannot be had, (their girdles) are to be made of hemp (Paus yonnuma), dānabda (Sibakuram muṣa) (or) selya (Ghunna suṣa), threaded, with one knot, (or) three, or even five.

The girdle of the Brahman is composed of 3

1. Living Races of mankind, ed. H. Northcote, 5 vols., London, n.d., where many illustrations of girdles may be found.

8. BIBL. III. (1881) 555, 455, 454, notes 1-3, 458-483; cf. xxx. (1897) 16, 17, 351.
strands of cotton formed of 9 threads, and the material must be gathered and spun by pure Brāhmaṇas. After marriage the cord must have 6 strands, and may have 9; the months of March–June are the most favorable for the investiture, and begging is permitted to defray the heavy expenses of the ceremony. The initiation with the girdle took place at 8 years old in the case of Vaiśāyins, at 11 years old in the Kṣatriyas, and at 12 years old in the Vaiśāyins. The following is the formula used at the ceremony:

Here has come to us, protecting us from evil words, purifying our minds as a purifier, clothing herself, by the power of illumination and exhalation, with strength, this friendly goddess, this sacred girdle.

With these words thrice repeated, the girdle is tied from left to right three times, and there shall be one knot or three or five, and it is finally adjusted with the words: The sacrificial cord rests upon the right shoulder, and the girdle is invested as follows: further, the student has to repeat the verse protecting us from evil word and the Protectress of right; the initiates in the girdle at the right side of the navel and draws that to the south side of it. At funeral ceremonies the relatives of the deceased wear their sacrificial cords. The Brāhmaṇa who has been invested with the triple cord is called a Brahmachārī; the cord is called Gopagopaka in Sanskrit, Jōtānu in Persian, Jōtānu in Tamil, and Jōtānu in Canarese. Other Hindu share with the Brahmans the honor of wearing the cord, e.g. the Jains, the Kṣatriyas, the Vaiśāyins, and even the Panditās.

The oldest extant charm for a girdle is contained in Atharvaveda, vi. 153, and runs as follows: The god that binds this girdle, that fastened it together, and that joined it for us, the god by whose instructions we move—may he take the further shore, and may he release us.

Offered to art thou, offered unto thee; thou art the weapon of the gods; mouthing first of the bow, be thou her protector, O girdle.

Since I am dead, a student, soliciting from existence a man for Yama, him do I, by intoxication, by favour, by lot, tie with this girdle.

Daughter of faith, born out of favour, sister of the being-making seer was she; do thou, O girdle, assign to us thought, wisdom; also assign to us favour and Indra's power.

The ascetic being-made seer bound about, do thou, O girdle, in order to length of its, O girdle.

Girdles were in use for religious purposes in the Greek and Roman liturgy, and Anastasius mentions in the 8th cent. maravasseis, or jewelled girdles of the shape of lampreys or seahorses. Zodical amulets in the form of girdles were known to the early Christians, and the girdle of the ephod must be again referred to (see above); its end when the priest was engaged in sacrifices was thrown over his left shoulder. As early as the 5th cent. Pope Celestine (423–432) deprecated the frequent use of the girdle by the priests as an article of adornment and distinction in their dress. Some mention must be made of the ovarium, a kind of scarf worn on the left shoulder and passing diagonally downwards to the right side; it was permitted to be worn by the Romans as a favour by Aurelian. The fourth council of Toledo directed that the ovarium should be worn by deacons over the left shoulder. The application of the pallium, which was used as early as A.D. 514—in its earliest form a narrow strip of cloth, passed over the left shoulder, then round the neck and over the left shoulder again, leaving the two ends free one in front and one behind—seems to the present writer to be connected with the ovarium. The girdle in its final form as an ecclesiastical vestment is a narrow band, usually and properly made of silk, but sometimes of cotton; white as a rule, it may be coloured. The esoteric meanings attached to it are mentioned in the apocryphal literature as semen omnium virtutum; virtus continentiae; perfectis Christi caritatis. Properly it is about four yards long, and is used to secure the alb, the upper portion of which depends over and often hides the girdle. The 'stole' is the successor of the ovarium, and consists of a strip of embroidery 2–3 m. wide, elaborating in a cross. The man wear it over the left shoulder and secure it under the right arm, while priests cross it over the breast. The 'pall' is also probably derived, through the pallium and stole, from the girdle, while the sub-pallium, now worn only by the Pope, was originally a girdle with a lozenge-shaped lappet depending on either side of it.

In the Orthodox Greek Church the πόρτα, and in the Malabar the σωστόν, are all girdles; and other vestments used in their ceremonies show traces of girdle origin. The girdle is also an important article in the dress of many religious orders. It is often of black leather, although a simple cord or rope is also common.

The above sketch of the part played by the girdle in sacrifices is by no means exhaustive. Little attention has been paid so far to the significance of the girdle in vestments; and it would be desirable to trace the various metamorphoses which have taken place in its descent from mythical times are often vitiated by the omission by authors of accurate descriptions of the girdles and their mode of application. Sym pathetic magic appears in connection with the girdle, in the form of spells and incantations. Thus, for example, a man can change himself into a werewolf (p. e.) by donning a belt of wolf's skin. According to Muhammad Shahristāri, who wrote his Gulistan-i-Rāvī (Ross, Garden and Mystery) in A.H. 717 (A.D. 1217), the girdle signifies to the Sufi the binding of the bond of obedience, so that the knotted girdle is the emblem of obedience. Perhaps influenced in part by some such passage as Is. 11 ('righteousness shall be the girdle of his loins, and faithfulness the girdle of his reins') or Eph 6:4 ('having girded your loins with truth'); or, as Ps. 90:2 ('I am a vile man'), an Irish monk in Austrian Klosterneuburg wrote the curious hymn which may also contain some reminiscences of the pagan Celtic period:

The girdle (ψῆλος) of Fines is round about me, to protect me, that I walk not in the way which leadeth the people... against disease, against anxiety, against illness, against pain... it is the girdle of John is my girdle... it protects me from the wrath of the enemy... it gives me strength and power... it protects me from the wrath of the enemy... it is about me that men may not wound me, that women may not wound me; in the fields I am marked; at my hour I am about me.

3. Girdles used as amulets for the cure of disease and for facilitating childbirth. (a) For the cure of disease. Girdles used as amulets for curing diseases are to be met with in many countries, and are employed in the treatment of multifarious conditions. No doubt they originally had some religious significance, but in the majority of cases this has been completely lost. Four in
stances may be cited as examples of their use. The natives of the Island of Harris wore a girdle of sealskin about the waist for removing sciatids; and, in Aberdeenshire, one was employed to cure 'chin cough' (whopping cough). Among the Nian-Niam and Upper Tribes of Bahir al-Ghazal in Southern Egypt, a tight cord is placed round the chest of a man and magic words are pronounced; a thick rope-shaped wooden charm is attached. These must suffice as typical illustrations of the wide distribution of such beliefs and of the variety of conditions in which they are employed.

(6) In pregnancy and childbirth.—The application of the girdle during pregnancy and labour forms a curious ethnological problem. It is well known that the popular idea in most nations is that everything must be unloosed in these contingencies: thus, husbands must not sit with their legs crossed, doors must be opened, knots of all kinds undone, and the hair even loosened. Whether the girdle idea arose as an offshoot of the sacrificial girdle or as a simple means of applying v'vsi 'pregnancy' to say with certainty, but the preponderance of evidence is in favour of the religious origin, as we shall attempt to indicate.

In the Brahman marriage rites the bride is invested with a red and black woollen or linen cord with three amulet gems; this is not the sacrificial girdle, nor are women allowed to wear it. In popular Hindu birth-customs, a charm is bound about the belly of a woman in labour; this charm consists of an equilateral triangle or a collection of magic words arranged into three rows cylindrical. In an Assyro-Babylonian fragment in the British Museum an inscription recited for a pregnant woman mentions 'binding being relieved.' The Brahman birth-customs, a charm is bound about the belly of a woman in labour, and carries as symbol the woolly girdle; it is, let it be noticed, comparable with Aphrodite and Frigg. Among the Greeks, a birth was forward or retarded by divine beings, the Eileithyia, handmaids of Hera; there seem to have been two Eileithyia, one advantageously and the other disadvantageously. The former is called 'the girdle-losing' (λακευτρία). Later the two Eileithyia were merged into one, who became the Roman Lucina. The Trojan maidens had before marriage to decorate their girdles to Apaturian Athene; and Athenian women pregnant for the first time hung up their girdles in the temple of Artemis. The Roman ladies bound the abdomen with a waistband-like girdle from the eighth month of pregnancy, and these bands were probably made near the image of some god; the girdle was unloosed at the confinement; hence the goddess of birth came to acquire the epithet Solonkios, 'the girdle-loosing.' In some cases the husband seems to have tied and unloosed the girdle.

It will have been perceived by this time that two or three variations of treatment are regarded as girdles. In some cases, the girdle is applied during labour as a charm, in others as a means of pressure, and it is also applied, probably as a support to the abdomen, in the last month of pregnancy, and removed when labour approaches. This introduces us to an interesting philological curiosity connected with the last variety. The Latin word isissaica means 'girdled,' sometimes 'ungirdled,' 13 and, in the vulgar tongue, 'a pregnant woman'; from this is derived the Italian isicci, 'pregnant,' Spanish asiento, 'to be pregnant,' French enceinte, 'pregnant,' and probably German entbinden, 'to unloosen,' and 'to deliver.' These words furnish excellent confirmatory evidence of the fact that the girdle played a most important part in pregnancy in early times. Amongst the Jews a girdle made of snake's skin or that of a she-ass was worn to prevent miscarriage at birth, and the Turkish women held similar beliefs; compare with the Jewish custom that of Brandenberg women, which consisted in binding the abdomen with a snake's skin to gain an easy delivery.

The same beliefs are prevalent amongst the less civilized races; thus, in China, a belt is used during pregnancy and labour; the Japanese women wear a long and flowing silken girdle, and the custom is said to have been originated by the Empress Djin-go-Nogou about A.D. 200. The fifth month is selected for its application, and a girdle belonging to a woman who has had easy confinements is favoured, and, therefore, borrowed, such as the woman referring to as 'the girdle-mother'; after the birth, part of the girdle is used to make some of the child's clothing. The Kalmucks, nomads of Mongolia race, buckle broad leather belts around the abdomen as soon as labour begins, and use pressure from above downwards; 14 and the Burmese women wear a tight bandage from the 7th month onwards to prevent the child ascending too far. The central Australian tribes have curious modifications of these customs. A certain stone is believed to contain the spirits of children; by visiting it a woman becomes pregnant; and, by tying this girdle round the stone, a man can cause his wife to be with child. Again, the Arauta husband removes his hair girdle, it is then tied tightly round the woman just under her breasts, probably with the idea of expelling the child. 15 During a Zulu confinement a grass rope is tightly fastened round the middle of the woman to prevent the child slipping up again; 16 and, to judge from an illustration, the girdle is also worn during pregnancy. 17 The Bantu of South Africa employ the girdle as an amulet for easy delivery. 18 A very curious girdle is used by the Shangaan women of Portuguese East Africa; it is of woven fibre, hinged in the middle so as to resemble a pair of calipers; but, as its height is only 6-7 in., one fails to understand how it is applied.

GIRNAR—GLASITES

plied. The practice is general among the American Indians, where the idea again seems to be pressure; the "squa belt" used by the Sioux Indians is of leather, 4 in. wide, and has three buckles. In Macedonian folklore, if one's girdle becomes undone, some woman of the family has just been delivered, and it is also an omen of easy delivery; girdles have also a place in their marriage ceremony.

In historic times, and particularly among Catholic peoples, the belief in the efficacy of girdles in difficult labour has been, and is probably still, rife. In France, the girdle of St. Oyan; in England in 1159 that of St. Joseph, and that of the Abbess Robert of Newminster; and of the Holy Magdalen of Swabia, have all been used for this purpose. In Germany a cord the length of the standing image of St. Sixtus was used about the 14th century. Spanish women tied their girdles or shoe-latches about one of the church-bells, and struck the bell thrice. Further, we find in 1592, under the expenses of Elizabeth of York, a sum of money paid to a monk that brought our Lady gyrdle to the Queen, and the note that "it was probably a reliquary for a monastic cell; as it was in common practice for women in this situation to wear blessed girdles." Sometimes a long scroll containing the Magnificat was used. Dr. Leighton writes in a letter to Lord Cranstoun (1657?): "I saw our Lady's Girdle of Bruton red silk, a solemn relique, sent to women in travail. Other charms of a like nature were bound to the thigh.

In the Battle of Lora, by Ossian (James Macpherson), the passage occurs:

"An hundred girdles shall also be thine, to bind high-looked maidens, the friends of the ladies of homes, the crow of the sons of toil." Macpherson adds a footnote stating that "Sacredly girdles, till very lately (1761), were kept in many families in the north of Scotland; they were bound about women in labour, and were supposed to alleviate the pains and to accelerate the birth. Some were dedicated to St. Ninian, the twenty-fourth of their Tir-thanakara, or deified saints. A rock at the foot of the hill is engraved with a copy of the codicils of Aoka (q.v.; cf. "Our Lady's Girdle of Bruton red silk," in the Early Hist. of India, Oxford, 1898, pp. 129 f., and two other inscriptions—one of the Satrap Rudradaman (c. A.D. 150), recording the construction of the Sudarians tank; and a second its destruction and repair in A.D. 488 (V. A. Smith, Early Hist. of India, Oxford, 1898, pp. 129 f., 200).

The original name of the mountain was Raiwara or Ujijanta; and the Buddhist pilgrim, Himen Taling, describes it under the Pali form of the latter title, Yuh-chen-to or Ujijanta (S. Beal, Buddhist Recollections, London, 1884, ii. 209). The Jain temples, the largest of which is dedicated to Neminatha, are fully described by Burgess in his Report. On the verge of the hill, at some distance from these temples, is the huge isolated rock, known as Bhravara-jap, 'the place where charms are recited in honour of Bhravara, Siva in his destructive form. In former days, fanatics used to hurl themselves from the precipice, in the hope of gaining immediate entrance into the paradise of Siva (cf. Crooke, P.R.I., 1891). Another interesting temple is that of Amba Mata, the Mother-goddess, now one of the many forms of Uma or Parvati, the consort of Siva (see DURGA). Here newly-married Brahman couples resort, have their clothes tied together, and present coco-nuts and other offerings to the goddess, in the hope that she will secure for them a continuance of wedded felicity.

GIRNAR.—A sacred hill and place of pilgrimage of the Jains, with numerous temples, is situated in Kathiawar, Bombay; N. lat. 21° 30', E. long. 70° 42'. The hill reaches a height of about 3500 feet above sea-level, and includes five peaks, one of which, till recently, a haunt of the loathsome aegis or sphinx. In the opinion of the Jains, the sanctity of the place is second only to that of Pataliputra, because it was associated with Neminatha, the twenty-fourth of their Tir-thanakara, or deified saints. A rock at the foot of the hill is engraved with a copy of the codicils of Aoka (q.v.; cf. "Our Lady's Girdle of Bruton red silk," in the Early Hist. of India, Oxford, 1898, pp. 129 f., and two other inscriptions—one of the Satrap Rudradaman (c. A.D. 150), recording the construction of the Sudarians tank; and a second its destruction and repair in A.D. 488 (V. A. Smith, Early Hist. of India, Oxford, 1898, pp. 129 f., 200).

The original name of the mountain was Raiwara or Ujijanta; and the Buddhist pilgrim, Himen Taling, describes it under the Pali form of the latter title, Yuh-chen-to or Ujijanta (S. Beal, Buddhist Recollections, London, 1884, ii. 209). The Jain temples, the largest of which is dedicated to Neminatha, are fully described by Burgess in his Report. Another interesting temple is that of Amba Mata, the Mother-goddess, now one of the many forms of Uma or Parvati, the consort of Siva (see DURGA). Here newly-married Brahman couples resort, have their clothes tied together, and present coco-nuts and other offerings to the goddess, in the hope that she will secure for them a continuance of wedded felicity.

GLASITES (SANDEMANIANS).—A Christian sect founded by John Glaes (1696-1779), and his son-in-law, Robert Sandeman (1713-1771). Glaes was born at Auchtermuchty, in Fife, where his father was parish minister. He graduated at St. Andrews, and studied for the ministry at Edinburgh. In 1733 he was ordained into the ministry of Fochabers. In 1739 he was appointed to the new charge of Tealing, and soon attracted large congregations by earnest and effective preaching. He was led early in his ministry to study the Scripture doctrine of the Church, through 'being brought to a stand,' while lecturing on the Catechism, by the question, 'How doth Christ execute the office of a king?' The result

5 Licensed by the presbytery of Dunkeld, he was ordained as minister of Tealing (1719), and soon attracted large congregations by earnest and effective preaching. He was led early in his ministry to study the Scripture doctrine of the Church, through 'being brought to a stand,' while lecturing on the Catechism, by the question, 'How doth Christ execute the office of a king?' The result
of his inquiry appeared as early as 1725 in the forming of a society "separate from the multitude," due to his new esoteric beliefs and practices. Glaser taught that there is no authority in the NT for a National Church, or for a National Covenant, such as then existed in Scotland. He maintained that the man of God was to have authority only in the Christian Church, and that the use of political and secular weapons as a means of reformation, instead of the word and spirit of Christ, is wholly wrong. This is the argument of his most famous treatise (Edinb. 1727), The Testimony of the King of Martyrs concerning His Kingdom. When it became apparent to Glaser that the Scriptural authority of Independency he was summoned before his presbytery. In 1728 he was suspended from the discharge of ministerial functions, and in 1730 he was convocated. As the members of his congregation adhered to him, the first 'Glasiot' church was formed, and Glaser was recognized as the 'kirk'. Although the General Assembly removed the sentence of deposition which had been passed, Glaser remained an independent minister to the end.

At Perth, Glaser was joined by Robert Sandeman, who had become his son-in-law. Sandeman gradually became the recognized leader of the churches of the order. It was his task to draw the line between antinomianism on the Glasiot churches. He taught that the true sect of Jesus Christ, without a supposed 'office of the part of man, is sufficient to present the chief of sinner spots before God.' He maintained that justifying faith is a simple assent to the Divine testimony concerning Jesus Christ, differing in no way from belief in any ordinary testimony.

Owing to Sandeman's prominence, the Glasiot churches became known as 'Sandemanian.' Different endeavours were made to make these churches the exact reproduction of the NT type. Elders, pastors, or bishops, who were all equal, were chosen without regard to education or occupation. Second marriage was a disqualification for office. Neither a weekly observance of the Lord's Supper, nor a love-feast at which every member had to be present, is in any way set up. Things strangled and blood were prohibited as articles of food. Decisions of the church must be unanimous. The accumulation of wealth was regarded as unsacred, and therefore wrong, and each member considered his property as liable to be called upon at any time to meet the wants of the poor or the necessities of the church.

There were about a dozen Glasiot or Sandemanian churches in Scotland, and a few in England and America. Michael Faraday was for many years a member of the Sandemanian Church in London. The most rigid churches of the order have now become extinct, and most of the members have joined the Scottish Congregational or Baptist Churches.

Gnosticism.—t. Name and character. Under this name are included all the manifold systems of belief, prevalent in the first two centuries of our era, which combined the Christian teaching with a higher knowledge. According to Hippolytus (Refut. v. 6), the title of "Gnostics" was assumed by the Naasenes; and we may infer that it did not originally bear the wider connotation which was given to it later. The pursuit of γνωσις was so intimately bound up with the religious sentiments of the age that those who shared in it were unconscious of any close affinity, and did not themselves call it by a common name. But the eventual triumph of orthodox Christianity brought into clear relief the identity of principle which underlay the various heretical doctrines, and caused them to be grouped together under the general designation of "Gnosticism."

We have to deal, therefore, not so much with a definite scheme of thought as with a large and many-sided movement, which was continually changing. The nature of this movement has often been misunderstood through a failure to apprehend the precise significance of the term γνωσις. It has been taken for granted that the Gnostics were the intellectual party in the Church, and that their object was to resolve the Christian message into a philosophy acceptable to cultivated minds. This estimate of the movement is not wholly erroneous. In working out their beliefs the Gnostics thought that they were led to construct highly speculative systems, which sought to explain the origin of evil, the nature of the Divine being, and the interaction of the spiritual and the material. In the words of Theodorus, as quoted by Clement of Alexandria (St. Theodot. 78), γνωσις is 'the knowledge of who we were, what we have become, where we came from, into what place we have been thrown: whither we are hastening, whence we are redeemed: what is birth, what is re-birth.' This definition, however, belongs to the later, more speculative phase of Gnosticism; and in any case it suggests the idea of a knowledge not attainable by ordinary intellectual processes, and only to be gained by a mystical enlightenment. To the term γνωσις, as we meet it in Hellenistic writings, there always adheres this suggestion of a knowledge obtained supernaturally. The magical papryi describe their contents as γνωσις, and the word is constantly employed, by religious and philosophical writers, to denote an immediate vision of truth, as contrasted with a wisdom that comes by seeking. These two kinds of supernatural knowledge have both been taken into account in estimating the purpose and character of Gnosticism. On the one hand, the Gnoseos possession is an occult lore. He participates in mysterious rites, and is instructed in magical watchwords and secret names.

1. By means of this γνωσις a man receives power to overcome those very angels that made the world' (Iren. 1, xvi. 5). This is the description of the invisible divinity enshrined in the hidden mysteries that show the way to the elect generation (Iren. 1, xvi. 5).

On the other hand, he undergoes a mystical experience whereby he apprehends the true nature of God and enters into communion with Him.

2. He who possesses a heart that is anointed, and that shines with light, is blest with the vision of God' (Fragment of Valentinus, quoted by Clem. Alex.).

The idea of γνωσις is closely related to that of revelation. It is assumed in all the systems that man is unable of himself to attain to the higher knowledge, which is, therefore, communicated to him by a being from the heavenly world. This fundamental doctrine of Gnosticism gives a mystical expression in the Hymn of the Naasenes (Hippol. v. 5):
Each of the sects claimed to be the repository of a secret message, revealed from heaven; and on the knowledge of this message, with its accompanying symbols and ritual, the entrance into the higher life depended. As there had been an original revelation, so, from time to time, there had arisen others. The idea of a spiri-}
Gnosticism

223

on syncretistic thought before Christianity had yet emerged. Indeed, it is possible—although of this we have no certain proof—that the Jewish contribution was of great importance, and was one of the main factors which enabled Gnosticism to effect its alliance with Christianity.

The origin of the Gnostics is the result of that mingling of diverse beliefs which had long been in process at many different centres; and it had developed itself, in all its essential features, before the Christian era had fairly begun. Of this pre-Christian Gnosticism we still have an impressive monument in the so-called Hermopolitan literature of Egypt—a literature which was compiled from sources that were certainly in existence in the 1st or 2nd cent. B.C. Not a few of the Gnostic systems described by the Fathers betray a pagan origin, although they have been officially connected with Christian elements. Reitzenstein has succeeded in detaching a purely pagan document which underlies the Naassene teaching, as preserved by Hippolytus; and a similar analysis could probably be applied to the records of other systems with a like result. But, while we can thus speak of a pre-Christian Gnosticism, it was by no means the case that the characteristic ideas which define Christianity in such a way that the earlier stages of its history became only the preparation for this, its characteristic thought. For already the Christians, in their teaching, received a mighty impulse. The contact with a living religion gave a new vitality to pagan thought and compelled it to offer its own solution of the ultimate problems.

How was it that the syncretistic movement came to ally itself with nascent Christianity? A definite answer to this question is hardly possible. The tradition concerning the coming of Christian Gnosticism with Samarias may be well founded, for in the neighbourhood of Palestine the new religion would be first known and welcomed. But the same causes that led to its recognition in Samaria would operate independently in other centres where it was afterwards established. The Eastern religions were superficially akin to Christianity in their presuppositions and motives. They represented a striving after purity and redemption and a belief that the true path to blessedness could be discovered only in the light of a Divine revelation. Earnest thinkers, in their effort to win the secret of the higher life, found in Christianity a wealth of spiritual conceptions which promised to aid them in their quest. The life of Jesus Himself was capable of an allegorical interpretation whereby it could be partially fitted into the prevailing mythology. In their eclectic scheme, therefore, they made room for the Christian message, and by its intrinsic power it gradually won for itself a certain place. It may be said, however, that when, first entered the Gentile world, was still in the process of free development. Within the Church itself its teachings were subjected to a constant revision, and the Hellenistic thinkers had little difficulty in modifying them yet further and adapting them to alien speculations. For that part, the assimilation of Christianity to the syncretism of the age was not effected entirely from the outside. In their endeavour to make their Gospel intelligible to the Gentile world, the missionaries had themselves clothed many of its conceptions in terms and imagery derived from the pagan cults. The cardinal idea of a salvation offered by Christ had been expressed, even by St. Paul, in a syncretistic manner, and anticipated the current beliefs. Moreover, the Church was compelled, by deeper reflexion on its doctrines, to interpret them along the lines of Gnostic thought. The new teaching, drawing as it did from the soil of Judaism, was apocalyptic in character, and was thus involved with conceptions that became more and more untenable. A reaction against the primitive millenarianism set in almost from the beginning; and the main task which the Church set itself after the end of the 1st cent. was that of transforming its apocalyptic beliefs into their spiritual equivalent. In the process, it did not occur to itself that it could not but avail itself of ideas which were already familiar in the religions of the time. Thus the alliance between Christianity and syncretism was a mutual one. As a later date, the Church perceived the danger that threatened it from the encroachment of foreign beliefs, and required to free itself at the cost of a life-and-death struggle. But there was an earlier period when the boundaries between the Church and the contemporary cults were ill-defined, and influence could pass between the two with relative ease.

3. Origin.—Gnosticism resulted from the fusion of a number of diverse beliefs, and the tracing of its origin is, therefore, beset with many complex problems. The attempts have been made by scholars in recent times to connect it, not with only one or other of the religions out of which it sprang, but there are several considerations which make this attempt not a little hazardous. (a) 'Gnosticism' is a general term which covers a wide variety of religious thinking. It may be possible to assimilate one particular system very closely to a given religion; but the conclusions thus obtained cannot be made valid for the whole many-sided movement. (b) Certain features are common to many different Oriental religions (e.g. the Mother, the Redeemer, the Holy Being, the Ascend to a higher and the Descent to a lower state of being). The presence of these features in Gnostic systems affords no clue to the source from which they are derived. They can be traced exclusively to one religion only by obscuring details in which they remind us of another. (c) Even when a characteristic element can be assigned, with practical certainty, to a given religion, we cannot be sure that it was borrowed directly from that source. Gnosticism had been in process for a much longer time than we have means of following it; and the element in question may already have been incorporated into some later faith, from which it passed into Gnosticism. (d) In the concrete, thought the content is resolved into the abstract. Personal names are replaced by terms of philosophy, mythological figures are changed into qualities and attributes, and events into cosmical processes. It is next to impossible to make out the original contours and outlines of this blanched picture.

But, while we cannot, with anything like precision, the elements which enter into Gnosticism, some valuable light has been thrown on the problem by the investigations of recent years.

The work of Anax. (Uebrug von Gnosticismus) was the first attempt at a scientific analysis. He discovered the central idea of Gnosticism in the ascents of the soul through successive stages of being, and sought for the origin of this conception. He found it in the astral religion of Babylonism, with its doctrine of a series of heavens, each under the rule of a planet. Through the soul must make its ascent by means of magical passwords delivered to the guardian of the degrees. To this theory of Anax, at least in the extreme form in which he presents it, there are several objections. First and foremost, the soul must make its ascent by means of magical passwords delivered to the guardian of the degrees. The derivation of the one element of Gnostic thought cannot be made conclusive for the origin of the movement as a whole. (b) In the 1st cent., indeed, for several centuries before, the Babylonian religion belonged to a remote past. It is true that many of its superstitious survivals survived in the current astrology, but they had now
merged in the general belief of the time. To assume a Baby-
lonian origin for any system of thought in which we once
recognizes them is to confuse our whole historical perspectiv.
(2) The planetary gods, as we find them in Gnosticism,
have a close resemblance to the planetary gods of the
Babylonian religion. They are no longer supreme Divinities,
but they are endowed with antagonistic powers by which man is
held in bondage. His one endeavour is to throw off their
bondage, and escape to the divine life. 
(3) Admitting that there are elements in Gnosticism which must
have had a Babylonian origin, it seems necessary to hold that they came
in by an intermediate channel.

Bouquet (Haupts-probleme der Gnostik) has advanced strong
reasons in favour of the view that this channel was the Zoro-
astrian religion. He lays especial stress on the altered position
assumed by the planetary gods, and finds in it an
instance of that 'degradation' which is not uncommon in
religious history. The Persians after conquering the Baby-
lonian Empire had allowed a place to the ancient gods, but had
deposed them from their sovereign rank to that of subordinate
divine powers. To the Gnostic influence Bouquet would
attribute not only the Babylonian elements in Gnosticism, but
nor more.

It may be doubted, however, whether even the Persian
influence was exercised directly. Not a few of the Gnostic
dogmas are derived from the Gnostics of Philo, who had
been carried out from the main stem of the Persian religion,
and had already, in the 1st cent., a.b., become widely prevalent
in Asia Minor. The conception of the
ascend of the soul through the planetary spheres, and which
had associated it with the sacramental and ritual system of a highly
elaborate kind. As a mystery religion it powerfully attracted
the mass of the people. But the influence from Babylon and Persia
were combined with others, hardly less potent, which
as trace back to Egypt.

An Egyptian origin of Gnosticism was first maintained by
Ammonius, who based his argument on fancied resemblances
between the magical symbols in the Gnostic documents and
of certain hieroglyphic signs. Of late years, Reinsenstein and
other scholars have adduced stronger evidence, derived
from the inner affinities of Gnosticism with Egyptian thought. It is
significant that the Hermetic literature, our chief existing
record of ancient Gnosticism, was composed in Egypt and
is impregnated with Egyptian ideas. On the ground of the
parallels supplied by this literature, we can assume, with a fair
degree of confidence, that the Gnostic thinkers were indebted to
the Egyptian theocoria, or the growth of the Pleroma, of the birth of the
soul by a process of emanation, and of the enenites, or pairs
of male and female gods. To the Egyptian thought we may also
assign the conception of an apocalyptic, or absorption into the
Egyptian nature, which in Gnosticism is the final goal of
the ascent to heaven.

The main sources of the Gnostic beliefs must be sought in
Phrygia and Egypt; but other religions added their contribution. Phrygia had long been the home of a peculiar
worship, mysterious in its character, but powerfully
affected all the Hellenistic cults. It centred in the
two figures of Cybele and Attis, the Mother and the Victim-
deliverer; and it was largely through Phrygian influence that
these figures, although they have counter-parts in almost all
the oriental religions, were brought into prominence. They held a
foremost place in Gnosticism, and were conceived in a manner
that combined the dualistic and the Oriental mythologies; indeed, the Naassene
document in Hippolytus appears to be borrowed directly from
Phrygian sources, and is well calculated to dispel
no trances of influence proceeding from India. The Buddhist
system, as described by Hsüan-tsang, affords striking analogies
to the Gnostic thought in itsnegative conception of God and its
dogma of the Great Ignorance (Nirvana) which will accompany
the perfect knowledge of the Paracetamic Soul, so well
held by Jadzarda, son of Basilides, likewise suggests a well
known apocalyptic conception, and hardships, the 'lost of the
Gnostics,' was confessedly influenced by his acquaintance
with Indian thought. It is easy, however, to attach undue
importance to the Indian contribution even in the later systems;
but in Gnosticism of the main period it seems to have played little
or no part.

The ground-work of Gnosticism was supplied, then, by a number of mythologies which had become
fused together in the process of syncretism. Ideas which had come down from the astral worship
of Babylonian and Phrygian religions, and these, again, with the cults of Egypt and Phrygia. Other religious (e.g. the local
cults of Syria) also helped to form the character of their
contribution cannot be identified with any
certainty. It is more than likely that this mixture of
oriental beliefs had been partially leavened,
even before the Christian era, by elements taken over from Judaism. As a result of the Gnostic
alliance with Christianity the OT came to occupy an
even greater place in the building of the various
systems. Gnosticism was thus trained in Greek philosophy the mere opposit

forth supplied the framework for the Oriental
mythologies. The whole mass of belief which had
thus been compounded out of the diverse
religious was informed with the spirit of Greek
speculation. What had been given as myth and
legend was construed metaphysically. Theories concerning the nature of the soul
were interwoven with the ancient traditions. But,
while Gnosticism availed itself freely of the
language and ideas of philosophy, the appearance
which it thus assumed was for the most part de
ceptive. It was not a speculative but a mytho-
 logical system. In spite of all efforts to read a
deeper meaning into its hieratic consistencies, the
material could not be made tractable to philo-
 1
osophical interpretation. As a movement which
strangely influenced Christianity in its formative
period, Gnosticism has an important place in the
history of human thought, but in itself it remained sterile.
For all its pretension to hold the key to a
higher wisdom, it never really transcended the
primitive mythology out of which it sprang.

4. Doctrine of redemption. The affinities of
Gnosticism are not with philosophy but with
religion, and it has to be explained through the
view of its practical religious motive. This is for-
gotten by the Christian polemical writers, who
deal almost exclusively with the Gnostic specula-
tions. In all the sects these, no doubt, had a large
place, but they were at best subsidiary to the
religious interest. The central idea of Gnosticism,
as of all the mystery religions, was that of re-
demption. A popular, or spiritual enlighten-
ment, was offered to the elect, whereby the soul might
be delivered from its condition of bondage. Redemp-
tion, as understood by Christianity, is fundamen-
tally ethical, although the ethical meaning is
obscured, even in the NT, by apocalyptic or
speculative forms. But in Gnosticism the ethical
aspect of redemption falls almost entirely into the
background. Here we may discern the chief
peculiarity of the movement, which gave direction
to all its thinking, and brought it finally into open
conflict with the orthodox Church.

Two ideas are involved in the Gnostic doctrine of
redemption. They are closely associated, or
even identified, in all the systems, but were
different in their origin, and need to be considered
separately. (a) The redemption is a deliverance
from the material world, which is regarded as in-
trinsically evil. (b) As a result of this, these systems
had a Persian dualistic conception; but, while in Par
isian light and darkness appear as two natural
principles in eternal conflict, the Gnostics trans-
formed the physical dualism into a metaphysical
one. Under the influence of Greek speculations the
contrast of light and darkness became that of
spirit and matter—the lower world of sense and
the higher world of pure being. Although these
two views are recognized as irreconcilable opposites, it is
recognized that they have come to be mingled to-
gether. All the evil and misery in the world are
held to stem from this forbidden intermixture of the
antagonistic principles. This is the grand calamity
which has made necessary a work of redemption.

In most of the Gnostic systems the Oriental
dualism is frankly accepted, although we consis-
tantly meet with efforts to overcome it. The
Naassenes conceived of a 'chariot' perishing from the
first-born.1 The later Valentinian school
regarded the fall of Sophia as taking place within
the Pleroma. Basilides, according to Hippolytus,
resolved the historical Christ into two elements taken
over from the Oriental
1
continuos process. Moreover, in a number of systems
a mediating power is assumed between light and
darkness (cf. the Sethian conception of soteia as
a fragrance even mentioned by Origen). Under
trained in Greek philosophy the mere opposit
of the two worlds was a standing challenge to discover some ground of unity. But the dualism is rather concealed than overcome, and may be traced more or less clearly underneath all the apparently monistic constructions. Indeed, it constitutes the basis apart from which the Gnostic type of thought has no meaning or meaning. A spiritual essence has come to be imprisoned within a sphere which is radically alien to it; hence the need for a redemption, to be achieved only by some supernaturally endowed one.

(b) But the idea of deliverance from the material world is blended with the further idea of escape into a world of freedom. To ancient Hellenic thought, necessity was the power above the gods (see Fate in Greek and Roman); and at the beginning of the Christian era this mode of thinking had been immensely strengthened by oriental fatalism. The conception of a κατανάλωσις imposed on all human action had grown into a tolerable tyranny—all the more so as it was now connected with astrological beliefs which had come down from the Babylonian religion. The planets were regarded as the ἀρχήτοροι or κοσμοπράγματες to which the whole creation is subject. By their influence, Good and Evil was brought into this bath, and was forced under the yoke of mechanical necessity, although conscious all the time of his vocation to freedom. Gnosticism took the direction from these contemporary beliefs. Its motive was a genuinely religious one—sacred to secure for the human spirit that liberty which is implied in its very nature. The deliverance from bondage was sought for along the lines suggested by astral mythology. It was assumed that the soul was held captive by the planetary powers; and in order to win freedom it had to pass through the sphere over which they ruled, subduing or deceiving the guardian demons by means of charms and spells. To this purpose of circumventing the hostile rulers the secret discipline of Gnosticism was mainly directed. The adept was prepared for his future journey by sacraments and illuminations, and by instruction in the hidden names of angels and the words and signs by which they could be recognized. All the resources of magical γραμματα were called into play to effect the deliverance of the soul from the material prison which had brought it under the bondage of necessity.

These were the two aspects in which the idea of redemption presented itself, and they merged into one another at every point. The escape into freedom is conceived at the same time as a rising out of the material into the spiritual world. As the goal of the Redemptive process the Gnostic looked for a return of the soul to its original place in the heavenly light. A doctrine of the resurrection of the body, or even of personal immortality, was proclaimed by the fundamental conception of matter as evil. The soul, freed from its limitations, is simply to be reunited with the 'Pleroma'—the fullness of the Divine being.

It is characteristic of all Gnostic systems that redemption is anticipated for only a limited number of chosen spirits. This has sometimes been set down as an exaggeration of the Christian doctrine of election; but it belongs rather to the aristocratic tendency of all mystery-religions, heightened, in the case of Gnosticism, by the underlying dualism. There were two worlds, so there were two classes of men, absolutely separate from one another. For the greater type of man was responsible; only the spiritual natures had sprung from Him and were destined for the higher realm of light. These spiritual natures alone were capable of the redeeming γινομαι, and to impart it to others was a profanation. The earlier Gnosticism recognizes only two classes—the υπογείως, and the inferior class which is variously described as μησοῖς, χορǐοις, or υπάρχουσα. Later schools allow for three—μησοῖς, υπάρχουσα, and υπογείως, the Gnostic redeemer consecrating the ordinary Christians, who possess videntes instead of γινομαι. The Coptic writings divide humanity into a large number of different classes. These, however, are merely attempts to confound the Church by obscuring the distinction between the Gnostic and the orthodox believer. The distinction is really an absolute one: body, who share in the heavenly light have nothing in common with those who are denied it.

5. Praxis and mythus.—In its essential purpose Gnosticism was a method of redemption, and consisted not so much in the profession of certain opinions as in the practice of given rites, which were supposed to lead the soul in its effort to shake off its fetters. Although the extant documents are concerned chiefly with the Gnostic theology, we have one detailed account of the praxis in the so-called Books of Jed, and further light is thrown upon it by Irenaeus' description of the Marcionites and the liturgical portions of the Acts of Thomas. As in the Christian Church, the act of initiation took the form of a baptism; and in the Gnostic rite was more elaborate, and the ordinary baptism by water was supplemented by 'fire' and 'spirit' baptisms. The worshipper was to have been accompanied by a highly complicated ritual intended, as in Mithraism (cf. Dieterich, Eine Mithratisierung), to typify and anticipate the ascent of the soul towards its own peculiar rites—illuminations, anointings, sacramental meals, repetition of magical phrases and formulae. Symbols with a mystical import were frequently marked on the body, and were engraved on rings and gems, which were worn as amulets. Above all, the secret names of angels and demons were carefully committed to memory, and with the spells and invocations wherever the different powers of the invisible world could be controlled.

How was this praxis, consisting, as it did, of the usual apparatus of contemporary magic, related to the speculative side of Gnosticism? The relation appears to have been twofold. (1) The speculative systems were the interpretation of the praxis. In the Pseudepigrapha we can almost follow the process by which a mythical history was woven together out of the details of the ritual, which had already been realized on a higher stage. (2) The mythus was developed as a supplement to the praxis. Speculative minds were unable to rest in the bare assurance that by partaking in a certain ritual they would secure redemption. They could not but ask themselves why a redemption was necessary, what was its scope and nature, and what means it had become possible? The answer to these questions was given in the Gnostic systems. Originally they were something added to the γινομαι proper, which was concerned entirely with the occult rites and formulae. But in course of time they became an integral part of the γινομαι. It was taken for granted that redemption was in some measure conditioned by a knowledge of the higher speculations on the ultimate problems of being.

6. General features of the mythus.—In the details of their construction the systems are widely different, and cannot be fitted into any one general scheme. Yet there are certain elements which in one form or another belong to all of them, a view of the dualistic hypothesis that underlay the whole
Gnostic theory of redemption. It followed from that hypothesis (1) that matter was intrinsically evil—a lower world standing over against that higher one into which the soul sought to escape; (2) that the soul was native to Baraboth (the deep), and had fallen from it, previously to its conscious existence, as the result of some cosmical disaster; (3) that this baraboth was restored only by a Divine intervention, since its progress was hopelessly barred by its imprisonment in matter. The ideas which thus presented themselves to Gnostic speculation were first elaborated and elaborated in terms of mythus. It was assumed that man's spiritual nature was derived from a Divine being, who had fallen out of the world of light into the world of darkness. The process of deliverance involved, in the first place, the restoration of this fallen being, and the restoration could not be effected except by the voluntary descent of another Divine being, equal or superior in rank. Around these two beings—the fallen Divinity and the Redeemer—the Gnostic mythus in all its variations may be said to turn.

Allowing, then, for an endless diversity of detail in the manifold systems, the characteristic features of Gnosticism may be briefly indicated. At the heart of the systems is a Supreme God, who is not so much a personal Deity as the abstract ground of all existence. Sometimes (as in the Acts of Simon) He is conceived as pure Light. Elsewhere He bears names which serve to emphasize His absolute transcendence—Father of All, Unbegotten, Ineffable, the Unapproachable God, the Spirit of God, the Unseized. The Barbelo system describes Him as 'the Man' or 'the Primal Man,' and traces of this conception meet us even in Valentinianism. In view of the many analogies with other religions (e.g., Parseism, the Hermetic writings of Egypt), we cannot assign it to Jewish or Christian speculation. It runs back rather to some primitive myth, the meaning of which can now only be conjectured, and which possibly underlies the imagery of Daniel and the Book of Enoch. From the Father of All (or Supreme God) there proceeds a number of beings, in a descending scale of dignity, who are arranged in pairs of male and female ('syzygies'), and in their totality make up the Pleroma— the fullness of all being and perfection. Behind this concentric decoration of the Pleroma we can discern the purely mythological idea of a Pantheon, or family of gods, but in Gnosticism it assumes a mystical character. The Divine existences, while distinguished from one another, are the manifestations of the one God, who is Himself impersonal and unknowable.

In later Gnosticism—more especially in the teaching of Valentinus and his school—the members of the Pleroma bear the name of Archons (g.e.), and are created in successive pairs by a process of emanation. This doctrine of Archons, in which we can trace Mithraic and Egyptian ideas modified by Platonic, has often been singled out as one of the typical features of Gnostic speculation; but it is characteristic only of certain systems, and seems to represent an attempt on the part of later thinkers to overcome the dualism inherent in the movement. In a manner which partly anticipates the Neo-Platonic theory, the Primal Being is conceived as going forth from itself in a series of existences, each at a further distance from the centre, so that the interval between God and the world is partly bridged over.

The process of emanation becomes necessary through the fall from the Pleroma of the member that stands lowest in rank. To this Archon or Power is usually assigned the name of Sophia, a name suggested by the OT conception of the Wisdom by which the world came into being. In Simonian Gnosis the fallen Divinity is called Helena (a reminiscence of Μηλή, the moon-goddess), while in one important group of systems she appears as Barbara (perhaps, in the four is God'). The conception of Sophia is related in many of its features to that of the Mother (Ishtar, Is, Atargatis), the soul which is restored only by a myth descends into the abyss, where she is held prisoner. But, whatever may have been its origin, the figure of Sophia underwent a complete transformation at the hands of the Gnostic thinkers, who sought by means of it to solve their crucial problem of how the Divine principle of light could enter into contact with darkness. According to one theory, Sophia fell by leaving her appointed place in her desire to attain to the supreme light. According to another, she was lured into the outer depth by a false reflection of the light. In Valentinianism, as in the Barbelo system represented by the Pseudo Sophia and the Books of Enoch, the figure of Sophia is doubled. The higher Sophia remains in the Pleroma, or in a sphere just outside of it, while the lower Sophia sinks into the darkness. The purpose of this duplication is apparently to account more easily for the fall, which was unintelligible on the strict dualistic hypothesis; but it also reflects a conception of Sophia of which we have traces in all the systems. A twofold function is assigned to her: to have been the fallen Divinity through whom the light becomes immersed in darkness; and she is also the intermediary between the higher world and the spiritual nature which has fallen. The fall of Sophia is regarded not only as the object of redemption, but as herself assisting in the redemptive process—watching over the light until the deliverance comes.

The fall of Sophia has for its consequence the work of creation. Hitherto the world of light had stood over against an utterly formless world of darkness; but the comingling of the higher principle with the lower evolves a cosmos out of the chaos. As the agent of creation, Gnosticism assumes a Demiourgos, who is usually represented as the son of Sophia. He is himself ignorant of the Pleroma above him, and governs the world created by him in the belief that he is himself the Supreme God; behind this conception of the Pleroma we can discern the purely mythological idea of a Pantheon, or family of gods, but in Gnosticism it assumes a mystical character. The Divine existences, while distinguished from one another, are the manifestations of the one God, who is Himself impersonal and unknowable.

In later Gnosticism—more especially in the teaching of Valentinus and his school—the members of the Pleroma bear the name of Archons (g.e.), and are created in successive pairs by a process of emanation. This doctrine of Archons, in which we can trace Mithraic and Egyptian ideas modified by Platonic, has often been singled out as one of the typical features of Gnostic speculation; but it is characteristic only of certain systems, and seems to represent an attempt on the part of later thinkers to overcome the dualism inherent in the movement. In a manner which partly anticipates the Neo-Platonic theory, the Primal Being is conceived as going forth from itself in a series of existences, each at a further distance from the centre, so that the interval between God and the world is partly bridged over.

The process of emanation becomes necessary through the fall from the Pleroma of the member that stands lowest in rank. To this Archon or Power is usually assigned the name of Sophia, a name suggested by the OT conception of the Wisdom by which the world came into being. In Simonian Gnosis the fallen Divinity is called Helena (a reminiscence of Μηλή, the moon-goddess), while in one important group of systems she appears as Barbara (perhaps, in the four is God'). The conception of Sophia is related in many of its features to that of the Mother (Ishtar, Is, Atargatis), the soul which is restored only by a myth descends into the abyss, where she is held prisoner. But, whatever may have been its origin, the figure of Sophia underwent a complete transformation at the hands of the Gnostic thinkers, who sought by means of it to solve their crucial problem of how the Divine principle of light could enter into contact with darkness. According to one theory, Sophia fell by leaving her appointed place in her desire to attain to the supreme light. According to another, she was lured into the outer depth by a false reflection of the light. In Valentinianism, as in the Barbelo system represented by the Pseudo Sophia and the Books of Enoch, the figure of Sophia is doubled. The higher Sophia remains in the Pleroma, or in a sphere just outside of it, while the lower Sophia sinks into the darkness. The purpose of this duplication is apparently to account more easily for the fall, which was unintelligible on the strict dualistic hypothesis; but it also reflects a conception of Sophia of which we have traces in all the systems. A twofold function is assigned to her: to have been the fallen Divinity through whom the light becomes immersed in darkness; and she is also the intermediary between the higher world and the spiritual nature which has fallen. The fall of Sophia is regarded not only as the object of redemption, but as herself assisting in the redemptive process—watching over the light until the deliverance comes.

The fall of Sophia has for its consequence the work of creation. Hitherto the world of light had stood over against an utterly formless world of darkness; but the comingling of the higher principle with the lower evolves a cosmos out of the chaos. As the agent of creation, Gnosticism assumes a Demiourgos, who is usually represented as the son of Sophia. He is himself ignorant of the Pleroma above him, and governs the world created by him in the belief that he is himself the Supreme God; behind this conception of the Pleroma we can discern the purely mythological idea of a Pantheon, or family of gods, but in Gnosticism it assumes a mystical character. The Divine existences, while distinguished from one another, are the manifestations of the one God, who is Himself impersonal and unknowable.

In later Gnosticism—more especially in the teaching of Valentinus and his school—the members of the Pleroma bear the name of Archons (g.e.), and are created in successive pairs by a process of emanation. This doctrine of Archons, in which we can trace Mithraic and Egyptian ideas modified by Platonic, has often been singled out as one of the typical features of Gnostic speculation; but it is characteristic only of certain systems, and seems to represent an attempt on the part of later thinkers to overcome the dualism inherent in the movement. In a manner which partly anticipates the Neo-Platonic theory, the Primal Being is conceived as going forth from itself in a series of existences, each at a further distance from the centre, so that the interval between God and the world is partly bridged over.

The process of emanation becomes necessary
claim to a Divine origin and sanction was still acknowledged. In Gnosticism, the riddle which had perplexed St. Paul and the writer to the Hebrews was solved in the most drastic fashion. The God of the OT was regarded as different from the God revealed by Jesus, and in some sense hostile to Him. He was not, as the Fathers were wont to assert, identified with Satan, but he cloaked in inferior attributes and limited to the one task of blind creation.

The fall of Sophia breaks up the perfect harmony of the Pieroma, and this cannot be restored until the lost light is recovered from the darkness. An ΑἰΩΝ of supreme rank—the Soter or Christus—undertakes the work of deliverance. According to the Neoplatonists (and indeed the teaching of the Church) Sophia, through his own initiative, but elsewhere (e.g. Pseudo Sophocles, Orphics of Irenaeus) he is moved by the urgent prayer of Sophia. He comes down through the spheres of the Archons, taking on himself the forms of the spirits of each world as he descends. Arriving in the world of darkness, he gathers to himself the scattered seeds of Divine light, and finally re-ascends along with the rescued Sophia into the Pieroma. The figure of the Soter is itself anterior to Christianity and has many counterparts in popular mythology. It may possibly be found in the Babylonian light-God Marduk, who descends unrecognized to do battle with Tiamat, the monster of Chaos. Further elements are drawn from the ideas of Isis and Osiris, and Mithra, although all the definite features are blended together and resolved into one abstract conception. The grand characteristic of Christian Gnosticism is the identification of the mythical Redeemer with Christ, with whose history the pagan traditions are interwoven. But the Soter always remains distinct from the historical Jesus, who appears simply as a man of pre-eminent spiritual nature, united for a given time with the heavenly Redeemer. The union takes place either at the baptism of Jesus, when he is twelve years old (justianian sect), or, according to the usual view, on the occasion of his baptism. The crucifixion of the divine being, who is incapable of suffering, separates himself from Jesus (cf. art. DOCTRINE). This distinction of the Soter and the historical Jesus is partly necessitated by dualistic theory; but it must be explained, in still greater measure, by the radically un-Christian character of the whole movement. The Gnostic Redeemer had originally no connexion with Jesus. He was simply an abstraction of features common to the mythological Saviours, and this abstract figure was combined artificially with the Jesus of history. It was on this account that Gnosticism was unable, in spite of all efforts, to establish any real identity between the Redeemer and Jesus. Before it could adapt itself to the Gnostic construction the Gospel history had to be revised throughout, with a loss of practically all the elements which gave it significance to Christian thought.

The task of the Soter is twofold—to deliver the fallen Sophia, and to rescue the seeds of light which have become mingled with the darkness, owing to her fall. This double activity is emphasized in some texts by identification of the figure of the Soter, while in others the work of redemption is separated into two acts—the first of them in the period before creation, and the second at the advent of Jesus. The redemption accomplished by Jesus is not connected with His death, which is transformed into a mere outburst of hostility on the part of the Demiurge against the Son of God, or rather of the Soter who used Him as his instrument, to communicate the hidden γνωρία. By means of this knowledge, imparted by Jesus and preserved in the Gnostic tradition, the higher natures were freed from their earthly bondage and restored to the kingdom of light.

The ethical system of Gnosticism, like its speculative construction, was founded on the dualist hypothesis. By this hypothesis the idea of morality, in the ordinary sense, was excluded. All material conditions were regarded as necessarily evil, and the aim of the Gnostic was to rise through the purely spiritual life. To this struggle for deliverance from the bondage of matter all moral endeavour was subordinated. As a consequence, the Gnostic rule of conduct was liable to take either of two directions. (1) In most of the systems it is strongly ascetic in character. The soul is required to free itself from the conditions by holding aloof from all sensual pleasures and reducing the needs of the body to the barest minimum. A strict ascetic discipline is conjoined with the possession of γνωρία as its necessary support and complement. (2) But the same motives that dictate this ascetic morality lead as easily to the opposite extreme of libertinism. Spiritual natures are called on to assert their independence of the material world by indulging in its pleasures without restraint. The libertine tendency is reinforced by the identification of the Soter or Demiurge—the inferior and tyrannical God. It is assumed that the moral law, as laid down in the Decalogue, is founded on his arbitrary will, and aims at the subjection of man to his free spirit, under the yoke of necessity. To defy the ordinances of the law, and thereby throw off allegiance to the inferior God, is a duty obligatory on the true Gnostic. Carpeores and his son Iadvisus sought to establish the libertine theory of conduct on a regular philosophical basis. It was represented likewise by the Nicolaites, and in a still more marked degree by the Cainites, who applied their inverted standards of moral values to the characters of Scripture. Cain, Esau, Korah, and Judas were honoured within this school as the champions of spiritual freedom. How readily the one extreme could pass into the other is illustrated by the opposite attitude of kindred sects, such as the Peristates and Sethians.

7. The Gnostic sects.—The diversity of the Gnostic systems, as portrayed in the writings of the Fathers, may in some measure be explained by controversial motives. One of the strongest arguments against the heretical beliefs was their tendency to conflict with one another, and the Patristic writers take every means to emphasize the confusion. Local and superficial differences are made prominent; alternative forms of the same doctrine are set forth under specific names, as if they were held by separate schools. But, when we have allowed for this artificial sub-division, the variety of the sects is still bewildering. Gnosticism drew from so many sources and was so irresponsible in its methods of speculation that no uniformity of belief was possible.

The difficulty of tracing the affinities and ramifications of the systems is all the greater because of our ignorance of their historical development. For the leading Gnostic teachers we can roughly assign dates between 180 and 180—the age of the Antonines; but a large number of the figures of the Soter, while in others the work of redemption is separated into two acts—the first of them in the period before creation, and the second at the advent of Jesus. The redemption accomplished by Jesus is not connected with His death, which is transformed into a mere outburst of hostility on the part of the Demiurge against the Son of God, or rather of the Soter who used Him as his instrument, to communicate the hidden γνωρία. By means of this knowledge, imparted by Jesus and preserved in the Gnostic tradition, the higher natures were freed from their earthly bondage and restored to the kingdom of light.
history of Gnosticism there seems to have been a central process of borrowing and reworking. An arrangement of the sects in historical order would be largely deceptive, for the movement in its most developed stages was constantly reverting to ideas of a primitive stage.

Attempts to classify the systems were begun even in Patristic times. They were grouped by Clement of Alexandria according to their material status—simple like that of the Gnostics—according to their speculative character, as monistic and dualistic. It is evident that no true classification can be arrived at by either of these standards. Among the many modern scholars who have tried to group the systems, the following may be mentioned: (a) Naumann drew on the relation of Gnosticism to Judaism, and distinguished between the friendly and hostile schools. (b) Bauer applied this test in a more scientific fashion and divided the sects according to their prevailing Jewish, pagan, or Christian character. (c) Gieseler sought to determine the countries in which they originated—Egypt, Byzas, or Asia Minor. (d) Lippold also adopted the geographical division, but was content to make it more general and to regard the two great Gnostic schools—the Syriac and the Alexandrian.

These groupings are all unsatisfactory, since they fail to take account of that intermingling of diverse types of religion which belongs to the essence of Gnosticism as a syncretistic creed. Perhaps the most convenient classification is that which is now usually adopted, and which distinguishes the apocalypse of religion into its two aspects of a definite founder or teacher. The distinction is at best a rough one, and is open to at least two serious objections. Since the evolution of a system to a given founder is often accidental, and is due to nothing else than the existence of some well-known work in which its doctrine was expounded. (3) The books of the Apocalypse of a given sect may be divided into two classes, one of which is substantial and authoritative, while the other is more or less apocryphal, and serves only to bring out a real and important distinction. The anonymous systems may fairly be held to represent the more primitive Gnosticism, which grew up more or less spontaneously out of the pagan cults and had only a superficial relation to Christianity. When a system bears the name of a definite teacher, we can regard it as a comparatively late product, based on philosophical reflection and more closely allied to Christian thought.

(a) The anonymous systems are brought together, in all cases, under test-case writings, under the general head of Ophiticism. They comprise, besides the Ophites proper, the Naassenes, Peratae, Sethians, Christians, Sarco-Christians, Monte-Hierno-Gnostics, Justinians, Nicolaitans, Docetes, and other more obscure sects. The figure of the serpent, to which the name refers, seems originally to have had a cosmic significance, but in various Hellenistic cults it had come to symbolize the worldsoul, or eternity, or the Divine redeeming power. Its import for religious thought was enhanced by the apocalyptic stories of the serpent in Eden and the brazen serpent in the wilderness. Among the Ophites the serpent was a favourite symbol, typifying sometimes a beneficent, sometimes a hostile, power. But the term 'Ophiticism,' although convenient, carries with it no definition of the system. From some of them the serpent-symbolism is entirely absent, and in none can it be regarded as central and characteristic.

The Ophite or anonymous group of sects is marked by certain broad fundamental features. All the systems included in the group are relatively simple in structure, and have affinities with mythology rather than with Christian or philosophical speculation. The Apocalyptic scheme, as we find it in later Gnosticism, is undeveloped or altogether wanting. The idea of Godhead is seen in the character of the Trinity, when the form of a Trinity—the Supreme unknown Father, whose essence in light, and, associated with him, the Mother and the Son. Other Divine beings have their place, and the doctrine of the Pleroma, but the Trinity appears so constantly that we cannot but feel that originally it was complete in itself. Beneath the higher world are the seven planetary powers—half gods, half demons—and at their hour stand Ialdabaoth, who is identified with the God of the OT. He and the other six are thrown above the lower world, which they have created out of the darkness, and in which the fallen particles of heavenly light have become imprisoned. The aim of the Gnostic is to enable these spiritual natures to free themselves and re-ascent to their native world.

As a typical example of Ophiticism, the 'Gnostic' system described by Ireneus (adv. Haer. I. 80) may be reproduced in outline. It starts from the conception of a Supreme Being, 'the First Man,' from whom proceeds his son, 'Son of Man' or 'Second Man.' Along with these two there exist a male and female principle—'the Holy Ghost.' Illuminated by the First and the Second Man, she produces another male principle, 'Christ.' But the one associated with a definite founder is her child also to produce the male-female Sophia or Prunikus, who sinks into the depths and assumes a body. But her children are formed out of her body as she struggles to rise, and, finally, she rises herself to her seat in the east between the sun and the moon, to a birth to a son, Ialdabaoth, who begets sons in his turn, and thus there arises the Hebdomous, or group of seven planetary powers. Ialdabaoth, opposed by his sons, begets from the same source another son, Nocia, who is formed like a serpent; and by him he is led to believe himself the Supreme God. But his Mother reveals to him the existence of the true God, and, in order to discover the attention of the other six powers, Ialdabaoth with them in creating man. The man thus formed is at first heat and shapeless, but Ialdabaoth breaks into him the breath of life, and thereby empowers himself of his power, while man is inspired with the knowledge of the Supreme God. The wrath of Ialdabaoth is kindled, and he endeavors to destroy his ignorance and subject him to his own ordinances; but man, on the impulse of Prunikus, transgresses the will of the tyrant, and is driven by him out of Paradise. Henceforward the malign influence of Ialdabaoth moves through human beings, who have the power of being born to man, and the prophets who sends in a constant succession keep alive in him the knowledge of the light. Finally, at her prayer, her Mother requests of the Supreme God that Christ should come to the help of man. Descending through the seven planetary spheres, he unites himself at the Baptism with Jesus, the Son of Mary, and through him procures the unknown Father. Ialdabaoth and his sons bring about the crucifixion of Jesus, but Christ and Sophia ascend to the higher world. The crucified Jesus is raised in a spiritual body, and for eighteen months reveals the mysteries of Gnosticism his disciple. Then he is exalted to heaven, where Christ sits at the right hand of the Father. Ialdabaoth becomes the enemy of all souls which possess the spiritual nature. The consummation is effected when all the lost light is gathered together and restored to the higher world.

This example will illustrate the character of the Ophite systems, and a few brief notes will suffice for the others. The Justinian is a marked resemblance to that which has been outlined, except that it reverses the part assigned to two of the chief figures. The male principle Edem (corresponding to Prunikus or Sophia) is the hostile agency who seeks to thwart the beneficent influence of the creator Elohim. The rôle of Saviour is enacted by the angel Baruch. He enlightens a series of elect spirits (pagan as well as Hebrew) before he brings the final revelation to Jesus.

The Naassene sect appears to represent a highly primitive type of Gnosticism, the pagan features of which are thinly veiled by transferring to Jesus the attributes of the Soter. So far as we can gather from the confused account of Justinus (Refut. v. 2-6), the Naassenes assumed a Primal Being (First Man), in whom the whole universe (including the person of Sophia and the Pleroma) originated. His nature is threefold—material, psychic, and pneumatic—and the world-process consists of the segregation of these three principles. By the work...
of creation the Divine Being purifies Himself of the material and psychical natures, in order to attain to His true life as absolute Spirit. In man, as in the First Man, the three natures are united, and remain united, in process of development, whereby the spirit in man may be set free from the alien elements adhering to it. It is revealed by the Saviour Jesus. (In the Naasene hymn pre

Gnosticismism 239

ocess of his efforts to ally Christianity with the symcretistic movement. Tradition makes him a disciple of Dotheos, and from this we may infer that he was a leader in the Dotheian sect, which it seems to have existed from about the time of the Macabees. According to Justin (Apol. i. 26, 58, Tryp. 120), he was honoured as the highest God, and his companion Hermaeus as the Divine creative architect. If this view can be accepted, he must himself have come to occupy the centre of the system which is known by his name. The treatise entitled the "Antithesis Mardiva," which is quoted by Hippolytus and attributed by him to Simon (vi. 6), was more likely an anonymous document of the Simonian sect. In the Simonian doctrine, which concerns the deliverance of the falen Helen—there is little trace of Christian influence; and this is likewise true of the teaching of Menander, who, according to Irenæus and Justin, was Simon's fellow-countryman and disciple. A livelier interest in Christianity begins to manifest itself in Corinthian (i.e.), towards the end of the 1st century. He appears to have been the first to promulgate the Gnostic conception of Jesus as a man of pure spiritual nature, temporally united with the heavenly Saviour. Simon, the disciple of Menander, taught that the Supreme God created the world of angels, by seven of whom, with the God of the Jews at their head, the world was formed. They made man according to an image reflected from the Supreme God, who afterwards, in pity, bestowed on their creature a spark of Divine life. The Saviour descended for the sake of rescuing man from the oppression of the inferior powers, and was Himself a man only in appearance. Satanlorius is important as the link between a more primitive Gnosticism and that of Basiliades and Valentinus; but prior to these speculations, and in the same country of Egypt, there appeared the remarkable system of Cropricotta. In this system, the unity of God is reflected by Plato, the antinomian ideas of Gnosticism are most fully developed. Good and evil are resolved into merely arbitrary commandments, imposed on man by the tyranny of the world-rulers. Freedom from these oppressors is given through Jesus. A man like others, but of exceptional purity of soul. He received in the New Testament that which he had seen in the higher world, and received power from above to escape from the world-rulers. All souls that follow the path marked out by Him are endowed with the same power, and may even rise superior to Jesus. In order that they may pass through every phase of experience in their ascent to God, departed souls must undergo a series of re-incarnations; but the stronger souls are able in their lifetime to traverse all experiences, and so free themselves at once from the bondage of the lower law.

The teaching of the two great masters of Gnostic

ism is formed into a large and complex subject by itself, and is discussed in special articles (see Basiliades and Valentinus). In the case of both of them the doctrine of the founder has to be carefully distinguished from that of his school. The nature of the original systems has been much debated; but, so far as we can gather from the scattered doctrines, they had many points of affinity with the more primitive Gnosis—Basiliades connecting himself with Satanlorius, and Valentinus with the Ophite sects. Irenæus' account of Basiliades is probably much nearer to the original than that of Hippolytus, but itself represents a later doctrine, in which an attempt is made to accommodate the compromising dualism of the earlier teaching. The theory that the Basiliadean doctrine as set forth by Hippolytus is based on a 'mystification' has now
been generally abandoned. Not only is the system too profound and original to be the work of a casual forger, but it agrees in not a few important details with the teaching described by Irenaeus, and may we refer to a distinct teaching of that character in its progress towards pure monism. From the account in Hippolytus, too, we are enabled to understand why the basilidean influence ceased to play a part in the later history of Gnosticism. The cardinal Gnostic positions had been gradually abandoned by the disciples of Basilides, and his Gnosis merged itself at last in the ordinary philosophical speculations of the age.

The Valentinian movement, on the other hand, while it freely assimilated philosophical elements, never ceased to be faithful to the distinctive Gnostic ideas, and drew into itself practically the whole stream of later Gnosticism. Hippolytus recognizes two separate Valentinian schools—the Ionic or Western, and the Anatolic. To the Eastern school he assigns Theodotus and Bardesanes; to the Western, Ptolemaeus, Heracleon, and Marcion. But the points of difference on which he insists appear somewhat arbitrary and superficial; and perhaps we arrive at a truer division when we conclude that Gnosticism, as in the Valentinian influence, proceeded in three main directions. (1) The mythological and ritual elements were exaggerated—as in the Marcionian system, with its intricate machinery of personages and the fourth letter and numbers. Gnosticism in this phase of its development was ultimately absorbed in the magical and cabalistic lore of the later centuries. (2) The speculative tendency became predominant. Although the mythological scheme was retained and even amplified, it was subjected to a process of allegory. The history of the Aions was construed as a theory of the unfolding of the Divine consciousness. Ideas borrowed from Plato were interwoven with the mythical data, and served, in great measure, to dignify their real character. (3) The Gnostic beliefs were assimilated more closely with those of the orthodox Church. By so adapting itself, Gnosticism vastly enhanced the success of its propaganda, and continued to survive, even when the day was finished, in heretical Christian sects. Of this phase of the movement the outstanding example is Marcion (q.v.). That he is legitimately reckoned among the Gnostics must be admitted, not only in view of his undoubted dependence on the Gnostic teacher Cerdos, but because of the distinction which he drew between the divine God (Tylos) and the creator, and his consequent rejection of the OT. But the ground-work of his theology was Pauline; and it was mainly in the interest of an exaggerated Paulinism that he accepted the gnostic positions. It is probable that a similar judgment must be passed on Bardesanes, the last of the great Gnostic teachers (A.D. 164-240). The true character of his system is hard to recover from the contradictory records; but the judgment of Eusebius may be accepted that he was at first a disciple of Valentinus, and then turned to Christianity without completely abandoning his former errors (cf. the discussion by Haase, Zur bardesanesischen Gnosis). Unlike Marcion, he seems to have held fast to the construction of one all-creating God; but he combined the Christian position with ideas of an astrological nature taken over from Gnosticism. Whether the hymns preserved in the Acts of Thomas can be ascribed to Bardesanes is doubtful. It has been clearly proved, by the investigations of Frensel and Reitzeinstein, that they are adapted through ideas from pre-Christian sources; and the work of Bardesanes, if he had a part in them at all, can have been little more than editorial.

2. Results of the movement.—From a very early time the danger that threatened Christianity from the side of Gnosticism became apparent, and in the NT itself we meet with a polemic which was almost certainly directed against incipient phases of the movement. The missionaries who are condemned in Colossians 2:8 are said to belong to a variety of Jewish Gnosticism. The heresies contemplated in the Pastoral Epistles and in the messages to the Churches of Revelation are described as false Christianity of the gnostic type. The Fourth Gospel rests upon the thesis that the Word was made flesh; and, in view of the close relation between the Gospel and the 1st Epistle of John, there can be little doubt that the writer is opposing some form of Gnostic docetism. It is the peculiarity of the Fourth Gospel that its underlying polemic against the Gnostic teaching is combined with a certain sympathy. We are enabled to understand how, in spite of misgivings, the Church was led to compromise with the heretical movement, and so to encourage the attempt at an alliance. In the opening decades of the 2nd cent., the alliance had become imminent, and the Church was fully awakened to its danger. The letters of Ignatius are marked by the sharpest antagonism to the new doctrines; and all through the century this conflict with Gnosticism is the dominant influence in the theology of the Church. The objections most frequently urged against the heresy are (1) its hostile attitude to the OT; (2) its doctrine of a higher God who is other than the Creator; (3) its denial of the person of Christ; (4) its ethical teaching, ascetic or libertinism; and (5) its denial of the Resurrection. These, however, were only the particular errors on which the ecclesiastical writers laid hold for the purpose of controversy; and beneath all else was the sense that the very existence of the Church was imperilled. Unless it closed the door on the heretical teaching, Christianity would be dragged into the vortex of contemporary syncretism, and would disappear as a separate religion.

The struggle against Gnosticism was fraught with momentous consequences. (a) It led to a strengthening of the Catholic idea. As against the alien sects, which were always breaking up into new subdivisions, the Church took its stand on its universality; and by the strict enforcement of uniformity in creed and worship it sought to make its Catholic character more fully manifest. (6) It hastened the development of the episcopal form of government. The letters of Ignatius illustrate in the clearest manner how the rise of the heretical sects enhanced the position and importance of the bishop. He was at once the representative of the true Catholic tradition, and the centre around which the Church could rally, in the face of disruptive influences. (c) It made necessary a regulus fidei—an authoritative standard of belief whereby all innovations could be tested. Out of this rule of faith, with its brief summary of the cardinal doctrines, arose the great creeds of succeeding times. (d) It contributed, more than any other cause, to the formation of the canon of the NT. The Gnostic sects were prolific in forged literature, which presented their own teachings under the sanction of consecrated names. To guard against this evil, and at the same time to define its own position more clearly, the Church was compelled to sift and collect the genuine documents of the primitive age. (e) It secured for the OT its permanent place as a source of the Christian Church; and the Gnostic thinkers led to reject the Jewish Scriptures were operative within the Church itself; and in course of time would have brought about the same result. The Gnostic impulse which prepared the way for a truer appreciation of the OT. The Scriptures of the old religion were adopted by the new, to the enrichment of its spiritual heritage.
The chief results of Gnosticism were thus consequent on the reaction against it; but it made its influence felt, in a more positive manner, on the development of the Christian religion. It would not have diffused itself so widely over the world of the first two centuries unless it had answered to some real need of the time, and Christianity was able to control it only by the partial adoption of many of its aims and interests. In the following directions, more especially, we can discern a Gnostic influence modifying the life and thought of the Church. (a) The tendency to asceticism was strengthened. It is true that the Christian monks of the 3rd and subsequent centuries no longer appealed to Gnosticism them; but their contempt of the world was nothing, in the last resort, but a survival of the earlier dualism. (b) The sacramental idea of religion was more firmly established. Gnosticism had laid hold of the popular imagination by its claim to a secret praxis, which was itself sufficient to ensure all spiritual blessings. In place of the sacramental ritual the church now offered its own. The efficacy of the Christian faith was more and more identified with the value of the sacraments. (c) A mystical strain, originally foreign to Christianity, appeared in due course in the form of Gnosticism. Already in the Fourth Gospel we have the example of a Christian writer otherwise opposed to Gnosticism, who was powerfully attracted by the mystic element in Gnosticism. The influence was exalted by the Fourth Gospel was reinforced, in the course of the following century, by further contamination of the Gnostic form of religion, until mysticism had worn itself into the substance of Christianity. Here, perhaps, we can discern the most enduring of all the effects that are traceable to Gnosticism. Many scholars have assigned to the Valentian sect, but its affinities seem to be rather with the Barbelo-Gnosticism described by Irenæus (i. 29). This is true likewise of the Books of John, which bear a close relation to the Gnostic literature, but are concerned with the practical sects.

Apart from the Gnostic writings, a large number of fragments, preserved by the Fathers, are to be ranked as original source materials. Of special value are (1) the letter of Polycarpus to Flora; (2) the Ephesians 3 and 4, consisting of extracts, contained in the writings of one of the leading disciples of Valentinus; (3) the Pastoral Epistles, and; (4) the hymns in the Acts of Thomas. Probably the controversial writings contain a great many direct citations, but these are so entangled with summarised statements that they cannot be detached with any certainty.

For our main knowledge of the Gnostic teaching we have still to rely on the Christian polemical treatises. In the employment of these we have to make allowance not only for a controversial bias, but for a frequent lack of real understanding and adequate information. The earliest work written with the express purpose of countering Gnosticism was the Synagoge of Justin, now lost. On this writing the subsequent controversialists seem to have been largely dependent, although they supplemented its data by a further research (not always, perhaps, of a first-hand nature) into the Gnostic teachings. The great work of Irenæus, adv. Haereses (1, 2, 3, 4, 5, 6, 7), is preserved in its present form, until recent times was the chief store-house of knowledge on all subjects connected with Gnosticism. In 1645 a work was discovered which was at first ascribed to Origen, but has now been clearly the work of Hippolytus. This work contributed an immense amount of fresh material, and is especially rich in data concerning the Ophite sects. For many years Hippolytus was
accepted without question as the basis of all study of Gnosticism; the estimate of him then passed to the other extreme, and his information was attributed to secondary or even to forged and garbled sources. He did little more than repeat their evidence, with occasional additions. Ephiphanus, Philaster, and the pseudo-Tertullian seem to have drawn for the most part on the lost Syntagma of Hippolytus—a shorter work which preceded the longer one, and which was dependent mainly on Irenaeus. Clement of Alexandria and Origen deal incidentally with the subject of Gnosticism. Of all the Fathers, they were the best fitted to treat it intelligently and sympathetically; and their notes are always of value. But no systematic account has come to us from their hands.

Literature.—Of the older works may be mentioned: A. Neander, Gnost. Entwicklung der vorchristlichen gnost. Systeme, Berlin, 1818; F. C. Baur, Die christl. Gnosis in ihrer geschichtl. Entwicklung, Tübingen, 1838; R. A. Lipps, Die Gnosticismen, Leipzig, 1860; H. L. Manneh, The Gnostic Heretics, London, 1876; A. Hilgenfeld, Ketzerschae, des (Protestantismus (following on a long series of previous writings), Leipzig, 1854; C. W. King, The Gnostics and their Remains, London, 1857; E. Kaulbach, Zeus auf der Gnostizismuip., Paris, 1867. The sources. Later investigation, however, has tended to re-establish his authority. As far as may be judged, he brought little critical discernment to bear on his material; but much of it is of the highest value, and must have been derived from first-hand documents. Irenæus and Hippolytus are the two chief Patristic witnesses; the others do little more than repeat their evidence, with occasional additions. Ephiphanus, Philaster, and the pseudo-Tertullian seem to have drawn for the most part on the lost Syntagma of Hippolytus—a shorter work which preceded the longer one, and which was dependent mainly on Irenæus. Clement of Alexandria and Origen deal incidentally with the subject of Gnosticism. Of all the Fathers, they were the best fitted to treat it intelligently and sympathetically; and their notes are always of value. But no systematic account has come to us from their hands.

The most important temples at Gobardhan are, (1) that dedicated to Kṛṣṇa as Gokulnāth, 'lord of Gokul' (g.e.), the image being brought over from that place on the occasion of the festival; (2) the temple of Harideva, Hari being one of the titles of Viṣṇu. This temple was erected during the tolerant reign of Akbar, about A.D. 1560, by a prince of Amber, on the site previously occupied by a succession of humber fanes.

"It consists," says Growse (p. 304), "of a nave 68 ft. in length and 33 ft. broad, having a choir 20 ft. square, with a narthex of about the same dimensions beyond. The nave has four openings on either side, of which three have arched heads, while the fourth, nearest the door, is covered by a square architrave supported by Hindu brackets. There are clerestory windows above, and in the west front is a large doorway, which is decorated at intervals with large projecting heads of elephants and sea-monsters. . . . The construction is extremely massive, and even the exterior is still solemn and imposing, though the two towers which originally crowned the choir and sanctum were long ago levelled with the roof of the nave."

Close to this temple is the sacred tank known as Māna Ganga, the 'Ganges' supposed to have been called into existence by the mere ascension of the Divine deity (mānasa). On one side of it are two stately cenotaphs (chastrī) dedicated to the memory of Rāja Randhir Singh and Baldeva Singh of the Jat dynasty of Bharatpur, who died in 1823 and 1825 respectively. A mile or so from the town is a third cenotaph in honour of Sīrāj Mal, founder of the family, who died in 1764. Close to the hill stands the village of Anyor, where are annually celebrated the Girīrdgūḍh, or adoration of the sacred hill, and the Annakūṭ, or commemoration of Κρήσ αρχάς. Later more sacred places are in N. India, Gobardhan seems to have been the scene of Buddhist worship. Outside the village stands a large stupa of Buddha, with an inscription of the Indo-Scythian period.

GOD (Primitive and Savage).—Whether or not we may speak of the supreme, or at least superior, beings of savage and low barbarian religions as 'gods,' is a matter of the definition of 'gods' and of 'religion.' To such superior beings in the beliefs of Australian tribes, Howitt, in his Native Tribes of S.E. Australia (London, 1904), gave the name 'All-Father,' and they are usually spoken of as 'Father ours.' He adds that (as the present writer had already pointed out in The Making of Religions, London, 1898, pp. 202-204) the terms 'spirit,' 'Great Spirit,' or 'All-Spirt' are not applicable to such beings in Australia; and this holds good in almost all savage and lower barbarian religions. It would be absurd to try to find a 'spirit' in the Hebrew Scriptures, and there is nothing spiritual in Homer's conception of his Olympians. The term 'spirit' or 'Great Spirit,' in application to savage All-Fathers, or highly superior beings, is an error of European introduction. It is important to remember these facts, for current anthropological theories usually explain the superior or supreme being of savage and other beliefs as merely the idea of ghost, or spirit, carried to the highest power. From the notion of ghosts, writes Im Thurn, 'a belief has arisen, very gradually, in higher spirits, and eventually in a Highest Spirit.'1 This is the current theory, held, with a variety of details, by Herbert Spencer, E. B. Tylor, and their popular exponents.

The idea of a supreme being is not of late appearance in culture, and is not a reflexion from human kings. It is found among the democratic tribes of Australia, as the All-Father is often a 'head-man' of the community, the while the council of the men makes his position more or less constitutive.2 The All-Father is not the glorified ghost of such an one, for he was before Death, in the myths, entered the world; and he still exists, usually in a world of his own, above the sky. Again, he is not a man, or a spirit, or a god, without existence. He is simply a being, a magnified undying man, who lived long on earth, and then went to his own place, whereas he watches men and their conduct, but seldom indeed takes any active part in their affairs. A good example of such a being is Atmna, recorded by Spencer-Gillen as believed in by the Kaiti tribe, in the precise centre of Australia.

Atmna was prior to the 'Aborigines' (p. 23), or say of beginnings of things. 'He sprang up in the sky in the very far back of time. He is himself his name. His sons he called Atmna.' He expelled from heaven a number of his sons who neglected his sacred services; and they came down to earth, to which Atmna sent 'everything which the black-fellow has.' He has wives, himself working sacred services, and a son, or at least a spirit-fellow (p. 24), and punishes mortals if they do not sound the bull-roarer at initiation ceremonies. It is said that he can teach a man to prophecy to heaven and see him, but find him unpeppable. He is 'a very great man, black,' and his name is said to mean, without sense.

1 J.A.F. (1862) 272.
2 Spencer-Gillen 486.

He is a great man of this sort, the father and benefactor of men, who are disobedient to his father and who are without the saving knowledge of his beneficent guidance.
mysteries, deny this article of native belief are negligible witnesses.

The other side is taken by Fraser and Spencer (see Fraser, Totemism and Reconciliation, London, 1891, 1882). After all, they do not demand the acceptance of their conclusions, Fraser quotes Spencer, the explorer of the Central and North Central tribes:

"In the highest development of the animal religion among the lowest savages, there is not, I am convinced, any such thing in Australia. The greatest difficulty is that we have had statements made on the authority of men like Gason.

Gason was a police officer among the Dieri tribe on Lake Eyre. He knew their language, which scientific visitors to a tribe hardly ever do. He appears to have confused a set of mythical beings, the Mura Mura, with a single great being, Mura Mura. Howitt gives Katchi as the Dieri equivalent of the S.E. All-Father. Spencer, after describing Gason as 'perfectly incapable of dealing with matters such as these,' goes on:

"In the days when the evidence of (talking) Balaime and Daramun was collected, the importance of securing minute and detailed information was not realised, nor was it imagined that there were men without any so-called religious ideas, while it was many years before the desire to be deceived, or, rather, to deceive themselves."

Spencer must have forgotten that the chief authority, Daramun is Howitt. Howitt also gave for other All-Fathers the information which he acquired after being initiated in the secret rites and doctrines of the Naidi tribe. He was perfectly aware of the importance of securing minute and detailed information, and was, of course, the most eminent of Australian anthropologists.

Spencer overlooks these circumstances.

As to Balaime, the All-Father of the Kamilaroi, Euahlayi, and other tribes, the first author who is at all definite is James Manning, who, you will remember, was visited by the sister of Gason, the first white man to reach the Dieri tribe in New South Wales. He settled among the Euahlayi, when the nearest missionary was a hundred miles distant. He took their information, all the oldest men of the tribe, comparing carefully the versions of various informants. To her, as was said, he communicated the hymn to Balaime, in a language no longer intelligible to her teachers. The result was that, whereas she came to the Euahlayi as a believer in Herbert Spencer's theory, she was obliged to yield to the evidence of facts. At first, as we shall see, as she was informed, at a certain point in the rites of initiation, the Euahlayi prayed to Balaime. She herself, of course, never learned to pray to Balaime.

In another region east of the Grey and Barrier Ranges, A. L. F. Cameron is our chief informant as to the totemic institutions of his remote and little known tribe. He cannot be dismissed as 'perfectly incapable of dealing with matters such as these.'

As to 'the discovery of a high ethical religion' in Australia, a religion whose chief being sanctions with a degree of solemnity is not very low, Spencer's speculation, the current writer can add, is mere hypothesis. The word is to some extent false, the superstitious being a sort of Hermes to the historian, from which it derives its name by which he might bring the Kamilaroi to a knowledge of God. Ridley, in fact, only made an etymological guess at the derivation of Balaime, who, on all the evidence, did make or create things in general.

Manning's account, setting his phraseology aside, is corroborated by Mrs. Langloh Parker (The Euahlay Tribe, London, 1900) in many particulars. Manning's informant, who was much alarmed at his own temerity in revealing things hidden, refused to repeat the hymn to Balaime which, so many years later, Mrs. Langloh Parker produced.

This lady, it is right to say, had read, and she drew the attention of the present writer to Manning's notes of 1844, which were published in 1892;

1. Indeed, as the present writer can find,
2. From these, to be so designed.
3. This is more a conjectural form, for Manning, whose Notes on the Aborigines of New Holland are in Journ. and Proc. of the Royal Society of New South Wales, xvi. (1892)
writes that 'it was not imagined that there were men without any so-called religious ideas,' seems unaware that this was perhaps the prevalent opinion of anthropologists when Lord Avebury wrote The Origins of Civilization (London, 1870) and E. B. Tylor criticized that popular view in *Primitive Customs* (do. 1871).

It is possible to examine this instance of the great anthropologist's mode of treating evidence in this matter—a mode sanctioned by Fraser, who then proceeds to quote E. M. Curr, in *The Australian Races* (1889-7, i. 45), and his belief that the Blacks dress up what they have learned from missionaries 'with a view to please and surprise the Whites.' Fraser neglects to inform his readers that Howard (op. cit. 503-508) replied to and crushed Curr. First, Curr's original book contained evidence of the beliefs which that author rejected. Secondly, Howard's own friends, the Kurnals, who have the best of his knowledge, taught by missionaries. Next, where missionaries have long been settled, as among the Dieri and the Southern Arunta, not the least ray of Gospel light was discovered by Spencer-Gillen among the Arunta, or by Howitt or his informants among the Dieri. Howitt found only a demon narrative of the Arunta. The appeal (see Howitt, in *The Australian and Kurnals*, Melbourne, 1881) till he was initiated into their ecstatic rites and doctrines. His reply to Curr appears to have wholly escaped the notice of Fraser. 'Curious book' but does not notice Howitt's defence. Fraser concludes as regards the All-Father: 'If the abstract idea of a powerful headman, kind to his own people and terrible to their foes, had blended with a belief in the immortality of the dead, it might easily have culminated in the worship of a tribal or national god.'

But no evidence is quoted, and none is known to us, which suggests that the All-Father is terrible to the foes of any Australian tribe; indeed, inter-tribal war is almost unknown. Belief in a future life, on the evidence of Howitt, Mrs. Langholt Pedersen, and others, is somewhat based on belief in the All-Father. It is unfortunate that an analysis of anthropological objections, by the most distinguished anthropologists, to the idea of the All-Father, must be off the value of the objections is easily estimated when we remark on points not alluded to by the critics.

Howitt was by no means the first to bring the All-Father into full play, but the great German ethnologist Waetz (1866) had accepted the idea as unborrowed and genuine. In 1881, in his and Fison's *Kurnals and the East*, Howitt, still uninitiated, knew nothing of the belief. In 1884-88 he wrote copiously and with some enthusiasm about it in the *J.A.* He then spoke of the being as 'the Supreme Spirit, who appears to me to represent the defunct headman.' In 1904 Howitt* re-echoed the idea that the All-Father is a spirit, but still regarded him as an Idealization of a tribal head-man, who had created the world or most of it, among other wonderful works, and whose very name was tabbed among men on earth except on the most sacred occasions. He 'can go anywhere and do anything.' In the same work Howitt rather watered down his expressions of 1884-88. He gave an account of all All-Fathers as he had heard of them in native books, and from correspondents; and he endeavoured to prove that the belief was a concomitant of social advance on the coast and in western countries. But, in fact, he had recorded the belief among tribes with the simplest and most archaic social organization, without kin locally associated (a result of living in a male necessity to descend in the female line—and among tribes

as far from the sea and in conditions as unfavourable as the peoples of the Darling River and its hinterland. Moreover, we have seen, on Spencer's evidence, Atsato flourishing in a tribe of the arid and infertile centre. The All-Father belief was discovered by Spencer-Gillen in the Arunta, in the northern tribes of the most advanced social organization, or on the coasts of the North. Thus it is impossible to make out that the All-Father was a concomitant of social organization, or a belief propagated by sea-winds and plentiful rain.

Howitt (loc. cit.) admitted that the All-Father 'is evidently everlasting, for he existed from the beginning of all things and he still lives. But being so (i.e. being from the beginning and still living,) he is merely in that state in which, those aborigines have, every one would be if not prematurely killed by evil magic.'

Men can be killed; not so the All-Father, who is thus no ordinary man, and who was before Death entered the world. There are no strong arguments of Howitt. 'In this being, although supernatural, there is no trace of a divine nature'—in a benevolent and everlasting creature, in several cases the dispenser of reward and penalty in the future life! Howitt was exiguous in his ideas of what 'a divine nature' ought to be. Again, the All-Father is clearly neither an imitator of those qualities which are, according to their [their] standard, virtues worthy of being imitated.' But no moral conception of the All-Father can possibly reach the ideal of moral excellence; and the gods of Homer and Herod and Pindar fell very far and frequently below their ideal of moral excellence. But there can exist no being in human faith who has 'a trace of a divine nature.'

Howitt, observing that sacrifice is not offered nor (except in very rare cases not recorded by him) prayer addressed to the All-Father, wrote: 'It cannot be alleged that these aborigines have conceivably any form of religion.' It is, perhaps, no form of religion to believe that an everlasting, benevolent, and creative Being watches over and approves of human virtues. Howitt appears to have held that, where there is no worship, there is no religion. Yet he had described the worship of Daramunim, if 'dances round the [his] figure of clay and the invoking of his name by the medicine-men' are worship. What are the attributes of this not worship? Howitt ended by saying that 'such a change as a recognised religion' would have been brought about, if ever, by these medicine-men. By 'a recognised religion,' he appears to have meant what he recognised as religion—belief plus prayer and sacrifice. Meanwhile, whoever thinks that belief in the kind of Being described, plus moral obedience, and dances and invocations of the sacred Name of the Being, does constitute religion has Howitt's high authority for holding that in Australia there was a religion, unborrowed and spontaneous—and highly unwelcome to anthropologists in general.

Not all anthropologists are so hard of belief. Van Genep (whose name we may call a cliche) accepts the evidence for Balmaine as more than a tribal deity. Unscientific, of course, is the opinion of Ridley that the belief in Balmaine, for example, was a lingering gleam of 'the true light,' namely, of some supernatural revelation to mankind. We have to do with facts and evidence, and Ridley's remark is no part of his evidence, nor of the foundation of his theory. The current anthropological theory is that if, after all, we must accept the evidence as to the 'powerful headman' of a people above the sky, that belief is that of the relatively advanced culture in favoured regions, where the relative easiness of obtaining food gives leisure for
religion and speculation. Yet few regions are less
favored than the place where the Kaitish, with
their self-existent benevolent Atanata, hunt very
small deer. Their neighbors, the Arunta, have
no belief of an Atanata, but, in Fraser's words,
they have "a theory of reincarnation . . . obviously
incompatible with a description of the ancestral
spirits . . ."! They also have a theory of evolu-
tion of species, human and other, in a marine
environment, so that they cannot conceive of a
creator or maker. The theory, granting the
promises, is elaborate and ingenious, and excludes
the ideas of a God and a future life not territory.
To work out this theory, men, we might think,
need all possible advantages, but the region of the
Arunta is arid, except during the season of rain,
as that of the Kaitish.

Meanwhile, it may as easily be argued that the
Arunta once held the All-Father belief, and lost it,
under the advance of their animistic and
evolutionary speculations, as that they never had
it. The usual All-Father has his subordinate,
sometimes his son, who manages the initiatory
rites, and is the patron or first maker of the bull-
roarer. This subordinate is a bogey, known, unlike
the All-Father, to the women and children. The
spirits have a high and divine name: Atanata; he
is also known to the Unmatjara. 2 The Kaitish
have their counterpart. The Arunta may have
retained, as a bogey to scare the women, the deity
or subordinate of their All-Father, while dropping
that personage. Among the Arunta, Gillen,
Spencer's collaborator, discovered 3 a great sky-
dwelling Being, "the great Ulthana of the heavens."
We hear from Gillen nothing of his functions,
except that the spirits of the dead ascend to him
and by him are cast into the sea, whence they are
rescued by two minor Ulthana and thenceforth
live 'with the lesser Ulthana in an abode.

This being was discovered in a southern branch
of the Arunta not visited by Spencer and Gillen while
collecting material for their great book. Again,
in a southern portion of the Arunta, C. Strehlow,
intimately familiar with the Arunta language,
finds a great sky-dwelling Being named Altjira
Mara (Altjira the Good), 4 who is said not to have
made anything or to take an interest in mankind.
The neighboring tribe, the Luritja, have a similar
being, Tukura, indifferent except as to rites. 5

Thus we see all have some form of the general
Arunta theory of evolution and migratory spirit-
gulls born as men and women. It is more probable
than under stress of this philosophy, they have let
their great sky-dwelling Being slip into the back-
ground, though 'good,' than that they have in-
vented him for no reason, as he does not explain
the world, and is not the creator or cause of any-
thing. Spencer's section of the Arunta have entirely
lost the idea of this Being; their neighbors, the
Kaitish, retain Atanata, who is benevolent but

5 K. Strehlow, Myths and Legends of the Arunta,
familiar. He was a great maker, Garuboi, and had regulated human society as Baime did; ‘he separated mankind into exiguous ‘clans and named them,’ giving the marriage rules. He ‘made us,’ said the native informants, ‘the beasts, earth, and we know not what other things.’ 1

In Fiji (q.v.) we find, among a crowd of polytheistic gods, the same conception. The creative being is Ndengi (Williams) or Degel (Flouz). He is conceived of as a serpent or as a body of stone with a serpent’s head. In a hymn 2 Ndengi is represented as saying, ‘W did men, prayed them on earth, and yet they share to us only the under shell.’ Ndengi has scarcely a temple, but prayers used to be made to him through the mediation of two of his sons, and there was a tradition that old he received much sacrifices.

He sends rain on earth. Here the gradual neglect of the creative Being is historically proved, and it is not unreasonable to suppose that Garuboi was honoured by the ancestors of the Massai.

Among the numerous worshipped gods and ghosts of the Baganda, an agricultural and monarchical people of Uganda, Mulaka held the highest rank, as a benign god of plenty, who refused human sacrifices. It seems to be almost certain that he was the same as Manam the Creator of the Kinyarwanda. On the other hand, ‘the Creator,’ Katomba, ‘received little honour or attention.’ He ‘was spoken of as “the father of the gods,” because he had created all things, but not much was known about him.’ Cattle were occasionally sacrificed to him, but usually they were allowed to roam about his temples. The same gods were ‘the human beings’ gods’ were more sympathetic and easily entreated, like Saints in popular Roman Catholicism. A man or woman may pray for the intercession of the being’s of whom the person is related by blood or sympathetic, who is so near to our idea of the tender and true.

The processes of creation from the All-Father are not entirely intelligible and naturally human. The more Animism in religion, the more appeal to kindly spirits of men, the less theism—such is the obvious tendency: Israel, so incursions (as far as our evidence goes) concerning the dead and their propitiation, was the more free to concentrate effort on the worship of the Eternal. On this side of the Atlantic, if not so far (which, of course, cannot be proved), had the opportunity of elevating their religion from such a faith as that in Baime towards monothelitism.

‘But their foolish heart was darkened’ (Ro 1:21); and animal-worship may be, in some places, a result of totemism. Under the All-Father belief, in Australia, human sacrifices and other abominations of the higher barbarism, and even of Greek and Roman religion, if many legends speak true, are, of course, impossible, as nothing is given to the All-Father. He is not localized, and has neither temples nor favoured seats, for his people have no houses. There is no ‘priestcraft,’ for the medicine-men have not developed into priests.

The present writer’s Making of Religion (London, 1888) gives an account of the superior beings of the religion of low races, and of the survival of All-Fathers and creators, usually neglected, in the polytheistic and animistic religions of peoples more advanced. Thus Qing, a Bushman who ‘had never before seen a white except fighting,’ greatly revere him:

1. ‘He made all things and we pray to him;’ ‘more was known by the initiated.’

GOD (Arabian, pre-Islamic).—I. SOURCES.—Although numerous treaties were composed by Muslim authors bearing on the early religion of their country, it was not in their power to furnish much information on the subject; for no written manuals had survived from pre-Islamic times, and during the first century of Islam the very memory of the earlier condition was detected. Only enough was retained to explain certain allusions in the Qur’ân or the Prophet’s biography; and even this is vague and contradictory. These authors, moreover, naturally regarded the Qur’ânic treatment of the matter as authoritative; but, since the accounts of Judaism and Christianity given in that work are well known to be gross travesties of those systems, we have no guarantee that its treatment of Arabian paganism is any fairer or more intelligent. At most we may assume that

1. JAI xlii. (1892) 156. 2. Man, x. (1919) 52.
3. Lejaan, A.M., April, 1859, citing Belzoni’s MS. Dist. of the Dinka Language.
4. Weitzgerland, Antropologi, i. (Zaljopf, 1880) 187.
the religious terms employed by the Qur'ān in connexion with paganism were understood by the later compiler, and that the latter were familiar with the concepts for which they stand. But the concept cannot be extended to the statement of his case by a better and passionate enemy. The sources whence the meager information contained in the Qur'ān can be supplemented are, in the first place, inscriptions discovered in N. and S. Arabia, which from the nature of the case mainly add to our store of names; in the second place, occasional statements by Greek authors; one of these, Uranus, actually compiled a treatise on Arabian affairs, several fragments of which are preserved by Stephanus Byzantinus.

2. Names for 'God.'—The word ʿādah (identical with the ʿādah of Job) is found in inscriptions belonging to various Arabian communities, and is used by the Qur'ān as a common noun—e.g., 'the ʿādah of Moses' (xi. 39); 'I know of no ʿādah of yours save me' (xxviii. 38). A form ʿādah is quoted from an early poet (Pāhi, ed. Fleischer, Leipzig, 1846-48, 1. 4, lxx. 20), but this may be evolved from ʿātāh, 'the god,' where the elision of the ʿā is in accordance with Arabic morphology. ʿĀdah appears from its form to be originally a plural, and, indeed, of the earlier Semitic ʿil (Heb. ʿil), on the analogy of ʿabqar from ʿabqat, 'lip' (where the ʿā is a femaline affix). Of ʿādah itself the Biblical ʿādah is a further plural, of which, curiously, there appears to be a trace in the Arabic vocative of ʿādah, viz. ʿāḏāʾ, which the native grammarians find to be of Semitic origin. The employment of a foreign word as vocative in such a case could be paralleled. The verb derived from ʿādah, 'to serve,' means 'to take refuge with,' 'cf. 'I took refuge with it (nāṭaḥa ʿāḏāh), whereas had I fled from it' (Qū āl-Quṭāb of Abī Taʿlīb al-Makki, A. R. 1319, l. 107). On the other hand, some think that ʿādah means 'to serve.' The feminine of ʿādah, viz. ʿāḏāhah, is said to mean 'the sun,' just as Herodotus speaks of the sun as 'this god.'

A Qur'ānic equivalent of ʿādah appears to be ʿābīb, 'dear,' 'beloved,' 'lord'; in this sense it is always annexed (my ʿābīb, your ʿābīb, etc.), but it is used absolutely in the plural: 'they have taken their doctors and their monks as ʿābīb instead of Allah, whereas they were comforted to worship one ʿādah, than whom there is no other ʿādah' (ix. 31). Probably this word is taken over from Jews or Christians, as its name ʿābīb has the Biblically ʿābīb, 'lord of the worlds,' which corresponds to ʿābīb ʿabām in the Jewish tradition. The adjective ʿābīb meaning 'great' is not used in Arabic.

The use of the form Allāh for 'God,' imitated in Christian Arabic by ʿābīb, 'lord,' may be pre-Islamic, and the title may have been applied in various communities to their chief object of worship, but the matter is not free from difficulty. The identification of the Allāh of the Meccans with the Allāh of the Syrian Christians may have been opportunist, like St. Paul's interpretation of the Athenian 'unknown God' (Acts 17); i.e., there may have been a deity worshipped at Mecca called Allah, as is attested by the uniform interpretation of the name itself by the idolaters or the like. This deity was generally known by a family of Allāhs and of such a deity there are epigraphic traces. On the other hand, the polemic of the Qur'ān assures us that the Meccans regarded Allāh as the Creator, and theo logical mistakes and the deity so subsequently to him, though in practice they gave the others greater honour. If this could be accepted, it would strongly favour the Prophet's theory of an original Meccan monotheism, which seems to be historically excluded. Further, there is evidence showing that at one period in his career he wished to abandon the name Allāh for another. On the whole, some modification of the first suggestion seems the most plausible theory. It is a point which Islam shares with Christianity, that the Deity is regularly called only by a generic name with the Allāh appended. The all probability is, then, that the identification of the object of monothestic worship with the Meccan god Allāh was at first avoided by the Prophets, but afterwards welcomed. It may be observed that the retention of the article in the vocative (pl. Allāh) indicates that this form was used as a proper name at an early period. And the same seems to be evinced by the employment of a particular preposition in the sense of 'by' before this word only in oaths. It would also seem that the verb Allāh, 'to swear,' (Heb. ʿāḏāh), was an early derivative; and the same may be the case with the old word ʿādah, said to mean 'covenant.'

The epigraphic traces of the name are to be found in the Sassanian inscriptions, whereas a form which, it seems, should be identified with the Allāh of the Qur'ān is found five times, but regularly preceded by the article. The employment of a foreign word as vocative in such a case could be paralleled. The verb derived from ʿādah, 'to serve,' means 'to take refuge with,' 'cf. 'I took refuge with it (nāṭaḥa ʿāḏāh), whereas had I fled from it' (Qū āl-Quṭāb of Abī Taʿlīb al-Makki, A. R. 1319, l. 107). On the other hand, some think that ʿādah means 'to serve.' The feminine of ʿādah, viz. ʿāḏāhah, is said to mean 'the sun,' just as Herodotus speaks of the sun as 'this god.'

The use of ʿādah is an element in the name ʿābīn, 'patron,' often appears. With this we may compare the use of ʿaḥān, 'trustee,' which is often applied in the Qur'ān to God.

A name which is in use in parts of the Qur'ān, al-Rahmān, 'the Merciful,' where the word attached to the article is Hebr. or Arab., is said to have been abandoned because certain impostors adopted it in the sense of Meccan ʿābīn. It is found as an epithet of deities in pagan Arabic inscriptions. In the common Islamic formula called the ʿaḥān (q.v.), we find the name ʿābīn al-Rahim, 'lord of the worlds,' which corresponds to ʿābīb ʿabām in the Jewish tradition. The adjective ʿābīb meaning 'great' is not used in Arabic.

3. Nature.—Herodotus, the earliest authority on this subject, says the Arabs believe only in Dionysus and the Queen of Heaven, calling the former Orotal, the latter Allāh (i. 9) or Allāh (i. 91). Allāh is clearly identical with Al-Lat, a goddess mentioned in the Qur'ān (iii. 19; see, further, Ezr. i. 601). Orotal is a puzzle, hitherto unsolved. What Herodotus implied is that the Arabs assigned to these beings functions corresponding to those of the Greek god and goddess—those of Dionysus being well known. Now, it seems certain that even with the Greeks such assigning of functions was a late development, ascribed by Herodotus himself to Homer and Hesiod; the Arabian gods were all tribal or local, and gave the tribe what ever it wanted to give. On the other hand, the polemic of the Qur'ān assures us that the Meccans regarded Allāh as the Creator, and theological mistakes and the deity subsequent to him, though in practice they gave the others greater honour. If this could be accepted, it would strongly favour the Prophet's theory of an original Meccan monotheism, which seems to be historically excluded. Further,
and Manak the third, the other; and many more such names have been collected. Al-Uzza, according to Ibn Ishaq (t.A.H. 150 (A.D. 767)), was a House (dais) honoured by certain tribes of Quraysh, which Wadd improved upon (sees), out of which, when it was destroyed, a naked Abyssinian woman (the goddess herself) departed to her hostor, her father, I. 1469; see further, ERE (1919)).

The life of its believers, their narratives illustrate the difficulty which even the first Islamic historians had in accommodating their new faith in the minds of the pre-Islamic community. The god of the Meccans seems similar to that of a 'house'; their festival was the Feast of the House (ka'bah al-ḥāṣib; cf. ḥag ib'ah, Lv 29)). In the Qur'an the word 'house' is used in some special theological sense where this phrase occurs, and we are told that the first 'house' established for mankind is that of Abraham, for the guidance of the holy book (xii. 90); possibly this last phrase means 'a model for all others'; it contains the text continues, 'manifest signs,' Abraham's station; and whoever enters it is secure. The house here seems to mean 'consecrated ground,' though elsewhere the building called Kabe is clearly meant. Apparently, then, in the case of a house, there was the consecration between the soil, the god who dwelt there, and something that marked it which is found in river-worships. The pollution of a house is not directed against the sacred, but against certain objects called somehs, apparently meaning 'images,' such as were worshipped by Abraham and his family, and the last of whom Abraham had knocked down, mockingly scaring the act to the greatest of them (xxxi. 71, xxi. 64). Clearly these were thought of as bearing some resemblance to him. Muhammad, a tall man, was to appear and bid him stand aside (Dala'il al-mubawweq, Haldhah, 1324, p. 59); probably (if this story be old) the apparition was an angel rather than the god. Other old names for idols are mer Sup and wādhe(m) (plur. wādhe(ūs). The former were perhaps flat stones rather than images, since we read of animals being slaughtered upon them (ib.). The latter is perhaps to be identified with the Heb. word for 'old' (gēshāq), and may, from this bring us in which case, e.g. Qur'un (R 31, 'avoid the abomination of the gēshah'), be a term of abuse. Similar appellations occurring in the Qur'an and elsewhere, evidently to the Jewish (e.g., 'error' used in the Raggum for 'idol,' and 'idol,' possibly the Gharb of the LXX).

The proper names of these deities tell us little of their character. Al-Uzza means merely 'the mightiest' (feminine), and resembles al-Asūs, 'the mighty,' a name or epithet of Allah. Al-Lat appears to be the feminine of Allah, meaning 'the goddess.' Manak seems to be identical with manigah, 'fata.' A list given in Qur'an lixi. 22), 23 has the same sound of humanly; Wadd ('liver'), Sass ('liver'), Yodhah ('helper'), Yaqub ('aid'), Yās ('helper'), Nasr ('helper'). This last name is suggestive of soteri, of which otherwise Arabian paganism shows a few traces; some other names appear to be abstract, e.g., 'unanimity' or indicative of a quality, e.g., Ndah, 'a giver' (fem.). Certain others (collected in the Madkucass, Cairo, A.H. 1320, x. 104) are obscure. A Sahasin dictionary, the Qaro, dictionaries, Maghah, means probably 'answering god.' The Qaro'ic description of these deities as 'names coined by your fathers' appear to be near the truth; they were mainly predicates without subjects.

4. Theology.—It is probable that, whatever the symbol, or whatever the origin of the cult, the worshippers really thought of the deity as some one like themselves; and the Qur'ānic itself, though denying their objective existence, cannot avoid treating the Arabian idols as human beings. On the Day of Judgment (meaning 'the saints'), out of which they were destined to save them, will deny that they ever received any eulogy, and even call God to witness that they knew nothing about such honour being paid them (x. 28, 30); and they are charged with having instigated infanticide (v. 138). The former scene is exactly analogous to a later passage, in which Jesus and His mother similarly repudiate the charge of having told mankind to worship them (v. 118); and the word wakhir, 'associator,' is applied to Jews and Christians as well as pagans, all being supposed to give some person or persons besides Allah a share in Divine honours. The polemic of the Qur'ān assumes that the place of the pagans gives those he is secondary; they acknowledge that Allah, and not the Idols, created the world; and, indeed, they profess to worship these idols not as deities but as intercessors with Allah (x. 19); as His daughters, treating them perhaps as the ordinary fugitive treat the females of the family to which he refers, as more tenderhearted and less regardful of consequences than its male head. The Qur'ānic polemic, in reply, the indignity of ascribing deities to Allah, when any Arab was ashamed of beinggetting one. The assumptions involved in this are insidious, viz. that the deities of the Meccans were all females, with the exception of Allah, whom they regarded as father of the others, are confirmed by nothing that we know of the cults of the processions, nor can we find the deities of the same character as the Qur'ānic assertion that the Jews say 'Usair (Era) is the son of God.'

So far as the meagre evidence at hand can be used, we should infer that the Arabian deities were treated like other tribal and local gods by peoples in the anthropomorphic stage of religion. The word 'iṭdad, 'worship,' implies proper the relation of slave to master; and another word, 'ādāfah, apparently means 'wait upon,' 'attend,' in the style of a domestic servant, and this the idolaters are represented as doing all day on their deities (Qur'an, passim). Another word which represents a slave's attendance is šābāh. Besides this they brought gifts of various sorts, e.g. the 'house of Allah' is still clothed, and sacrifices are still offered in Meccah. Al-Uzza was smeared with blood (Makūk, loo. A. 15); and the one speaks of more precious offerings still—e.g., objects of gold, such as were offered by the Greeks to their gods. They were naturally witnesses to oaths, being doubtless thought of as immortal; and in certain cases they probably had priests (Adōn, a word which appears to be connected with the Gr. aor, a sheaf on fine linen) and treasurer. In S. Arabia they liked public acknowledgment of their services in the shape of eulogistic tablets. When they appeared to their worshippers, they probably did so in human shape, just as, according to the Prophet's biographers, the angel Gabriel and Satan, like Homeric deities, when they appear, take the form of some well-known man. But beyond this it is probable that Arabian theory varied as elsewhere with the intellectual capacity of the worshippers and the character of the deities. Thus there is evidence that the heavenly bodies were worshipped in some places, whether identified with deities or not; and, even where the deity was thought of as permanently fixed in some spot, a fiction could be exegeted to enable him to accompany an expedition. The specifications, however, whereby contradictions were reconciled or blunted have not been preserved.

The almost entire absence of allusions to the
GOD (Assyro-Babylonian).—A careful study of the Assyro-Babylonian religion, by Ramman, who sits on the throne of heaven, under the name of the god Anu; the earth, represented by Bel, who was also the divine type of everything on the earth; and the waters and everything under them and under the earth, whose patron was Ea. The second Babylonian triad consisted of the sun Shamash; the moon Sin; and the planet Venus represented by the goddess Ishtar. These six deities formed the basis of the Babylonian religious system, but a host of lesser personifications of natural phenomena was also recognized. Perhaps the most important of these was the god Shamash, who was the moon of the wind and rain and of the thunder and lightning. The planets also had deities sacred to them; for example, Niban and Marutuk probably represented Saturn and Jupiter, while Nergal and Nebo were gods of Mars and Mercury respectively. On the other hand, it must not be forgotten that the last four gods possessed attributes which had no connexion with these planets at all, but which overlapped the characteristics of certain other male deities.

At this point, the most important peculiarity of the Babylonian religion becomes apparent. Every god or goddess could be regarded from many sides, some of which were not always in harmony with the others. Thus, for example, Nergal represented both the rising and setting sun, and by the southern and noonday sun, while Ishtar as Venus was worshipped differently as Ishtar, the Essen goddess of sexual love, and as Ishtar of the Morning Star, the goddess of war. In the same manner, Ramman was distinctly the Thunder-god as separate from the light of the Babylonian religions deities were thoroughly anthropomorphic in conception, as was naturally to be expected. They all had wives, sons, and daughters, and even attendant spirits, perhaps, i.e., lower beings whose chief duty was to execute the functions commanded by the greater gods. An examination of the Babylonian pantheon shows a most varied system of pantheism so far as the multiplicity of god-names is concerned, but a great sameness of conception with regard to the functions of the different deities. This is the first step towards a narrowing down of the divine functions.

In this connexion it should be remarked that every one of the more important Babylonian towns had its own tutelary deity, who was regarded by the inhabitants of that district as the highest of all the hosts of the pantheon. Consequently, a distinct priesthood of every such tutelary god arose in each of the cities in question; and this priesthood guarded the cult of its own particular god with the greatest reverence, often exalting him as practically the only deity whom it was worth while to worship at all. The most significant point in all this strange system is the fact that toleration was practically unknown, particularly in the earlier days of Babylonian history, when the hegemony of the land was still an unknown quantity. As one city after the other got the upper hand, the god of the temporarily ruling city came to be regarded throughout the entire country as more powerful than all the others. Still, the worship of these other gods never ceased in their own peculiar shrines. On the contrary, the chiefs of the ruling city constantly made offerings to the gods of the conquered cities, in order to gain the confidence of the various inhabitants. In this manner the tributary peoples came to consider the king of the ruling city as a patron of the cult of the conquered gods, and were consequently the
more disposed to regard the rule of the suzerain with favour. For example, when Babylon-Borsippa held the hegemony of Babylonia, they saw no inconsistency in ascribing the very highest attributes to Marduk, the god of wisdom, who were the city-gods of the capital. In the same manner, when Ur had the upper hand, its own moon-god Sin was looked upon as the chief deity of the entire land, and the other deities literally sank into nothingness. Yet these temporarily lesser gods were never seriously affected by this state of affairs, because it was generally recognized that at any time another city might get the suzerainty, and then its god could and should acquire the rank of chief deity in the pantheon. The city was worshipped in its own peculiar place as the chief deity of the universe, without interfering at all with the claims of any other god. This system is called homineism, as distinct from the cruder polytheism.

Such flexibility of religious conception did not jar in the least on the ancient Babylonians, because their gods were, in reality, at no time in the later period more than mere names personifying Nature. Any name of a great god was as full of meaning to them as was the name of a great god in Nature as was any other great god's name; and this fact is still further demonstrated by the indefiniteness of the divine genealogy which prevailed until the latest period of Babylonian history.

The same deity is said, for example, to be the daughter of two gods, or the son of two gods, the divine father of various deities, in the famous hymn to Belus, who was the feminine counterpart of Bel, and who was also regarded as being identical with Sin, the following lines: "The exiled daughter of the judgment of Bel I am. The noble heroine of my father Sin I am. I am the supreme one." Here the goddess states that she is sin offspring of two widely differing deities. The main point is that she is exalted as the supreme one.

Probably no better example than this could be cited to show the indifference with which the Babylonian priesthood looked upon the genealogy of their deities, and the necessity for following the lines of descent. In this passage do we see the great underlying principle of the universality of deity as such, irrespective of mere name.

It remained for the Assyrians, however, those Semitic colonists from primitive Babylonia, who established in the north that empire which was to absorb all Western Asia, to crystallize in the personality of their tutelary deity Assur the principle of one central Divine figure in such a manner as had never occurred to the Babylonians. Under the worship of this god Assur was perhaps the nearest approach to an all-embracing monotheism which can be found in the Assyro-Babylonian religion. Unlike all other deities of the pantheon of this region, Assur did not represent any great force in Nature, but was essentially a national god—indeed, practically the only god of Assyria, because in him, owing to the unprecedented success of the Assyrian arms, were incorporated all the qualities which the Babylonians assigned to various deities. It is really no exaggeration to state that Assur became almost identical in character with the warlike Jehwah of earliest Israel. Assur's aid alone was all-sufficient in war and peace, and it is significant to observe that his devotees never attached to his train a host of minor deities, but always a number of the greater god-names. These greater gods, it will be noticed, invariably lost their identity alongside of the magnificence of the all-absorbing Assur. Comparatively few other deities are invoked by the Assyrian kings, and even those few were really merged into the worship of Assur. For example, when they simplification became Assur under other names. There was, however, one great point of difference between the Assyrian worship and that of the Israelitish Jehwah.

Whereas in the Israelitish system there existed a special high-priestly class, distinct from the monarch, it was always the monarch who was the sole high priest of Assur.

The symbol of this god was a standard, consisting of a double-winged disk, over which stood a figure of the god shooting with an arrow. This emblem seems to point to a solar origin for Assur, as the disk always represented the sun.

In the Assyrian worship, then, we see exemplified the most striking tendency of the Assyro-Babylonian age towards a real monolatry, the first step towards pure monotheism.

At the same time, in spite of this obvious unifying tendency, a certain range for the gods was duly observed by both Babylonians and Assyrians, which is portrayed in the peculiar system of assigning to each deity a specified number.

Thus Assu, the head of the great Triad, had as his numeral 60, which was the fundamental number of the ancient Babylonian sexagesimal system of counting. Bil and his son Nun had 60; Sin, the moon-god, had 80, the number of days in the lunar month. To Shamas, the sun-god, was given 30, while to Tuktar, the god of love and war, was given 10, the half of the lunar month; and to Marduk, the great tutelary deity of Babylon, also a manifestation of the sun-god, was assigned 11. Ramses, the storm-god, had 5; and Naisu, the god of death, had 10. It is probable that some of the lesser numbers were assigned purely arbitrarily, because even this enumeration of the gods is not always constant.

It must not be forgotten, moreover, that the lower side of the Babylonian religion was full of all sorts of base superstitions, and unless the relics of the earlier shamanism. The people believed in a host of evil demons and lesser divinities, against whose malevolent influence they could invoke an equally great host of conjurers of every kind.

Thus we find observers of birds' flight, soothsayers, interpreters of the dead, dream-readers, etc. The incantations, of which a large number have come down to us, usually mention every kind of possible evil influence, because the conjurer never could be certain which particular influence was present in a given case. For example, 'Whatever hast afflicted the system of the man—evil face, evil eye, evil mouth, evil tongue, in the name of Heaven be it conjured; in the name of Earth be it conjured.' Spirits played a large part in the life of the Assyrians, and conjurers, who applied it freely to the person of the patient (cf. the story of our Lord described in Jn 6). It seems that they also possessed the knowledge of the symptoms of many recognizably diseases, which, however, were always treated by driving out the evil spirits which were the cause of all diseases. Parallelism from the New Testament will readily suggest themselves.

It is not, of course, the purpose of this article to give a detailed account of the religion of Babylonia and Assyria. For the special characteristics of the many deities who are as members of the Babylonian pantheon, the reader should consult the art. BABYLONIANS AND ASSYRIANS, ii. 309 ff., and the works cited in the literature at the close of this article, the chief aim of which is rather to illustrate the real religion of the Assyrians rather than the form of the art. Assyrians. Perhaps no better method, of bringing out this important point can be followed than to quote an extract from the religious literature, much of which shows a spirit of true devotion equally only by the Hebrew Psalms. Here attention may be called to only two points.

1. Like all Nature, all creatures were considered as being absolutely dependent on the Divine will for everything in life. Nothing could happen without the god, and everything in existence was the result of the all-powerful creative Word, which is here undoubtedly the prototype of the Logos in the Gospel of John. This creative Word is admirably portrayed in a hymn to Sin, the moon-god, as follows:

1. In heaven, who is exalted? Thou alone art exalted, In earth, who is exalted? Thou alone art exalted.
When thy word echoed in heaven, all the angels of heaven met themselves before thee.
When thy word echoed on earth, all the angels of the earth kiss the ground.
When thy word roareth above like a storm-wind, it causeth food and drink to flourish.
GOD (Biblical and Christian).

The Christian conception of God, as it is held to-day, is the product of a long history, which is the object of this article to trace in broad outline. It is the result of a gradual, but continuous, revelation on the part of God, and is the outcome of the蜱
certain response on the part of man. The centre and pivot of the whole history is the body of writings known as the NT, or rather the order into which they are set in the NT and the interpretation there given to them. But the God of whom Jesus spoke, who is worshipped and believed in the Gospel, is a Being who is to some extent a mystery, a God whose existence is known, and who had been the object of faith for generations in Israel. Some knowledge of the previous revelation is necessary in order to under-
stand the meaning of the phrase 'the God and Father of our Lord Jesus Christ,' while it is
matter of frequent comment that the doctrine of
God implied in the Sermon on the Mount seems to
be restricted by a wide interval from that of the
Triune Deity worshipped and defined at Nicaea and
Chalcedon. For a thousand years after the Fourth
Council the Church doctrine concerning
God was practically a fixed quantity, though
it was from time to time developed by the elaborate
analyses, or overlaid by the ingenious syntheses, of
scholastic philosophers. The scriptures, however, has
left upon the Christian idea of God a mark of its
own. The almost incredible enlargement of knowl-
dedge concerning the universe which has charac-
terised modern thought, especially in the 19th
century, has profoundly influenced men's conceptions of
the Divine, so that the traditional form of
Christian doctrine has been enriched by a new and
various content, as yet but partially assimilated
and imperfectly incorporated with the old.

It has been denied that true and legitimate con-
tinuity has been preserved amidst all these
changes. But, if the Christian view of God and
the world is true, then, under the actual condi-
tions of human life, revelation must be progressive
on the Divine side; and the apprehension of (God
on the part of man will be gradual, various, and un-
certain, according to the capacity and fidelity of
those who seek to understand it. Is is the standpoint of this article that unity and con-
 tinuity of conception have been sufficiently pre-
served, whilst growth and progress are throughout
discernible. Elements in that conception may be
traced back to Israel, ideas and forms of expres-
sion are due to the influence of Greek thought,
the experience of the Church throughout the ages
has made it necessary to expand and a rethinking of
Christian doctrine, the 'light of the knowledge of
the glory of God in the face of Jesus Christ' has
alone supreme. Christology—a spiritual and
ethical monothelism at first highest type, a religion
of redemption of which Christ is both the centre
and the sum—presents a consistent and ever de-
veloping doctrine of God, one that at the same
time modifies the imagination, the 'Judaising' and
and has proved itself to be the most potent and
influential factor in the history of religion in the
world.

I. THE OLD TESTAMENT.—The existence of a
God is always pre-supposed by writers in the OT,
ever explained, still less argued out. But what
was meant by the word, what connotation was given
to the name, what attributes were implied by it,
are quite other questions. The writings which re-
cord the earliest traditions on the subject range
from the 9th to the 5th cent. B.C., and it is not
easy to summarise the various ideas of the Divine
Being which find a place in them. The documen-
tary strata recognised by criticism do not em-
body much of earlier material, and may furnish
evidence of the existence of primitive beliefs, not
sanctioned by the religion of Israel, but influencing
to a considerable extent the thought and practice
of successive generations. It may not lightly be
taken for granted that the God of Noah, of Abra-
ham, of Moses, was identical in all respects with
the God of the Law and the writers from 8th to 5th
century B.C. The term Elohim, beginning with the
Priestly Code after the Exile. Yet the utterance
of Dt 6, 'Jahweh our God, Jahweh is one,' is
the watchword of the God of Israel in no artificial
or perfunctory sense throughout the national
history; and the Deity worshipped and proclaimed by Israel for centuries is the God of
whom Jesus said that the first great command-
ment in the Law was to love Him with heart and
mind and soul and strength.

For the present purpose all traces of primitive
beliefs in pre-Mosaic religion may be disregarded.
The Semitic tribes at the time of the
Trinity Deity worshipped and defined at Nicaea and
and similar steps forward in the knowledge of God
were made in the time of Moses. The God who
spoke to Moses from the burning bush was
Abraham marked a clear stage in advance, and
Deity; He was the 'God of thy father' and 'the
God of your fathers'; even His name was pre-
viously known—Jahweh the God of the Hebrews
(Ex 3:14). In exactly what sense, and to what
extent, this God was recognised by the people
at large before the time of Samuel is a moot
question. Materials for an answer are scanty, and
some points are still in debate. Many super-
stitions and some idolatrous practices were re-
tained amongst the people, while a long, steady
warfare was maintained against them, with
the utmost assertion of the supremacy of Jahweh
and His claim to sole allegiance and undivided
service. The beliefs and practices thus indi-
cated may be classified in two categories: (1) those which were
arguably polytheistic; (2) those which accoun-
ted the existence of demons, or inferior divin-
lities; and (3) those which have to do with the
worship of Jahweh, observed on the veneration of places, sacred stones, and sacred trees, consistent
with the worship of Jahweh, though often indulged
in a spirit of disobedience and revolt.

What is, however, beyond question is the rise of a distinctive
religious of Israel from amongst tribes in
which polytheism, often of a cruel and licentious
type, prevailed; and the attainment, by whatever
stage of the process, of a pure ethico- logos, the
uniquely lofty kind. The distinction between
monolatry and monotheism is often a narrow one.
A nation which whole-heartedly worships one God
alone may change in its mode of regarding
the gods worshipped by other nations. These may be
viewed as inferior deities, whom it was sometimes
tempting to acknowledge and try to propitiate;
or as spirits, more or less evil, that were not really
'gods'; or as 'abominations,' banned and de-
nounced by true religion; or as empty figments of
the imagination, the 'Judaising' and 'Judaizing' nature
in which some Hebrew names for idols brand them as
being. Indications of what are now called 'totem-
ism' and 'tabu' may be found in the Law and
the national law; the divination and ancestor-worship for-
bidden in successive codes of legislation may have
been relics of dying cults. The precise character and
religious value of 'division,' 'south,' 'south-east,' and
and the religious history before the Exile do not
belong to the present inquiry.

The lesson of the OT is the establishment of the
worship of one God, unique, incomparable—the one
God that matters. The main light shines clear,
whatever vague forms fit and glimmer in the
twilight around it. The history of revelation in
the OT is a history of the way in which this light
was seen to shine more purely and more power-
fully till all the shadows of lesser deities fled
away.

1. Names.—The names used for God were sig-
nificant. Elohim was the generic term for Deity,
Jahveh the personal name of the God of Israel.
The term Ely was commonly the title of the
Priestly code after the Exile. Yet the utterance
of Dt 6, 'Jahweh our God, Jahweh is one,' is
the watchword of the God of Israel in no artificial
or perfunctory sense throughout the national
history; and the Deity worshipped and proclaimed by Israel for centuries is the God of
whom Jesus said that the first great command-
ment in the Law was to love Him with heart and
mind and soul and strength.

For the present purpose all traces of primitive
beliefs in pre-Mosaic religion may be disregarded.
The Semitic tribes at the time of the
Trinity Deity worshipped and defined at Nicaea and
and similar steps forward in the knowledge of God
were made in the time of Moses. The God who
spoke to Moses from the burning bush was
Abraham marked a clear stage in advance, and
Deity; He was the 'God of thy father' and 'the
God of your fathers'; even His name was pre-
viously known—Jahweh the God of the Hebrews
(Ex 3:14). In exactly what sense, and to what
extent, this God was recognised by the people
at large before the time of Samuel is a moot
question. Materials for an answer are scanty, and
some points are still in debate. Many super-
stitions and some idolatrous practices were re-
tained amongst the people, while a long, steady
warfare was maintained against them, with
the utmost assertion of the supremacy of Jahweh
and His claim to sole allegiance and undivided
service. The beliefs and practices thus indi-
cated may be classified in two categories: (1) those which were
arguably polytheistic; (2) those which accoun-
ted the existence of demons, or inferior divin-
lities; and (3) those which have to do with the
worship of Jahweh, observed on the veneration of places, sacred stones, and sacred trees, consistent
with the worship of Jahweh, though often indulged
in a spirit of disobedience and revolt.

What is, however, beyond question is the rise of a distinctive
religious of Israel from amongst tribes in
which polytheism, often of a cruel and licentious
type, prevailed; and the attainment, by whatever
stage of the process, of a pure ethico- logos, the
uniquely lofty kind. The distinction between
monolatry and monotheism is often a narrow one.
A nation which whole-heartedly worships one God
alone may change in its mode of regarding
the gods worshipped by other nations. These may be
viewed as inferior deities, whom it was sometimes

religious value of 'division,' 'south,' 'south-east,' and
and the religious history before the Exile do not
belong to the present inquiry.

The lesson of the OT is the establishment of the
worship of one God, unique, incomparable—the one
God that matters. The main light shines clear,
whatever vague forms fit and glimmer in the
twilight around it. The history of revelation in
the OT is a history of the way in which this light
was seen to shine more purely and more power-
fully till all the shadows of lesser deities fled
away.
plural number indicates either eminence or supremacy, or fullness and abundance of powers and resources. The origin of the sacred and characteristic name Jehovah (p. 301) is still obscure. The attempt to show that it was a West Semitic name for the storm-god rests on conjecture only. The idea that it was gained from the Kenites is more than dubious. It should be understood as distinctly a personal name, going back to pre-historic times, but made the vehicle, or the channel, of special revelations, till it acquired a sacred character and significance, incomprehensible otherwise. The interpretations of it given in Ex 3:14 (EV 'I am that I am,' RVm 'I will be that I will be') are not strictly etymological, in the modern sense, but descriptive of the nature of God as then making Himself known—the one, true God, self-existent and self-sufficient, the cause and ground of all being, faithful to His promise, and constant in all His relations with His people. It would be an anachronism to draw out into a list of 'attributes' in modern fashion what none the less lies implicit in the simple sublime appellation—'I AM.' The content of the name was filled up in the course of history, as successive acts and manifestations showed Israel what kind of a Supreme Being it was whom they were hidden alone to worship. Jehovah remained the name for the covenant God of Israel, where the term 'covenant' indicates a special relation between God and His people, one on which the whole national history is a running commentary.

Stages of progress in the idea of God are more or less clearly traceable. But from the outset the conception was simple and concrete, not metaphysical, not an abstraction from the powers of Nature. The God of Israel was essentially (1) personal, (2) spiritual, (3) sole and supreme, (4) of an unapproachable lofty ethical character. The personality of God was pressed to the verge of extreme and open form, is not described, but described being popular, not scholastic; but it is not easy to determine how far the ascription to Jehovah of human limbs and organs—face, finger, arm, heart, and voice—was understood literally or symbolically. Dt 4:31-32 shows at once the error into which the multitude were in danger of falling, and the corrective which, in the 7th cent., was supplied. Personality, implying a living Being, who thought, felt, and willed, and who possessed all the characteristics of personal life, is a distinctive feature of the God of the OT throughout. But this Being was spiritual, in the sense of being invisible to mortal eye and beyond all sensuous apprehension; while His power and operations were such as only a spirit could manifest, the living Will behind all being specially emphasized. Jehovah is proclaimed from the outset as sole and supreme; the ground of all other commandments is, 'Thou shalt have none other gods before me.' Other gods had but a relative existence, if they were thought of as existing at all; they possessed neither might nor right in comparison with Him who was the Creator and Sustainer of all that is.

The distinctive feature, however, of the OT doctrine of God is the emphasis that is laid on the moral character of Jehovah, who is unique, not in power only, but in wisdom, righteousness, goodness, and truth. An influential school of critics hold that the 'ethical monotheism' of the OT originated in the prophetic period which formed the golden age of Israel, from the 8th to the 6th cent. B.C. It would be never, probably be correct to say that the work of the prophets from Amos onwards was to define more clearly, and to enforce more strenuously, a doctrine concerning God which was not then entirely new, though the current coin needed to be minted afresh, and distinct advances in conception were made in the prophetic period. The work of the prophets consisted mainly in two things: (1) they taught the unity and supremacy of Jehovah in relation to the whole world as well as to Israel; and (2) claimed and home the doctrine of His 'holiness,' in its full meaning and implications, as this had never been done before. Two names of God may be mentioned as more or less representative of these ideas—Jehovah Shaddai and 'the Holy One of Israel.' The first of these (= 'Lord of hosts') was not new, and is taken for granted in all its original meaning. But, whether earthly battalions or heavenly auxiliaries were intended, whether Jehovah was Lord of stars, or of angels, or of cosmic forces generally, the title of the time of the prophets certainly connotes world-wide supremacy. The name 'Holy One of Israel' emphasized the fact that the Lord of all power and might was Himself incomparably pure, and was prepared to sanctify from all evil His people who trusted and obeyed Him. 'This new name,' says Ewald, 'was the first kindling of a new age of the God who was the aged of the Hagocery was beginning in Israel, in a sense altogether unexceptionable.' (Die Lehre der Bibel vom Gott, Leipzig, 1871-75, Eng. tr., Old and New Testament Theology, Edinburgh, 1888, p. 94).

2. Holiness.—It is not possible to consider in detail the moral qualities of which the word 'holiness' (q.v.) came to constitute the sum. No formal list of Divine 'attributes' is anywhere given; the qualities enumerated are not always the same, and the emphasis laid on each varied at different epochs. But substantially the same moral excellencies distinguish Jehovah from the first; compare Ex 34:6 with the latest Psalms. Almightiness is taken for granted, but stated in its literal or mere power, as was largely the case with the b' dotyczą (see BAAK). Wisdom, foresight, and purpose are distinctive features of the God of Israel throughout, though importance in the more complete sense of the term is not dwelling on earlier times, as it is, e.g., in Ps 139. The righteousness of Jehovah is a favourite theme with Amos and Micah and Isaiah, the attribute being explained throughout by its concrete bearing upon national life (cf. Is 5). In Deuteronomy, Jehovah is characterized by b'/gifat ('mercy') for Israel, and for His people, and the psalmists echo the description in verse. Mercy and tenderness are predominant Divine qualities in Hosea, as in Ps 103; lovingkindness and pity are not understood as contrasted with righteousness and justice, as the promise in Hos 2:4.1 shows. 'Jealousy' is a word used by writers of different periods to describe, not cruelty or harshness, but the uncompromising claims upon the allegiance of God's people made by His holy love. 'Faithfulness' and 'truth' are companion names, which indicate that God's words correspond with His nature, and His deeds with His words; that His present action is one with His past, and that He may be trusted as constant and unchanging in all that is to come. Finally, the word 'holy'—which in the first instance probably meant only 'divine,' that which belongs to God as such—is taken in the whole sum of ethical excellency characteristic of Jehovah; righteousness, flawless purity, and utter antipathy to all evil being in the forefront of its significances.

3. Self-manifestation.—There is in the OT no indication of interior distinctions in the Godhead; it is an anachronism to find either the doctrine of incarnation or that of the Trinity in its pages.
But the God of the OT is emphatically a selfcommunicating God, as opposed to a metaphysical abstraction, or a solitary, remote Deity. The forms of manifestation, the various modes of self-revelation which mark off the God of Israel from the gods of the nations around, prepare the way for a clearer and more intimate relationship. The term, 'angel of God,' spoken of in Gn 28, Ex 3, and many other passages, is not a mere messenger from God, a created being, neither is he strictly Jahweh, but Jahweh in a particular form of selfmanifestation, a special revelation of the Divine presence. The 'Spirit of God,' whose name is found, with variations, and whose operations are the various and so vital in the religion of Israel, is not distinct from God, nor does the phrase imply a distinction in the Godhead. The Spirit of God is God Himself, breathing, living, active, energizing in the world.—'God at work.' The Spirit is personal because God is personal; personal distinctions within the Deity find no place in the Old Covenant. As breath is the principle of human life and the source of human energy, so God possesses life in Himself, and is the spring of all life in men; and in the fulness of His vital power as in any way communicating itself is dwelt upon, the Spirit of God is expressly named. There are a few passages in the later books—of which 1 Esdr 7:29 is the best example—where the Spirit of God may serve as an example—which might seem to imply that the Spirit of God was thought of as a distinct person. But these are best understood in the light of prevailing usage, whilst they undoubtedly prepare the way for a doctrine which does not clearly appear within OT limits. See, further, art. Holy Spirit.

4. Word and Wisdom.—A history attaches to the two phrases, 'Word of God' and 'Wisdom of God,' which cannot here be traced out (see art. Word), and whose operations are the instrument of His working. 'He spake and it was done, he commanded and it stood fast' (Ps 33; cf. Gn 1, Ps 33:167). Also, the thought of God is mighty; His word creates, and controls all. But, by a natural transition, in later Jewish literature a tendency appears to personify both Word and Wisdom—notably the latter in Job 28 and Pr 8. Whether the grammatical figure of bold prosopopoeia, viewing Wisdom as God's masterworkman, had here passed in the mind of the writer as a hypothesis in the full sense of the term is doubtful; probably not. A distinction is discernible between the use in Job and in Proverbs, and further development is perceptible in Sirach and Wisdom of Solomon; but the poetical picture called up by the imagination had probably not given place to the idea of independent personal existence. Undoubtedly, however, in the use of these phrases a foundation was laid for the idea that the Thought or Will or Speech of God, going forth from God, might be conceived as an activity distinguished from God Himself, a manifestation of God in the world, distinct, though not separate, from His own proper Being.

5. Creation and Providence.—The relation of Jahweh to Israel is the main theme of teaching in the earlier periods; for, though He is thought of as supreme, only gradually did the idea of His relation to the world as a whole emerge. The notion of God as origin of all that exists is implicit from the first; but a doctrine of creation such as is developed in Gn 1 and embodied in many passages of Psalms is only late. The problems of Providence dawned but slowly on the minds even of the teachers of Israel. In Job and in the later Psalms a few writers wrestle with these difficulties rather than overcome them. The underlying postulate of religion was that Jahweh ruled and did all things well, punishing the wicked and rewarding His faithful servants. The prevalence of evil were acknowledged as permitted or overruled by God, but no theology was constructed to account for its existence. The language employed is popular, the moral laws and stories of Divine hatred of evil are strenuously asserted, but the facts of life were accepted in a matter-of-fact, almost child-like fashion for centuries before the 'maddening riddle of the root' and a demand for an answer to it pressed upon the minds of an essentially practical people. Even in Is 45 the prophet is content with stating both good and evil as forces so completely controlled by the Supreme Ruler that it may be said, 'I form the light and create evil: I am Jahweh that doeth all these things.'

6. The Exile.—The exile in Babylon was a fruitful epoch in many ways in the religion of Israel; it brought with it especially a widened horizon in the conception of God and the right way of worshipping and serving Him. Amongst the most notable changes may be mentioned the increased spiritualization of faith, the purification of the ritual from doubtful elements, and a growing superiority to local and material considerations. Jahweh could manifest Himself to His people and be found in Is 45:5, even in the midst of trouble, independently of a sacred land and a consecrated temple. From this time onwards a certain universalism takes the place of earlier particularism. Jahweh is the God of the whole earth in a new sense; He has sworn that every knee shall bow to Him (Is 45:23). The destinies of the nations are in His hands, and He cares for all that His hands have made. Israel shall be the means of bringing the nations to a knowledge of Him. The captivity in Babylon, instead of weakening the attachment to Jahweh and leading to anything both good and evil, sounded in reality its death-knell. Under the guidance of the prophets the people learned to see that the overthrow of the monarchy and the destruction of the Temple did not imply foolishness or apathy on the part of the God in whom they trusted, but were intended to be the means of leading them to loftier and more adequate views of Him. Their heart, while it trembled, would be enlarged (Is 60; and they acknowledged, in the midst of their worst fears, that God's ways were higher than their ways, His thoughts than their thoughts (55k).}

7. The Greek age.—In the Greek age and the following periods no change took place theoretically in the idea of God, but modifications passed imperceptibly over the spirit of Jewish religion and over the customary modes of acknowledging God, which reacted upon the very conception of Deity. There was no more any prophet in Israel (Ps 74); the priest and the scribe took his place. The living God ceased to be realized as a present and active power, and the record in the Scriptures of His dealings in the past acquired a peculiar sacredness. In proportion as the Deity was conceived as transcendental, high above man, He became farther off from man, and the 'pale cause of thought sickled over' the simple, healthy realization of a present, gracious Friend and Protector, who was ever thinking of His people's good, and willing and working on their behalf. Greek culture partly roused Jewish national feeling to greater intensity and deepened devotion to the national God. But it also enforced a stricter train of thought, especially among Jews of the Dispersion. The Hellenic philosophy of the period regarded God as pure Being, transcendental, impulsive, inactive, existing out of relation to time and earthly
changes. The Jews were not philosophers and never precisely adopted these views, but Greek influence aided in promoting a change which had begun the earlier. This is witnessed to some extent in the later canonical books, and is still more fully illustrated in extra-canonical literature. Greater reverence is shown to God, His name, and His words; anthropomorphism is all but abandoned, and a sharper contrast comes to be drawn between the natural and the supernatural. 'God is in heaven and thou upon earth; therefore let thy words be few' (Ec 5:1) is a significant maxim of the 2nd cent. B.C. The LXX in its paraphrases smooths away stumbling-blocks from the language used concerning God in the Hebrew Scriptures, but at the same time rob it of much force and significance. The hollowing of the ineffable Name by never pronouncing it was at the same time a mark of superficial reverence and of diminution of religious earnestness.

The Targums bear witness to the same general tendency. Names indicating the loftiness of God—'Lord of the world,' 'the Mighty One,' 'the Glory,' and especially 'the Most High'—multiplied on the one hand, and on the other it was found necessary to introduce intercalary phrases that pass the point where God intervenes in human history, lest due reverence for the Highest should be impaired. Hence the 'Messiah, the Word of God,' and later 'Shabath, the glorious Personified by the Glory.' In such passages as Gn 3:2 the Targum of Onkelos reads, 'Adam heard the voice of the word of the Lord.' In Dt 6:4 'I and you.' Later extra-canonical writings abound in illustrations. Such a passage as Wis 18:16, 'Thine Almighty Word leaped down from heaven out of the clouds, without Him is a void,' is explained as a grammatical personification, but the literature of the period indicates a decided tendency to hypostatize the Word of God. The Philionian doctrine of the Logos (q.v.) is more explicitly stated in this article, but it bears its part in a similar development of thought. Cf. art. God (Jewish).

The worship of God during this period underwent a corresponding change, which was partly effect and partly cause in relation to the altered conceptions of the Divine. The Temple still stood, and its ceremonial became more stately and elaborate, but comparatively few could join in it. The synagogal worship—without priest or sacrifice or formal ritual, its essence consisting in the reading of God's word, and in an earnestness of devotion that was more ardent than the teachings of the Synagogue's free and heartfelt prayers—affected a virtual revolution, and helped to perpetuate the prevailing conception of God as a spiritual Being who must be spiritually worshipped. Side by side with this the development of scribalism, and an exaggerated and fanciful devotion to 'the Law' which almost defies definition and put it in the place of God. Himself, the marks of a religion grown old and stiff, a formalism fanatical in its intense devotion to the letter, but important as a spiritual energy, because it had lost touch with the living God. The heart of the generations in the 1st cent. B.C. cried aloud for a regenerate Church and rejuvenating religious power with which it was itself incompetent.

II. THE NEW TESTAMENT. An epoch was created by the appearance of Jesus of Nazareth. Himself an Israelite indeed, He had no entirely new conception to make. But the Father, the Son, and the Holy Ghost, the chosen people. But His conception concerning God and the manifestation of His life were such that the religious conception, which as a plant had already taken root and put out green branches, burst into unexpected flower and brought forth new, unexpected, and abundant fruit. Jesus assumes the fundamental conceptions of God already described. He is personal, spiritual (Jn 4:26) but impressively (John declares what is not unknown in the long acknowledged, transcendent, yet draws very near to men in revelation and communion, unique in holiness, goodness, and His fatherly bounties. Thus the doctrine of God set forth in the discourses of Jesus exhibits the ethical monotheism of the prophets raised to its highest power.

With this doctrine far He travelled beyond it remains to be seen. The implications of His words and deeds were felt at the time to carry His hearers much farther in what direction God's ways to what goal could not be immediately discerned.

1. Christ's own teaching.—The unity of God is taken for granted throughout Christ's discourse, and is explicitly dwelt on in Mk 12:30 as the basis of the first great commandment. The spirituality of God, emphasized in memorable words in Jn 4:24, also pervades the whole teaching of Jesus. The moral attributes which characterize the God of the OT all appear and reappear in the Gospels, though the emphasis is seen to lie differently, in view of the mission that Jesus came to fulfill. Holiness and righteousness are fundamental characteristics of the Divine will; the subjects of the Kingdom are to seek righteousness above all (Mt 5:20; Lk 1:26). In the Gospel of John, the Evangelist, God is described as the holy and righteous Father (Jn 17:24). The majesty of God is implied in the words 'the Holy One of Israel' used in the Lord's Prayer and often in the Sermon on the Mount. Yet He cares for the lowliest (Mt 5:9); not even a sparrow falls to the ground without Him. The sun is a light given by God, and the light of the world is the Sheep of God (Jn 8:12). The sunshine and the rain, the lily in its beauty, and the common grass of the field, all have their message to deliver concerning Him. He is as 'good' with a within the highest standards of the earth; it is such as even the teachers of Israel had not fully understood; in comparison with it no other goodness deserves the name (Mt 5:10). Especially is God good as being merciful and ready to forgive. Man must be like God, if he has learned the lesson of mercy (Mt 5:48); but the unforgiving cannot be forgiven (9), but must suffer severest punishment (18). God is gracious and long-suffering, but the judgment that is to come will prove that He is not 'father' to the sinless, but to those who are to learn reverently to fear Him in whose hands their destinies lie (Lk 12:13).

These characteristic utterances, however, some of which might have come from the lips of a prophet of the Old Covenant, cannot be rightly understood without placing the emphasis where Jesus Himself placed it, and interpreting all in the light of the Divine Fatherhood. This doctrine appears in the OT, but it describes a relation which exists between God and Israel, not with mankind at large, or with individuals who are children of God in virtue of their personal character (see Ex 4:10, Dt 5:3, Hos 11:1). If the king is regarded as a son of God (2 S 7:14), is in virtue of his position as the head and representative of the nation. Christ's teaching on this subject differs fundamentally from that of the OT. It described three concentric circles. (1) The Father occupies a peculiarly intimate relation to Jesus Himself, who, as a Son, is the Father's only Son, and has been specially revealed to Him (Jn 14:12-17:26). Amongst the first recorded words of Jesus (Lk 2:1), the last (22), the name 'Father' is on His lips. He used no language to describe God such as was familiar to oracles on
GOD (Biblical and Christian) 257

the one hand, or to philosophers on the other, but He often offended His hearers by the familiarity with which He claimed God as His own Father, in a sense shared by the uniqueness (Jn 14:9). (3) The sense of sonship was to be enjoyed by all true disciples in their measure. 'Your heavenly Father' was the designation given to them that His own might be trusted to supply all their needs (Mt 7:11, Lk 11:13). But this conception widens out into (3) a universal Fatherhood, as of One who cares for the unthankful and the evil and is ready to receive not only the lost sheep of the house of Israel, but all wanderers from the Father's house. It is true that the message of Jesus for Gentiles is not explicit as was His mission to the Jews, but the three parables in Lk 15 are evidently intended to illustrate a deep-seated compassion of God for the lost as such (Lk 15)— announcement of the Father's heart that go swiftly forth to meet all penitent children of men who arise and go to Him (Lk 15:18).

The characteristics that have been described have been drawn chiefly from the Synoptic Gospels. John does but emphasize the notes so clearly struck. The name 'Father' occurs far more frequently by far in the Gospels than in the Old Testament, and both in the Synoptic Gospels together, but all four Evangelists indicate that the word came always from the lips of Christ, who standardized it. Prophecies of the future ran the risk of being misunderstood unless Himself and them together as sons. In the one passage that seems to do so He deliberately marks a distinction, saying, 'My Father and your Father, my God and your God.' The singularity of the Divine Fatherhood is made much more plain in the Fourth Gospel, and the word 'love' is seen to be the climactic word that describes the innermost nature of the Father in relation to the Son and to the world. The book of Revelation is the universal expression of the Divine Fatherhood, and yet it speaks of Jesus as 'the true and the living God' (Rev 1:8). The Son is also much more fully brought out in this Gospel (Jn 3:16). It must be added in a word that no quotation of the words of Christ, apart from a study of Himself, His person, and whole work in the world, can ever suffice to set forth the full meaning of His teaching concerning the Fatherhood of God.

The Son and the Spirit. The special mission of Jesus was to announce the coming of the Kingdom of God, and Himself to lay its foundations in a Gospel message (Mt 3:17). He did not at first formally claim Messiahship, though from His baptism onwards His unique Sonship was recognized (Mt 3:17). But the time came when His work as the Christ, who must through suffering and death accomplish the Father's will and establish His Kingdom on earth, was made clear, and His disciples began dimly to understand that He was not only the Christ, the King of Israel, but the Son of the living God in a deeper sense than the words had usually conveyed (Mt 16:16). Further, Jesus had much to say, not only concerning Himself as 'only-begotten' Son, to use John's characteristic word—but concerning the Spirit of God (see Mk 9:32, Mt 10:19, Lk 11:13) several other passages in the Synoptists, and especially the discourse recorded in Jn 14:16. The question, therefore, arises whether the manifestation of God in Christ was such that in His own lifetime the fundamental conception of God was modified by it, and whether a distinction of persons within the Godhead is to be discovered in any form as the doctrine of the Trinity was taught by the Master and accepted by His disciples.

The question cannot here be discussed in detail (see Trinitarian Theology, p. 297). The Synoptic Gospels contains the exact words of the Saviour, He did before His ascension virtually lay down this doctrine. But, quite apart from the special phraseology of this passage, it is safe to say that Christ's teaching contained the material elements out of which a doctrine of the

Trinity was formulated later. His claims for Himself, His authority, His power to forgive sins, His demand for absolute personal allegiance to Himself, and His assertion of having His own knowledge and power and His coming to judge the world—not to speak of His miracles—were enough to show even before His ascension that the phraseology which the doctrine of the Saviour Christ could not but affect the old doctrine of the Ruler God.

'A Who is this Son of Man?' was a question in the answer to which lay many more questions and answers, still latent. The main question, however, was not fully answered till Christ's work on earth was fully accomplished; and the full light shed on the doctrine of God by a clear doctrine of Christ was not revealed until some generations had passed away.

2. The Apostolic doctrine of God. The position of the Apostles was wholly changed after the day of Pentecost. The death of their Master had greatly disconcerted them, and His resurrection formed the basis of their new message. Their early sermons and addresses were naturally not occupied with the mystery of His person. Preaching to Jews with Calvary full in view, Peter urged that the crucified One, which God had overruled in raising Him from the dead, and that the meaning of both death and resurrection was to be found in the Gospel. It promised remission of sins through faith in the Saviour; it heralded the establishment of the Kingdom of God with the Prince-Saviour at its head. The watchword of the whole was, 'Jesus is Lord; repent and believe in Him.' Salvation can come only through Him (Ac 4:12); His work, now fully accomplished, forms the central theme of the new Gospel doctrines of the day. 'First of all' (1 Co 15:3). The Acts faithfully reflects the gradual stages through which this position was gained, with far-reaching effects on religion as a whole.

A Christology was needed; the question, Who is this Jesus? must be answered. The theology, or doctrine of the Godhead, that followed turned upon the answer to this question. The teaching concerning the Holy Spirit did not raise the same difficulties, because the OT had so frequently used language which described the gift of the Spirit of God. But the experience of the new life in Christ, and the way in which the blessings of salvation were realized, pointed to a threefoldness in God's relation to man. Side by side with the belief in the God of the New as well as of the Old Covenant, and blending with it as a part of the same faith, was trust in a Divine Saviour and the consciousness of a Divine Spirit, Himself at work in the hearts of all believers. This experience found expression in the triple benediction of Co 1:3-7, and the baptismal formula of Mt 28:19. Jesus the Christ was a manifestation of God to men, such as had never been known before; the Holy Spirit, after the Day of Pentecost, was a manifestation of God to men, such as had never before been possible. The Apostles realized that here was a richer revelation, an ampler Divine presence and blessing, which demanded fuller expression in their very definition of God, as the whole NT bears witness. The Synoptic Gospels in their measure (remembering the scope of their narrative) contains the exact words of the Saviour, He did before His ascension virtually lay down this doctrine. But, quite apart from the special phraseology of this passage, it is safe to say that Christ's teaching contained the material elements out of which a doctrine of the
GOD (Biblical and Christian)

of God, which, before the NT closes, has taken the place of the simpler 'ethical monotheism' of the prophets.

There is no 'doctrine' of the Trinity in the NT. But there are in all the materials out of which such a doctrine came inevitably to be built up, together with evidence of the way in which that teaching arose out of certain central facts of history and experience, proclaimed by the Apostles and accepted by all believers, an integral part of the gospel. The intense monotheism of those who had been educated as Jews was never relinquished, but new modes of conceiving of God, of worshipping Him, and of realizing His relations to men as in some sense threefold, form an essential part of the doctrine of God in the NT. These were not so much theoretically adopted as felt to be indissolubly bound up with what believers had from the beginning held concerning Christ, and with what they themselves had enjoyed of His grace and salvation.

(1) The Trinity.—The testimony of Paul in 1 Co 8:6 and elsewhere shows the process of advance. There may be, he says, those that are called gods—gods many and lords many, but 'to us there is one God, the Father, of whom are all things and we unto him.' Yet, without prejudices to the unity of this one God, He adds, and 'one Lord, Jesus Christ, by whom are all things and we through him.' He also is creator and of cosmic significance; the doctrine of God henceforth is mediated through Christ. Lordship is the essential word. Kepha renders the OT Jehovah, and in Ro 10:12 the word is used of Christ in such a way as to show His essential Divinity. His standing name and title is the Lord Jesus Christ; He is preached as Lord (2 Co 4:5), and the characteristic watchwords of unbelievers and believers respectively are 'Anathema be Jesus!' and 'Jesus is Lord' (1 Co 129). Nor is this Lordship marred or blotted by men. His pre-existence is implied in 2 Co 8:6, Ph 2:5, and Col 1:15. All interpreters are not agreed that in Ro 9:5 Christ is styled 'God over all, blessed for ever,' though this is the natural interpretation of the words; but few can doubt that in Tit 3:3 the appearing in glory is expected of Jesus Christ, 'our great God and Saviour.' Paul's language concerning the Holy Spirit does not bear so immediately upon his doctrine of God, because the word 'Spirit' sometimes indicates a gift of God to men, sometimes something God himself working in men, as it did in the OT. A closer examination shows that the Holy Spirit is not a mere gift or influence; yet, while Divine, He is not the whole Godhead. The intensely personal language employed in such passages as 1 Co 2:11, Ro 8:34, and elsewhere, combined with the distinction maintained between the Spirit and Christ, the Spirit and the Father, makes the interpretation of the Holy Spirit in an OT or 'Unitarian' sense impossible. Again, apart from the phraseology of benediction in 2 Co 13:14, the general tenor of description in such passages as 1 Co 12:3-6 and Eph 2:18 shows that St. Paul thinks easily and naturally in terms of a 'Trinity' in the Godhead, when speaking of Divine operations in the salvation of men and in the worship of the Church.

The author of the Fourth Gospel declares that his object was 'that men may believe that Jesus is the Son of God, and that believing they may have life in his name' (Jn 20:31). The whole Gospel proves that the Sonship thus indicated was understood by men as not merely that of office, or mission, or ethical likeness, but of eternal and essential nature. He who shared the Father's glories before all worlds was 'the image of the invisible God, the firstborn of every creature.' The whole of the NT believes that the Sonship of Jesus was an essential part of his divine nature, just as Manhood was an essential part of his humanity. Nevertheless, the Sonship of Jesus has never been so defined that the use of the old words embodies a new gospel. One word, moreover, not entirely new, acquires so predominant, so consummate a place in the concept of Christ, as to surpasses and encompasses all the rest—God is LOVE. Not that love eclipses righteousness, still less is it opposed to it; Paul identifies the idea of righteousness seems to predominate, it is love who writes in 1 Co 13 the immortal hymn of love. If
it was left for John to expound the love of God in its most bountiful and abounding manifestations all through history; it is he who makes the strongest and most uncompromising declarations of His righteousness that are to be found in the Bible. Neither of the Apostles nor of any other religious leader whom the two attributes are not eternally and indissolubly blended; but only in Jesus Christ, Son of God and Son of Man, is to be found the abiding proof that God is both righteous and merciful in the deepest sense of the words; and only through Christ can man reach and maintain his true relation with a God of infinite holiness.

Granted the promises that the Son of God has come to earth, suffered, died, and risen again for man's salvation, then all previous Divine manifestations pale before this stupendous Light of the world. Paul's theme in his greatest Epistle, the one whose contents exhaust the full account of his central preaching, is παντελῶς γὰρ διεσκέψασθαι τὸν θρόνον τῆς εὐγενείας, God's righteousness is revealed from faith unto faith (Ro 1:17). Whether the righteousness of God means an attribute of His own nature, or a state or condition of man that is derived from and acceptable to Him, in either case much light is shed by the phrase upon the character of the God whom Paul preached. These two meanings are just as true to Jesus himself, where it is said that the object of the work and sacrifice of Christ was that God might be shown to be righteous Himself, whilst at the same time free to be exalted by His own righteousness (Ro 2:16). So far, therefore, as an exposition of the Divine nature is summed up in the light of "I, if I be lifted up, will draw all men unto me" (Jn 12:32), and "He that spared not his own Son but delivered him up for us all, how shall he not with him also freely give us all things" (Ro 8:32), Christ bears the Oneness of human nature and the goal of human life if He is Himself accepted as the interpretation of the Divine human history. Christology is but a Christianization of the heart of all theology. The Eternal Word has relation to all the worlds, but for this world and for man's comprehension of the mind and heart and will of God, the Word of God is Christ. Such at least is the teaching of the NT at its highest point, and it claims to shine by its own light as the purest and lovest revelation of the Divine known in the history of the world.

III. THE FORMATION OF THE CHRISTIAN DOCTRINE OF GOD.—The Apostolic writings attempt no metaphysical explanation of the new conceptions of God which unquestionably dominated the whole experience and life of the earliest Christians. The doctrine of Father, Son, and Spirit, as embodied in the baptismal formula of Trinitarianism. The threesomeness of the Divine manifestation and operations, as well as the underlying unity of the Divine essence, is recognized throughout the Epistles. That Jesus is Son of God as well as Son of Man, and that the Spirit is Divine and personal, closely related with Father and Son, is assumed, but no attempt is made to show this is reconcilable with the monothelitism which was an unquestioned and unquestionable axiom in the thought of the Apostles and their converts.

The next three centuries witnessed the unfolding of what lay implicit in this teaching. The relation between the earlier and later stages is usually described as "development," but that word does not necessarily indicate a process in which literally nothing is added but what was actually present in the germ. The more correct, though pedantic, biological term, "ontogenesis"—a progressive differentiation and integration—connotes more than the bare explication of the implicit: it is rather the gradual organizing in one whole of elements which the separate constitutions before were not and did not possess. Unquestionably the changing environments of the Church through the centuries contributed largely to the shaping both of faith and of theology. Christianity was able to give a certain "creative evolution" in which the energy of a new spiritual life adapts, assimilates, and utilizes, as
well as unfolds. From the standpoint of Christianity a believer in a living God can never resolve 'development' into a mechanistic process governed by natural laws. For him the God who has revealed Himself in Christ is still the ever-to-be-known God who illuminates His work in all generations by His Spirit. The change from the heavenly Father of the Sermon on the Mount to the Son of the Gospel in the creeds of Nicea and Chalcedon has been described by Harnack and Harnack as a degeneration rather than a development, a corrupting of truth from its earliest simplicity, not an enrichment due to healthy and necessary growth. Such a conclusion is not lightly to be accepted. The formulation of partially realized faith is one thing; a tendency to desert the manifestation of the Triune God in experience and in history for abstract speculations concerning the interior relations of the Deity is quite another. Before the end of the 5th cent. illustrations of both processes appear in the Church, and it is necessary to keep in mind the distinction between them.

It is possible to test the legitimacy of developments in the orthodox creed by means of a comparison. There were Christians in the primitive Church who took their stand on the OT and maintained its type of monotheism intact, except that Jesus of Nazareth—whether technically the Messiah or not—was esteemed a prophet of exceptionally high and pure character, whose mission it was to conserve the revelation of the Torah under a new covenant called the Gospel. Ebionites and Adoptionists (see EBIONISM, ADOPTIONISM) of various types preserved the OT concept of God, and the acceptance of Jesus as a specially commissioned messenger from Him, one in kind with Moses and Isaiah, though far higher in spiritual degree. History has written its comment on the outcome of the process by which it was a specimen of arrested growth. Not along this line was it possible to carry on and carry out the teaching of Jesus Himself, of His interpreters Paul and John, and of the multitude of evangelists who in His name were beginning to regenerate the world. The Church of the 2nd and 3rd centuries, with the sacred traditions of the 1st held in trust, was called to fashion, under the guidance of the Divine Spirit, a conception of God such as would at the same time interpret Christian experience—experience in human thought and life. That the Fathers of the Church were influenced by pre-Christian, especially Greek, thought, no one would strive to deny. Probably pure Platonism exercised far less influence upon them than Alexandrian Hellenism, and some would rank the influence of Stoicism as still more potent. But it is in the use of philosophical terms, in forms of reasoning, and in general views of the relations between God and the world, not in essential views of God, that these influences are traceable. The vital germ of Christianity, implying a new conception of the relation between God and man in Christ—a conception not abstractly conceived in the intellect, but embodied in the experiences of thousands of devoted lives—was not lost or destroyed amidst the enveloping pressure of pagan ideas. On the contrary, the new religion assimilated the power of the Divine wares that were not polytheistic, and made use of them for its own ends. Aristides, the first Christian apologist, illustrates this in the opening sentences of his De claris muli.

'Let us begin from the Lord, and from His two names that are His names, and from the figure of His two persons, and from the two natures that are two natures. For from the beginning the Father is the Son, and the Son is the Father. As far as the figure of the Father is concerned, He is the Son of God, in the same manner as the Father is the Son of God, and the Son of God is the Son of God. As far as the figure of the Son is concerned, the Father is the Son of God, in the same manner as the Son of God is the Son of God, and the Son of God is the Son of God. For He is the Father of the Son, and the Son of the Father, and the Father of the Father, and the Son of the Son. As far as the figure of the Father is concerned, the Father is the Son of God, in the same manner as the Son of God is the Son of God, and the Son of God is the Son of God. As far as the figure of the Son is concerned, the Father is the Son of God, in the same manner as the Son of God is the Son of God, and the Son of God is the Son of God. For He is the Father of the Son, and the Son of the Father, and the Father of the Father, and the Son of the Son.

Justus Martyr, philosopher as well as Christian, appealed to the idea of God innate in man (ὑποτελείται

Gnostic (q.v.), 'the first comprehensive attempt to construct a philosophy of Christianity' (see Harnack, Hist. of Doxology, Eng. tr., i. 238 f.), teaches chiefly by its failures. Gnostics of various schools furnished what were for the most part honest attempts to interpret Christ; but they did so in the light of preconceived ideas, some of which were incompatible with essential Christianity, and others inconsistent with its characteristic spirit. At this stage evolution took place by antagonism. The representatives of the Church learned some of their most valuable lessons by resistance to ideas of God thrust on their attention by the most active thinkers of the time. Monarchism (q.v.), a reaction against the Gnostic tendency to interpose numerous overlapping orders of being between God and the creation, taught the unity of God in a modalistic, i.e. really unitary, way. The Son and Spirit have no distinct, personal existence, but are only modes in which the one God reveals Himself. Some of the Fathers, especially in the East, whilst they recognized the subordination of the Son and the Spirit to the Father; and a tendency in this direction was for a considerable time present within, as well as outside, the pale of recognized orthodoxy.

1. Church doctrine of the Logos. Amidst these diverging tendencies the Church built up a constructive doctrine, first of the Logos, then of the Trinity. Justin, Irenaeus, Clement, and Tertullian are representative names amongst those who contributed to the earlier structure. The prologue of the Fourth Gospel formed the foundation. The Logos was eternal, not created, not emanating, but begotten, the Sonship of the Word seldom being lost sight of. The Logos was not a mere instrument in the plan of God, impersonally conceived. Rather was He the organ of Divine revelation and operation in creation and history, and pre-existed the world. The eternal priniple of God was realized in the Word Incarnate; the personal Logos took upon Him human nature that men might be partakers of the Divine. For Clement the Logos is 'the highest principle in the religious explanation of the world,' as well as the centre of the work of redemption. In nature, as in grace, He is the interpreter of the Father's attributes, being first the educator, then the Redeemer, of the human race. The work of the Holy Spirit was not at this stage ignored, though it was not elucidated and dwelt upon to the same extent.

The ideas concerning God which the Church had drawn from history and experience were not easy to express in the language of the Divine name that was created, and East and West were apt to misunderstand each other. Thus, if we find that by Tertullian and Origen, for example, whilst Christian thought was slowly crystallizing, others used inconsistent with one another, or with the exact forms ultimately adopted, it will occasion no surprise. Technical phrases, drawn from Roman law or from Greek metaphysics, were inevitable; but a true instinct was at work, now accepting and now rejecting the same
phrase, as certain associations seemed to render it serviceable, or undesirable, for the expression of underlying faith. The Godhead is 'one substance in three persons,' said Tertullian, 'by employing God, by establishing not only the homogeneity of the Son but also that of the Spirit as a necessary inference. The Holy Spirit is the Spirit of the Son; he is a creature; He is the Giver of life and of celestial gifts—Himself God. Athanasius, like other leading Fathers, protests against being compelled to define relations within the Deity which are beyond human comprehension; but, finding in Scripture the word 'proceeding' used to denote the relation of the Spirit to the Father, he says that he will retain it as the best. The Arian controversy (see ARIANISM), which practically ended at Constantinople in 361, affirmed the faith of Nicaea on the basis that, while in the Godhead there is one essence or substance (σόφια), in that unity there are three eternal modes of existence, now called  

3. The Trinity.—It is impossible here to trace the detailed stages by which the doctrine of the Trinity was finally established by the Cappadocian Fathers, Basil and the two Gregorys (see CAPPADOCEAN THEOLOGY), contributed to a clearer discrimination of ideas and a more accurate use of words. It is to them that the theological use of ἀρχή as above defined was due. Neither Origen nor Athanasius had made it sufficiently clear that in relation to the person of the word and of the Son, which mean more than mere aspect or manifestation, and less than the exclusive individual existence which the word implies among men. The subject of personality, the Divine and human, was not discussed until the 3rd cent. as it has been during the last hundred years; and even now a clear and definite vocabulary remains a desideratum. But there was no doubt in the mind of the Greek Fathers that the three ἐσώτερα (ισότερα, or modes of subsistence, of the undivided Godhead were not three ἐσώτερα, or aspects of a bare unity, neither did they think that the three  

2. Nicaean doctrine.—The rise of Ariusian enabled the Church to distinguish between what it really held and what it might seem to hold. This heresy, which waged so long a war against orthodoxy, and at times appeared likely to gain the upper hand, was never strong in doctrine. It taught a Trinity consisting of one uncreated and two created beings—hence it was both illogical and irrational, if creatures were to be worshipped. It represented Christ as a demi-god, and its whole doctrine implied retrogression and schism. The strength of Ariusian lay in the fact that a large portion of Christendom was not yet Christianised, and the believers had not learned to understand the real nature and implications of their own faith. The Nicaean formulary, in insisting on homogeneity to establish the Divinity of Christ, laid the foundation of the orthodox doctrine of God and His essential Tri-unity. The statement that in the one Godhead there are three Persons was never intended to mean three individuals, i.e. three self-subsisting subjects and centres of personality as 'persons' are understood among men; nor merely three aspects (ἐσώτερα) of one unitary Deity. As time went on, it was clearly laid down that there were three eternal subsistences (ὑπόστασες), personal, distinct, but not separate, organic one to another and to the unity of the Triune God. Athanasius (q.v.) in his long and strenuous controversy was contending for real contact between God and men in a real redemption wrought out by a real Divine Saviour in the midst of the world, and hence he insisted that on the one hand, that God operates continually in the world, could not preserve His personality distinct from the world, whilst, on the other hand, those who insisted on Divine personality tended to separate God from creation in transcendental isolation. If a historic Incarnation was to be preserved, the fullness of its actuality and redeeming power, it must be based on interior.
Modalism. The Father is conditioned by the Son and the Spirit, as the Son is by the Father. If the unity is conceived of as one undivided Deity, then the three appear merely as relations in the one Godhead. It is true that this differs from the older Modalism, which rested upon the idea of successive manifestations; from the very first, God is to be conceived as Trinita. But this is possible only through a refining of the idea of personal existence, till it becomes a 'mode' only in the simplicity of the Godhead. Doubts the Neo-Platonic element in Augustine's thought was responsible for some of the language he employed. But the anaximenes he used to illustrate the subject—especially his favourite one of intelligence, memory, and will in human self-consciousness—show in what direction his mind constantly moved. He presented theoretically the tradition of three persons in one substance; but himself emphasized, not the personality of each person, but the personality of the One God, and he never overcame the contradictions more or less implied in his attempt to combine the philosophic and the religious standpoint. Harnack describes Augustine's speculations as an attempt to 'construe the most immanent of immanent triadities and to sublimate the Trinity into a unity; and, just because it does this, to dissolve everything in the way of a basis in historical religion and lose itself in paradoxical distinctions and speculation.' Whether the speculations do this or give the impression to its new and valuable thought' (Hist. of Dogma, Eng. tr., iv. 590).

It is so very hard to say, as Harnack here does, that the 'idea de Trinitate' can scarcely be said to have possessed any where or at any time, but the speculative tendencies of Augustinian did unquestionably trench upon the living realities of historical Christianity. Augustine, more than any other teacher, prepared the way for the barren refinements of scholasticism; he elaborated his standpoint and anticipated some of its methods. The idea, however, which underlay Augustine's lofty meditations on the subject of the Trinity was not so very far fetched. It came to the tradition of the οὐσία, the intercommunion, or mutual interpenetration, of the Three Persons in the Trinity. John of Damascus, last of the Fathers and first of the Schoolmen (c. A.D. 700), gave currency to the word, and the thought which it expressed prevailed in East and West alike, though with a different emphasis. The Latin equivalent of the Greek were circumincessio, which implies the activity of mutual permutation, and circumincisio, which denotes a mutual rest or abiding of each Person in the other. 'Co-inherence' is perhaps the nearest English equivalent; but, whatever word be used, it represents the thought that the whole Trinity is present in each Person, that each is so complete that it includes the others—a mode of speech which destroys the very conception of 'personality.' The idea first appears in Gregory of Nyssa, it was most fully developed by Augustine, and came to be the basis of orthodoxy in Scholasticism; but it has never been fairly interwoven with religious thought and experience in the actual life of Christendom.

The Creed.—There is any danger of losing sight of the main theme in the midst of discussion concerning the views of individual thinkers, however eminent. Controversies in the Church did not arise over the fundamental belief in one God, which was never questioned by any; nor, strictly speaking, were they concerned with the nature or condition of each Person in the Holy Spirit, which were the common heritage of believers. Questions did arise—and they were but slowly and with difficulty settled—as to the mode in which the Christian conception of God could be most appropriately expressed amidst the environ-

ments of the Greco-Roman world of the 2nd to the 4th centuries. Faith in God the Father of all, in His Son Jesus Christ, and in the Holy Spirit through whom Father and Son were revealed, formed the basis of all Christian creeds, and such trust was the animating principle of all Christian experience; it was never debated by authorities or adopted at a Council; slowly it grew as the expression of the working faith of the Western Church. It contains the statements, 'I believe in God the Father... and in Jesus Christ His only Son our Lord... I believe in the Holy Ghost,' but the inter-relation of these is not defined, and no doctrine of the Trinity, properly speaking, is attempted. (1) The Apostles' Creed, an expansion of the baptismal symbolum, may be described as the creed of the catechumens. From the time when it consisted only of three or four clauses in the 2nd cent., down to its full development in its present shape in the 8th, this venerable Confession of Faith always retained its original character. It was never debated by authorities or adopted at a Council; slowly it grew as the expression of the working faith of the Western Church. It contains the statements, 'I believe in God the Father... and in Jesus Christ His only Son our Lord... I believe in the Holy Ghost;' but the inter-relation of these is not defined, and no doctrine of the Trinity, properly speaking, is attempted. (2) The Niceno-Constantinopolitan Creed, ratified at Chalcedon (461), is a theological document, shaped and revised by a Council, its phraseology keenly debated and sharply defined. It was prepared for the purpose of excluding heresies, and its earliest form concludes with an anathema upon some of them. But it is not a Creed; it consists of three parts that are not concatenated together. Its Christology forms its characteristic feature, and a doctrine of Christ undoubtedly implies a doctrine of God of a very significant kind; but here again no attempt at a definition of the mystery of the Trinity is attempted. It is otherwise with the Athanasian Creed.

The Athanasian Creed—to use the modern misnomer for the anonymous sermo or exposition of Christian doctrine known as the Quinisexta, as transmitted from the Western Church in the 8th century. It was a creed for the clergy, with accompanying condemnatory clauses; and in its two parts it minutely defines the doctrine of the Trinity, and that of the two natures in Christ as intimately related to it. The teaching of Augustine and the phraseology of creeds in the 4th and 5th centuries are presupposed, and the Church, as a whole, was never accepted by any Council, nor can it be described as an Ecumenical symbol.

(4) The Te Deum, on the other hand, was prepared for the purposes of worship, not to express nice metaphysical distinctions. Yet it embodies more adequately than any technical creed the faith of the Church, and the Christian conception of the God whom it adores—te orandi, te credendi. This lyric paraphrase of the Apostles' Creed, by whomsoever composed, is, as Luther said, a fine confession of the true faith of a Christian, as also a hymn in which to praise God. The religious faith of the community, uttered by Paul in his solemn benediction, echoed by Clement of Rome and Ignatius, and repeated by every believer at his baptism, remained the same throughout, though only after the lapse of centuries were acceptable forms devised to express the deep Christian conception of God which was imperfect, silence was impossible. Scientific and speculative discussions have had their place, and metaphysical formulations their value, in shaping in which the Christian conception of God; but it has been forgotten that religious conceptions, when ex-
pressed at all, can only be uttered in the language of religious faith.

V. RELIGION AND REFORMATION PERIODS.

For more than a thousand years the doctrine of God in the Christian Church preserved its character, substantially unchanged and unassailed. Proceeding from the Creed of the Arians (principium et foedus) to the conception of all knowledge; all things are viewed in relation to Him; He is at the same time cause and end of all things, governing all things, controlling all things, of all subjects, of all thoughts. Sacred science, i.e. theology, is pre-eminent in the teaching of the schoolmen; but close observation shows that, partly as regards their conception of God, partly through the methods adopted of reasoning about Him and His relations with men, and partly through the resultant views taken of human life, vanquished philosophy had at this time transformed, if not actually conquered, its conqueror. It is not possible, however, to generalize concerning scholasticism as a whole; for, during progress, and decay, from the 11th to the 16th cent., changes of various kinds are discernible. It is difficult for us now to estimate the influence upon the doctrine of God exercised first by Neo-Platonist and afterwards by Aristotelian principles, and by the prolonged philosophical discussion concerning universals and the Realist v. Nominalist controversy. But the names of Anselm (q.v.) and Abelard (q.v.) in the 11th cent. mark the rise of a movement of which Thomas Aquinas (q.v.) in the 13th constitutes the climax and crowning which teaches the nameless supra-essential Deity in the form of symbols, historical manifestations, and ecclesiastical dogmas—and abstracting theology, by no means as the device of later modern times, which may rise from these temporal forms to the direct contemplation of the transcendent inconceivable Infinite and Absolute Being. Dionysius appears to identify this highest principle of Deity with God the Father; and, while he believes in the Trinity, to him Jesus and the Holy Spirit are but branches, or elements, which enter into relation with human life. A system of 'heavenly hierarchy' was constructed, of which the earthly hierarchy is the reflection and continuation. But all this new speculation in making clear the steps of ascent and descent in his speculative scale of being; and his name is preserved in history chiefly because of the lasting impression he produced upon mediaeval theology. Scotus Erigena, who in the 9th cent. heralded the approach of scholasticism, interpreted Christian doctrine in the light of Greek teaching. His system was essentially pantheistic, and pleased to lead from God, through the ideal and the real worlds, back to God. He attempts in his own way to solve the philosophical problem of the One and the Many by means of Scriptural doctrines and phrases to which he gives a meaning of his own. God is the supreme unknowable Deity, who yet manifests Himself in the manifold of creation. This process of unfolding is to be followed by the return of all orders of being back to the primæ Unity, so that God may be all in all. The fundamental difficulty found in the presence of sin is met by resolving evil into a necessary factor of development which in due course will be overcome. Christ is the centre in this stupendous cycle of movement from God and to God, and Trinitarian phraseology is from time to time employed; but Erigena's scheme of existence is essentially philosophical rather than Christian, and was never accepted by the Church, though it exercised considerable influence on mediaeval thought.

V. REFORMATION PERIODS.

The general factors of development which prepared the way for Thomas's Summa, the standard theological monument of mediaevalism, were such as follow. The pantheistic tendencies which have been described as characterizing the Neo-Platonism of Dionysius and Erigena produced a marked reaction. In time the genuine Platonism which had been handed on from Augustine to the earlier Schoolmen gave way before a revived Aristotelianism, the doctrines and methods of which were being used by Aquinas to establish and expand the truths of natural theology. God is defined as primum mouens immobile, 'Mover of all, Himself unmoved,' and as actus potentiae per se without potentiality. The modes of proving the existence of God are chiefly deductive, being drawn from the nature of causality, the necessity of absolute being, and the need of an absolute Designer. The metaphysical attributes

GOD (Biblical and Christian) 263
of the Deity—unity, infinity, self-existence, and the rest—are deduced in similar fashion. The proof furnished by Aquinas in Thomas' is the fundamental relation of God to the world which He has brought into being, stands in marked contrast to the idea and exposition of Divine love given in Jn 3:16 and 1 Jn 4:16. Thomas insisted on the distinction between the teachings of reason concerning the existence and nature of God and the teachings of revelation. These latter must be received by faith on authority, since they could neither be discovered nor proved by reasoning. The dualism thus introduced has influenced Calvinism and to a large extent Protestant theology ever since. Thomas rejected the pantheistic teaching which represented God as the essence of all things; he viewed Him as creator of all things from nothing, i.e., without pre-existing material— not from all eternity, but at a definite moment, when time began. This relation of God to the world is dispositive and perishable by the posteriori arguments. Man has the knowledge of God natural, if he does not by evil-doing stifle and destroy it. The doctrine of the Incarnation, however, must be received on the authority of revelation. It implies a union between the Divine and human natures in the One Person of the Logos, the human nature of Christ being impersonal. God's nature, including the combined attributes of justice and mercy, made necessary the 'satisfaction' rendered by the death of Christ on the cross, and from this moment spring all the streams of salvation made by God's grace to the unfallen world. Thomas was essentially a Realist; for him the ideal was the real in a truly Platonic sense. But, from the standpoint of philosophy, the data of revelation which he professed to assent to made Christian interpretation. Theology is for six centuries past has been largely moulded—for better, but to some extent decided for worse—by the speculative reasonings of this Doctor Angelicus. Long after the ancient fetters of scholasticism had been broken, the movements of Christian thought continued to live too largely confined within the limits which the Schoolman had laid down.

2. Mysticism. The relation between Scholasticism and Mysticism (g.e.)—those twin forces in shaping medieval thought concerning God—cannot be defined in a word. The view that Mysticism represented a reaction against the extreme subtleties and logical analyses of the Scholastic method represents but a fraction of the truth, characteristic only of a few teachers at one particular epoch. Harnack's view (Dogmengesch. p. 215. I. ii. ch. viii.) that Scholasticism is 'nothing but scientific thought,' though the science is in fetters. Mysticism is the presupposition of Scholasticism, because medieval science based itself on piety. Piety prompts to thought, and thought in turn promotes piety. Where the knowledge of God is pursued for its own sake there is a more termed mystical theology; but, where the knowledge of the world in relation to God possesses an independent objective interest, the term 'Scholastic theology' is applied. Landmarks in scholasticism and neo-scholasticism, either new or parallel to one another nor are in conflict with each other, but Mystical theology and Scholastic theology are one and the same phenomenon, which only present themselves in marked gradations of piety in the intellectual life. The teaching of Divine knowledge being the Father, the object

prevails' (Harnack, Eng. tr., vi. 27). 'Mysticism' is a word employed in various senses that ambiguities, that love necessarily constitutes the fundamental relation of God to the world which He has brought into being, stands in marked contrast to the idea and exposition of Divine love given in Jn 3:16 and 1 Jn 4:16. Thomas insisted on the distinction between the teachings of reason concerning the existence and nature of God and the teachings of revelation. These latter must be received by faith on authority, since they could neither be discovered nor proved by reasoning. The dualism thus introduced has influenced Calvinism and to a large extent Protestant theology ever since. Thomas rejected the pantheistic teaching which represented God as the essence of all things; he viewed Him as creator of all things from nothing, i.e., without pre-existing material—not from all eternity, but at a definite moment, when time began. This relation of God to the world is dispositive and perishable by the posteriori arguments. Man has the knowledge of God natural, if he does not by evil-doing stifle and destroy it. The doctrine of the Incarnation, however, must be received on the authority of revelation. It implies a union between the Divine and human natures in the One Person of the Logos, the human nature of Christ being impersonal. God's nature, including the combined attributes of justice and mercy, made necessary the 'satisfaction' rendered by the death of Christ on the cross, and from this moment spring all the streams of salvation made by God's grace to the unfallen world. Thomas was essentially a Realist; for him the ideal was the real in a truly Platonic sense. But, from the standpoint of philosophy, the data of revelation which he professed to assent to made Christian interpretation. Theology is for six centuries past has been largely moulded—for better, but to some extent decided for worse—by the speculative reasonings of this Doctor Angelicus. Long after the ancient fetters of scholasticism had been broken, the movements of Christian thought continued to live too largely confined within the limits which the Schoolman had laid down.

3. Schools of Mystics. Mysticism is neither Catholic nor Protestant, though it took differing and characteristic forms in Latin and in Tentrodonic minds. The connection between the idea of God and man's mode of a state communion with Him is very close. Hugo of St. Victor in the 12th century united two modes too often disjoined, of conceiving and approaching God, when he says: 'In two ways God dwells in the human heart, to wit, through knowledge and through love; yet the dwelling is one, since every one who knows Him loves, and no one can love without knowing. Knowledge, through cognition of the Faith, erects its structure; love, through the offices of colour' (De Adam Noe moralis. i. 1. P.L. dievi. 681).

The contemplation of God on which St. Victorine school, with its Platonic tendencies, laid special stress stood midway between the logical analysis of Abelard and the emotional fervours of Bernard of Clairvaux (g.e.). Bonaventure laid down an excellent example of clear thinking concerning the Trinity and the Divine attributes on the lines accepted by the Church, combined with deep devotional feeling and an insistence on the necessity of religious experience for the attainment of any true knowledge of God.

'The whole of Christ dwells in our hearts. This is the knowledge of Jesus Christ, from which, as from a source, cause the method and understanding of the whole Scripture. Wherefore it is impossible that any one should advance in its knowledge, unless he first has Christ infused in him' (In Respons., Prologus. Quaer. ed., p. 203. For last two texts, see Osborn Taylor, The Medieval Mind, ii. 587 and 600). The church thought was represented mainly by Eckhart, also by Tauler, Riesbrook, and others, exhibits the tendency—always more or less inherent in mysticism—to lose theological form and become too much a speculation. Eckhart was not a Pantheist, but he often writes like one. For him the Godhead is impersonal, for ever hidden and unknowable. God, however, reveals Himself in a gradual personal aspect of Divine knowledge being the Father, the object
being the Son, while the Spirit is the mutual bond of love whereby they are united. The world is in God, not God in the world. Time, space, creaturely life are nothing in themselves. It is the duty of man by an act of intuition, which includes intellect, feeling, and will, to realize direct union with the Divine. In Origen's phrase, the end will be like the beginning, all will return to God, and the Many will be lost in the One, from whom (or from which) all have originally proceeded.

4. The Reformation.—At the time of the Reformation no controversy arose concerning the doctrine of God, so far as creeds and formularies were concerned. The Decrees of Trent reaffirm the Niceno-Constantinopolitan Creed with Western additions; it is noteworthy that no attempt at reconstruction was made on the lines of Aquinas. The Confession of Faith then passes to the subjects of Original Sin, Justification, and the other points of immediate controversy, with which also the Reformed Confessions were mainly occupied. The first article of the Augsburg Confession, however, after reaffirming the decrees of the Nicene Synod concerning the Divinity of Christ as true and without doubt to be believed, proceeds thus:

"To wit, that there is one Divine essence which is called and is manifested, invisible, God, infinite, eternal, almighty, immovable, immortal, incomprehensible, inconceivable, incomprehensible, infinite power, wisdom, and goodness . . . and that yet there are not two Divine essences, of which one is limited and the other infinite, the former earthly, the latter spiritual; one eternal, the Father, the Son, and the Holy Ghost. And they use the name of 'persons' in that signification in which the communication of the essence is in the persons, because they have not used a part or quality in another, but that which properly subsists."

The corresponding Anglican article runs:

"There is but one living and true God, everlasting, without body, parts, or passions, (impassible, impassable); of infinite power, wisdom, and goodness; the Maker and Preserver of all things, both visible and invisible. And in unity of this Godhead there be three Persons, the Father, Son, and Holy Ghost, (Art. 1)."

None the less, the Reformers exhibited a change of tone and of emphasis, though not of definition, in their teaching concerning God. Luther in his Small Catechism lays the stress where Scripture lays it, and he was wont from time to time to criticize the use of the term 'Trinity' as a 'mathematical' word, saying: 'Since it is not in the Scriptures and sounds cold, we shall do much better to speak of God and not of the Trinity.' Luther dwells often upon God as a loving Father, ready to forgive and providing for men a free salvation. But he is careful to say that this means 'God in Christ'; all knowledge of God outside Christ reveals Him as a righteous Judge, wrath with sin and stern in punishing the guilty. It is the word Christ which makes it possible, and opens up communion with the Father for His rebellious children. It is Christ as Saviour, not as Eternal Word, that Luther preaches, though his doctrine of salvation loses its meaning if the Eternal Word did not become flesh and dwell among us as Jesus Christ our Lord. A distinction between Luther and Calvin is discernible—still more marked between Lutherans and Calvinists—in the conception of God which appealed to them respectively. Calvinism is a 'theology' indeed, a doctrine of God throughout the length and breadth of its teaching. The glory of God is exalted, all else is banished or absorbed. God is infinite and incomprehensible, in His sovereign and incorruptible will, in the grandeur of His eternal, unalterable decrees, God in His sciences and absolutes, in the accomplishment of His will rather than in the manifestation of His character, a will that instantly silences opposition and irresistibly effectuates its own decisions. Luther, on the other hand, admitted a closer approximation of God to man than orthodoxy had always allowed. It emphasized the love of God manwards, the self-emptying on the part of the Eternal Son, the quasi-delocation of His humanity in the uncreated Person of the Logos. The contrast between Lutheranism and Calvinism furnishes a striking example of the fact that theoretical identity of creed is consistent with almost incredible divergency of spirit and temper.

5. Protestant theology.—The 16th and 17th centuries are marked by the establishment of a kind of Protestant Scholasticism. The post-Reformation theologians in their doctrine of God fell back on Scholastic categories, and laid down laws in their definitions of Deity which have been observed by their followers ever since. The second chapter in the Westminster Confession of Faith, 'Of God and of the Holy Trinity,' is a standing illustration of this in its definition of the One Being who

'is all life, glory, goodness, blessedness, in and of himself; and is alone in and unto himself all-sufficient, not needing any good from any creature which he hath made, nor deriving any glory from them, but only manifesting his own glory in, by, unto, and upon them; he hath most sovereign dominion over them, to do by them, for them, or upon them, whatsoever himself pleaseth.'

God in His essence is defined as an infinite and eternal Spirit, His metaphysical and moral attributes are carefully mapped out, and an exposition of the doctrine of the Trinity on orthodox lines follows. But in the systematized doctrines of God of the 16th and 17th centuries, there are indications of constituting elements which were not yet adequately harmonised. The ideas of the philosophical Absolute, God as the ultimate reality in the universe, the self-sufficing Deity of abstract thought, appears in them. There is present also a metaphysical conception of the Trinity as it had been developed through centuries of Catholic teaching. But at the heart of the whole is the living God of the Bible, the revelation of the Father in the Son of His love, the ever present Friend and Saviour of mankind; and in the whole, thus presented there are unresolved antinomies. The question how the philosophical and speculative elements in these definitions were to be harmonised with the purely religious teaching of the OT and NT had hardly emerged. In the passionate conflicts which shook Christendom to its foundations in the 16th cent., it was taken for granted that Catholics and Protestants alike had grasped the same God and accepted the same fundamental conceptions of Him.

V. THE MODERN PERIOD.—The date from which a 'modern' movement in theology is reckoned depends upon the subject handled and the standpoint occupied. For some purposes, in the study of theology the 16th cent. forms the watershed between medieval and modern ideas; but the critical investigation into the foundations of Christian Theism begins with Kant and the 'Enlightenment' of the 18th cent., whilst the scientific and philosophic movements which have affected the Christian doctrine of God belong chiefly to the 19th century. The progressive of Christian Theism within its own lines is a marked feature of the period, and there can be little question that the ideas of God entertained by representative Christian thinkers during the last half century have been none the less profoundly, because silently, modified, without necessarily losing their essential Christian character.

1. Delitzsch.—The Delitzsch movement in England, which may be associated the revival of Arius in the early years of the 18th cent., affected orthodox thought only indirectly. Delitzsch (q.v.) was a philosophy rather than a religion; it taught the existence of a God, but, as Kant said, not of a living God. Essentially
rationalistic in their methods, the Deists recognized the Deity as a transcendental cause of the universe. They criticized revelation if they did not entirely deny its reality, they rejected the supernatural and all claims of authority in religion, with which they associated the doctrines of Providence, moral government, and Divine rewards and punishments. Bishop Butler answered them by showing the unreasonableness of accepting a bald natural theology with an absentee Deity, whilst refusing to recognize the analogous and superior claims of revelation; and Paley contended that the cosmological argument on which the Deists relied to prove the existence of the Deity in whom they believed necessitated an advance to teleological and moral arguments in proof of a living God who had not left the mechanism of nature to run on the mere operation of its own laws. But the full reply to Deism was not possible in the 18th century. That came later, with a deeper and more adequate understanding of the two terms, Nature and God.

2. German theology.—Kant promoted the critical examination of the currently accepted "propositions" of the Divine existence, carried out on the lines of a critical philosophy which denied all direct knowledge of the divine realities. For him God was but one of the "ideas" of pure reason, or postulates of the practical reason, whilst his strenuous assertion of the claims of the practical reason led to a permanent strengthening of the moral argument for the existence of a righteous Ruler of all. Kant's criticism of time-honoured traditional arguments was undoubtedly serviceable to Theists by leading them to test the soundness of their foundations, but the critical philosophy could not, any more than Deism, bring men into the presence of the living God. Kant's religion found no place for prayer, and resolved itself into a Divinely sanctioned morality. Hegel's epoch-making work in philosophy profoundly affected theology, especially his development of the absolute idea and the world, and his claim to have rationalized the Christian religion and its doctrine of the Trinity. The Hegelian logical process of thesis, antithesis, and synthesis, as applied to religion, meant that the Absolute externalizes itself in Nature and comes to itself again in Spirit; that through his "dialectic" historical development becomes self-conscious in finite spirits, and especially in Him whom Christians believe to be God manifest in the flesh. Hegelianism dissolves religion in metaphysics, and the terms used undergo a philosophical metamorphosis. Hegel's followers differed in their interpretation of his religious teaching, the right wing maintaining the personality of God in Himself apart from creation, and the doctrine of the Incarnation practically as taught by the Christian Church; the left wing—on the whole with more logical consistency—adopting a kind of evolutionary Pantheism. Schleiermacher's teaching blended philosophical and religious views of God without really reconciling them. He vindicated the place of religion as a fundamental and universal element in human experience, making its essence to consist in "feeling"—in a wider and deeper sense of the word. He helped to renew religion in Germany by the renovation of the claims of devout consciousness as immediate, self-vindicating, and independent of the processes of consciousness on the one hand, and the forms of morality on the other. But in the philosophy which underlay all his teaching, the explanation of religion is found in the infinite universe coming to pass in the connection of the personal and the personal God was conspicuous by its absence; personality appeared to him a limitation; and his glowing and attractive exposition of Christian teaching, while he seeks to free from absurdity and bizarre extravagances, does not conceal the fact that in his view we have no objective knowledge of God as He is in Himself. He is in Himself one; and in Christ implies only that in Him human God-consciousness found historically complete realization. The fundamental idea of Schleiermacher's theology is that in 'con, not necessarily viewed as personal, is found the identity of the ideal and real, which in the world exist as opposites. He is Sabellian, if not Pantheistic, and mysticism is of the essence of his religion. The redemption which he proclaims as characteristic of Christianity does not imply God in self-sacrifice for the salvation of men, but a gradual perfection of human nature through communion with the Christ in whom human God-consciousness has been attained in perfect and consummate measure.

Lotze as a philosopher largely influenced the theology of the later 19th century. He asserted the knowledge of reality in and through phenomena, and followed Leibniz in his affirmation of the personalism of God. The reality leaving God is 'not matter and is still less idea', but the living personal spirit which he has created. They only are the place in which Good and good things exist. (Metaphysics, Eng. tr., I, 788). Ritschl, on the other hand, who was in some respects a disciple of Lotze, based his theology upon a practical attempt to reconcile the rational structure of metaphysics, hated mysticism, rejected natural theology, and based his teaching on the NT, as inculcating a practical knowledge of God and a religion of redemption sufficed for man's needs. God in Himself is unknowable; but an objective knowledge of Him sufficient for salvation is revealed in Christ, who has for us the value of God. Accordingly, the Fatherhood of God, His love manifested in Christ, is determinative of His nature and of all His attributes. Love is, however, not set forth as a special characteristic of God, but characteristic of God in His own essential being, for this is unknown, but it describes His relation to man as seen in Christ and so operative in the upbuilding of the Divine kingdom in the world. A religious agnosticism of a kindred type was inculcated in England by Mansel, following Sir W. Hamilton in his philosophical principle that 'to think is to condition.' Hence God cannot be known as He is by human thought, though specific doctrines of revelation, such as the Trinity and the Incarnation, have been granted for the guidance of men and may be defended as knowledge regulative but not real. A direct knowledge of God being impossible, the truths of revelation must be accepted as authoritative, in spite of the contradictions which they necessarily imply. But religion based on scepticism has never been far-reaching or long-lived.

3. Christology.—Every doctrine of Christ implies a corresponding doctrine of God. The chief feature of the Christologies of the 19th cent. has been theirKenotic character. A growing tendency has been discernible to adopt a humanitarian doctrine of Christ, with its correlative Unitarian doctrine of God. But, apart from this, many teachers within the broad limits of the orthodox dogma of the claims of devout consciousness as immediate, self-vindicating, and independent of the processes of consciousness, have sought to combine with it a doctrine of His true Divinity by asserting such an exsimilation, or self-emptying, on the part of the Eternal Word as made it possible. In Schleiermacher's view, the earlier teaching of the doctrine of the personality of God was conspicuous by its absence; personality
upon the one Divine-human life of the Incarnate Word, the human not being raised to the level of the Godhead, but the Godhead not being lowered to the level of the human. But this limitation is essential and necessary to the Incarnation.

The doctrine of the Incarnation is sometimes misunderstood as implying the entire abnegation of some divine attributes, such as omnipotence or omniscience; sometimes it implies a virtual transformation of the Logos into a human soul. The doctrine as taught by Martensen is based upon two postulates: the Logos in the bosom of God as Eternal Reason, and in the form of man as the holy Redemptive Seed. In Dorner's exposition, Kenosis takes the form of a progressive Incarnation to express the self-communication of the Logos gradually increased during the life of Jesus from His conception to His ascension. In any case the mystery of the Incarnation is not solved, though some types of Kenotic doctrine have helped to remove difficulties which had long hampered thoughtful believers. It is to be borne in mind that the 'emptying' of Ph 2 in the laying aside of status, dignity, and glory, not of the essential nature of Deity implied in οὐκ οὐκ ὄντος, which is retained throughout. Kenotists have impressed on the minds of those who teach the fundamental Christian truth, such as that it is the glory of God to limit Himself in love for such a purpose as the salvation of the human race; also that the reality of the divine nature must not be lost sight of, or overlaid, through a desire to honour the Divine in Him; and that it is safer and more truly Christian to rise from the historical Jesus to the Word Incarnate than to reason a priori from man's conceptions of what the Divine is likely to be, or must be. Every form of Kenotic doctrine is scientific in its study of humanity, its genesis and history on the earth—these are but a few examples of the workings of the modern mind which have led to a wider and truer appreciation of the being and nature of God, as understood by the Christian Theist. Conflict between the conceptions of God as seen in Nature and in the history, in law and in grace, in tradition and in fact, has inevitably arisen, and there have been periods when it appeared as if the two diverse points of view would be pronounced incompatible. But so it has always been during a period of assimilation of new knowledge, especially when it has been rapidly acquired.

The process of separating between the abiding and the transitory in traditional ideas, between the sound and the speculatory in new theories, cannot be readily carried out; and, whilst it lasts, a strife arises not between religion and science, but between mere time-honoured traditions of the past and mere hasty speculations in the present. The result thus far has been to lay the foundations of a truer and fuller belief in God, as the ultimate postulate of all thought, the ultimate ground of all existence, and the ultimate presupposition of all that makes our actual experience possible. Steering between the rocks of crude mechanical explanations of Nature on the one hand and the whirlpool of a Pantheism which would merge the very idea of God in the natural self-evolution of Absolute Being on the other, modern Theism has learned to set forth the living God as an ever-present Energy in a universe which is an outgrowth of the living, unfolding Energy from which it originated, and the divine is always dependent on Him for existence. Herbert Spencer declared that amidst the many mysteries of our inescapable existence there remains the one absolute certainty that we are in the presence of an Infinite and Eternal Energy, from which all things proceed, but that it is unknowable (Evol. Inst., p. 463; cf. First Principles, p. 1. ch. 2) (1ed). The Christian Theist, accepting his premises, has interpreted the unknowable 'actuality lying behind all appearances' as the living personal God, a fullness and richness never possible before. This very considerable literature that has appeared under the auspices of the Gifford Lectureship has borne witness to the activity of very various minds in this direction.

4. Modern Theism.—The Christian doctrine of God is Thessian raised to its highest power. Consequently it is affected by all current thought which bears on Theism, as well as by Biblical criticism and investigations concerning the historical Christ. The two great phases of the traditional Christian theology during the later 19th cent. were the remarkable development of physical science and the spread of Idealistic philosophy. The Materialism, Naturalism, and Agnosticism which dominated Western civilization for some decades were simply foes to be resisted by all who believed in a living personal God. But in process of time it was seen that a mechanical explanation of the universe was incredible and impossible; whilst from an Idealistic view of Nature, as well as from the wealth of knowledge concerning its phenomena and laws that has been amassed by science, Theists have naturally learned much, and Christian conceptions of Deity have been imperceptibly deepened and enriched, without losing their essential character. It is impossible in a paragraph even to enumerate the gains that have resulted from this lifting of veil after veil from the face of God. The dawn of the conception of the vast reign of law, with the new enlargement and comprehensive knowledge, the establishment of evolution as the mode by which Nature works, the relations between mind and matter as exhibited by modern psychology, the play of spirit in the operations of natural and material forces, the
completely comprehended in this life have been brought home as never before. The result has been that many have come to the conviction that to represent now an ‘over- come standpoint’; and the idea of God has been in- definitively widened and deepened by an inclusion of some of the standing antinomies of life in the order of His eternal purposes.

5. Divine immensus.—It does not lie within the scope of this article to dwell upon these modifi- cations in detail. But no account of the doctrine of God in the modern period would be complete without a comment upon its most marked feature—the Divine immensus in the world. The phrase has many meanings; it is here used as not to refer to the newly emphasized belief that God is the ever-present, ever-active ground of all finite existence, that He is not only the cause and origin of all creatures and their powers and activities, but that always and everywhere He sustains and imparts universe, the whole world of things and of spirits being continually dependent on Him ‘in whom they live and move and are.’

The quotation of well-known words shows that the thought is old, but its application in the 19th cent. indicates that the theology of the 20th may not improbably be transformed by it. Instead of insisting upon a sharpposition against God and Nature, God and the world, God and man, God and the history of the universe, the theology of the last half-century has tended to trace the operation of God in the history of the world, in the very substance of the man, and in the develop- ments of nations and of the human race in its long and complex history. Dualism in all these depart- ments is preparing the way for Monism, of one form or another.

It is clear that for the Theist this process is accompanied by dangers. If Theism is maintained in its purity, the transcendency of God as of One over all Being and all Being, the conditions are not what haunts by, or identical with, the universe will never be lost sight of. The fundamental distinctions between the Infinite Spirit and all and each of the finite spirits dependent upon Him, and the eternal contradistinction between good and evil, moral light and moral darkness, must never be effaced or slighted. The philosophy which refuses to set the One over against the Many, and seeks to find the One only in the Many, is inconsistent with true Theism. Reality would thus be resolved into the opposite of God and of being, and the universe would become not only elements, or factors, in one indivisible whole. Deism banishes God from the universe, but the sense of God is not removed from it. If the Eternal Spirit only ‘realizes Himself’ in finite spirits, and the Absolute only ‘comes to consciousness’ in the facts of history, the essential meaning of the word ‘God,’ the significance of evil, and the nature of religion are alike completely altered. Neither pure Theism nor real Christianity can be erected upon this basis. But short of this, there is abundant room in the Theistic and Chris- tian conception of God for a fuller stress to be laid upon the abiding, informing presence of God in the universe than was possible in the 18th century. The chief contribution of the 19th to the doctrine of God is the development of thought in this direction. Elements of crude anthropomorphism, in the sense of attributing to God a moral and intellectual personality, have lingered in Theistic teaching, are now rapidly disappearing. Influences of various kinds lead the modern mind to find its way to a conception of a Deity who is not the universe from within, as well as ordering and controlling it from without. Creation, preserv- ation, providence, and the march of human thought and civilization as directed by God are best under- stood from this standpoint. The supernatural is intelligible in proportion as it is not severed from the order of Nature which it transcends, and revelation can only come to us in opposition to that continuous operation of the Divine Spirit which guides and illumines the thoughts of all mankind.

6. Divine personality.—Religion is bound up with the doctrine of the Divine personality; philo- sophy has been for the most part opposed to it. But there need be no discrepancy between the idea of God viewed as the ultimate entity in philosophic thought and God as the ultimate ground of religious trust and hope. The philosophy of religion to-day, so far from opposing the position that to attribute personality to the Infinite limits and lowers the conception, rather lays stress on the category of personality as the only one that suf- fices for a worthy conception of Deity. Force and causes and substance are not ultimate in a true conception of essential being; only a Person represents existence by, in, and for itself. Personality, of course, be rightly understood, not identified with the imperfect forms of its characteristic of finite spirits. Even amongst men it implies intelligence, feeling, and will; it is characterized by self-consciousness and implies self-determination. As such it forms the highest category of existence that we know; even Herbert Spenser urges that the Infinite Energy on which all things depend cannot be less than personal. The Absolute must be Absolute Intelligence, and this carries with it, as implicate, Absolute Will. The Absolute, finally, is not to limit Him; to deny it constitutes the real limitation. A person knows; a thing is known. Such measure of personality as man possesses is the one source of infinity within him, since it is the measure of him grows in knowledge and power, and is capax infini. The unquestioned limitations amidst which human personality is realized arise from the conditions not with the universe, but with the person, not with the external world, but with the self. The God of Theism is not the Unconditioned, out of all relation with the universe, nor is He the Absolute, in the proper sense of that much abused term. But He is Infinite Spirit, possessed of personality in a sense that can be predicated only of the Infinite—consciousness, knowing, feeling, willing, each at its highest, and all indissolubly blended in the unity of immediate, inalienable Self-existence. Some of the speculations of Aquinas in the 15th cent. have taken more sedent and abiding shape and become the assured possession of the philosophy of religion in recent years.

7. Christian doctrine.—Theism, however, is not Christianity. As interpreted by some, a bare theistic doctrine of God has even stood in the way of the acceptance of the Christian gospel. The God of some theistic philosophers could never be- come incarnate. Christian Theism, rightly under- stood, only carries to completeness the conception of Deity implied in the definition of an Infinite and Eternal Spirit, perfect in wisdom, righteousness, power, and love. Christianity is nothing if not a religion of redemption, and the Christian idea of God is inseparably bound up with the doctrine of Divine Incarnation for the salvation of men. Given a God of infinite compassion, and the existence of moral evil in man as divine and deep- rooted as the Biblical opposition to it, the existence of God as a necessary part of Divine self-revelation as Nature. A God who humbles Himself and suffers in order to redeem, because only thus can the redemption of a Deity, if it is to be genuine, be worth- less, and the supreme manifestation of a holy love in action is demanded alike by the needs of man and by the expression of human thought and action. The question of the kind of mediation necessary to set right the disturbed relations between the Father of Spirits
and His children are still various, as they have been throughout the history of the Church. But new light is continually dawning upon the minds of men as to what is implied in a Redeemer-God, and this has been especially the case in the last century, and is being illumined by it. The study of history and of the facts of human life, the fuller understanding of human nature yielded by modern psychology, the development of new ethical, and of new ethical and social standards, and the stress laid by such writers as Eckermann upon the life of the Spirit have combined to confirm the Christian doctrine of a God who, as essential love, has proved the divinity of His regard for men by giving Himself in uttermost self-sacrifice on their behalf. The kind of redemption, the supreme value of redemption, is as different from the release from the Wheel of life in Buddhism as the fundamental idea of God differs in the two religions. A living, personal God of holy love delivers from sin in the cross of Christ, whilst a religion practically without belief in God and the soul can promise cessation only from the wrongs of the world by a long journey on an eightfold path leading to the city abode at the disappearance of individual existence.

3. The Trinity.—Belief in an incarnate and resurrected God which leads the mind beyond Unitarian Theism. In modern light it is seen to imply a richer and more adequate conception of God than that set forth in Judaism and Muhammadanism. The Christian doctrine of the Trinity is conceived, however, to be arrived at by philosophical reasoning, though a verification of it may be constructed from the relations of personal identity. In recent expositions the doctrine has chiefly been dwelt upon as the earliest Christians understood it, as one of revelation and personal experience. It has been necessary to combine the facts of Gospel history, the teaching of the Apostles, and the religious experiences of believers in Christ from the first until now. Such a doctrine makes it easier to apprehend, however, its meaning in the Trinitarian, and in the Godhead and the true significance of thought, goodness, and love, as existing eternally in the Divine nature, by its indication of interior distinctions in the Godhead which do not impair unity. It avoids the extremes of Deism and Pantheism, preserving elements of truth in each with regard to the relation of God to the world. Trinitarian doctrine, however, did not originate in speculation, and it is not propounded to-day on a priori grounds arising from the nature of Deity. It commends itself to faith as the best expression of the fuller, as of a revelation of God which was given in Christ, and of the rich and many-sided communion with Him made possible by this realization. The importance of the specific respect the phraseology of the 4th cent. does not express to men of the 20th what the Fathers of the Church intended to say more than a thousand years ago. 'Substance,' 'nature,' and 'person' do not mean precisely what they meant in Aristotle, St. Augustine, and Cyril, nor have the three English words always preserved the same meaning. The modern idea of personality would perhaps have been unintelligible to the Fathers at Chalcedon; and changes in that idea, whether it signifies, have taken place even within the last half-century. The theological phraseology employed to describe religious truth may well be varied as the generations pass. But the substance of the doctrine remains. The N of concerning Father, Son, and Spirit, Three in One and One in Three, whatever various comment it may receive, remains the highest and the best, as it was a for the meaning of the sacred name God means in the Christian religion.

W. T. DAVISON.

GOD (Buddhist).—A general statement of Buddhist belief with regard to the meaning of the conception which Buddhists generally have formed of God, presents considerable difficulties—less on account of the complexity of the belief in itself than by reason of its many-sided character, and of the very various views that are held in the many Schools of Buddhism. The sects of the Hinayana and the Mahayana are not in agreement in their doctrine of God as in any other article of their loosely-knit, respective creeds, and perhaps further. Both have departed widely from the position of primitive Budhism, as taught by Gautama Buddha himself, according to the usual interpretation of his teaching on this subject. There is, indeed, little evidence that that teaching was ever actually put into practice beyond a narrow circle, or the generation of his immediate followers and disciples. By its philosophic detachment and refusal to make concessions, it fell in the desire of the human heart for some external support and supernatural aid in the conflicts of life, it set itself in opposition to the universal tendencies of religious thought and the aspirations of religious life, and—probably inevitably—while appealing to the few, lost the support of the majority of mankind, whose needs it did not fully meet.

It is probably an erroneous view of the original teaching of Gautama Buddha which explains his attitude as entirely and of set purpose atheistic; as construing the universe in a materialistic and denying the existence of a God. That he interpreted the universe in the sense indicated is in all probability true; and his views in this respect were derived from the ancient doctrine of the Sankhya philosophy, which in India professed to explain everything in terms of soul and matter (purusha and prakriti), and to have no need for the
intervention of a Divine power. The latter view, however—that the founder of Buddhism intended to give expression to distinctly atheistic views—seems to be a mistaken inference from the response which he is recorded in the Buddhist books to have given to the questioning of his disciples with regard to another world, and his refusal to offer any definite instruction on the spiritual and unseen, or to superintend, with any ray of light, which he was competent to give, the uncertainty and darkness of the unknown realm that lay beyond the touch of sense. Many centuries later than the period at which Gautama lived, there is no reason, however, to doubt that in this respect they correctly report his views.

The inference, however, that he intended to imply personal disbelief in the supernatural and in the existence of a God, and to urge or enjoin upon his disciples, is certainly mistaken. As 'enlightened' and in possession of the true and perfect dharma, which he had gained after so many years of strife and endeavour, it is most unlikely that he meant, with any ray of light, which he was competent to give, the uncertainty and darkness of the unknown realm that lay beyond the touch of sense. Many centuries later than the period at which Gautama lived, there is no reason, however, to doubt that in this respect they correctly report his views.

The inference, however, that he intended to imply personal disbelief in the supernatural and in the existence of a God, and to urge or enjoin upon his disciples, is certainly mistaken. As 'enlightened' and in possession of the true and perfect dharma, which he had gained after so many years of strife and endeavour, it is most unlikely that he meant, with any ray of light, which he was competent to give, the uncertainty and darkness of the unknown realm that lay beyond the touch of sense. Many centuries later than the period at which Gautama lived, there is no reason, however, to doubt that in this respect they correctly report his views.

And a strongly anthropomorphic conception is elaborated with the utmost possible freedom, presenting a rich and even extravagant mythology, which is based ultimately, in all essentials, upon the popular pantheism of the Indian peoples, and reproduces the two main currents of thought of its original—that, namely, which exalted the object of its reverence worship as the Supreme Author and Creator of all; and which was content with an innumerable company of deities, of varied attributes and power, often deficient and liable to err, as frail and impetuous as he, and which was content with an innumerable company of deities, of varied attributes and power, often deficient and liable to err, as frail and impetuous as he.

Thus a more or less complete enumeration is presented of the various classes of gods. There are Sakka and Yasna gods, gods of the Tuṣita and other heavens, Brahmā and Mahābrahmā gods, etc.; and of the thirty-one grades of being or sentient existence, the divine or that of the gods one. Elsewhere reference is made to the gods of the Thirty-Three, i.e. subordinate classes or varieties of gods, who approached Sakka the ruler of the gods with questions or complaints.

And, entirely after the manner of Indian mystical conceptions and rules, of the ten subjects of meditation or ‘reflection’ (which include the physical body and death, as well as the three ‘ganas’—the Buddha, Dharma, and Sākya; for the reader of the old textbooks may be found in the word of meditation upon the gods) are a subject of transcendent importance—his insight was defective, and that he was unable of his own personal knowledge to satisfy inquiries with one another; hence the idea of the law of transmigration or the control of karmas; they are subject to desire or passion with all its evil consequences; and even the greatest of them, Brahmā himself, has to confess to ignorance of the nature and constitution of things which he might be expected to know. As they are not omniscient, so also they are not omnipotent; and it is further implied that not even a god, but only one who is born a man, can by resolution and perseverance attain the highest state of a Buddha.

Apparently also the abstract and philosophical conception of Brahmā as the First Cause, the Creator and Ruler of all, was taken over by Buddhism, but made no impression upon the disciples of the Hinayāna, and was too much out of harmony with the general presuppositions of the Southern School of thought to influence their system of doctrine. It appeared to the Hinayānists and the Mahāyānists, sometimes only to be contested; especially in the Chinese version of Asvaghosa’s Life of the Buddha, the most striking and for Buddhist doctrine important conception of the Divine was the uniform exaltation of the Buddha himself above the highest god. In the Northern School, this thought found expression in the conception of the Divinity, supreme and alone, the first of all the gods.

The Dhamma-sutta-pavatipattī Sutta, 27, enumerates seven of these heavens, each with its appropriate company of gods.

5. Vinukha-Nīkāya, iii.
7. Sutta-Nīkāya, iii. 6.
8. Kosambī Sutta, 31; cf. the wisdom of the true Buddha contrasted with the ignorance of others, including gods (Dhammapadā, 419; Sutta-Nīkāya, iii. 6).
9. Not even a god... could change into the victory of a man who has vanquished himself! (Dhammapadā, viii. 106; Mahāvibhāsasutta, viii. 34, and Dhammasa-sutta-pavatipattī Sutta, 25 ff.; the wheel of the universe of Truth, which the Buddha has set on its course, cannot be turned back by any god).
10. Sutta-Nīkāya, i. 14.
Buddhas, without companion or peer. But the religious thought of the Hinayana, moving on different lines, glorified the historical Buddhas, Gautama himself. It required its own object for an object of reverence and worship by practically deifying its Founder. At his birth and death the gods came to pay him homage; they strewn flowers, and offered garlands, and placed worshipful relics after cremation. On more than one occasion during his lifetime they appear and offer him reverence; but especially when Gautama gained perfect insight and enlightenment under the Bo Tree. He also is their teacher and guide into the Truth; and they are by him converted to a knowledge of and obedience to the right way. Elsewhere the same worship is extended to all the Buddhas and even to the muni, the sage, the man who has vanquished his kama and has extirpated on the path that leads to Buddhism. Significantly also the perfect wisdom of the Buddha is contrasted with the imperfect and limited knowledge which the gods possess. He is god over all gods, supreme in knowledge as in power. And thus in the doctrinal system no less than in the actual practice of the Southern School, which in most respects has no rival, the Buddha is in its great rival to the teaching of Gautama himself, the deistic theories of the founder, or at least his prohibition of worship and deification on the part of the gods; and the being of a god, have been ignored or transcended; and the faith and practice which he inculcated, and which made his disciple look to himself as the centre of his own strength and resolution win for himself deliverance from the bondage of existence and misery, have had superadded to them a practical deification of his own person, and a theistic belief in his supremacy and power.

Historically therefore, at least in its expansion and development within the area in which the Hinayana school of thought has prevailed, Budhisht experience has been marked by the growth and strengthening of a theistic movement which has found its centre in Sakyamuni himself. It is probably right to regard the Buddhist teaching of the Hinayana as the truest exponent of Gautama's own doctrine and beliefs; and philosophically and in theory it has always remained loyal to the principles, deistic and agnostic, which he is understood to have commended and enforced. In practice however, outside of the circle of the more metaphysically minded and capable of the monks themselves, and certainly to the laity, the process referred to has restored to Buddhism the personal centre and object of adoration which was lacking in the impersonal self-centred doctrines of the primitive teaching. The earliest Buddhist thought, as expressed and formulated by the Master himself, was consistently agnostic, if the representation of the Pali books may be trusted; professed its ability to secure the highest and most desirable aims without requisitioning external aid; and from its world-scheme omitted the superhuman and the Divine. That, however, was not a position in which the followers of Gautama Buddha were satisfied to rest. The human craving for an ideal or idealized object of love and homage was too strong for the remote aloofness and somewhat cold philosophy of the doctrine. The desire was met, and found its satisfaction in the person and in the Being of the historical Buddha himself; and such tendency manifested itself, to all appearance, at or very soon after his death. With him were reintroduced the Hindu deities, or the more important and popular of them. But they were always subordinated in attributes and power to the Buddha. And thus a system in theory deistic became a practical polytheism.

It was far otherwise, apparently from the very beginning, in the Mahayana. In its origin, it retained the rich, even extravagant, features of Oriental fancy and the syncretismo with which the Buddhist reform rejected; amplified its mythology, and elaborated a complete and extensive hierarchy of divine beings of many grades and capacities, at the head of which, remote and altogether abstracted from practical life or experience, was the Adibuddha (q.v.), a metaphysical conception but not an active force in touch with the universe which he was supposed to have brought into being. The deities, moreover, so far from remaining abstracted, interested themselves purposefully and actively in the affairs of their worshippers, and rendered them effective aid in all their most pressing needs (see Buddha, Mahayana).

Mahayana Buddhism, therefore, was always theistic, and even monotheistic, not denying the existence of other deities, but subordinating them to a single Head. It differed remarkably, however, from the more coloured in the South in that among the innumerable Buddhas, who held the most exalted rank in the celestial hierarchy, Sakyamuni, the historical Buddha, occupied an entirely subordinate position. To his deification had been applied to all the Buddhas; and all, having been human teachers upon earth, had by virtue of their own immeasurable strength and wisdom and power, won for themselves an abiding place in the highest heaven. Vows were made to them, prayers offered, and their favour and assistance sought in the ordinary as well as in the extraordinary exigencies of life. Gautama, however, was only one among the rest, by no means the most distinguished or important. The first place was taken by Amitabha (Amida), a deity whose origin and history are altogether obscure, but who was invested in the popular thought with every attribute that could attract devotion or win homage, and on the delight in whose paradise Mahayana writers expatiate with unrestrained delight. To be received thither after death and to see Amida in his glory was the longing desire of every pious believer. The Indian founder of Buddhism was hardly more than a figure and a name. In Amida every wish was centred. Grace, mercy, and beneficence, as well as wisdom and power, were his attributes. Homage might be given in other gods; but to Amida every heart went out in loving adoration with the assurance that he would hear and heed the prayers of his worshippers. A reform movement was initiated in Japan in the 13th cent., the object of which was to reestablish Sakyamuni in the supreme place. It proved, however, an entire failure. Amida has almost universally retained his position, which he has held from a very early period, the embodiment of every Divine grace, the all-wise and all-powerful guide and friend of all who call upon him.

From the speculative and metaphysical point of view also the Buddhism of the Mahayana, in formulating its conception of the Divine, gave expression to the familiar thought of a first principle, the primal and essential cause of all that is. By the Buddhist thinkers the Person of the Buddha himself was an essential factor in this result was attained. This determining principle and cause was known as the Dharma-kaya.

1 In one form of the legend he is born spontaneously from a lotus, without father or mother. In all probability the introduction and worship of Amida were introduced into China from the West in the early centuries of the Christian era, and were of Indian origin. Other authorities, however, would connect his worship and cult with Persian Buddhism. His paraisos is always conceived to be in the West.
the ‘body of righteousness’ or ‘of the law’ (cf. art. ADBUDDHA, vol. 1, p. 97 f.) and was in theory identified with the Buddha, one of his three bodies, his essential and permanent nature, by virtue of which he was one with all existing beings and all existing beings were one in him. The DharmaKāya represents the mind of the Buddha, one of his three bodies, of Brahman, but with a very important difference. The Buddhist philosophers and thinkers never lost their hold of the personal element or attribution in the DharmaKāya. So far from being a blind or impersonal force, the DharmaKāya was conceived as endowed in the highest degree with the most distinguishing attributes of personality, especially will, intelligence, and love. It is in Amitābha Buddha that the DharmaKāya has chiefly manifested himself, and Amitābha therefore is the supreme object of religious homage and worship. The whole creation, however, is a manifestation of the DharmaKāya; all are really one in him, their union being darkened and obscured by ignorance, prejudice, and sin. In the final issue they will in the DharmaKāya find the light and their own true nature, and be delivered from the bondage of present evil and suffering.

Accordingly this was the crown and completion in the Northern School of Buddhist teaching with regard to the nature of God and man’s relation to him from the metaphysical standpoint. It differed from the Hindu view in that it so strongly maintained and emphasized the personal element. In this respect it had not a little affinity with Christian thought. Nevertheless, however, it was and remains the conception of the thoughtful few; and, although truly and faithfully representing Buddhist doctrine at its purest and best, it was of too abstract and mystical a nature for the comprehension of the many. Their faith and love centred in Amitābha with his paradise of perpetual bliss, and sought nothing further. The philosophical reasoning and the popular aspiration and devotion met and were reconciled in the doctrine that these were one and the same, that Amitābha (Amida) was in fact, the highest manifestation of the DharmaKāya.

The Buddhist doctrine of God, therefore, even in its most abstract and speculative form, never lost touch, as did the Vedāntic philosophy of India, with which it is most natural to compare it, with feeling, feeling, and devotion. It personified the highest and best in man—mercy, gentleness, and love—and conceived these in a truly noble and generous spirit. In India its similarity is most marked to some forms of the so-called sectarian religions, and especially the Bhāgavata faith, which inculcated devotion to the one Supreme Lord, and self-sacrificing love in His service (see art. BHAKTI-MĀrgA, vol. ii, p. 540 ff.). Its second in many respects with Christian teaching is not improbable to be explained on the hypothesis that at some period in the course of a long history and development it came under Christian influences, and borrowed elements from Western teaching; and that in part at least the similarity is due to the assimilation of Christian doctrine and forms of belief covered more or less directly in the early centuries of our era by missionaries from Europe. The theory is incapable of proof in the present state of knowledge, and may be altogether devoid of foundation. Under any circumstances, however, the development of the doctrine has proceeded on altogether natural and Oriental lines. Whether historical criticism has at any point taken place and a mutual influence been exerted, or whether doctrinal growth has been altogether spontaneous and independent, it remains true that, of all non-Christian religions, the Buddhist theory of the DharmaKāya, the Divine Ruler immanent in the universe and manifesting Himself in His creation, is perhaps the nearest to the New Testament teaching and ideal.

LITERATURE.—The literature is sufficiently indicated in the articles to which reference is made, especially those on Brāhma and Buddhism. For the Mahāyāna, see also articles on Outlines of Mahāyāna Buddhism, London, 1897; Arthur Lloyd, The Great Brentwood General of the Buddhist Identities, Madras, London, and Colombu, 1912. The last-named work has regard mainly to the Buddhism of Ceylon, but is well worthy of study.

A. S. GEORGE.

GOD (Chinese).—The Chinese language possesses two terms which, as far as etymology goes, seem adequate to stand for ‘God.’ The former of the two is Shang Ti, or ‘Sovereign (T) Above’ (Shang); the second is T’ien, or ‘Heaven,’ and is used in later centuries for the visible heavens, but explained in the ancient Han dynasty dictionary (the Shao Wéi, largely quoted in the Imperial Dictionary of Kang Hsi) as ‘the Exalted in the highest, being formed of signs meaning the One who is great.’ Some famous Chinese scholars have explained the common substitution of the latter for the former by saying: ‘It is not lawful to use the name of Shang Ti lightly, and therefore we name Him by His residence, which is T’ien, or heaven—on the principle that the Court should for the ‘Emperor.’’ T’ien, however, probably seemed to the Chinese mind the more appropriate term for general literary use, after the early ages, standing, as it does, for an unfocused and impersonal concept.

The earliest reference to Shang Ti, or indeed to any religion whatever, in the ancient history of China, is found in the oracle bones, on which was cast the name of the Shang (1600-1200 B.C.) sacrificed to Shang Ti, gathered the whole populace together, and diffused among them the principles of government and religion.”

We seem to have here a brief note of the worship of a patriarchal priest-king, somewhat ‘after the order of Melchisedek,’ in the days before that branch of the Turanian race now called Chinese had continued their eastward migration down the bend of the Yellow River, to occupy the territory which formed the nucleus of present-day China. For the palace of the Yellow Emperor is said (in a work ‘probably of the 2nd or 3rd cent. B.C.’ [Wylie] and universally since) to have been on the Kun-lun mountain, over a thousand miles westward from the capital of the Chow dynasty sovereigns (1122 B.C. onwards).

The next historical reference to Shang Ti is in the reign of the emperor K’u (3425-3296 B.C.), father of the much-quoted emperor Yao: ‘Ch’ien Yuan (his consort) together with the emperor sacrificed to Shang Ti, and bore Ch’ü’ (or Hou Ch’ü),’ or Hou Ch’ü, afterwards Director of Husbandry under the emperor Yao. The Book of Odes celebrates the birth in the words: ‘Shang Ti regarded her with favour; and without hurt or injury, immediately her months were fulfilled, she gave birth to Hou Ch’ü.’ Then, in the unimportant reign of Wu Tsin (1194-1186), that ruler, wishing to obtain an able counsellor, ‘reverently mediated upon moral matters, and in a dream Shang Ti bestowed upon him an able and virtuous helper,’ whom he afterwards sought and found in reality. From this point, as far as the Historical Annals are concerned, we find the term T’ien substituted for Shang Ti. Thus the ‘flood-regulator’ Yü (2305-2198 B.C.), on assuming the throne, said: ‘I have received the decree of Heaven, and will exhibit to the whole empire to emerge the mythical populations in

1 This quotation is found in the ‘Early Edition of History,’ published in 1711, and ranking second only to the ‘Imperially edited edition,’ published in 1709. It is an added chapter of an edition drawn up by Ch’ü Hsi (1189-2000), which was itself a collection of the works of various authors. The tendency has always been to cast, never to add, references to mythical matters, and we may take the quotation as an

1 This quotation is found in the ‘Early Edition of History,’ published in 1711, and ranking second only to the ‘Imperially edited edition,’ published in 1709. It is an added chapter of an edition drawn up by Ch’ü Hsi (1189-2000), which was itself a collection of the works of various authors. The tendency has always been to cast, never to add, references to mythical matters, and we may take the quotation as an
their labours.' And to the tyrant Chih (1818–1767 B.C.) a memorialist said: 'The hearts of the people are lost, and Heaven's decree no longer aids us; while of the moral order of the state an early commentator says: 'They enjoyed (the favour of Heaven's) heart, and received Heaven's mandate; but the two last (of the sovereigns of) Shang Ti and T'ieh were interchangeable is strikingly shown in the History Classic (v. 23): 'Thus did they (Wen and Wu Wang) receive the true appointment of Shang Ti; thus did Imperial Heaven approve of their ways and give them the four quarters (of the empire).'

A prominent topic in the History Classic is the reverence with which a ruler should carry on his government. The object of that reverence would seem to be the Supreme, whether quoted by the term Shang Ti or by T'ieh. Instead of the former term was in frequent use down to the 19th cent. B.C., and still current much later, is evident from the passages about to be cited. The earliest reference to Shang Ti in the History Classic does not give us a picture of absolute monothecism: 'The emperor Shun sacrificed specially to Shang Ti, offering lesser sacrifices to the Six Honoured Ones, to the ancestors, to the spirits of the land and to the multitude of spirits.'

On the whole subject a memorialist of the Sung dynasty (Hu Hsiung, 108 B.C.) says of the Chou dynasty (1122–222 B.C.) that in the solitary sacrifice to Shang Ti, and in offering of heaped-up faggots to sun, moon, stars, and of bundles of rushes (as the Confucians) to the household and kitchen spirits, and to the wind and rain spirits.' In a memorial to the prince T'ai Chia (1753–1721 B.C.), his aged aged gave an interesting glimpse of the religious opinions of the times, which prompted a secondary worship of the spirits of heaven and earth, of the land and grain, and of the ancestral temple; for the former sovereign is said to have 'served and obeyed all these, keeping his eye all the while upon the inestimable requirements of Heaven.' The spirits of heaven and earth were destined in after years to loom larger in the popular imagination than Shang Ti; and in six hundred years' time we find a modal ruler, who extolled the last Tyrant of the Chou dynasty (1122 B.C.), announcing 'heaven and earth' (perhaps in those early days equivalent to our modern word 'cosmos') as the (pates) of all things.'

Yet Shang Ti was still recognized as the one King of kings—often in a very literal sense. 'Now Heaven, to protect the populace, made for them rulers and instructors, able to assist Shang Ti, and to secure the tranquillity of the (realm in all its) four quarters.' And so, returning to the earlier passages in the History Classic, we find T'ai (afterwards emperor), while yet a minister of the emperor Shun, counselling him saying: 'Abide in your resting-point, attend to the springs of things, study stability, employ upright assistants,—then will your every action evoke a large response from a submissive populace, you will receive in brightness (the bounty of) Shang Ti, and Heaven will surely renew its appointment, dealing out blessing.'

The dynasty of Hsia, founded by Yu the Great, lasted four hundred years, and, like all the succeeding dynasties, it gave tribute to the court of Shang Ti. A new form of worship was added, and T'ang the Completer was the man for the crisis. Arousing the populace to revolution, he addressed them saying: 'The (present) sovereign, a braggart, is an offender, and, as I fear Shang Ti, I shall not recite the situation of my position.' In a later chapter of the History Classic the case is represented in the words: 'I have heard that Shang Ti guided to rest the two last (of the sovereigns of) Hsia would not enter into His rest, whereupon Shang Ti visited him with corrections. Then, as history repeated itself at the end of the dynasty founded by T'ang the Completer, it is recorded of the last ruler of the series that he was much abandoned to dissolve idleness, regarding neither the emperors and the people of the empire. The favour of Shang Ti is still not (infallably) settled; it is upon the good that He sends down manifold blessings, but upon the evil-doer manifold calamities. Also 'The Majestic Shang Ti has conferred (even) upon the ordinary populace a moral sense, to comply with which would give them a right and constant spirit.' Then, passing over some fifteen other quotations in the very massive History Classic, he finds a glowing presumption of the goodness as well as the righteousness of Shang Ti in the ancient Book of Odes.

'The great is Shang Ti, Described (even) in majesty, surveying all regions, seeking the repos of the populace.'

'The vast is Shang Ti, the Ruler of the populace below! How awful is Shang Ti! How irregular are many of His dealings! . . . (yet) it is not (infallibly) settled in evil time, but Yin, is not following (the good) old ways.'

'There is the majestic Shang Ti. Does He know that? (Yes). He gives rain and fruitful seasons. How beautiful are the wheats and barley! What shining produce we shall receive! The bright and glorious Shang Ti will give us a good year.'

In another ode there is the exhortation, 'Have no doubts nor anxieties, Shang Ti is with you.' This message occurs in other languages, a thousand years later, in the Annals of Suen-ma Ch'en, addressed to the emperor (Han) Wu Ti (140–87 B.C.): 'Shang Ti bends down to grace and mercy, looking for blessing, bringing (the empire) to a commendable conclusion.'

The great essentials of the devout life are described as having been fulfilled in the case of Prince Wen (father of the founder of the Chou dynasty): 'This Prince Wen, with the carefulness of a fluttering bird, served Shang Ti intelligently, and secured abounding blessing.' This passage is the more interesting as marking the non-imperial worship of Shang Ti, for the title 'Prince (or King) Wen' is merely a title of canonisation given to duke Ch'ang of the State of Chow, otherwise called 'Marquis of the West.'

The special ceremonies of worship, in yet earlier days, on the part of T'ang the Completer, before he ascended the throne, are thus described by the worshipper himself: 'I, the little child . . . presume to use a dark-coloured victim, making clear announcement to the spiritual Sovereign of the high heavens.' Such is the version in the History Classic, and In the Analecta of Confucius: 'I, the little child Li (the child-name of T'ang), presume to use a dark-coloured victim and presume to announce to thee, O most majestic and imperial Shang Ti. And the consciousness of priesthood on the part of the sacrificer, not yet 'Son of Heaven' or special representative of Heaven, is expressed in the rest of the invocation: 'If in my own person I commit offences, they are not to be attributed to the population of the land. If the populace commit offences, they must rest on my person.'

Leaving unmentioned about seventeen other references to Shang Ti in the Book of Odes, we find the requirements of kingly worship described by a statesman of the Sung dynasty (Li Kang, 1085–1140): 'Heaven is to the sovereign lord and mother to a son, loving him with an extreme love,
and therefore giving him extreme adoration. Thus a ruler of men, admonished by Heaven, must be fearful, and keep in mind the point to which he is so sincerely bound. To this a statesman of the 12th cent. (Hu Hung) adds: 'The sovereign serves Heaven as a son serves his father. He must do so in the same way. That emperor was noble, and the most refined of them all. He selects a spot of rural land to the south of the city, sweeps the ground, and says to Shang Ti of the vast Heaven, the word "Heaven" pointing to His disposition, and the word "(Shang) Ti" referring to His essential nature.' An emperor of that dynasty (Hsiao Tsung, 1183-1190) applied to this: 'I sincerely, and reverently serve Heaven, and Heaven continues to make me happy and blessing.'

That some of the ceremonies of Imperial worship were originally undertaken by way of example to the populace seems clear from their connexion with the annual handling of the plow by the sovereign and local officials—a ceremony continued every spring-time until the Revolution of 1911. The Book of Rites says: 'In the first month of spring the Son of Heaven prays to Shang Ti for a good harvest, and himself handles the plow.'

An emperor with an otherwise fair name set a very different example to the populace in after years by identifying Shang Ti with the visible sun and raising himself to a position of equity with Shang Ti as an object of worship—calling forth the condemnations of the best scholars ever since in connexion with his adoption of five TVs at the emperor Wang Ti (Han) Wên Ti (179-157 B.C.). The story begins with the accession of 'The First Emperor,' as he termed himself, in the year 259 B.C., and for the time abolished the ancient worship of Shang Ti, setting up as objects of worship eight new deities, Heaven-lord, Earth-lord, War-lord, Yang-lord, Yin-lord, Moon-lord, Sun-lord, and Earth. So great was the resulting disorganization of Imperial worship that Wên Ti, coming to the throne fifty-two years later, passed fourteen years of his reign without attending to any religious rites at all. Then in the fifteenth year of his reign, he was informed by the Master of Ceremonies that of old the Son of Heaven every summer (he should have said 'every spring and autumn') personally offered ceremonial worship to Shang Ti, and the emperor, awaking to his duty in the matter, went forth to do so. But, with the old custom, he said: 'I now personally offer sacrifice to Shang Ti, but Regal Earth is without a sacrifice, and so the ceremony is one-sided!' whereas upon he erected an altar to Regal Earth, and offered similar sacrifices thereon. Thus the historian Hsiao Tsung relates in his 'Sacred Records.' And in his 'Historical Records' proper he says that altars to the 'Five Imperial Ones' were also erected. The emperor Chao Ti, of the last dynasty, in his 'Imperial Annointings,' criticizes these serious public innovations by saying: 'Those who know the true constitution of the universe may not allow themselves to be thus deluded by spirits and bogeys.' And the editor of the Easy Edition of History in 1711 exclaims: 'Heaven is one! And to talk of Five Imperial Ones! Such is not following antiquity! Sick-minded Emperor!' The action of Wên Ti, however, was to be outdone by the weak emperor Hui Tsung (A.D. 1101-1126), who deified a favourite court magician as the 'God.' Literally 'Gemmons of Jade Shang Ti'—still the chief idol of decadent Taoism.

Under the term 'Heaven,' as used of the Supreme, there are many fine utterances. In the works of Yang Tsung (53 B.C. to A.D. 18) we read: 'Heaven is spiritual, Heaven is intelligent, with an enlightened knowledge of all regions; Heaven is pure, that no filth contamination may enter. It is a sacrifice, without equality to which is no sacrifice; it is homage thereto.' Heaven is claimed by Confucius as the source of all that was good in him; and of the task of national renovation the History Classic declares: 'The prime duty of the Prince is to be a virtuous ruler (but) deputy.' A work ascribed to Chiang T'ai-kung (12th cent. B.C,) and on sale at the official libraries, contains the words: 'Heaven's extreme partiality in practice is really extreme justice.' The erratic philosopher Chang-Tsun (3rd and 4th cent. B.C.) exclaims: 'Partiality is human, but a large compass belongs to Heaven.' And, in Lao-Tsun's muchquoted words, 'The net of Heaven stretches everywhere; its meshes are wide, but nothing escapes them.' Pan Ku, a notable historian (died A.D. 22) says: 'Heaven has a disposition (capable) of pleasure and anger, a heart of sorrow and joy, answering to that of humanity, so that Heaven and man may be as one.' And the work known under the name of 'Kuan-Tsa' says: 'When a man's deeds accord with Heaven, Heaven aids him; when his deeds are opposed to Heaven, Heaven disregards him. Those whom Heaven aids, though small, become great; those whom Heaven disregards, though successful, must suffer defeat.' 'Heaven is infinite and listens to the lowest,' says a work of the 3rd cent. B.C. In the Book of Odes some one suffering from slander exclaims: 'O vast and distant Heaven, who art called our Father, Mother!' and Chi Yuan (290-285 B.C.), under stress of calamity, says in one of his essays: 'Heaven is man's Origin; and man's Ruin!' and on the contrary he recalls his Sources. For when men are overwrought and worn out, who is there that does not cry to Heaven?' The latter remark applies to China to-day.

GOD (Egyptian).—x. Name and Ideograms.—It is quite in keeping with the ancient reverence for the systematic faculty among the ancient Egyptians that, in the vast profusion of their religious literature which has come down to us, no definition of the term 'god' has ever been found. For our knowledge of the concept we have to fall back upon discrepancies allusions in the extant texts. The conditions of the earliest age of Egyptian civilization are indicated by ideograms which retained their ancient form in the script even when the objects for which they stood changed their shape. Of the ideograms used for the term 'god,' the subsequently rather frequent figure of the star (☆) was derived from the occasional, but never altogether systematic, identification of the gods with the stars. The figures of the hawk or falcon for 'god,' and of the Uraeus-serpent for 'goddess,' recall the incarnation of the sun-gods (with which a large number of other gods were subsequently assimilated) as falcons, and of goddesses in serpents. The late usage of figures of the three most sacred birds—hawk, ibis, and heron—instead of three hawks, the Uraeus-serpent 'gods.'

3 According to Lortet, Bulletin de l'Inst. franc. d'Archeol. du Caire, III. (1909) III. 1., the Fa'ao peregrinus. In the animal sepulchres, the most diverse kinds of birds were mingled together (Lortet and Gallard, La Faune momofie de l'ancienne Egypte, Lyons, 1908, I. xii. 14), and these can hardly have been precisely distinguished by the Egyptians.
A much more frequent figure is the short axe (†), similar to that used by soldiers. The axe-head was let into a wooden haft and fixed with a bolt or wire, or sometimes with a wooden or metal wedge; to suggest the polished stone used for such tools in the earliest age, and superseded later by copper or bronze. In the Nubian period, instead of the single head, we sometimes find two somewhat thin and almost nail-like—attached to the handle. This symbol always represents a weapon, and in the inscriptions the standard, with which some have sought to identify it. It is normally depicted in a different way. A cult of weapons is certainly met with on Egyptian soil. In the semi-Libyan Seth a shield and two arrows served as a sacred symbol of the name, while an amulet with its strap formed the ideogram of the goddess Neith. Implements of war were worshipped in the Upper Egyptian city of Pa-ahb, 'the house of conflict,' and are specified in a list from the reign of Pepi I, while a duplicate of this list, dated from the reign of Sesostris I, enumerates the weapons as slings (†), axes, sceptres, clubs, harpoons, and two arrows. But the weapon-cult was, on the whole, so severely limited to a range that, while the derivation of the symbol for 'god' is evident, we cannot safely trace the connexion with certainty.

The regular term for 'god' has the soundтвор, but from the time of the XVIIIth dynasty the final כ is left in many other Egyptian words, tends to be dropped, and the Copt. נטוי begins to come into use. Besides signifies 'natron'—a designation which, in view of the fact that this substance was used for embalming, might well arise from the meaning of 'divine'—the wordтвор may be applied in two senses, vis. (1) to 'strike,' 'knock down,' 'throw,' and their derivatives (§), which, while it is written, not with the symbol for 'god,' but with another syllable sign, would nevertheless accord with the figure of the axe; and (2) to 'grow,' 'thrive,' 'be young' (†) —not, however, in the special sense of 'to come periodically and to be renewed,' as Lorent (SpG, zl. 86.) supposed; nor can the meaning 'to be vigorous' or 'powerful' be decisively made out. The crenellated rampart with which the symbol is sometimes surrounded was intended, like the cartouches enclosing the king's name, to safeguard the term and its correlative concept against malicious magic.

The frequently recurring property of the youthfully fresh god, is to be understood in the sense of 'being and becoming fresh, like a plant.' But this does not involve the wider sense of 'the god who by being renewed creates everlasting life for himself,' as such personal immortality was not an attribute of the Egyptian deities, who, as a matter of fact, grew old and were mortal. It is also doubtful whether the idea of vegetative youthfulness is really equivalent to the fundamental conception of deity, as, apart from the isolated figure of the sprouting Osiris, the distinctive character of which must not be regarded as general, plant-cults play by a small part in Egypt. A reliable derivation of the term נטר is, therefore, still to seek.

2. Monotheism or heterotheism?—The earlier Egyptologists believed that a species of monotheism must have existed in the Valley of the Nile. As a primitive revelation, this, it was supposed, would mark the starting-point of the religious development, and was afterwards forgotten and overgrown by polytheism, so that it is now traceable only in vestiges. Other scholars were of opinion that monotheism existed side by side with polytheism, but that it was known only to the learned, i.e. the priests and the initiated. The theory of an Egyptian monotheism was often combined with the hypothesis that a doctrine of mysteries likewise prevailed here, though this finds no support in the religious texts. More, arguing from the mystery plays of the Middle Ages, applies the term 'mysteries' to the Egyptian doctrines of immortality and of the ritual necessary for the attainment of the life beyond; but, as the texts show, these doctrines were in no sense esoteric. Greek writers who treat of the Egyptian mysteries speak of the belief in immortality—which formed an element in the secret mystery cults of Greece—as being an esoteric doctrine also in the Nile Valley, but here they are undoubtedly mistaken in their conclusions. In Egypt the only mysteries were magic words and ceremonies. Nor does the statement that certain chambers of the temples could be entered, and certain ritual performances witnessed, only by the initiated find any support in the extant texts.

From the Egyptian texts scholars have laboriously collected such passages as would indicate a higher conception of deity, or such as attributed to the deity the qualities appropriate to a god regarded as One. They have also found passages which speak of a god as the creator of all life and all existing things, as one who traverses eternity, the lord of infinite time, one who cannot be grasped by the hand, whose evolutions are a miracle, the outstretcher of whose being knows no limits, and who is king in Thebes, and, simultaneously, prince in Heliopolis, and the great of crowns in Memphis. He cannot be seen; he listens to prayers; he turns his countenance to men according to their conduct; he is hidden, and his form is not known; he is alone, and there is none beside him. These attributes, however, were not all ascribed to the same deity, but now one now another of them was regarded as the special property of Ammon, of Ra, of Ptah, or of some other member of the pantheon. Even when the texts refer to the One deity, they speak also of other independent figures. The One god is at most described, in a purely material sense, as the begetter, father, builder, conciliator, or king of the other higher powers. He is then, as such, the sovereign of the world of gods and men—one who, corresponding for the time being to the earthly Pharaoh, reveals his will to his subjects by decree. In all this, however, he is never more than primus inter pares.

Nor is this relation essentially altered when it

GOD (Egyptian)

comes under the operation of syncretistic modes of thought, for in that case the other deities are defined as the various existences or phases (vas-es, 'names') assumed in other localities by the One god, whose 'names' are many. The tendency to such syncretism was specially active in the later period. The high god of Amon-Ra, Ptah, Hator, Khnum, Isis, and others. The practice finds expression more particularly in hymns, which ascribe the supreme, all-dominating position to the deity who happens to be invoked for the time, as, e.g., to Amon-Ra,1 to other deities in the Oasis of Chargab,2 in Euseb,3 and so on. At a much later day, Apuleius (Metam. xix) states that the slave name of the god whose he was worshipped with various ceremonies, and under various forms and names, was Isis. How artificial the procedure might be in such cases may be seen from an inscription of the reign of Sabako, the aim of which was to assign, by syncretistic methods, the highest place to Ptah of Memphis.4 Such texts, however, just as one of the prominent deities that they give to the one deity invoked, are of little value for a proper estimate of the Egyptian religion as a whole. Notwithstanding textual data of this kind, the One god held the consuetudinary position only at a particular place, and even there the other gods are not absorbed in him, but maintain their own functions and individualities.

Egypt was an attempt made, with the aid of the civil power, to invest a deity with a more comprehensive sway. Aibon 1440 B.C. Amenophis iv. tried to secure a wider range for the cult of Aten, the solar-disc—understood in a purely material sense; and this not without result. To this deity the king dedicated his residence, on the site of the present Tell el-Amarna, and erected temples in his honour at Thebes, Memphis, and Heliopolis. The temple itself, however, though its worship was thrown into the background, was not abolished. What is said by king Tut-an-kh-amon (on a stele published and translated by Lepsius, AT xliv. [1871] 102 f.) regarding the plan of the temple, is really intended to extol the merits of the former in restoring the sanctuaries, and is not to be taken too literally.

The theory that Amenophis iv. engaged in a thoroughgoing campaign against all the traditional deities of his country is refuted, too, by the character of the reaction against the cult of Aten which took effect after his death. It is true that the temple of Aten in Thebes, and perhaps also in Memphis, was desecrated at the time of the death of the king; but the monuments of his reign are, for the most part, left unimpaired. As a matter of fact, a considerable number of those monuments survived till a late period in the temple of Aton himself as Aten.5 Amenophis iv., in his religious reforms, did not in any sense deny the existence of Amenophis iv., as he himself unhappily wrote. While he seems to have held that Aten was the only deity with whom he and his kingdom had any concern, he was no monotheist in the strict sense of the word. It is to be regretted that his reforming movement cannot be more closely followed, as only in very few cases, as our only real information regarding the cult of Aten is derived chiefly from hymns,6 upon whose extraneous language we cannot safely rely.

The apparently monothestic expressions on Egyptian monuments rest in reality upon heno-

thegistic modes of thought. Each name fom its supreme Divine authority in its special deity. The gods from which the Pharoh had sprung was always regarded for the time as the most important of the nome-gods. The very fact that he had raised his devotees to the throne of Egypt showed the place of other gods in heaven in the divine mind. But his prestige lasted only so long as his chosen dynasty held the reins of power. If his favoured deity, for whom he had done so much, perished, its members worshipped a different deity, he himself had to give place to the latter. Thus, on merely political grounds, the supreme position was held in the Old, in the Middle, and in the New Kingdoms by Amon, and in the Saite period by Neith.

As a rule, however, the supreme position of the nome-god did not rest unchallenged even in its own home. Here also he had to tolerate the cult of other deities, who, like the sun-god Ra, or Osiris, the god of the dead, were enshrined by all Egyptians, or were concerned in some special way with certain localities, occupations, families, or private individuals. The lower classes in particular took little cognizance of the nome-god, or of other gods worshipped by people of higher rank. They preferred to worship deities whose sphere of action was believed to be relatively narrow. Some of the popular deities could increase their power at any time; others had special functions, as, e.g., that of affording security against demons in general (Bes), at birth (Tuberser), or entering the under-world (Mentu, a form of Hator), or that of protecting the corn (Neperu), etc.

This class also includes the special and temporary deities (germ, djet, mst). These, e.g., i.e. the numerous by-forms in which the great gods were invested with independent personalities, and which sometimes attained to an important position in the pantheon. In the case of Imhotep, 'he who comes in peace,' and Sochet, 'the mighty,' a secondary form of Sechet of Memphis. Probably Amon, 'the hidden one,' was likewise associated with Khons, the god of fertility. To the same class belong, in particular, the numerous animals which might be regarded as animal-deities or as sacred animals.1 Though the worship of such animals declined in the great temples, a wide range of power was frequently still ascribed to them. In many cases the penalty of killing one of these animals, even unintentionally, was death. Such an occurrence demanded an atonement, in order to protect the country from the vengeance of the slain animal and the ruler of its species—a vengeance which not even the greater deities would otherwise be able to avert.

The existence of monothestic in ancient Egypt has been inferred, finally, from certain expressions in the so-called 'moral papyri.'2 In these we read that certain acts are desired, or rewarded, by 'god' (hnet), no particular deity being mentioned by name. In point of fact, however, the reference in such expressions is not to a mysterious, all-ruling God, in whom, as contrasted with the other deities of the country, the authors of the papyri believed. Any such inference would run counter to the established fact that these texts were designed for the general mass of a polytheistic people. In the passages in question the writer simply left the persons using the texts to supply the name of their particular nome- or family-deity. In certain cases he may himself have regarded the deities in place. Thus the use of the term 'god' in

7 A long hymn addressed to him was first published by Bourgeois. Mém. du Caire, i. 1896 f.; cf. Wiedemann, op. cit. p. 232 ff.
9 Most recently Budge, Osiris, i. London, 1911, 845 ff.; similarly Recueil, Lectures, p. 100 ff.
these passages may be traced to the same vein of thought as found expression in the celebrated dedication to Isis, found by St. Paul in Athens (Ae 179), or theSITE THE pile of sacred offerings upon the altar erected c. 100 B.C. at the foot of the Pyramids of Egypt. The foregoing considerations warrant the inference that the ancient Egyptians held much in common among the religious beliefs, but that they had a leaning towards the hieratical conceptions, which, though they were not consistently applied, yet readily combined with the local and proverbs. 

3. Systems of deities.—With a view to introducing some kind of order among the vast multitude of deities, the Egyptians attempted from a very early period to arrange them in groups. One such group after another was believed to have reigned as Pharaohs; or, again, a particular deity was regarded as the king, or as the father and lord, or of others, as in the names of Heliopolis. In other instances we find certain smaller groups, as the god of Heliopolis, who sometimes also in the form of triads, which might appear as families (father, mother, son, and, in Thebes, usually very loosely connected, or in even less coherent unions (god and two goddesses, in Elephantine) which never developed into triads. Alongside of these we also find larger families (the Osireion, and various other arrangements. But none of these seem to have been more or less parochial, or to be of general occurrence, as in the case of the great deities, or to have had in general more than a local vogue. Moreover, the deities of a certain cycle in one locality might belong to an entirely different group in another. There was no single system embracing a majority of the pantheon, and, consequently, the functions of the individual deities were not everywhere defined in the same way. The same god might for the time be concentrated in a single deity, and, if occasion demanded, the functions of a kind of god or goddess were ascribed to him in a cycle, or to the god of a special point, and thus the deities, this arose from fortuitous and, for the most part, spasmodically operating causes, which were nowhere permanently recognized.

4. The anthropomorphous character of the deities. —The gods, while they might assume the external form of men or animals, mostly, as the products of human art, were always represented as having the feelings and needs of men. They required sustenance, and food and drink were accordingly offered to them in sacrifice. Even the obelisks, the embodiment of the sun-god, received oblations of loaves and beer. In the daily worship, moreover, articles of clothing, ornaments, fumigations of incense as a protection against evil spirits, and the like, were consecrated to the deity in a fixed order of sequence. Attention was paid also to the housing of deities in temples and chapels, and to making these acceptable to them by such necessities as groves, lakes, ships, attendants, slaves, etc.

In all this the relation between the deity and man rested upon the idea of reciprocity. The worshipper attested to the needs of the god, and the god was expected to requite the worshipper with divine gifts—life, prosperity, health, happiness, victory. In the temple-reliefs we see king and deity facing each other as partners in a ceremonial act. The world was ruled by a pantheon of deities, the so-called Dynasties, or the history of ancient Egypt, as it is called, or the field. Within the temple, the god was represented as a living being, and the deity was regarded as a living power.
The fullest list of human attributes is met with in the case of the Ea. The centre of his cult was Heliopolis, but the kings of the Vth dynasty had erected great sanctuaries to him in the neighbourhood of Memphis. The Theban Book of the Dead requires the deceased to present his sons of Ra, who, assuming the personal form of the reigning monarch, begot his successor, as is depicted, in the beautifulScarabaeus in the British Museum, and Amenophis III. in Luxor. Ra is accounted the king of gods and men; he is decrepit with age; his spittle drips from his mouth; his limbs have become like gold, and lapsis lacrimi; he prevails over mutinous deities only by the aid of the sun-god Horus of Edfu. Incensed at the refractory race of men, he issues to the goddess Sechet an order for their annihilation, but presently repents, and can thereafter deal with the destroying goddess only by wiles. He suffers agonies as the result of a battle in which he is buried. Nor are things any better in the case of other gods. Thus the sun-god Horus receives an injury in his eye. Osiris is slain and cut in pieces by his hostile brother Set. Horus suffers from head-injuries and internal pains; he is stung by a scorpion, and, especially in his youth, has other afflictions to endure. The goddess Sechet becomes intoxicated with a mixture of beer and blood (legend of the annihilation of mankind); and there are many other incidents of similar character. Popular tales, in representing the gods as altogether human, were really quite the spirit of the tempera ment. According to these stories, the gods move about the world as a band of musicians (Papyrus West-copel, 8), by whose music, composed by the god of Egypt to the gods to earth, and presents his favourites with gifts which afterwards work injury to their recipients (Papyrus d'Ordiney). In these inscriptions we are, more rarely—the greater deities, e.g. the Sun, Khnum, and Ptah, as independent figures. Here there is no reference to the power of magic; the desired boon comes simply by the favour which the gods manifest in response to urgent entreaty. That the deities who thus manifest themselves as mothers of petitions by the gods manifest in response to urgent entreaty. Especially similar ideas lie at the root of what we find in the stele of Amenophis. Memphis beheld the figures of the ear in large numbers, and sometimes speaking of Ptah as the hearer of petitions. A list of the deities who thus manifest themselves as hearers of petitions like those of the Egyptian language.

The idea of ascribing to a deity a large number of ears is also met with elsewhere in Egypt. Thus a certain very powerful deity is alleged to have seventy-seven eyes and the like number of ears; and in a hymn to the king—regarded as equal to the God—we find the words: When thou takest rest in thy palace, thou hearest the words of all lands, for thou art endowed with innumerable ears.

The multiplicity of gods was supposed to make the anthropomorphically conceived deity able, in a material sense, to listen simultaneously to the numerous and varied petitions of many individuals. But the texts in question do not present, as has been surmised, a higher conception of deity. Those who were too far away from the main currents of life, the people of lower rank, and could, therefore, make no pretensions to possess magic powers. In the realm of the dead they were not of those who dictated or demanded, but of those who entreated, and, accordingly, they were not in a position to extort, but could at best only try by submissive humility to win, the favours of the unknown. Here, as elsewhere, they paid homage to the popular deities, and especially to the sacred animals, as those who would be more likely to be interested in them than the greater gods. The utterance, in a like submissive tone, which sometimes emanates from persons of higher rank, are to be regarded as mere cajolery, since in other parts of the same texts it is assumed that the deity is subject to the power of human magic and dependent upon human goodwill.

Conclusion.—The conception of deity among the ancient Egyptians thus never got beyond the primitive stage, and there is no evidence to show that it attained to any highly developed or refined form. The belief in the future life seems to have emerged in the hymns to the gods, it is at once repressed by the ascendency of magical doctrines, and by the all-dominating idea of the reciprocal relation of deity and humanity which rests upon the assumption of their essential equality. A. WIEDEMANN.

GOD (Greek).—The words most nearly corresponding to 'God' in the Greek language are θεός and θεότης, both derived from unknown origin,—the former rather conveying the sense of an individual personality, the latter of a spiritual power. Minor differences and changes of meaning will appear in modern. The purpose of the present article is to trace the gradual development of the characteristically Hellenic conception of the divinity.

1. We are met at the outset with the prevalence of a multiplicity of gods. One who undertakes to unravel the tangled web of Greek polytheism is described by Plato as a laborious, and not very fortunate man (Phdr. 229 D, ἀλβοτα ὑπὸ τοῦ ἐνδυμαγμονοῦ τῶν θεῶν). The former epithet remains, and will long remain, most apposite. But recent discoveries in archæology and the comparative study of religions have removed some part of the obscurity. The earlier communities, whether they lived by hunting, pasture, or some primitive agriculture, could not but feel their dependence on powers over which they had only a limited control. Wild animals, their own flocks and herds, the seasons of the year, rivers, fountains, wind, and rain were of the utmost importance to them; acts hostile or benign, were also inspired by the growth of the forest and the darkness of the cavern, suggesting to the imagination the existence of subterranean powers into whose keeping the souls of departed from earth departed. It is sometimes assumed that primitive worship was wholly inspired by terror, but this must not be the case. The germ of hope and of affection. On this subject the words of Auguste Sabatier are worth considering (Philosophie de la religion, Paris, 1887, p. 15):

'En elle même et toute seule, la peur n'est pas religieuse; elle paralyse, elle rend stupide, elle assoucit. Pour que la peur devienne religieuse il faut qu'elle se mêle de l'adoration, de l'adoration, un sentiment contraire, un doute d'appréhension; il faut que l'homme, en proie à la peur, commette ou doute au moins de la surmonter, c'est à dire de pouvoir vaquer à ses biens, un accours pour conjurer les dangers qui le menacent.'

The god of the family or tribe, perhaps an ancestor who had passed into the Unseen, was looked up to as the protector of his race from hostile powers, and from the spirit of death, with whose fruit the primitive imagination was always ready to suspect as dangerously near. Immigrants by land or sea must have found new gods, of which probably that of some earth-goddess and of a heavenly rain-giver were most widely spread. The new-comers applied to powers worshipped by the conquered tribes in the lands familiar to themselves. The Aryan warriors may have found on certain mountain-heights the worship of a cloud-compelling deity, giver of the rain, whom they identified with their God of Lightning (Δίας = Zeus); just as the word which signified the bee in northern climes was now applied to the oak, or as the Greek in later times recognized the objects of his habitual reverence in the gods of Egypt or of Persia. Thus the power that dwelt in the forest of Dodona now took the name of Zeus, and his female counterpart became Thetis, while on Mount Lycaon the wolf-god that ravaged or spared the flock was likewise Zeus in the new nomadic tribe. Apollo, perhaps a sun-god, was identified with the protector of the world of the Aryan, while Athena (perhaps a lightning-goddess), Artemis, Hera, Demeter, were names applied, whether by the Aryans or by some earlier immigrants, to female powers previously worshipped in different localities. Aphrodite, Hercules, perhaps Poseidon, owed their existence to Phoenician or other colonists by sea. Already those hospitable shores were sensitive to foreign influences. Asia was a Thracian; Dionysus partly Thracian, partly Cretan. Yet even he, though confessedly a late-comer, must have found in primitive village-festivals a congenial soil.

The Aryans also brought with them their own patriarchial system, involving the worship of ancestors, whom each family had its peculiar cult; and, when the family had grown into the tribe, there followed an amalgamation of such cults under one presiding power. Hence came a grouping of divinities differing in each central district, until in certain regions an amphiachtyorny (ξυστ., or federation of neighbouring communities, was loosely combined under the protection of one chief god—as Apollo at Thermopylia, Poseidon at Calauria, Zeus at Olympia, Artemis at Atoll; and, as tribes were gathered into states, one worship in each place tended to become supreme,
Such abstract notions as justice, mercy, or reverence, were in the Greek mind, embryonic. The attributes of such deities were modified by the character and history of each city. Athens had different attributes at Athens, Sparta, Thebes, Corinth, Thessaly and Caria, Nemea at Nemea, Rhamnus and Smyrna. Powers once supreme, as the Graces, vegetative powers at Orchomenos, became subordinate to more prevailing deities. Colonies on the Asiatic seaboard, or elsewhere on the Mediterranean coast, and the several island communities were subject to special conditions. Apollo was the same and not the same at Delphi, in the Troad, and at Branchidae; Athens at Athens, in the Troad, and on the shores of Africa. The worship of these local cults was further modified in various ways. One potent cause was the love of story-telling which created mythology. When Hellenic worshippers were asked, 'What mean ye by this service?' their ready imagination furnished copious replies. Hence came an almost endless multiplication of deities; for each attribute of a god or goddess tended to become a separate personality. Thus to Artemis were added Callisto, Iphigenia, Dictyna, etc.; to Aphrodite, Peitho, Harmonia, Helen, Ariadne; to Athena, Aglauros and her sisters; to Hera, Eileithya—and so on. Such additions were further developed in literature and art. 2. The Homerice poems show this development already at an early stage. They present the gods, with a special grouping of the chief deities, embodying possibly the same of Achian culture. Zeus is at all, but his nominal omnipotence is limited in reality. And the, so-called trinity of Zeus, Athena, and Apollo is the usual sanction for an oath. By this time the power of divination, once vaguely attributed to an earth-goddess or some demigod, was more definitely attached to some object, at many local shrines, was concentrated first at Dodona, and afterwards at Delphi, where the priesthood had secured a predominate and widespread influence.

Beneath the many-coloured veil of mythology there is evidence of the unconscious working of the human mind, endeavoring to form a general notion of that which is higher and mightier than man. All manner of mortal weaknesses are attributed to individual gods; yet there are grave moments in their lives, we not unworthy conceived, and in times of exceptional emotion not an individual god is present to the mind, but the gods collectively. The Hesiod and in the Odyssey, where the gods, both as and and as , are often spoken of without particular mention of Zeus. What, then, are the general attributes of the Homerice gods? (1) They are immortal. This privilege is shared by some who are not dwellers on Olympus. (2) They live at ease (water), exempt from pain and sorrow. (3) They feed not on the produce of the ground, but on ambrosia and nectar. (4) They are in their nature inviolable, but have the power of appearing to men in various disguises (sometimes as birds). (5) They are the givers of all good, but (6) they are ever ready to punish the breach of an oath, the oppression of the stranger, and other acts of wrong. The Muses, who contend with them in doomed to perdition. They visit cities in the guise of strangers, to observe the just and unjust deeds of men.

The poetry of Hesiod reflects a parallel and partly independent growth of the religious consciousness. The Muses of Mount Helicon are imagined as revealing to their devotees the realities of the superhuman world. A crude form of reflexion comes in aiding of poetic fancy, and is associated with a strong though simple ethical conviction.
society, but do not exist in the free life of Nature. The mystery of self-reproduction, of eternal unity amid temporary diversity, is the key idea on which all the requisite legends and ceremonies that cluster round that worship, and all the manifold manifestations or diverse embodiments of the ultimate single divine life depend. 

That religion had some elements essentially alien to the Greek spirit, which, however, like all strange things, became a powerful distraction for individual minds. Obtaining a footing at seaports, these cults found their way into the cities, bringing with them some impurities for which the earlier Greek cults were again not responsible, but also diffusing a spirit of mystical devotion which in the Orphic and Pythagorean schools was associated with ascetic strictness of conduct.

6. Excesses, however, whether of impurity or asceticism, found little response until the decline of Hellenism, except on the outer fringe of Hellas. Corybantic wildness remained a peculiarity of semi-barbarous lands. The Attic of Catullus has nothing corresponding to it in classical Greek. Laments for Adonis were confined to women. Dionysian exuberance, in Athens at least, had been tamed and regulated through the institution of the drama. To some such influx of foreign ideas, in which Egyptian, Oriental, and Thracian influences mingled, must be attributed here the origin of the oracle at Delphi. A crude theosophy had already appeared in Essed. The tendency to Pantheism and theological absurdities (see Hesiod) had shown itself here and there, and in the worship of Dionysus the notion of a god who suffers, dies, and lives again was already present in germ. There was a tomb of Dionysus at Delphi, as probably in Crete. The founders of the Orphic mystery weaved these several threads together in a new mythology. Dionysus Zagreus, born in pieces by the Titans, lived again not responsible, but also diffusing a spirit of mystical devotion which in the Orphic and Pythagorean schools was associated with ascetic strictness of conduct. 

6. Excesses, however, whether of impurity or asceticism, found little response until the decline of Hellenism, except on the outer fringe of Hellas. Corybantic wildness remained a peculiarity of semi-barbarous lands. The Attic of Catullus has nothing corresponding to it in classical Greek. Laments for Adonis were confined to women. Dionysian exuberance, in Athens at least, had been tamed and regulated through the institution of the drama. To some such influx of foreign ideas, in which Egyptian, Oriental, and Thracian influences mingled, must be attributed here the origin of the oracle at Delphi. A crude theosophy had already appeared in Essed. The tendency to Pantheism and theological absurdities (see Hesiod) had shown itself here and there, and in the worship of Dionysus the notion of a god who suffers, dies, and lives again was already present in germ. There was a tomb of Dionysus at Delphi, as probably in Crete. The founders of the Orphic mystery weaved these several threads together in a new mythology. Dionysus Zagreus, born in pieces by the Titans, lived again not responsible, but also diffusing a spirit of mystical devotion which in the Orphic and Pythagorean schools was associated with ascetic strictness of conduct. 

7. Philosophy in its earliest form stood aloof from common life, and involved a reaction from ordinary belief and custom. Xenophanes despised anthropomorphism, and Heraclitus could not tolerate the absurdities of the ascetic sacrifice. Yet each great speculative effort was in effect a seeking after knowledge. The Heraclitean theory of Change, the True World of Parmenides, the Thought of Anaxagoras, Pythagorean Number, were modes of expression for a conception of the Supreme Being. Meanwhile, apart from philosophy, and from Orphic innovation, there were significant changes both in popular worship and in literary expression. The grouping of divine powers was symbolized by a common altar-place (cosmòpóles), either for the eight or for the twelve greatest gods, at Athens and in Argolis; and the generalizing tendency already noticed becomes more distinct. In Herodotus, for example (i. 32, vili. 46, vili. 13, 60), the idea of God which is present to the historian is at once impersonal and personal. All exceptionally striking events and extraordinary phenomena are accounted for by a supernatural providence above and beyond the action of individual gods (see especially the curious case of teleology in Herod. iii. 108). The stage of religion which appears in his history probably dates from an earlier time than that of their publication, representing to spirit which may be described as social pessimism. The old suspicion of Divine malignity was confirmed by the sad uncertainty of life amongst those who lived beneath the ever-threatening head of Fortune (see stoicheia ev aletheia ev kureia, Herod. vii. 86). 

The idea of Fate (q. e.) as distinct from Divine volition at the same time acquires increasing prominence (θεός, χρόνος, Ἡρακλ. 930). The hope of immortality, which in Homer had grown dim, was revived in the Eleusinian worship, and found poetical expression in Pindar. This poet has sublime conceptions of the Divine nature as exalted above the petty things of this world, swift, etc., and he refuses to accept fables that seem to him degrading to the gods. But his ethical standard, that of the Hellenic aristocracy of birth, though noble in many ways, has not the human breadth and depth of the great tragic poets.

6. Ἀρέσχυς absorbed and carried further the theosophical speculations which were prevalent in the early 5th cent. B.C. For him they centred in meditation upon human things. The idea of Divine rightness striking a harmony amidst a clash and conflict of events and bringing order the moral chaos of the primitive world is the dominant note in him. He reserves the word 'God' (θεός) principally for the supreme name of powers, and sometimes makes expression opposition between the gods and the subordinate deities (see Εὐμεδεῖς). The mythophoric faculty is still strong in him. But his mythology is not fixed in a system. It is an elastic medium for the expression of his thoughts. Apollo is the prophet of Zeus; Athene represents the glory, the freedom, and was equity of Athens; Poseidon the seer. The Divine attributes he came to see clearly the necessity of combining power with beneficence and Wisdom (Προμηθέας Ζωοτροπός) 9. In Sophocles the idea of justice is identified with the righteous but inscrutable will of Zeus, and destiny becomes the symbol of the mysterious, unaccountable element in life. 'The burden and the mystery. Of all this unintelligible world.' 

9. δησισθαί is used of any superhuman power directly acting on the life of man. 

The 'eternal laws' (probably an Eleusinian notion—see Lydias, ad nov. Andoc. p. 104) may not be broken with impunity either consciously or unconsciously, but the noble spirit, though over-clouded for a time, is ultimately justified. Some notes of sadness here and there, chiefly in late plays, prepare us for the asceticism and newer pessimism which find frequent utterance in Euripides. This belongs to the period of the Sophists (q. e.), in which earlier beliefs and positive speculations gave way before the one vision of the Supreme Being. Meanwhile, apart from philosophy, and from Orphic innovation, there were significant changes both in popular worship and in literary expression. The grouping of divine powers was symbolized by a common altar-place (cosmòpóles), either for the eight or for the twelve greatest gods, at Athens and in Argolis; and the generalizing tendency already noticed becomes more distinct. In Herodotus, for example (i. 32, vili. 46, vili. 13, 60), the idea of God which is present to the historian is at once impersonal and personal. All exceptionally striking events and extraordinary phenomena are accounted for by a supernatural providence above and beyond the action of individual gods (see especially the curious case of teleology in Herod. iii. 108). The stage of religion which appears in his history probably dates from an earlier time than that of their publication, representing to spirit which may be described as social pessimism. The old suspicion of Divine malignity was confirmed by the sad uncertainty of life amongst those who lived beneath the ever-threatening head of Fortune (see stoicheia ev aletheia ev kureia, Herod. vii. 86). 

10. It is observable that in the later tragedies the word for 'God' (θεός) is used with increasing laxity—for instance, for Nobe in Soph. El. 180—and is predicated for mere abstractions, such as Time (καιρός τοῦ θεού), Soph. El. 179, Thought (θεωρεία τοῦ θεού), Soph. frag. 837, Caution (κεφαλαία καταφύγια, θεωρεία τοῦ θεού, Eur. Phem. 725). Wealth (πλοῦς οἱ κρατοῦσαν ὁμολογίαν τῷ Θεῷ ὁ τῆς καταφύγια καταφύγια, Eur. frag. 29; cf. Aristoph. Plut. 991, abstemfastness (ἀθρασμός ἡ ἱματία τοῦ Θεοῦ, Eur. Ion. 326, 327), Poverty (πλοῦς οίκοι καταφύγια καταφύγια, Eur. frag. 250), and even Recognition (θεώς ὁ θεός καταφύγια καταφύγια, Eur. Hec. 690). Here had anticipated this mode of speaking in saying of Rumour (ϕύμα): 'She also is a god' (θεός ἐστὶ τοῖς καταφύγια, Op. ed Dice, 762). How conventional Athenian religion had become, although it still had a powerful hold, appears from the light treatment of Dionysus and other deities by Aristophanes.
GOD (Hindu)

11. With the career of Socrates (q.v.) a new era of reflection, at once religious and ethical, begins. Plato is probably justified in representing him as an accursed pursuit of truth by the command and inspiration of Apollo, and the Divine Intimation (sādānta) which chooses him, even when on the point of undertaking some new enterprise was likewise regarded by him as supernatural. While conforming to the religion of his countrymen, he rejected fables which attributed immortal beings to the gods. The simple theology which we have already noted in Herodotus was carried by him somewhat further in recognizing the adaptation of organs to function in the animal frame, and in giving the gods little future in opposing prayers for blessings which the gods had placed within human power.

12. Plato it necessary to distinguish between his allusions to popular conceptions and his own original thoughts. In one place the ordinary notion of God is spoken of as the fragment of a non-natural man (Phaedo, 236 C). In another the gods who exist through custom and convention are contrasted with the heavenly bodies to whom he attributes real divinity (Tima. 41). But when speaking of the gods in the widest sense, he expresses theological principles which are of permanent value. God is the author of all good, but also of evil. If He chooses men, it is that He may make them better. He cannot create evil. He is free from envy (here Plato contradicts his predecessors), and He would have His creature to be as like Himself as possible. In these and other passages preserved in Plato's writings, we find a methodical treatment of the subject. Elsewhere the place of God is taken by the impersonal idea of good. That is the Atlas on which the universe rests, and which preserves the stars from wrong. It is this which has validity in the highest principles of truth and being, and with which the fabric of the universe would collapse. Plato speaks with some reserve on theological questions, and in his Laws the most sacred rites are to be performed in the temple of the Sun. Yet above and beyond all such rules of worship, there are unmistakable indications of a true monothesticism. God is virtually identical with the good mind or soul, which in the end prevails over the evil or imperfect soul. That is the prime cause of motion and being—benevolence, unchanging, and unmoved. The unity of the supreme will is expressly recognized in the Statesman. Lastly, God is not to be confused of rite of atonement, nor by prayer and sacrifice; and only a less dangerous error is to suppose that He takes no interest in human things.

13. In the system of Aristotle, the spheres of theology, ethics, and politics, though not unrelated, are distinct. The life of action and of moral choice is human; the life of contemplation is alone divine. God causes motion, but is Himself unmoved. His unceasing, uninterrupted energy is the thought of thought (vôpia evróma). This metaphysical notion, seemingly cold and impassioned, is yet informed with a strain of philosophical enthusiasm which occasionally breaks forth (Ed. Nic. xi., cf. Met. xi.), and it has had an influence on theology (both Scholastic and Reformed) more persistently effective than Platonism as later understood. Even in Aristotle the perfection of the Divine nature as immanent in the universe is linked with the symbolism of the circle and the sphere. But these shadows of Pythagoreanism are not essential to the philosopher's thought. God, the prime mover, Himself unmoved, is at once the first and the final cause of all things. All Nature, from the lowest to the highest, is potentially Divine. From God it has received the seeds of being, and yearns to realize itself in the self-appointed pursuit of truth. It is the Denver and inspiration of Apollo, and the Divine Intimation (sādānta) which chooses him, even when on the point of undertaking some new enterprise was likewise regarded by him as supernatural. While conforming to the religion of his countrymen, he rejected fables which attributed immortal beings to the gods. The simple theology which we have already noted in Herodotus was carried by him somewhat further in recognizing the adaptation of organs to function in the animal frame, and in giving the gods little future in opposing prayers for blessings which the gods had placed within human power.

14. Epicureus, following the Cyrenaic school in ethics, and Democritus in physics, and adopting one of the heresies denounced by Plato, taught that the gods, living happy in eternal calm, cannot be supposed to interest themselves in the affairs of men. The Stoic, on the other hand, while adopting Heraclidian cosmology, deified the moral ideal, and looked for God within the human mind and will.

15. By the end of the 1st cent. A.D. it had become impossible for persons at once religious and thoughtful to accept the old mythology in a literal sense. Meanwhile other worshipers, especially those of Egypt and Persia, had met and mingled with the Greek and found wide acceptance in the Roman world. The blending of divinities (theopoiusis, 'syncretism') had gone far. In this wave of superstitions, those who clung affectionately to ancient ritual and tradition had recourse to allegory and device, until a treatise concerning Iris andni and addressed to a pious and intelligent lady, is very instructive in this regard. He is strongly impressed with the doctrine of monothesticism, and quotes largely from the Timaeus and Laws. His own thoughts point clearly to monotheticism. Yet he assumes that the religion of Egypt, however barbarous, is better than that of the heathen. His explanation of the worship of the crocodile may serve as an example of what occurs when the pure and simple eyes are so arranged that he can see while himself unseen, a power which is justly attributable to the Supreme Being. By accepting the notion of communication between gods and demons (hēdai kai thērakiai), Plutarch is enabled to effect a superficial reconciliation between monotheism and polytheism. The same antithesis was adopted and emphasized by the Christian Fathers, when they followed St. Paul in saying that the heathen prayed and sacrificed to demons and not to God (1 Co 10:14).

GOD (Hindu).—At the foundation of all the religious life and thought of India lies her sacred books. The literary element, inspired and controlled by a dominant class and largely accommodated to their own needs, only serves to indicate the breadth and comprehensive nature of which finds few if any parallels outside of Christianity. Among other peoples the appeal to what is traditional more or less automatically dominates the tradition as in the case of the sacred words, in the case of the Vedas and the Puranas, among Western nations, Indian life, on the other
hand, in its religious aspect is, broadly speaking, no less determined by the teaching of the Indian Scriptures. Every leader of thought, every reformer of his time, took his stand upon these, and claims to be their true interpreters. Any one who, therefore, of the forms and developments of religious thought naturally and necessarily begins here; and if he can make his way into these conceptions which the Indian peoples have formed of the Divine must take account in the first instance of the evidence and teaching of the author of these books.

1. The Vedas. — The earliest illustrations of primitive doctrine and belief as they existed in north-west India are found in the Rig-Veda; and the chronological uncertainties of this literature hardly detract from its supreme importance as a witness to the origin and development of 'theology' in the narrower sense of the word, the doctrine of God, as formulated and held by the Indian peoples. The succession of the literary strata, generally speaking, is not doubtful; and it is upon this that the history of doctrine rests. Behind it lies the Indo-Iranian period, whose ideas with regard to the unseen form matter of more or less well-founded conjecture, but hardly as yet of secure inference. That these early hymns reflect the higher and serious beliefs of the people is not doubtful — as on another plane of thought the Atharva-Veda reflects the craving for unnatural or supernatural power, the cunning and greed of primitive man on his guard against demonic influences, seeking to overreach his fellow-man, and fearful lest his foe should overreach him. Of both tendencies account must be taken in any attempt to trace the genesis and history of theistic belief. As a whole the Rig-Veda is the collection, and has been most influential upon later thought. The Atharva-Veda, however, contains elements of very great, probably of not less antiquity.

It has often been pointed out that the conceptions upon which these ancient hymns are based are those of a primitive Nature-worship — a Nature-worship, moreover, which is sufficiently frank and inartificial to enable us to watch the process of personification, and to trace its development from the scarcely-disguised natural phenomenon, where there is a lively collaboration from the physical appearance, to the idealized and abstract personification, clothed with moral attributes, and endowed with an abstract life. To the four great elements belong Dyaus, the broad bright sky, perhaps the only one of the great gods of the Veda who carries us back to pre-Vedic times; the Marets, the deities of the storm; Indras, the god of the rain-cloud, who became the mighty warrior and champion of heaven; Agni, the god of fire, as regards some of his attributes and functions; and others, all of whom are in process of becoming detached from those phenomena of Nature which they represent, and obtaining an individual and abstract existence. The rich personification of the Veda extends over the whole realm of inanimate Nature. The heavens, the earth, the waters, the air are all laid under contribution; and there is a constant tendency to assimilation and interchange of attributes, so that not only are the same qualities sacrificed to different deities, but the same actions are performed, and they thus tend to become indistinguishable in character and function. The point of interest is that many of the Vedic divinities is no less noticeable than their derivation from the physical universe.

Abstract personifications are more characteristic of the later hymns, but are not confined to these. Aditi, the immensity; Prajapati, the lord of creatures; Hiranyagarbha, the golden germ, are illustrations of a tendency, which seems to have become more marked with the progress of time, towards a mystical, contemplative attitude of mind, which sought to dissociate the objects of its worship from the visible and tangible, and to assign to them a position of greater purity and exaltation. Hence especially the gods originally mortal become immortal, and cease to be moved by passions like their human counterparts; and the worshipper cannot come crudely with a gift in his hand, hoping to receive an equal or a greater return, but needs to inquire the way, and reverently to approach one whose nature and being he cannot fully know. In the later Rig-Veda the hymns there is a distinct approximation to the speculative and pantheistical spirit of philosophic Hinduism.

A further and noticeable feature of the Vedic gods is their predominantly beneficent character. Malevolent deities, at least of the higher order, are absent; and the demons, malicious and harmful, in their perpetual conflict with the gods are uniformly worsted. The great gods themselves are either neutral and indifferent, or interfere actively for the suppression of wrong and the punishment of the sinner. Ethically regarded, their power was conceived as making for righteousness; and, though subject to gusts of passion, and open to external inducements and caprices, the gods stood on the whole for justice and right as against deceit, fraud, and wrong. These qualities, that is, in the lofty character of their deities a comparatively high moral tone of the worshippers found expression.

That behind some of these personifications lies a differentiation of the heroic and honoured dead is sufficiently probable, though it can hardly be said to be demonstrated. Traces of totemism also have been found in the names tribesmen of the cow, goat, fish, etc. These indications, however, are obscure and indecisive, and at the most are readily explicable on other principles. It remains that the leading motive of the theology of the Rig-Veda is Nature-worship, the attribution of a personal and divine character to the objects and phenomena of the external universe.

It is not of such importance as at first sight it might appear to be that the poets of the Rig-Veda ascribe omnipotence and supremacy to the individual deity whom they are addressing; that, in other words, the religion of these hymns is henotheistic. Each divinity in turn so fully engages the attention of the poet that he seems to be no room for any other, at least for any equal. To him attributes of majesty and greatness are assigned which can be the possession of but one alone, unique and without a peer. But, as he ceases to be invoked and passes out of sight, another comes forward, who is invested with precisely the same powers and dignities with the same titles. This is the essential feature of henotheism, the worship of one god at a time, who for the time is regarded as supreme, to the exclusion or subordination of all others. In no other primitive religion is this character so marked as in that of early Aryan India. The logical conclusion and development of a henotheistic creed is monotheism, and from this forward movement Indian thinkers turned aside.

The East cares little for logic or consistency in the strict Western sense of the term. And the Vedic religion fell back into a lunatic polytheism, which on the one hand fettered itself with the most uncompromising system of rites and ceremonies that the world has ever known, fixed on the other allowed the freest scope to a speculative daring which resolved the idea of God into a vague and mystical pantemism.

2. The Brähmaṇas. — In the thought that char-
acted the period of literary development which followed, from the 6th or 7th cent. B.C. and onwards, it seems that to the active invocation of the gods by hymn and prayer there was added a ceremonial type of worship, which darkened all spiritual life, or at least laid the groundwork for it. The priest intervened, and demanded with increasing insistence a rigorous provision in the form of the niceties of ritual and sacrifice, a strictness which in turn had the effect of making his own service the more dispensable. The gods needed placating, and none could pacate them except the priest who knew the formulas and was able to carry out the ritual. Myth and story, precedent and custom ruled. It was an episode of order and commandment, of method crystallizing into principle, of elaboration of the minutiae of service, like to nothing so much as to the stringent demands of the later Judaic code, when beneath the weight of the latter the mass of the law the spirit was almost crushed. Doubtless, however, the reality was not so entirely spiritless and formal as the extant literature would suggest. True progress was made, in doctrines as well as in the ritual and modes of the sacrifice. But the doctrinal changes hardly affected, broadly speaking, the people's conception of God. They were not eschatological, extending the retribution which might be required of the sinner into a future life; building up a more ordered and settled theory of the constitution and government of the world, was leaving the idea of God still essentially that of one with whom a bargain might be made, and who for various reasons would or would not avenge his wrath, accept the transgressor, or bestow numberless benefits. This tendency found exaggerated and morbid expression in the practices of the hermits and ascetics, for whose use special books of rule and doctrine were framed (see Art. ABHAYAKAS), and who by intense meditation and prolonged self-mortification believed themselves able not only to wring from the gods what they would not give them in their dignity and sway, and to take possession of their throne (see Art. ASCETICISM, RENUNCIATION [HINDU]). On the other hand, a reaction against the formalism and religiousness of the times seems to have given birth to a materialistic or atheistic movement, which has left its traces in the literature, though naturally not allowed to assume a prominent place there; which scoffed at all things human and divine, denied the existence of a God, and, quite after the approved manner, sought to make the best of the enjoyments and opportunities of the present.

II. A line of thought essentially opposed to that of the Brahmans are the idealists and thinkers of the Upanishads (q.v.). Here the trend of thought on the nature and being of God is speculative and mystical, as contrasted with the practical and propagatory view of the books of ritual. In germ there can be little doubt that the former is of at least equal antiquity; the human mind pondered and scrutinized certainly not later than it worshipped. But, in the form in which they have been preserved, the Upanishads present us with the final result of a long period of inquiry, discussion, and speculation. During the ritualistic and the philosophical or speculative elements moved and were developed upon parallel lines, without in the main clashing with one another; until a common human influence they were brought together, and in some sort harmonized and made to agree. The leading doctrine or doctrines of the Upanishads seem to have originated around the Brahmans, and the ascetics were...
thoughtful classes of the people almost as far back as the records will carry us; and have determined the trend and character of the beliefs and world-views of India and the farthest reaches of the Indian civilization. The Pantheism is the theo-

3. The God-personal and the God-universal. The Hindu God is the highest expression of the spiritual nature of man. He is the supreme being, the creator of the universe, and the ruler of all things. He is the source of all knowledge, power, and bliss.

4. The Vedanta system of Indian philosophy. The Vedanta system of Indian philosophy is the most important and influential system of Hindu philosophy. It is based on the Upanishads, which are the most ancient and authoritative works of Hinduism. The Vedanta system is characterized by its emphasis on the oneness of the individual soul with the Absolute.

5. Epic poetry. The epic poetry of India, such as the Mahabharata and the Ramayana, is one of the most important contributions of Hinduism to world literature. The epics deal with themes of love, war, and the human condition, and are rich in philosophy and symbolism.

The Vedanta system of Indian philosophy is the most important and influential system of Hindu philosophy. It is based on the Upanishads, which are the most ancient and authoritative works of Hinduism. The Vedanta system is characterized by its emphasis on the oneness of the individual soul with the Absolute.

local or tribal divinities, whose attributes they have more or less adopted, and whose worship is more or less preserved.

Many of the elements, the episodes, and the characters of this poetry may be traced back to a great antiquity, equal if not superior to that of the Tantras themselves. Its thought, however, has moved on different lines, and the points of contact, of action and interaction, have not been numerous. But, while the tone and tendency of the philosophical literature has been pantheistic, mystical, and symbolical, that of the epic poetry has been uniformly in the direction of theism, but a rich polytheism, which has flooded the land with gods and goddesses innumerable. It is an illustration, moreover, of a bent of mind that has been noticed before, that from among this crowd of divinities there has always tended to emerge one or more with greater power and wider sway than the rest, whose veneration is more to be feared and his anger deprecated, and whose aid is more to be sought in times of need. The Indian pantheon is always a more or less stable monarchy, not a republic.

Morya is dependent upon the epic proper for the secondary romances and mythological literature, still imperfectly explored, and extant not in Sanskrit but in the various vernaculars, employing much of which has come down from a considerable antiquity. While the tone of a great part of this literature, as far as it is known, is sufficiently demoralizing and coarse, there are some of the works a true religious spirit, which seeks to cast off that which is sensuous and degrading, and to know and hold communion with a higher power that makes for rightness, holiness, and perfection.

6. A characteristic strange combination of theistic and ethical teaching with dreamy speculation is found in the Bhagavata-Gītā, the Song of the Blessed—the New Testament, as it has often been called, of Hinduism. To the European reader its many repetitions, its frank opportunism, its mixture of poetic and prosaic, its numerous and preposterous stories of an unfamiliar kind of people, must appear a highly imaginative and fascinating work; but to Hindu thought there is no similar book which has exercised such fascination and influence in the course of ages. The very features which condemn it to Western taste are beauties and excellencies in Indian eyes. But with all its difficulties and inconsistencies, the Bhagavata-Gītā, which only shares with nearly all Eastern literature, cannot be denied that the Bhagavat-Gītā has been a moral force, and that on the whole it has promoted simplicity and purity of life.

The poem has suffered interpolation (see art. Bhagavata-Gītā), and is no longer in its original form. To this cause undoubtedly are due some of the contradictions which meet us in the poet's view of God and the chief god. Action and devotion are the two themes upon which he insists. Nothing is better than faith in God, reliance upon Him, and obedience to His will; and this is the whole doctrine of man. The doctrine of Brahman, moreover, the soul of the universe, everlasting and omniscient, is set forth in the manner, and even in the very phrasing of the Upanishads; and the entire poem, as it stands at the present time, moves in the atmosphere of Vedantic idealism. It has been held that this idealistic teaching is the basis of the original Bhagavata-Gītā, and that all its later additions are a later comment. In a recent monograph, however, R. Garbe argues strongly for the primitive character of the theistic elements, holding that the basis of the poem was a monotheistic teaching or hymn designed to commend the worship of Kršṇa as supreme god; and though he has worked over and supplemented more or less in the interests of Brahman orthodoxy and the ascendant orthodoxies, the most important part of the text has certainly not been said. But, however its tangled history may be unravelled, there can be no doubt that its monistic and spiritual teaching, modified as it may have been and contaminated by other tendencies, has been a most potent factor, perhaps the most potent factor, in the religious life of India.

7. Sects.—By the side of the philosophic doctrines and systems of the Vedas, a tremendous development has taken place in the earliest times innumerable sects, over all of which has been thrown the loose cloak of the Hindu name, but which differ widely from one another in belief and purpose. At times their larger number accepts more or less fully the ancient Vedic divinities, recognizes the supremacy of the Brahmans, and caste, and adheres to one or other of the philosophical systems above named. Cross currents, however, run everywhere; the sects and the systems are rarely or never pure. And it can only be said in general terms, which admit of numerous exceptions, that this or that form of religious belief is allied to a particular trend of philosophical speculation. The tenacity and conservatism of the Hindu, moreover, has given rise to the result that the circumstances of the origin and rise of a creed or sect, the environment and influence of the founder and his immediate disciples, have exercised more influence upon the character of the faith they have professed than is usual in the West. The sects that have rejected Vedic and Brahmanic beliefs have been comparatively few, and in most, perhaps all, instances, the impulse to such rejection has come from without. Historically also they have usually been assumed to be some of the works a true religious spirit, which seeks to cast off that which is sensuous and degrading, and to know and hold communion with a higher power that makes for rightness, holiness, and perfection.

The greatest and most enduring revolt from Brahmanical assumptions and claims was raised in Buddhism, which has left marked traces of its influence in many of the sects, and, though in general extinct in India, lingers obscurely to the present day in some of the villages of Bengal. The sectarian or popular religions of India are essentially theistic. The two chief forms of religious creed and life, Vaisnavism and Sāivism, which recognize Viṣṇu in one or other of his forms and Śiva respectively as supreme, can both be traced back to a great antiquity, and contain elements which it is impossible now fully to disentangle, derived from the ancient beliefs and practices of the aboriginal tribes, and from the perhaps looser faith of the incoming Aryans. Of the two, Sāivism is the older, and has preserved most of primitive ideas, customs, and tendencies. Vaisnavism has come more entirely under the influence of Aryan thought, and has submitted more completely to that influence than has Sāivism. It is concerned with Brahman ascendance, following in its development the lead of Brahman advance. Sāivism, on the other hand, has hardly passed beyond a material and sensual view of things. Philosophically, the latter approaches nearest to the Sākhyas; but on the religious or emotional side has allied itself with Sāivism, the worship of the vital principle in Nature, and with the cult of the
Mātrī or Mahāmātrī, the 'mothers' or 'great mothers,' who are the source of all fertility and life, and on the other hand deal out disease and death. Kālī, the black goddess, whose temples are stained with blood, and whose ferocity reflects, no doubt, the traits of primitive savage life, has been identified with Šiva; and thus to her rites has been given the sanction of official recognition. Together with other deities throughout the land, of kindred nature and probably similar origin, though less widely popular and influential, this goddess and her worship have therefore become responsible for a degradation of the ideas of God, which has made of the divine power a capricious tyrant, or a monster that needs to be propitiated with the best that his worshippers can provide. Early in our era and for many centuries Šaivism was apparently the dominant cult in India; but it has long been losing ground steadily to its great rival.

The second idea closely associated with the Šaivite form of faith was that of ascetics. Šiva was the great patron of ascetics, and himself strenuously practised self-mortification. And the āsanas or Indian devotees, who divested himself of all his possessions, and who, after disencumbered, the final aim of union with God. To him the rejection of family ties and the ascetic life of Jogis and Jains, together with the afflicting of the body, were means to an end—the securing of release from individual existence with all its pains and penalties, and becoming a part of the One and Last of the divine. The ascetic ideal therefore was not only inconsistent with the prevailing pantheistic mode of thought, but directly contradicted it. To the Vedántist there was asceticism; the ascetic ideal was a realisation, whether personally conceived or not. He was essentially and altogether one with Brahman, and the only change necessary or possible was enlightenment, the opening of his eyes to a pre-existing fact, an eternal truth. The ascetic principle, however, as worked out in India, tacitly assumed the contrary. The quest for union, on whatever line it was pursued, implied belief in a supreme power with which the union was sought; and that power was logically personal, although, in the Hindu thought, it did not always accept or recognise its personality. The tendency therefore of the yogic conception and practice was in the direction of them.

It may be doubted, however, whether in ancient times any more than at the present day the ascetic ideal ever exercised really a great influence on the mass of the people of India, or modified to any appreciable extent their attitude towards the spirit world. They were vaguely conscious of its excellence, admired it in theory, and were ever ready in practice to bring their gifts. But they neither imitated nor desired to imitate the manner of life therein exemplified.

Of far greater immediate influence than the Šaivite faith or ideal is Vaiṣṇavism in one or other of its many forms and sects. Allied with the philosophy of the Vedánta, the Vaiṣṇavite creed has commanded the allegiance of three-fourths of the thoughtful minds of India, and has deeply, if not always consciously or professedly, permeated the life and moulded the conduct of the mass of the people. It can hardly be disputed that Vaiṣṇavism is the truest general presentation of the religious tendencies and conceptions of the Hindus; and, apart from its theoretical idealism, it is a peculiarly ethical in practice than the Šaivism itself. In its higher, purer forms the henotheism of the Vaiṣṇavite worshipper approaches closely to monotheism; and of all the so-called heathen cults, including Buddhism, this faith in its creed and in many of its forms has most affinity with Christianity. In particular, the ascetic ideal presents no attractions to the true Vaiṣṇavas, and to the philosophy of the Saivite deities is especially abhorrent. In his temples bloody sacrifices are offered, self-torture and self-immolation are unknown, and are indeed opposed to his religious precepts. His entire conception of God is gentler and more humane, and is, moreover, deeply impressed at every point with anthropomorphism and individualism. The Deity is present to man, converses with him, walks by his side, sees and hears, knows and feels, and perpetually reiterates Himself for the deliverance of suffering, helpless humanity. The similarity to Christian doctrines is often indeed merely verbal and superficial, as is the case with the Hindu theory of incarnation (see article INCARNATION [Hindu]). But the purpose is broadly the same, the rescue of man from the bellicose dominion of a foreign and hostile power. Such 'descents' or incarnations take place continually more or less of the deity being present under the bodily form. And every great ruler or teacher is thus regarded by his followers as divine, with a just claim not only to respect, but to formal reverence and worship.

8. Reforming movements.—Upon this theistic or monotheistic conception of the Supreme Deity is the one hand from the vague idealistic notion of the philosophers and yogins, and on the other from the polytheistic beliefs of the common people, the reforming tendency that has found expression within Hinduism itself has usually laid stress. In most instances a comparatively lofty moral and spiritual tone has characterized the teaching of the founders of the six higher of the six Vedánta schools, but in the main pointed the way not only to an amendment of life and manners, but to a purer faith.

(a) Perhaps the greatest and most influential of the reformers was Rāmānuja, who was born near Madras probably in the early part of the 12th cent., and took up the position of opponent of Śaṅkara in his interpretation of the Vedánta Sūtras. He expounded and enforced the doctrine of a Supreme Deity, endowed with all the attributes of graciousness, wisdom, and love; of the separateness of the souls of individual men, who are capable of knowing and attaining unto God; and of the reality of the external universe. His teaching also has been supposed, without any sufficient justification, to owe its inspiration to Christian influence.

(b) The impulse which Rāmānuja gave to a higher, purer faith was effective mainly in the south of India, where his followers and disciples carried and still carry on his work. In the 16th cent., however, it became a power in the Panjāb and the north through the influence of Kabir in the Panjāb in the 16th cent., who is said to have been a personal disciple of Rāmānuja. Himself of Muslim origin, Kabir united in his teaching the strict uncompromising monotheism of Śaivism with a readiness and more generous views of the Vaiṣṇavite faith as represented by Rāmānuja and his school. The sayings attributed to him by his biographer are of high moral tone, but are deeply penetrated by the mysticism characteristic of Indian thought. With him and with his great disciple Nanka originated the reforming movement of the Sikhs, which, taking cohesion and national life under the pressure
of external persecution, developed into a strong monopoly society and kingdom, offering various corporations, especially in the various religions and legal orders of the Middle Ages in Europe; but which, while maintaining its own exclusive ceremonial and forms of worship, ceased to possess a distinct religious significance, or to preserve its doctrinal and ethical superiority to the Hinduism by which it is surrounded. See, further, under art. Siva.

(c) In another direction, all the more interesting and instructive because it seems to draw its inspiration from pure native sources, the teaching of Râmânanda and the writings of Tulsî Dâs, perhaps the greatest as well as the best-known and most popular of India's poets. Literature in India is, almost without exception, whatever its immediate theme, religious and philosophical in tone. And the poems of Tulsî Dâs convey instruction in religious doctrine and embody a system of cult and creed, which by virtue of their popularity has been carried into every hamlet and almost every hamlet where the Hindoos are spoken.

'Fully ninety millions of people base their theories of moral and religious conduct upon his writings.' In adopting and giving literary expression to the teaching of Râmânanda, in Tulsî Dâs imparted to them a tenderness and directness of application to human needs which constituted their irresistible appeal to the hearts of the common people. There is one Supreme Being, who in love and pity became incarnate for the relief of man from his sin. In His sight all men are equal, without distinction of birth and position; all are alike involved in ruin irretrievable save by the grace of the Creator, and thus all stand in need of a deliverance which in and by themselves they are incapable of achieving. Tulsî Dâs further declared that it was in Râma, the blameless king, that the Deity became thus incarnate; so linking his teaching with the most popular hero and exemplar of bygone days. The justly celebrated and much-honoured poet died early in the 17th century. He also has been freely credited with having borrowed his doctrines from Christian sources; but there seems to be no real ground for the charge, at least so far as direct derivation is concerned. His creed is the outcome and highest expression of all that was best in Hindu thought, controlled and guided by a pure heart searching after wisdom. There have been many like-minded among the sons of India.

(d) The later and more modern reform movements within Hinduism, at least as much to the ferment of Christian thought and ideals as the earlier movements of the Panjâb to Muhammadanism. Of these the Arya Samâj (q.v.) claims to be a pure monothelion in the four Vedas, which alone it accepts as inspired and authoritative Scripture. The adherents of this sect, while intensely hostile to Christianity, ascribe to the Deity attributes of mercifulness and grace, which have their nearest parallel in the God of the New Testament. They deny the possibility of an incarnation, and in this respect approximate most to the teachings of Islam. Their professed aim, however, is to restore the ancient unblemished faith of Vedic times, which they declare has been corrupted from the time of the Mahâ-bharata, and that the doctrine of transmigration, although this is strictly speaking, foreign to Vedic teaching. The influence of the Arya Samâj is neither very deep nor far-reaching, and it has spread mainly in the ultra-conservative circles of those Brahmins who have kept themselves aloof from Western dogmas, and who are opposed to the temple, the road, the field, each has its guardian spirit—with the result that the thirty-
three faces of deities, with which India is popularly credited, might easily be multiplied many times, if the reckoning were to take account of every way and spirit in which the Indian village priest and godman are represented. The truth is, however, that among all these variant forms and practices of worship there is a very great likeness. It is more often a matter of mere adaptation to the local circumstances and the prevailing customs and ideas of the people, than of a genuine effort to approach the Infinite. The deities of India are not the impassioned, formidable, and terrifying deities of the ancient and primitive nations. The ancient and primitive nations, which have come down to us as the remnants of the great Asiatic empires, have left behind them traces of the old beliefs and practices of the races which had disappeared. The patriarchal and theocratic notions of the ancient and primitive nations have been replaced by the more democratic and popular ideas of the modern and progressive nations. The gods of India are not the fierce, terrible, and terrifying gods of the ancient and primitive nations. They are the gods of the modern and progressive nations. They are the gods of the modern and progressive nations.

India has been so broadly comprehensive, gathering into its net the most diverse races and absorbing the most unlike and even contradictory modes of thought and worship, combining them all to form one under one name and to recognize the advantage of one social order, that many have despised of a any definition on religious lines, and have affirmed that the common bond consisting in the practice of one or several religions, combined with a practical recognition of the supremacy of the Brahman caste. This denial to Hinduism of the status of a religion ignores the immensely religious character and tendency of the Hindu mind. Whatever else it may imply or concede, the essential indispensable element, it seems to there is no religion, is belief in a higher power, whether one or many. It may be doubted whether there has ever been a people among whom this belief has been more deeply engrained, or, to put the same thing in other words, who are more religiously inclined than the inhabitants of India. The definition, therefore, of Hinduism cannot be entirely secular; it will be simple, its articles few and broad, its terms of subscription wide and generously interpreted; but it will be distinctly a religious definition, not one of mere social conformity. With such a definition we have no further concern here than it contains and gives expression to the Indian conception of the Divine, of God. It must be broad, its articles general statements can never be other than subject to numerous exceptions and deductions.

1. Hindu thought shows a marked inclination towards theism. It would, perhaps, be more correct to describe its speculative theory as a theoretical, the occasional or opportunistic worship of one divinity, the supreme object for the time being of the worshipper's devotion. Atheism has never found a congenial home on Hindu soil. Alien, like agnosticism, to Hindu nature and sympathies, it is almost always an exotic which has required deli- cate nurturing to bring it to even a stunted maturity. The philosophic pantheism of Śaṅkara, on the contrary, has proved itself to be in harmony with the tendencies and dispositions of the people; and his interpretation of the Vedanta on these lines, although not unchallenged, has become the accepted metaphysical belief of the great majority of those who call themselves Hindus. The philosophical theory, however, does not interfere with the practical religions of the people. In Brahma, the All-One, with the doctrines of non-dualism, reality and unreality, illusion and the like that are associated with the Vedantic creed, remains theory and theory only. The living potent force to which the man turns in need is not his philosophy, but the personal God, who, by whatever name He is called, as Śaṅkara, Vāgu, Kṣru, or many another, is conceived as the sovereign dispenser of favours and the ultimate source of power.

2. Together with this theistic and, as it were, ultimate though unformulated creed, there exists an indescribable wealth of polytheistic beliefs, godlings, male and female, without number, imps and elves, ghosts and demons, the vast creeds of whom not seldom obscures, and for immediate purposes puts out of sight, the lofter and more stable power in the background. Among the more primitive races and tribes of India also, as so frequently is the case among peoples low in the scale of civilization, there are found traces of a belief in a higher being who is sometimes and unchanging, seldom addressed, who has become a shadowy recollection rather than an active force or an object of worship, discarded from memory and regard in favour of spirits, whose malicious
designs it is the pressing necessity of the moment to frustrate. Hindu belief, therefore, is not wrongly described as polytheism. A better term would be 'polytheism.' But the description does not cover the whole ground. It leaves out of account a higher and a more significant element, in which the lower and the polytheism is enwrapped; the mind by which in the more thoughtful minds it is superseded.

13) To the Indian, religion and philosophy are inseparable. His thinking is essentially spiritual and idealistic. The imperious demands of a hard daily life leave, indeed, to the ordinary Indian peasant, no opportunity for leisure or speculative thought; but amongst the higher classes the trend is distinctly in a spiritual direction. The ever renovating force of Nature—residing in the vastness of the material universe—leads to a process of mind to matter is solved, as far as the Indian is concerned. Matter is the shadow; mind is the reality; and mind is God. His philosophy, therefore, is cast into the scale, not on the side of materialistic views or dogmas, but on that of an idealistic and reasoned theism.

4) Hindu beliefs, finally, are coloured by the universal, or almost universal, acceptance of the doctrine of transmigration. Obscurantism and uncertainty as the origin and early history of this doctrine in India may be, it has become a part of the moral and religious faith of the people, and has profoundly influenced their outlook upon life. And, inasmuch as the gods themselves are, theoretically at least, involved in the process, and subject to the same perpetual flux and change of all things living, it has tended to make the outlines of these indistinct, their character and functions interchangeable.

14) The dividing line between men and gods is not so sharply drawn as in the West, or the place and features of the latter so clearly conceived. Logically, a doctrine of transmigration assumes and necessitates a doctrine of the separateness of individual souls, and is inapplicable with the extreme idealistic theories of the Vedanta as with Chritian Abbein. But the two conceptions lie side by side in the Indian mind without interfering with one another, or carrying on the mutually destructive war which to the European would appear inevitable. His thoughts concerning the Divine adapt themselves, or remain unadaptable, to a view of life which opens out to him a vista of recurrent human existences practically without end.

Cf. also Hinduise, Vedanta, Vedico Religion.

LITERATURE.—For the literature of the several periods of religious development, the sects, etc., consult the separate articles. All the works dealing with the religion and philosophy of India in general discuss with more or less fulness the Hindu pantheon of God: e.g. A. Barth, Religions of India, London, 1881, posth.; W. Hopkins, Religions of India, London, 1898, posth.; H. M. Memoir-Williams, India’s Legacy of Religion, London, 1880; D. Haydon, Hinduism, London, 1887; C. F. Duff, Hinduism, London, 1888; E. Sapir, ‘Religion,’ with a valuable appendix on the Religious Ideas of some Animistic Tribes in Bengal; P. Denisse, Philosophy of the Upanisads, p. 1. Theology, Eng. tr., Edin. 1886. A. S. GEDDEN.

GOD (Iranian).—1. The Idea of God during the Early Iranian period. For ascertaining the conception of God entertained by the Iranians during the earlier period of their history we possess neither direct records of their religious practices nor any form of sacred text crystallizing their religious experiences at that stage in the development of their God-consciousness. Nevertheless, the indirect evidence bearing upon even this part of the subject is neither meagre nor wanting in significance, so that comparative science has succeeded in reconstructing what can be confidently regarded as the main content of the early Iranian pantheon.

In his well-known account of the anthropomorphisms worshipped by the Medes in the middle of the 6th cent. B.C., Herodotus (I. 131) claims for the first part of his description an application to the conditions of a much higher antiquity. He says: 'They are in the habit of ascending the highest mountains and offering sacrifices to Zoro—giving the same Zoro to the whole oriental circle. Moreover, they sacrifice to the sun, moon, earth, fire, water, and winds. To these alone,' he adds, 'they were accustomed originally (Α&omicron;πε&omicron;) to sacrifice.'

According to this account, therefore, the early Persian idea of God was that of worshippers of the great Nature-powers—trees and birds, sea and sun, mountains and sea and sun, rivers and springs. Hence the sky and its associated phenomena. Although this description lacks completeness in one vital respect, as will appear later, yet, so far as it goes, it accords perfectly, as we shall now proceed to show, with what our other available evidence leads us to believe of the Iranians generally at that period.

Schrader has already shown very fully (see Ar. Aryan Religion, vol. ii. p. 31) that the worship of the elements enumerated by Herodotus always formed an essential feature and character of the religious life of all the Indo-European peoples. That religious regard for the same Nature-powers should survive amongst the early Iranians is, therefore, in the nature of things and subject to the same disturbing influence, what was naturally to be expected.

The Iranians, however, shared with the Indo-European people generally in common religion and culture for a much longer time than they did with any of the others; and this common life continued until the commencement of the period of the Aryan invasion. There is no evidence concerning the Indo-Iranian tribes as they made their way into the East. That people was the Aryan sect which ultimately settled on the banks of the Indus, and are known to us as Indians. Of necessity, therefore, the earlier stages of the development of the Indo-Iranian religion can be reconstructed only with very marked differences between the two peoples in concept and custom, dating in some cases probably from Aryan, i.e. Indo-Iranian, times. Hence the necessity for caution in attributing Vedic ideas to the early Iranians.

But, when we find the same religious beliefs and usages reflected in the Vedas as are attributed by other independent authorities, such as Herodotus, to the contemporary Iranians, we may fairly certain that we are dealing with phenomena that were common to both peoples.

Now, the Vedas reveal the same general stage in the development of the consciousness of God among the dwellers beyond the Indus, especially during early Vedic times, as we have postulated for the Iranians during, partly, the same period. The mighty Nature-powers that inspired the awe and reverence of the Vedic poets also compelled the sacrifices of the devoted Iranians. Comparative philology has shown that the two peoples from the period of unity employed the same two general terms for a god, thus indicating that the character of the objects of their worship in the same.

One of these was azu (Skk. azu, Av. ahu); the other was dvs (Skk. dvs, Av. dves). From Indo-European deies, pl. deites (connected with ydas, 'sky'), heavenly ones, meaning the sky and the great physical phenomena connected with it.

The premier position amongst the early Persian 1 Agashii (Av. Aharma) and Symmachus—says that previous to Zarotzher reform the Persian religion was that of the Greeks (see Jackson, Graeco-Iranian Religion, p. 612).
divinities assigned by Herodotus to the sky is in
perfect consonance with the supremacy which the
sky-god enjoyed amongst the Indians, whether in
the oldest times under the name DYUS or later
under the name of Yazdān. What was the name
and what the exact conception of the term
employed in addressing themselves to the
sky-god are most questions. Our indebtedness
and gratitude to the Greek historian would have been still deeper had he on
the occasion departed from his countrymen's usual custom and abstained from converting the Persian term into its Greek
variant. 1 That Herodotus had in mind the name Awar Mādā is improbable, 2 for we have no evidence that he was
acquainted with Mandām, as such, in any form, much less in its
Zarathushtrian development. Spiegel suggests Zavēka (Mod.
Pers. Zaveka), the probable term by which the Persians
invoked the vault of heaven. It seems improbable that the
old term dyus had been handed down as part of the
tradition upon which Herodotus relied for his account of the
earliest period. 3

If the evidence of the Iranian sun-and-moon
worship is somewhat less abundant, it is scarcely
any less clear or certain. In Vedic times the
Indians worshipped the sun under the name Varu
and the moon as Mātvā. The former is cognate
with the Avestan Avar (Mod. Pers. Avar, Avarhe,
'sun'); the latter with Avestan Māt (Mod. Pers.
Mātī, 'moon', and 'month'). The re-appearance of the
sun and moon in the post-Zarathushtrian
pantheon is highly suggestive of their earlier
worship.

In connexion mention should be made of another
important divinity, who, if not himself
a sun-god, was still intimately connected with the
chief luminaries and gave modern Persian its usual term (Mērtān) for 'sun'. We mean of course,
Mērtān, Vedic Mitra. Perhaps the best opinion is
that which regards him as the god of the luminous
either (cf. C. de Harlez, Avesta, Paris, 1891, p. 58,
also Monier, op. cit., p. 261). The
unique position of this deity in Vedic religion, and his almost unique position among the post-Zarathushtrian Yasna,
leave no room to doubt his existence in the early Iranian
pantheon.

Although the Earth did not properly come within
the category of the 'Heavenly Ones', yet the wide-
spread mythological conceptions of the Earth as one of the
divine pair, the wife of the sky, is sufficient
ground for accepting her as an Indo-European
divinity. In the Vedic her name, Prthivī, is,
approaches, invariably connected as a dyad with
that of the sky, DYUS, in the form Dyudhpahitās. 4
Moreover, we have the testimony of Herodotus
(Polyb. vi. 48) that at least one branch of the Iranian
peoples—the Scythians—worshipped the Earth as
the wife of Zeus.

There can scarcely be any doubt that the Earth
worshipped by the early Iranians as a 'god
worshipped by the main body of the Iranians during
the early period (see Spiegel, Die arische Periode,
pp. 156-159; Monier, op. cit., p. 261).

The most characteristic Iranian divinities,
perhaps, are those that come next for mention,
namely, fire and water. When Strabo says (XV.
iii. 14) that it was to fire and water especially
that the Persians offered sacrifices, he was indicating
no new emphasis in Persian worship. That
they were part of the Indo-European heritage is
well known. And the new physical conditions in
1 Herders maintained that Asa in Herodotus' account is not
the son of the Gr. Zeus, but the Persian form of the term
for 'sky', derived from the Aryan dyus (cf. Spiegel, Sivas,
Ätherstuhlebenen, Leipzig, 1876, ii. 180).
2 Monier observes that Awar Māta was not specially connected
with the orb of skies, and in later epochs he was Identification
made with the wife of Varu (cf. Monier, op. cit., ii. 141, 180;
also Die arische Periode, Leipzig, 1867, pp. 128-131).
3 See, however, Monier, Early Religious Poetry of Persia,
Oxford, 1868, pp. 39-40, 89, 126, 150, etc.

which the Iranians found themselves in conse-
quence of their eastward migration served only to
enhance the use and value of the two elements,
and consequently to intensify their reverence for
them or for the spirits which were associated with
them. In India the chief fire-god was Agni (Lat.
\textit{ignis}); but in Iran he was venerated under another
old name, Atar.

Another circumstance which substantially con-
tributed to the prestige and pre-eminence of these
two elements was their association with the
thunderstorm—a phenomenon that especially ex-
cited the awe and reverence of primitive peoples,
and for the Indo-European peoples it was not only
a deity, but it proved to be a \textit{vān ussurum de-
cum}. We find among both branches of the Indo-
Iranian people one very important and exception-
ally interesting divinity, whose origin is to be
traced to that great physical phenomenon, namely,
Apām Napāt, or 'offspring of waters' (i.e. 'fire
that rises in water') (Tiele). In the Vedas he is
a god of fire—the lightning flash; and even in the
Avesta he is once associated with another god of
fire, Nairosangha. But usually in the Avesta he is
a god of waters. In the later books he is
frequently invoked. In Yast 1614 he is even said
to have made and shaped man. As Spiegel observant
5, 209 (Die arische Periode, p. 318), we have in Apām
Napāt a very ancient and highly venerated
divinity.

The presence of another divinity in the later
Avesta and the functions assigned to him point
clearly to his existence in early Iranian times.
Vītaras in India is Indra, the slayer of the
imaginary demon of drought; whereas his cor-
respondent Varēhāŋkhag was regarded by the Iranians
as the god of victory in general.

The wind was worshipped by the early Iranians
under the name Vayu (Vedic Vāyu). It was
especially reverred for the supposed help rendered to
bring to the earth the fertilizing rain from the
clouds. Nor should Haoma (Vedic Hemśu) be omitted from
the list of early Iranian divinities. It may not, as
Tiele observes (Bol. of the Iranian Peoples, Engl.
tr., Bombay, 1912, p. 54), have been materially the
identical Haoma plant of the later Avestans, but
that an immortalizing drink was distilled at that
epoch is fairly certain. Cf. art. HAOMA.

The prominence of the custom of ancestor-
worship amongst Indo-European peoples generally,
taken in conjunction with the cult of the Pitaras
in the Vedas, and particularly the lavish adoration of the forefathers (g.n.) in later Avesta, 6 have
inevitably to the conclusion that only during the
strictly Zarathushtrian régime had this ancient
custom been discontinued among the Iranians.

A more difficult question confronts us when we
inquire how the early Iranians regarded their
gods; what precise character they attributed to
them; to what point in conception of feeling
they had attained at this time. Whatever vastnesses
of Animism there may still have been in their
religious notions, we are certainly justified in
asserting that in pre-Zarathushtrian days in Iran,
just as in India, some of the gods were credited
with a tolerably high moral character (cf. Indian
Varu). Moreover, the two classes of gods, ahuras
d avalanche, were ever from Aryan times viewed
in some respects as rivals in their claims upon the
adoration of those tribes. In India, as well known,
even in early Vedic times, the devas were
accepting the ascendency, although it later
the Ahurā Veda that we find the avāras regarded
as demons.

In Iran the opposite course prevailed. The
 ahuras, who from Indo-Iranian times were the
more feared and awe-inspiring, seem to have
gained in prestige, and, apparently at a
very early epoch, one of them had become the Ahura
par excellence. And it is in relation to this Ahura that the religious consciousness of the Iranians has since been primarily developed and exercised. Moreover, evidence seems to be accumulating to show that even the epithet Mazda, 'wise,' or 'twi,

dom,' was, so early as the middle of the second millennium B.C., applied as the special cult-epithet of the god, as well.

In accordance with this opinion is the fact that in the Gāthās Zarathushtra professed to reveal no new god to his countrymen, but only to bring a new revelation than one who was supposed to have been already well known. At this period, of course, even if supreme, he finds himself a member of a very extensive and miscellaneous pantheon.

2. The Gāthic or Zarathushrian concept of God is the five Gāthās of Zarathushtra and his immediate followers that enshrine the oldest as well as the highest and purest of the ideas of God to which the Mazdaean religion attained. Ahura Mazda, or Mazda Ahura, which is the more usual order in the Gāthās, is already not only supreme, but sole God. The whole pantheon has fallen from heaven to hell.

And, if Mazda himself was at any period a Nature-god, the last vestige of his ancient associations have been completely obliterated to the minds of the inspired writers of these spiritual hymns. Not that Mazda any more than Jahweh, the God of Israel, was praised in linguistic forms free from anthropomorphism or material imagery. The God of the Gāthās also puts on the solid heavens as a garment (Ys. 30) and covers himself with flames of fire. But still in substance he is the mainour, 'spirit,' as his faithful ones are never weary of repeating.

His most characteristic attribute is spenta, 'eternal,' as in the etymological and wider sense of that English word; and this Beneficient Spirit is, in the Gāthās, the great and sole creator. He created not only the light, but darkness as well; not merely the firmament, but midnight just as truly (Ys. 44). He is omniscient and omnipresent, the all-seeing Lord who cannot be deceived (40 P. 297), the immortal, who remains evermore the same (31). Nevertheless, in one important respect he is limited: he is not omnipotent, or at least for the present that attribute is only potential. But, as another self-existent spirit, coeval with Ahura Mazda, fundamentally opposed to him in his very nature, and having for a period the power of thwarting the purposes of the Beneficient God and working evil and suffering among his saints.

From the principal passages in the Gāthās in which this doctrine is expounded, it would appear that Zarathushtra did not conceive of the Evil Spirit as gifted with positive creative power, such as is attributed to him in the post-Zarathushrian portions of the Avesta. The truth that seems to emerge from the locus classicus of this doctrine in the Gāthās (Ys. 30) is the self-determination of the rival Spirit for evil in harmony with his inherent nature, and his choice of wrong and death as the principle of his actions and influence. So far as the doctrine is developed in these hymns, Ahura Mainour or Aza Mon is conceived of as exercising his destructive and malicious power in bringing about in the creation of Mazda an issue and culmination the very opposite of that destined for it by the Beneficient Spirit. In perfect keeping with this consciousness of a mighty, malicious, and ever-present Competitor, that is the emphasis placed upon certain attributes and blessings of Mazda which are the absorbing theme of the Gāthās. That idea of Angra Mainuy is the dark background against which this conception of Ahura Mazda with his six (or seven, if Brahma is included) ever-recurring attributes and blessings must be placed.

The minds of the Gāthic poets are not so much concerned with the essence of Mazda's nature as with the means and ways to realize his true relations to his saints and to the world as a whole. It is not theology proper that we find in the Gāthās, but the sociological aspect of the doctrine of God, not his transcendence and absolute nature, but his immanence and relationality, which are here emphasized. These moral attributes, through which the ideal relationship is to be realized together with the blessings resulting therefrom, are conceived of in such a vivid manner that they are constantly personified and addressed as if they were distinct persons in the Mazda system. Still the words are so often used as common abstract nouns, that in these hymns there need be no mistaking them for separate persons. The essence of Mazda, perhaps P. 40 in the OT serves as a good illustration of this sustained personification of abstract ideas. The precise attributes emphasized, as well as the meaning of those as a whole, has been determined in some degree by considerations dictated by the earlier history of Iranian religion. Still the nature of the case would have been sufficient of itself to account for the facts as we find them, and perhaps this has not always been duly considered by the expounders of this part of the Gāthic doctrine. The two most frequently mentioned of these abstract qualities are Vohu Mana, 'the good or best mind or spirit,' and Asha or Asha Vahushita, 'rightness,' 'perfect order.' The former connotes the idea of good will or benevolence, that attribute of Mazda which desires and seeks his people's good in opposition to that spirit which meditates harm to them; and in Ys. 40 these two thus come up in both pairs.

The other concept is that expressed by Asha, which has as its root-idea that of fitness, appropriateness; hence order, rightness, and other abstract ideas of meaning. It means that ideal relation to in which all would receive their due and highest good in conformity with their nature and destiny. The next is Khosrav or Khosrau Farvar, 'power,' 'dominion,' 'kingdom,' or 'wished-for-kingdom,' and indicates that condition or state of things in which the power of Mazda completely prevails, and in which his will is done, and where the two former concepts are fully realized. The fourth abstract attribute is Ahraniat, 'pity' or 'devotion,' which Mazda produces in the soul of his saints, and is the subjective attitude corresponding to Mazda's benevolence and justice. The last two of the six conceptions are always mentioned together, namely, Hauravastu, 'health,' 'well'; and Ameriatar, 'immortality.' They are equivalent to complete present and future salvation. This is the certain, if as yet distant, Divine event towards which the whole purpose and power of the Beneficient Spirit are ever directed.

This brings us to the idea of Mazda presented in the Gāthās, and the spirituality of their conception of
God is reflected in the inwardness of their ethic; for Mazda demands truth and purity, not in word and deed alone, but also in mind and heart. Mazda is represented by the appellatives 'good,' 'pure,' 'right,' 'splendid,' 'glorious,' 'wise,' 'bountiful,' 'wise.' These are the terms by which the Spirit of Mazda is known. In a beautiful psalm the Hebrew poet also couples with Jehovah's name the 'ark of his strength' (Ps 129). Nor is the name of the holy fire more incongruous with the Spirit of Ahura Mazda than the mention of water with the regenerating Spirit in the NT (Jn 3:5).

3. The Mazdeism of the Later Avesta.—Ahura Mazda is still a personal god, and his name means more the sole object of worship in the Later Avesta than in pre-Zarathushtrian days. By this time the six abstract ideas or attributes which were frequently personified, but never really regarded as distinct persons in the Gathas, had become separate personalities, and were called Amersha Spentas, or 'Immortal Holy Ones,' and accorded Divine worship.

It must have been in this later form that the Greeks learnt of the doctrine, for Plutarch refers to 'the god of the Persians' (De Res. 47); and Strabo speaks of a temple of Omanaus (Vohu Manah), and a wooden statue of the god carried in procession (xv. iii. 18). Moreover, a distinct doctrine of the use of persons is the greatest of the 'clan-gods' (perhaps the words should be rendered 'all the gods'), and 'the other gods that are' (cf. Xenophon's οἱ ἄλλοι θεοί). And, even when the Avesta is said to be greater than the greatest of the gods (maitisathas baqdadams), there is a tacit admission that he is only supreme, but not sole God. There is no suggestion that they are his creatures. Mitra is co-ordinated with Ahura Mazda in the Inscription of Ochus: 'May Auramazda and the god Mitra protect me and my kingdom and the work I have accomplished.' His predecessor, Artaxerxes Mnasene, not only addressed his prayers to Mitra and Anahita with Auranamza, but, according to Berosus (frg. 16, apud Clem. Alex.), he erected statues to Anahita at Persepolis (see his Inscription), Ecbatana, Bactria, Susa, and Babylon. Nevertheless, the whole of the Inscriptions of Darius and Xerxes breathe a spirit more akin to that of monotheism than that of most parts of the Younger Avesta. The recognition of the other gods in these Inscriptions impresses us as being, very largely formal; for the number of times they are mentioned in conjunction with Auramazda is very small, compared with the instances in which he is prayed to alone. The character of Auranamza as creator is constantly emphasized in all except the Inscriptions of Mnemon.

A great god (bapa vazata) is Auranamza, who created this earth, who created yonder heaven, who created fire, who created peace or prosperity or delight (shigshiti) for man, who made Darius (Xerxes, Artaxerxes) king. Not even in the Gathas is the creator conceived of as being more distinct from his creation than these words show him to be. As for his government and providence, he is more unfettered according to the Inscriptions. He has created peace (shigshiti) for man, a state of happiness and prosperity of which even the Gathas have no more than a promise.

5. The history of the later development of the idea of God amongst the Iranians is practically identical with that of certain sects in Sasanian times, whose views have also largely determined those of modern Parsism on this subject. The treatment of this period will, therefore, come more properly under 52877 (Persian) Literature.—In addition to works already referred to, see on the earlier period, O. Schrader, Prehistoric Antiquities of the Aryan Peoples (2d. Ed., London, 1890); M. Rapp, 'Die Perser.'

2 Mitra, a Persian word, means 'god.'
GOD (Japanese).

The Japanese word for 'god' is kami. Its derivation is uncertain. Some see it as an abbreviation of kamo-nami, meaning 'to look at,' 'to judge,' 'to decide'; others, a form of kami, or 'lord;' while still others propose kachi, the mysterious,' as its origin. A comparatively modern theory traces it to an Ainu word, kamyu, meaning 'he who or that which covers or overshadows,' and so representing divinity. The generally accepted derivation, however, is that it is traced in modified meanings of the same word kami, signifying that which is 'above' or superior, in contrast to shino, signifying that which is 'below' or inferior. The upper part of the body is kami, while the lower part is shino. A man of superior rank is kami, while an inferior man is shino. Heaven is kami, earth is shono. So general is the term that it lends itself readily as an application of that which is looked upon with fear or respect, as above man in power or honor, in the same sense as in Homer. Shinto, an eminent Shinto scholar (1730-1801), says:

"The term kami is applied in the first place to the various deities. Kami were the deified men and women who are mentioned in the ancient records, as well as to their spirits which reside in the shrines where they are worshipped. Moreover, not only human beings, but birds and beasts, plants and trees, sea and mountains, and all other things whatsoever which deserve to be dreaded and revered for the extraordinary and pre-existent powers which they possess, are called kami. They need not be eminent for surpassing nobleness, goodness, or servile obsequiousness alone. Malignant and mischievous beings are also called kami, if only they are objects of general dread." (Koyōshiden, ed. 1801, II. 180).

The primitive faith of the Japanese was Shinto, in which various natural phenomena, awakening awe and reverence, such as the sun and moon, fire and water, wind and storm, were worshipped, and in which various Deity names were given to the powers controlling the more noticeable manifestations of Nature. To this limited body of divinity others were added; and not a few from foreign countries, until the number the number was so generically stated as 'eight myriads,' and the country was called 'the Land of the Gods.' According to an official record, compiled in A.D. 301, the number of shrines at that time was 2861, while the number of deities worshipped therein was given as 3152. This multiplication of deities has continued until the present time; and the latest official statistics give the number of Shinto shrines of all grades as 190,436. These shrines are sacred to: (1) mythical gods, (2) patriots and heroes, (3) phenomena and objects of Nature, and (4) various animals and objects. Among the shrines recognized as governmental and national, those under the special supervision of the provincial or national government are classified as follows: sacred to mythical gods, 100; to emperors and members of the Royal Family, 25; to patriots and heroes, 30; to the various Deity names, etc. The deities worshipped by the Japanese might be roughly grouped as: (1) stellar bodies; (2) the elements of earth, air, fire, and water; (3) natural phenomena; (4) prominent natural objects, as mountains, rocks, trees, and caverns; (5) men; (6) animals; and (7) manufactured objects.

In short, anything conspicuous or exalted may have become a kami, the same that are the object of the people's worship. Kami of which they know absolutely nothing as to nature, origin, or being. What god we know not, yet a god there dwelleth.

It does not follow that those makai, or underworld, deities that have been regarded as of equal importance, nor have they all been revered by the mass of the people. According to the Ko-ki, the first Emperor, worshipped the deity of Heaven and Earth. In the opening chapters of the Ko-ki marked distinction is given to three deities: Amo-no-minaka-nushino-mikoto (the Deity-master of the -august-centre-heaven), Takamisubi-no-kami (the -high-august-producing-wondrous-deity), and Kami-misubi-no-kami (the Divine-producing-wondrous-deity), who are said to have been born in the plain of High Heaven when the heaven and the earth began. To them alone certain modern Shinto sects pay reverence.

Asu-mu Hirata, a modern Shinto scholar (1778-1843), says:

"The object of fear and worship in foreign countries is known by several names, e.g., Sovereign, Deity, Imperial Deity, God, Heaven, or Heaven. He is none other than our Heavenly Kami who dwells in Heaven and governs all the affairs of the world.

This clearly shows the tendency of Shinto scholars to a monolithic belief.

G. Kato, in a monograph in Taisi for 1909, on the 'Chief god of Shinto,' concludes that the deity 'shows in its origin a clear trace of primitive monotheism, when viewed in the light of the modern study of the science of religion.

It is true that a strict monotheism has never found congenial soil in Japan, yet there is not infrequently to be noticed the idea of one supreme and all-powerful force behind the manifold exhibitions of what are called kamyu. Moreover, the introduction of Chinese thought modified earlier Japanese conceptions; and Shong, the Supreme Being, or Ten, the Heaven, of the Chinese, became identified with Kami, and was worshipped, often supremely, though not exclusively by many. Shunta Daisai (1681-1747), a Chinese scholar, said:

"All the fortunes of man, whether prosperity or calamity, happiness or sorrow, are in accordance with the Heavenly Kami... Among all so-called Kami there is none so lofty and mighty as Heavenly Kami, who governs the Supreme Belief in Heaven as the Supreme Force, the Providence over all, and the criterion of all, to whom is due allegiance to the utmost, may be said to be universal among the Japanese, while individuals and classes reverence also in particular certain other subordinate kamyu. Among the most popular individual kamyu may be mentioned the Sun, associated with Amateru Omikami, as a sun-goddess, with whom is identified the pre-historic ancestress of the ruling house of Japan; Hachiman, an old-time hero; Tenjin, a great scholar, now revered as the god of learning; Inari, the god of rice; Kumpira, revered by sailors, as in Jehan by the seekers for good luck.

In recent years Emperor-worship has been advocated by not a few as a unifying substitute for vague religious faith.

The meaning of the English word 'God' by Jap. Kami is not entirely satisfactory; but, in spite of the polytheistic ideas long associated with the term, it has been in a remarkable degree filled with the content of worship. Not infrequently the Western religious and philosophic thought. The confusion becomes daily less, and the idea of a unitary Supreme Being is now one of the first conveyed to the educated Japanese mind by the
word Kami. The definition of the word in modern Japanese dictionaries is significant: (1) a spirit which is thought to exist invisibly, with unlimited supernatural power of good or ill, to punish crime and reward virtue in human beings; an object of religious trust or fear; (2) the honorific name given to rulers, kings, and the deities of Shinto shrines; (3) the name applied to spirits enshrined in Shinto shrines; (4) the Christian God, the almighty and omnipresent creator and ruler of the Heavenly Ruler; (5) the spirit of the dead in Shinto funeral ceremonies; (6) that which transcends human understanding (the *Yin* by S. KARASAWA, 1907). Or, again: (1) God; a deity; supernatural being; (2) the consecrated spirit of the dead, especially of an emperor, sage, or hero; (3) that which cannot be conceived by the human mind; a miracle (Jap. Eng. Dict., by F. BRINKLEY and others, 1860).

**GOD (Jewish).—Whatever had still lingered in Israel of the ancient conception of Jehovah as a territorial God (which rendered a lapse into idolatry easy whenever interest urged a prior or collateral claim of some other local god) was largely extinguished during the Exile; and after Nehemiah and Ezra the Jews were uncompromising monothists. This faith Judaism preserved and confessed before the heathen world in its scriptural expression, by legal observances, and by disassociation from every appearance of idolatry. The secret of its power to hold its own against all opposing world lay in the conviction of the Jews that their race was the favourite of Heaven. Indeed, Israel's election is an integral part of the Jewish conception of God. The Jews are monotheists because Jehovah is monotheistic. They have not chosen Him, but He chose them first.

"One God, one Israel, one Temple," says Josephus (Ant. ap. II. 9); and in the *Amidah* for Sabbath prayers every Jew repeats: "This art one, Thy Name is one, who one (unique) in the world as Thy people Israel." (cf. *Suk. 55a*). "Thy only one people".

1. Anthropomorphism.—The anthropomorphic expressions of the OT are linguistic relics of an age when the Hebrews attributed to Jehovah a human form and human passions (*JDB* v. 927). The Prophets retained these expressions as conscious anthropomorphisms and convenient terms to describe the personality and activity of the Deity. We assert, however, whether the popular conception of Jehovah was other than of a gigantic warrior in human shape. The Exile brought the Jews into contact with the gross idolatry of the Babylonians; and, viewing their captivity as a punishment for disloyalty to Jehovah, they became the more averse to the gods and religions of their enemies. The Exile became to the Jews a means of spiritual development. Jehovah ceased to be regarded as a territorial God, though the tribal conception remained. He was the God of the universe, but father of Israel—the God of Nature and revelation. Efforts began to be made to explain and remove anthropomorphisms.

The first step we read of was taken by the *Seferot,* the early scribes and immediate successors of Ezra (L. H. WEISS, *Zur Gesch. d. jüd. Tradition,* Vienna, 1871-91, vii. xxii.). In the *Seferot,* anthropomorphisms are used rarely and with caution. An important step was taken in the versions of the Bible. The artful manner in which the LXX softens down many anthropomorphisms and deities is well known. And yet the version was viewed with distrust by the Palestinian Jews, for fear it might convey to the heathen world wrong impressions of the nature of the God of Israel. Versions in the Apostolic church were more acceptable. "Targum,* in *JDB* circulated orally in Palestine time from the days of Ezra (Mey. 8). Children received their first instruction in the Law in Aramaic.

At the public reading the interpreter (dragonman or interpreter) stood by the side of the reader, and rendered into Aramaic each verse as it was read in Hebrew. The frequent repetition of the same must have produced in a short time a stereotyped version, and we may safely assume that it is embodied in our editions of the Targum, and that they represent the oldest form of Judaism. In all these anthropomorphisms, with few exceptions, are paraphrased and spiritualized. Thus, e.g., by the eyes and ears of God are understood His omniscience, by the hand His omnipotence, by the mouth of God His immediate communication with man, or inspiration (e.g. Nu 122). The finger of God in Ex 84 is rendered 'this is a plague from before Jehovah.' Peculiar to the Targums is the use of the Memra (q.v.), the executive word of God. The existence of this intermediate being was deduced from passages like Ex 2323, is 5500. Although not regarded as an emanation of the Deity, like Phile's Logos, the Memra was conceived as apart from God; and to it, and not to God, all anthropomorphisms and anthropopathisms were ascribed.

Turning to the Rabbinico literature, we find that anthropomorphisms were removed in several ways. (a) The particle *ne,* 'as it were,' or *jeh,* 'as though it were possible,' was placed before anthropomorphic assertions. (b) Such appearances and actions as seemed inconsistent with the idea the Deity were attributed to intermediate beings and to angels. (c) Convenient explanations got rid of many anthropomorphisms. Thus 'a jealous God (Ex 2022) is explained in the *Mishnah* as the God who rules over jealousy.' The same Midrash comments on Ex 128: "Is not everything revealed before Him? Why then does He say, 'When I shall see the blood, I will pass over?" (Am. 107; cf. V. 11.) (d) Executing My command I will reveal myself and protect them.'

In the same section it is asserted that anthropomorphisms are used *ne* *jemel,* 'to sink it into the ear, i.e. to assist a person's perception.' R. Judan said: 'Bold, indeed, were the Prophets to liken the Creator to the creature' (Gen. R. 27; see also Pes. 36b). Another Rabbi went so far as to deny that the Shekhinah ever descended on earth, or that Moses or Elijah ever went up to heaven.

(Suk. 5; *Mishnah* Tjebro, 4).

When we turn to the Rabbinic writings from about the 3rd cent. A.D. onwards, however, we find that anthropomorphisms went hand in hand with gross anthropomorphisms. There is no special event in Jewish history to which we should ascribe the reaction. No doubt Essenianism, the fertile imagination of Alexandrianism, the success of the sacrificial cult, the rise and progress of Christianity, with its offshoots of speculative Gnosticism, directly and indirectly influenced the Rabbis in favour of mysticism. But the reaction was rather the gradual outcome of legalism, according to which Israel's sole mission in the world was to keep the Divine Law. Israel's election was never lost sight of since the Exile, and ultimately developed a Judaised conception of God. The Halakka laid the foundation, and the superstructure was raised by the Haggada. The latter, originally with a few traditions in stock more or less based on facts or curiously deduced from them, might have been a good handbook on the Law, but in time it mounted the heights of imagination and spake of everything. It not only wrote human history as it ought or ought not to have happened, but explored the seven heavens and revealed the Deity.

Putting together the passages from the Talmud and Midrashim, we find in plain pronouncements that the Divine Image of Glory, on the book of which is engraved the image

A mysticism, a psychological body, leads God to government (Jers. 9, 6). Satan succors Israel, and Michael assists him by their help (Ez. 12). On God's seal is engraven the 'truth,' the first, middle, and last letters of the Hebrew alphabet, indicating that He is, and is to be (Gen. 10, 6; 1 Cor. 12, 1). In the seventh Jerusalem, there is a tablet on which Michael offers up the soul of the righteous (Est. 10). Behind the throne stands Sanballath, whose height is a distance of a walk of 600 years, and who bends chapter for chapter in the continual study of God. It is co-opted with studying the 6 books of the Bible by day, and the 6 scribes of the Midian by night (2 Cor. 5, 15). There are schools in heaven in the Biblical model, where Rabbin in their order discuss the Halakha, and God studies with them (Shab. Meg. 28). Every day He pronounces a new Halakha (Kid. 69). Old traditions about the nature of the Messiah were searched out. Mysticism, which hitherto lurked only in dark corners, crawled to the light. The study of Chiliasm was neglected in favour of this new theosophy. The experts were called be-dil 'imnot, 'men of faith,' who by means of charms and the recitation of senseless formulae were supposed to cast off the sin, assuaged the raging sea, and revealed the secrets of the Deity. The most monstrous book of this period was the Aron Kama, 'Elisha's scroll,' and out of all proportion. The measurement of each member, such as the neck, the head, the right and left eyes, the upper and lower lips, the ankles, etc., is given in parasangs.

Only those parasangs are not like corn, for a heavenly parasang measures 27,000 cubits or 27 miles, and each cubit space, and each span reaches from one end of the world to the other." 'And,' says the book of Elisha, 'blessed is he who knows these measures, for he has a share in the world to come.'

The Karaites were the first to ridicule the Shiki'ar Kama. The most learned orthodox Jews also, especially when the Kama was not in vogue, were highly hostile. 

Maimonides gave the most effec-

tual blow. In his More Nebuchadnezzar he asserts in philo-

sophic language the spirituality of God, and explains the Biblical anthropomorphisms as figurative terms.

2. The name of God.—Evidence of a transition to a new conception of God after the Exile is found in the manner in which God is spoken of. (1) The covenant name Jahweh, originally a proper name necessary in polytheistic and heathenistic periods to distinguish Him from other gods, gradually vanished from the consciousness of the people as a personal name of the Deity, until, at the time of the Christian era (and probably considerably earlier) it was entirely forgotten. Gen. R. 38 states that, whenever Jahweh is used, it signifies God in His most holy, pure, and majestic aspect, while Elohim stands for His attribute of judgment (see also Ex. 20, 3). To guard against an irreverent use of the sacred name the latrie ceased to pronounce it. Only the priests at the benediction, and, after the death of Simon the Just, only the high priest, and he with bated breath, so as to render it inaudible even to his colleagues, pronounced the 'unutter-

able name.' But the real reason of the decision that the name was delivered only to the priests and humble (Kid. 71a). According to Philo (Vita Mos. iii. 14),

it was breathed by holy lips into holy ears in a holy place. 1 The crucified Saviour, who was crucified at the command of Pilate, venerated by the Samaritans was crucified on Friday, and interred probably on the Sabbath, 'the name.' The Samaritans still use the name except when, in taking an oath, they pronounce the tetragrammaton YHWH. The name is sometimes spoken of as 'Elohim' (Gen. 2, 4), 'the distinguished or proper name,' and more frequently as 'Eloah, 'the name pronounced in the Temple.

It is also called 'Amen,' 'a remembrance,' 'mena,' 'menan' (Cont. R. ii. 4); 'the name of four letters' (Kid. 71); 'the great name' (Onk. Targ.); 'the great and precious name' (Jers. Targ.); 'the great and holy name' (Targ. on Ps. 47); and in post-Talmudic writings 'the name' נ"ג; and in the medieval philosophers we find י"ג, 'the proper, the great, the wonderful, the hidden, the excellent name, the written-but-not-read name.' In the later Halakha all the names of God are styled י"ג. But the usual substitute is Adonai (the plural form of Adon), יג, the pointing of which is supplied to the tetragrammaton as a memoria technica (Kid. 71). The LXX renders Jahweh by ε'ύγενος, or the anarthrous Αίγενος. This, without a proper name to the God of the Jews, is the name of charge of εὐγενία laid to the Jews of the Diaspora.

Adonai came to be styled the chief of the kinism, and was invested with an awe similar almost to the name Jahweh. Abraham called God Adon (Ber. 7), and taught Him as such to mankind (Sot. 13b). 2

The name El Elyon or Elyon, 'Most High,' originally with a relative meaning, used in the OT by non-Jews, and in the Psalms absolutely of Jahweh, came to be used in Exile (G. Dalman, Die Worter Jesu, Leipzig, 1898, p. 182). H. J. Holtzmann sees in the revival of this name a transition to an abstract conception of the Deity (Loseh, der meistet. Thabningen, 1896-97, § 49). The official title of the Hasmonean princes seems to have been high priests of El Elyon. Rosh. Rosh. 185 records that after the victory of the Maccabees, it was ordained that in dates of documents the name El Elyon should be added after the reigning high priest's name. The practice did not remain, the chief of which was of the irreverence to the Divine name when the documents are rendered useless and thrown away. It was accordingly abolished, and the day and its anniversary were observed as a fast. El Elyon, though occurring in the liturgy (e.g. first petition of the 'Amida), is seldom met with in the Talmudic literature.

Analogous to this conception of God as having His residence in the most elevated spot of the universe is 'Heaven' מֵאָרֶץ. That this term frequently stands for 'God' in the Talmudic literature, but never in the liturgies, indicates that it was a popular appellation borrowed from surrounding phraseology. Ahura Mazda was the ancient god of the vault of heaven. Bel-Sharmas, 'the Bel of Heaven,' was worshipped throughout Syria, like Zeus Olympus and Caelus in the Roman Empire.

The Divine Majesty, conceived as located in a special region in the heavens, was called מֵאָרֶץ, 'the place' (e.g. מֵאָרֶץ יֵשׁ יָם יֶשׁ, 'God help him' [Midd. 492]; מֵאָרֶץ יִנְשָׁמָה, 'Blessed be Jahweh from His place,' Ezek. 38). From Palestinian usage and not vice versa, Philo took his idea, although the pronunciation of the Hebrew name was delivered only to the priests and humble (Kid. 71a). According to Philo (Vita Mos. iii. 14),

1 Josephus already makes a mystery of the tetragrammaton (Ant. n. xli. 4).
GOD (Jewish)  

into the Talmudic literature, e.g., 'Why do they call the Holy One, blessed be He, סבון? Because He is the place of world, and not the world His place' (Pes. R. 21). 

The usual expression by which God is spoken of is 'the Holy One,' with the doxological addition, 'blessed be the name of His Kingdom.' 

(2) God as 'King.'—The practice of uttering a benediction on various occasions is probably in imitation of Zoroastrianism. Copies of these benedictions were current in the Talmudic period (Shab. 115b). Their composition and institution are traced back to the 'Men of the Great Synagogue' (Ber. 33). Every such benediction is invalid unless it contains שִׁמְךָ וַעֲנָיִיתָהּ, i.e., the name of God and acknowledgment of His Sovereignty. Likewise the response of the laity in the temple when the high priest uttered the benediction, 'בשִׁמְךָ וַעֲנָיִיתָהּ, blessed be the name of the Glory of His Kingdom,' is also the response after the Shema. As King, God is repeatedly confessed and invoked in the Prayer-book. The phraseology is borrowed from the OT, but the model is not the Hebrew king, to whom the humblest of subjects can have access, but, as Holtzmann insists (1172 266), the Persian monarch. The 'Great King' lives in solemn seclusion from his subjects. Only the favoured few may see his face. Access to him who alone may hope for a hearing, or for a decision on his will. Often he is not the author of his edicts, but government is carried on by his consent before him rather than through him. Books of remembrance are kept. Analogous to this is the Jewish conception of the court of heaven. God is transcendent. No one has seen His face at any time. 'To Moses He only showed the knot of His phylacteries (resting on His back) (Ber. 7a). He is surrounded by angelic hosts in military array, who execute His will. Around the throne of the Court, the princes of the Countenance, of whom Suriel is one (Ber. 61), and so is Melejishon (Sanh. 38). The latter is also called the Prince of the World (Yeb. 106; Kid. 60a), and enters the deeds of men in a book (Kid. 6a). The seventy nations have each a representative in the court of heaven, of whom the greatest is Michael (Yoma. 29b). The forces of Nature are presided over by viceroys. Rahab is the Prince of the Sea (Baba bathra, 74), Yurkami the Prince of Fire (Pez. 118), Dumah the angel of Spirits (Baba bathra, 94), and Leto the angel of the Serpent (Wig. 18). The angels intercede for men; and, as they know only Hebrew, prayers should not be said in Aramaic. 

Sanhedrain presents the petitions to God (Bab. 15). Elijah had a kind of Mercury, making known God's plans to the priests and sometimes solving their doubts (Ber. 3; Pes. 70). He travels from city to city (Baba forerra, 80), is a frequent visitant among the Rabbis (Sanh. 118), is familiarly known as 'that aged man' (Zul. 8), and assumes various shapes in accordance with the commission with which he is entrusted (Ber. 6; 'Ab. zuza, 77, etc.). God's statute book is the Law, which existed before creation, according to which He created, governs, and finally will judge the world. To keep this Law, and to sacrifice to Him at Jerusalem, God chose to Himself the Jewish race. Hence a right standing before God is procured by adherence to the Law. Judaism is not a faith but a system of observance, the obedience of a slave to his master. The very word in late Hebrew for 'religion,' ני (occasionally only in Esther), is borrowed from the place for the slave (Yeb. Lex. 193a, s.v.). Foremost knowledge itself is a piece of piety. כִּי יָדַע, or he who understands how to apply to and fulfill the Law under all circumstances, is accounted of higher merit than even an illiterate high priest. It was a saying of the 'gentle' Rabbi: 'An empty-headed man cannot be a sin-fearing man, nor can an ignorant person be pious' (Yer. Abod. ii. 6). 

(3) God as 'Father.'—Sometimes the epithet 'Father' precedes the word 'King.' In the 'Alumim Malkemi, four verses of which were known and used by Rabbi Akiba, or in a parallelism, as in the sixth petition of the 'Amida': 'Forgive us, O our Father, for we have sinned; pardon us, O our King, for we have transgressed.' Our Father, who art in Heaven,' is frequently used in the Mishna (Yoma, viii. 9; Sanh. ix. 7a), and in the Liturgy. The appellation, however, signifies nothing more than that Israel is God's property. 

'In a deeper penetration into the essence of God it never entered into Jewish theology' (F. Weber, 'Judenthum Theologie,' Leipzig, 1897, p. 165). The address of God as Father gives one the impression of a lost word in a strange word. The manner in which Jesus imparted intensity and depth to the spiritual life from the faith in the Father-God, such as in the Parables of the Prodigal Son, or when speaking of the birds under heaven, is peculiar to Him (W. Bouwsma, 'Relig. des Judenmenschen, Berlin, 1906, p. 249). 

(4) God as 'Creator.'—To the contact of Judaism with Mazaicism under Persian rule is probably due the institution of the Y'der, in which universal creation is ascribed to God, with which the second part or morning prayer proper commences. Its original form consisted probably of Is 40, in which God is styled 'Father,' 'Creator,' 'Maker.' A later epithet, savouring of polemics against Gnosticism, is 'He-who-spake-and-the-world-came-into-being.' It occurs in Siphra on Num. 21v. 15. 'Wilt thou know Him, etc., study the Haggada;' and frequently in the Talmud, and is the invocation in the collect of the first half of morning prayer. In the various phenomena of Nature the Jew saw the operations of the Creator and the 'King of the Universe,' and uttered a blessing. Not only is there an abundant material in the Jewish liturgy, but different blessings (many of which are referred to in the Mishna as known) on every conceivable occasion, such as the partaking of wine, of water, of fruit; as the scent of a spice, of fruit trees, of precious ointment; in a storm; at the sight of lightning, of the rainbow, of the sea, of spring-beds, of a king, of a wise man, of a monstrously fine, indeed, are the very few sentiments of the Rabbi on Divine immunence. 

R. Hanina said: 'Sometimes the Universe and the fullness thereof cannot contain the glory of His Deity, and sometimes He converses with man through the hair of his head (Pez. R. 4). To R. Yose is attributed a dispute with a lady who was a serpent-worshipper. When she maintained that the greater because Moses at the sight of the burning bush hid his face (Ex. 33) but from the serpent he did not, the Rabbi replied that in two or three steps he could become as strong as the serpent, but from God nowhere (Sanh. 3). As no one knows where the soul is situated in three or five books, no creature knows the exact place of the Holy One, blessed be He; not even the Holy Beasts who carry the Throne of glory know it.' ('Midr. Shoqar Tov. 150). 

(5) Peculiar to post-Biblical addresses to God is a lengthy enumeration of His attributes. Yet R. Hanina silenced a reader for saying 'O God, the Great, the Strong, the Awful, the Mighty, the Powerful, the Bold,' being as derogatory to the Deity as praising a millionaire for possessing only a hundred thousand (Meg. 25a). The tendency was to avoid the use of the name of God altogether. Addressed to God, which records a providential deliverance of the chosen race, does not contain it, but only once alludes to it (40v). A similar reserve is observed in the first Book of Maccabees, where 'Rabbi,' in place of Hebr. 'Lord,' is substituted for 'God.' This is the more remarkable in a book of Sadocean authorship (Holtzmann, 303). In the Rabbinic literature the usual surrogates for the above-mentioned epithets or an attribute, Some-
times the third person plural is used, e.g. 'Who
soever has bathed on it, they show pity on him from heaven' ('Shak. 151a).

Of the use of a Divine name in exclamation we know only one instance in the Talmud: 'Lord of the
universe!' (Kad. 11).

3. The solity of God.—A God who is Creator and
absolute Monarch of the universe can have no rival. Jewish monotheism, therefore, denotes belief in the existence of one God, and connotes denial of Divine attributes to any other being.
This the Jew has confessed by creed and conduct since post-exile times; the formulary is 
'shout daily recitation of the Sh'ma', Dr 84. 'Hear, O Israel, Jahwéh our God is One Jahwéh'; the latter by repudiation of the remotest approach to idolatry. It is, however, in heresy, in the Hebrew: 'faith' in Judaism, which is a religion of mere observance. The Hebrew 
'faith' does not signify an active principle, but is only an expression for strong confidence in God's help, a reliance on His faithfulness, His willingness to answer prayer, and the like (see art. 'Faith', in HDB and EB). 'Strach still uses the Hebrew in this sense (28BS 114.
409). It was applied also as trust in the saving power of the Divine prophets (Ps 119th; cf. Dv 6).

The persuasion of Judaism under Antiochus Epiphanes produced martyrs and confessors of faith. 
Tevvi came to stand for 'knowledge of Jahwéh and trust in Him, based not only on Israel's election, but also on individual conviction.
To become a believer meant to be converted to a form of religion (Jth 14th). To be a believer in
corporate articles to the essentials of that religion and steadfastness under persecution (Enoch 61
39th, He 11). It is possible that in this period was instituted the morning and evening recitation of the 
'shout of faith.' That it was so used in early pre-Christian times is attested by Josephus ('Ant. iv. viii. 13), to whom the practice seems so ancient that he ascribed it to Moses. It formed part of the 'T'fillin' (Deut. v. 10).
In the Mishna and the early Midrashim the recitation of the Sh'ma' is styled 'taking upon oneself the yoke of the Kingdom of Heaven' (Yev. 69b 60.

A traveller who recites the Sh'ma': 'walking must halt when he takes upon himself the yoke of the Kingdom of Heaven. Which is the Kingdom of Heaven? The Lord our God is one Lord' (Deut. 6).

Women, slaves, and children are exempt from reciting it (Ber. iii. 8), which indicates its use as a confession of faith such as an adult and a responsible member of the race could make. It is not surprising that the Rabbinics made much of the Sh'ma'. Minute directions are given about the time, the posture, and manner of its recitation.

It must be read with the utmost exactness. A slight pause must be made between words separated by dittoetical letters, such as תבככ. The first verse is read louder and with greater emphasis on the last word, 'yov,' and with 'intention' that God is ruling above, below, and in all the four corners of heaven. Hence the Sh'ma' is sometimes spoken of as 'a sign,' 'to cause God to reign.' The omission of the 'intention' would frustrate the process and require a repetition of the Sh'ma'. After the first verse the glory is said to be 'the name of the glory of his kingdom for ever and ever.'

The Bekhetha will be cooled for him who recites the Sh'ma' more than once. 'Whoever is he who recites the Sh'ma' to less than he who is occupied in the study of the Law' (Ch. 40). R. H. says: 'The Sh'ma' should be recited in public ('Shak. 48b).

'And he is sure of a share in the world to come' ('Shak. 119'). It is accepted by God in the place of the daily sacrifice ('Raph. on 15). The omission of the Commandments from the daily liturgy is ingeniously explained by R. Simon on the Temple at Jerusalem, because they are contained in the Sh'ma' (Jerus. Ber. 1). A further recitation of the

The Divine unity insists on in the Sh'ma' is re-echoed throughout the Jewish liturgy. Every office ends with the Amen, which is a repudiation of idolatry and an acknowledgment of the Divine Unity and Sovereignty.

The prayer is ascribed to Zenas to Rab (420), against Mendelssohn, who places its origin at a much earlier date. Its three daily recitation dates from the Middle Ages. Whether it is intended to be used as a protest against Christianity or not (see J. A. R., 'Amen'), it is less dogmatic than the prayer against the Maimonides composed by Samuel Ha-Levi (Beres. 149, 19th).

The Maimonides is distinguished from a dissertation and a memorandum. He quotes repeatedly from the Bible in a manner that is not uncommon in the Bible in this period. The passage is for the utter destruction (forte of the 'Avoda
Zaide, Wuta, 592-934). Simon y. Yoshai, also a disciple of Camael d., contemporary of the Talmudists, says: 'Whoever couples with the name of God any other thing is ascribed to R. Yohanan ben Zakkai, who at the time of the Roman conquest of Jerusalem.'

The point at issue between the Rabbinic and the Maimonidean is the Divine Unity. In ii. 5. he attacks the doctrine of the Trinity, addressing himself not to the vulgar, but to those whose faith is supported by speculative knowledge. He was followed by other Rabbinics, who were influenced by Aristotelian philosophy and who developed philosophical treatises on traditional monotheism, such as Babyl. (1274-1275), who ascribed the Chabad Ha-Shabbat, ch. v. 5. 330-340.) in his Or Yehud, Joseph Albo (1390-

In his book, better known by the Hebrew title, Emunoth W' deoth, he proves the divinity of Jesus. He relies on the testimony of the Maimonides, in imitation of Mu-
hammadan and Christian confessors, formulated a Creed in his commentary on the Mishnah. It consists of thirteen essentials of the faith, each commencing 'I believe with perfect faith.' The second asserts 'that the Creator, blessed be His name, is a unity' (ע"ש, solema), and that 'there is no unity (י"ו) in any manner like unto His,' etc.

The Creed has never been favourably accepted; and, although it is printed in some prayer-books, it is never recited publicly. But it was versified in the Yigdal and the Adon Olam, with which the introductory part of morning prayer begins. The two poems are also read in the death-chamber before life is extinct.

As a system of observances restricted to a race, Judaism demanded of every member a confession of its faith not so much in words as in conduct, consisting in conformity to the requirements of that system. A distinctive feature of Judaism was called Kedusha Ha-Shem, 'the hallowing of God's name,' or the avoidance of 

Digitized by Google
GOD (Muslim) — 1. The name for 'God' common amongst Muslims is Allah, a word which, according to their theologians, denotes a 'Being who exists necessarily by Himself'; comprising all the attributes of perfection (cf., further, 'Arabic, pre-Islamic' section of this art.). Another Qur'anic word is ar-Rabb, 'the Lord.' There are also many names which express the various attributes of God. These are called the 'Asma' ar-Rahman, names of qualities in contradistinction to the 'Asma ash-Sharif, the name of the essence of God.

It is said that, when Muhammad and his Companions addressed God as ar-Rahman, 'the Merciful,' Abû Jahl said: Muhammad and his Companions are the enemies of God, why, then, do they call upon another God?' On this the following verse was revealed: 'Most excellent titles hath God; by these call upon Him, and stand in awe of Him. Call upon Him by His titles' (Qur. vii. 179). Those who perverted His titles were the pagan Arabs who were alleged to derive the names of their idols from names of God, as al-Lat from Allah, al-Uzz from al-Astâ, 'the Mighty' (Qur. lxxi. 1), which is now considered a grievous sin, and even infidelity.

In a much earlier Sûra also, in a verse which emphasized the unity of God, these names are referred to. In this Sûra their existence did not impair the idea of unity: 'There is no God but He; His are the excellent titles' (Qur. xxi. 35). Again, a tradition recorded by Abû Hurairâ states that Muhammad said: 'Verify there are ninety-nine names of God, and whosoever recites them shall enter Paradise. All these names express some quality of God, and are such as - ar-Rahman, 'the Merciful'; - ar-Rahîl, 'the Merciful'; - ar-Rabbîn, 'the Creator'; - al-Karîm, 'the Most Merciful'; - al-Asmî, 'the Nameless God'; - al-Îzzî, 'the Majestic'; - al-Sahî, 'the Guide'; (see full list in Hûcêr's PL. 141). The reason given for the large number is that God may always be addressed by a name suited to the need of His petitioner. Thus, in case of illness, He, calls on God as al-Muhsîn, 'the Forgiving,' or al-Mustaghî, 'the Receiver of repentances': in case of bodily violation, He prays to ar-Rahîm, 'the Provider': in case of doubt as to a course of action, He addresses God as ar-Rasûlû, 'the Messenger,' etc. To seek in the repetition of all of them, a rosary of one hundred beads is used. The Wahhabites, however, use their fingers, believing that this has been the custom of Muhammad. The name Allah is recited first or last to make up the hundred.

All Muslims agree that such names as 'the Living,' 'the Wise,' 'the Powerful,' can be applied to God, but they must be tawzîfî, i.e., authorized in some revelation—Qur'ân or tradition; e.g., God can be called al-'Îzzî, 'the Healer,' but He cannot be called al-Tâbiîn, 'the Physician,' because that word is not applied to Him either in the Qur'ân or by Muhammad. Other authorities are less strict and say that, though the exact word may not have been so applied, yet, if an attribute of the Deity has been praised, an adjective expressive of that attribute can be used; but, if names not so given are used of Him, such use must be looked upon as expressive only of His attributes and not of His nature. Such a term is Musâabît al-'arâd, 'the Causer of causes.' The Persian word Khâdîj objection also has been taken; but, as it means 'one who exists in himself,' it is equivalent to the Arabo-Persian Wâdî al-'âdîf, one who has necessary existence, and, therefore, may be used. Of names taken from a language of the infidels, such as 'God,' 'Dios,' 'Gott,' the general opinion is that they ought not to be used at all.

Among the many names of God is the Ism al-'A'zam, the exalted name.' According to one tradition, it occurs in Qur. ii. 156 and lll. 1. The names there are: ar-Rahman, 'the Merciful,' ar-Qaīrîm, 'the Self-subsistent,' and ar-Rahîm, 'the Living'; but, according to 'Aisha, the Ism al-'A'zam is known only to prophets and saints. As it is believed that those who call upon God by this name will obtain all they desire, Sûras and sermons profess to spend much time in the search for it, and, when they claim to have found it, they claim great influence over the common people. The desire to attain this knowledge has been a powerful incentive to enter on the long, arduous, and sometimes dangerous, search to which the titles are applied.

2. The doctrine of God may be considered with reference to His essence, His attributes, and His works.

(a) Muhammad laid great stress on the Divine unity. His creed, 'There is no god but God,' contains the negation of false gods and the affirmation of the unity of the one true God. The principal passages in the Qur'ân referring to this are: 'Say: He is God alone; God the eternal: He begateth not; and He is not begotten; and there is none like unto Him' (Qur. i. 1-4). 'Truly your God is but one; Lord of the heavens and of the earth' (xxvi. 4). 'God, then, is the Creator of all things: most excellent His titles' (Qur. xxvii. 7). 'This is God your Lord; there is no God but He, the Living, the Eternal: neither slumbereth He nor sleepeth: His whatsoever is in the heavens and in the earth, who it is that can intercede with Him but by His own permission? He knoweth what hath been before them' (Qur. xvi. 109).
GOD (Muslim)

what shall be after them: yet nought of His knowledge shall they know, save what He will. His throne reacheth over the heavens and the earth, and the upholding of both burdenseth Him not: and He is the High, the Great.' "There is no god but He, the Merciful,' "There is no god but He, the Mighty, the Wise." (II. 1 and 4).

His strong conception of the unity of God led Muhammad to denote what he considered to be the Christian doctrine of the Trinity. At Medina, when all hope of winning the Christians to his side had passed away, he thus appealed to them: 'O ye people of the Book, overstepping not bounds in your religion; and of God speak only truth. The Messiah, Jesus son of Mary, is only an apostle of God and His word, which He conveyed into Mary and a spirit proceeding from Him. Believe, therefore, in God and His apostles, and say nay, 'Three'; forbear: it will be better for you. God is only one God. For be it from His glory that He should have a son (IV. 130).

In the last Sura revealed we read: 'They surely are infidels altogether.' "O ye who believe in God, call not the apostles of God as-sid'iyah, or sifat, or sūlū'iyah, or faqīh al-asbābīyā. The former means that God creates and sustains all things, but belief in this does not necessarily make a man a believer; belief in the latter does, for he who accepts it worships the one God only.

(b) Muslim theologians divide their definitions of God under the seven attributes of Life (hayyūt), Knowledge (ʿilm), Power (ʿamr), Will (raṣūl), Hearing (ʿazīz), Seeing (qāber), and Speech (kalām).

Life—God has neither associate nor equal. 'Had there been a being with Me, He had gone to ruin' (XX. 31). He is Immutable, invisible, without form, formless, or partless. His existence has neither beginning nor end. He is not a body composed of substance or elements. He is not an accidents inherent in a body or dwelling in a place, and the words which proceed from his mouth. He is free from forgetfulness, negligence, and error. His knowledge is eternal; it is not posterior to his essence. 'Do not then see that God knows the secrets of the heavens and all that is in the earth' (viii. 3). 'With Him are the keys of the secret things; none knoweth what He knoweth, but He: His knowledge is whatever He wills, and in the sea; and no fellah seeth; and He knoweth it; neither is there a grain in the darkness of the earth, nor a thing slain or saved, but He knoweth it' (viii. 18). Power—God is almighty. He can raise the dead, make stones drink, and manifest the heavens and the earth, and recreate them. 'His power is eternal and a priori and a posteriori. It is such that no creature can quicken the dead.' (Irav. 15). 'If God pleased, of their eyes and of their ears would He surely deprive them' (II. 15). God hath power over all things' (III. 129).

Will—God can do what He wills, and whatsoever He willeth comes to pass. He wills everything possible, whether good or evil. He willeth the fall of the believer and the unbelief of the unbeliever. All is eternal, and is not posterior to his essence. 'God is worker of that He willeth.' (Irav. 16). 'God maketh whom He will, and whom He will He gildeth.' (Irav. 3). 'God doeth His pleasure' (viii. 3). 'If God pleased, He would surely bring them, one and all, to guidance' (viii. 58). Heart—God is without an heart, for His attributes are not like those of a man. 'He truly heareth and knoweth all things' (Al-Fātiha, v. 8).

Seeing—God sees all things, however small, yet He has no eye as we have. 'No vision taketh Him in; He taketh in all vision' (v. 103).

Speech—God speaks, but not with a tongue as men do. Speech is not of God, as a man; but it has various modes, as command, prohibition, promise, and threat. To some of His apostles, the messenger is He who did to Moses on the Mount, and to Muhammad on the night of the Ascension to heaven. To others, the speech is God. 'This is the way He speaks to the Prophets. The Qur'an is the speech (.ulūd), and of God, is therefore eternal.

The orthodox support their position by the verse: 'He it is who hath sent down to the Book. Some of its signs are of themselves penultimate' (maslak), these are the tests of the book, and others are ambiguous (mustadabbah). But they whose hearts He has blinded, He craves discord, craves an interpretation; yet none knoweth (from interpretation) but Gabriel. He is the highest of Gabriel. This is the way He speaks to the Prophets. The Qur'an is the speech (ulūd) and of God, is therefore eternal.

The difference between muḥāsib and muḥākka verses has been thus defined: 'The verses which
give orders and prohibitions are miṣtabb, all others are mutakabbib. This ruling brings all verses which speak of God and His attributes under the same ambiguous term. That being the case, the orthodoxy may say that this verse clearly shows that the interpretation of such is known only to God. There must not be any discussion on this. There was the ancient rule (de Slane, Prologomena d'lm Khalidin, ii. 67). A tradition records that 'A'īshah said: 'One day the Prophet recited the fifth verse and said to me, 'When thou seest those who follow its ambiguities, these are they whom God has named, avoid them.'

This apparently closes the door to any freedom of discussion, but men arose who altogether disputed the right of the orthodox thus to set aside the use of reason. They, too, based their position on this very verse by insisting on a different punctuation, which ran: 'None knoweth its interpretation but God and the stable in knowledge. They say,' We believe in it. Here God and the wise are said to be able to investigate all those matters which come under ambiguous expressions, and this use of reason then leads them to say, 'We believe in it.' This very reading is an orthodox one; the scholastic theologians generally adopt the second.

When the latter asked, 'How can man believe what they do not know?' the reply was ready. 'The act of believing in the unknown is the very thing praised by God.' Or, 'Why, if the Qur'an says one thing, are not all its verses plain?' The answer was: 'There are two kinds of eloquence, one the arrangement of words in a plain style, the other a figurative language. The Qur'an, as a perfect book, must contain both. Some must be plain, as 'the God and His servants who are established in knowledge,' Com. on iii. 5; see also Fritzsche's edition of Bulâtinar, Leipzig, 1846-48, vol. i. p. 146, and footnote in Sûra Faith of Islam, p. 102.

The controversy, however, dealt chiefly with the questions whether the attributes of God were internal or external, were part of His essence or not, were eternal or not. The orthodox party, called the 'Sufis' (sûfî = 'qualities,' 'attributes'), held that the attributes of God are eternally inherent in His essence without separation or change. All the attributes are conjoined with Him, as life with knowledge, or knowledge with power. The ambiguous verses in the Qur'an were not to be explained. The Mu'tazilites opposed this, and rejected the idea of eternal attributes, saying that to know the kindred of the things as 'the God and His servants,' would require a multiplication of eternal existences. The attributes of hearing, seeing, and speech they rejected; they were opposed to doctrine of existence. They looked upon such an expression as 'the hand of God' as a figurative way of speaking of His power. Ash-Shahraštâni in the Mu'ad ud-din of the Cheltenham ed. p. 40) thus puts the Mu'tazilite view:

'They say that God is eternal, that eternity is the peculiar property of His essence; but they deny the existence of any eternal attribute (as distinct from His essence); they say that He is consistent as to His nature; life, etc., to His nature; but not through any knowledge, power, or life existing in Him as eternal attributes; for knowledge, life, power are part of His essence; otherwise, if they were looked upon as eternal attributes of the Deity, it would give rise to the absurdity of eternal existences. They maintained also that the knowledge of God is within the province of reason, for which reason we need not trouble our heads.

To the Mu'tazilites a plurality of co-eternal attributes, such as those involved in the Beautiful Names described above, seemed to conflict with the principle of the One, and therefore, apprehended them as states of the Divine essence, or identified them with the essence itself. The significance of the attributes thus, indeed, ran the risk of being lost. It is said that a philosopher who denied entirely the existence of any attribute said: 'God is by His essence a Being who knows.' A Mu'tazilite who denied the existence of an external attribute did believe in attributes, and so far differed from the philosopher. His way of putting the case would be: 'God is a Being who knows, but by means of a knowledge which He Himself has.'

For the rise of the Ash'arite school, see art. AL-ASH'ARI. It is enough now to say that Abu al-Hassan al-Ash'ari (A.D. 970-999) put the case somewhat differently. He says that there are twenty necessary qualities in God: existence (wujûd), the proof of which is the origin of
GOD (Slavio)——GOD (Teutonico)

The world, which must have had an originator; priority (genesis); 2, there was a time when He was not; consequence (genesis) or lack of termination to His existence; difference (nada/ba/a) from things created; self-existence (genuine); 3, no origin; anything exists, no necessity; Muhammad will; knowledge: life; hearing; seeing; speech; being powerful; is the essence of the attributes of the Creator; "when power exists in an essence, the quality called ‘being powerful’ is the same essence; being a will, a knowers, a living one, a hearer, a seer, a speaker." These are said to be qualities existing in His essence, and are states (stati); they are not the attributes of will, knowledge, etc.; but between them and the attributes concerned there is a reciprocal inseparability.

God is described as Merciful and Gracious, the Guardian over all, the Provider of daily bread, the Rower of the people, and their Deliverer, and many similar terms; but all that the Qur'an says of the loving-kindness of God is overshadowed by the teaching of Muhammad in the Qur'an and the traditions as to His Power. This is the prominent element in the conception of God as taught by the Prophet; it has ruled the Muslim world, and still rules it. The 'most excellent names,' ninety and nine in number, do not contain any term which denotes the relation of God as a Father to His people. The idea is repugnant to the Muslim mind, and so in Islam the relation of man to God must ever be that of a slave, who lacks the freedom and dignity of a son.

The Prophet's Semitic origin is apparent in his religious doctrine of the unity of God. Allah, the God, the absolute ruler of Nature and of man, was to him the truest and noblest conception of the Divine Being. Where he had not been brought into contact with Jews, his monotheism would have been so strong as perhaps doubtful. It has been well said that there is no charm in the abstract doctrine of the unity of God to elevate mankind, and the general idea that has grown out of this dogma—that God cannot be known, and that inquiries into His nature are worse than the God of the Muslim is far off. The prevailing conception of God as the All-Powerful is not far removed from the idea of a deep, and, fear, thus separate from love, is either the incentive to all effort or leads to the repression of all energy in the Muslim. The idea of unlimited, arbitrary power, unrestrained by any law of holiness, has so filled the Muslim mind that sin is regarded less as a breach of moral law than as a violation of some arbitrary decree. Certain actions of the Prophet were evil according to any law of righteousness; but no Muslim would admit that in doing them Muhammad committed a sin, for he acted under the command of God. Thus, said the Prophet, he was come to be regarded not as the moral elevation of a man, but as safety from punishment. It is attained not by spiritual regeneration of the man's evil nature, but by the punctilious performance of certain religious rites, submission to the will of God regarding them being the essential characteristic of a good Muslim.

The Wahhābites, the most fanatical of all Muslim sects, have so emphasized this idea of the unity and power of God that, from their point of view, the concept of power may be called the Definition of Power, just as Hinduism deifies the productive and generative principles of Nature (see the description which Palgrave gives in his Central and Northern Asia, p. 284). The Wahhābite idea of God is: it is more or less true of what men of the other Muslim sects believe. The characteristic of God realizes the greatness and grandeur of His power, but it does not tend to call forth the deep love of the human soul for the right of God in the individual, so also it hindres progress in the community, and prevents the formation of a national life. A practical fatalism settles sooner or later on all Muslim communities.

LITERATURE.—The translations of the Qur'an by Sale, Lane, Peter, Palmer, IV. and V. volumes; and the comments of Qur'anic theology, esp. by A. Schuré (Berlin, 1866-67), K. Krueger (Münster, 1892); the Proceedings of the Congresses of the International Congress of Arabic Studies (see the proceedings of the Congress of the Islamic States, 1866-67); T. P. Hughes, 'Le médecin, la chasse, le plaisir, la guerre,' in the Berlin, 1866; K. Kremer, Gesch. der herrschenden Lieden des Islam, Leipzig, 1862; T. P. Hughes, 'Le médecin, la chasse, le plaisir, la guerre,' in the Berlin, 1866;

Edward Sell.

GOD (Slavio).—The word for 'God' in the Slavonic languages is Bog. It is found in the names of primitive pagan deities mentioned in the ancient chronicles (e.g. Strijov, Dazsbyg), and by Helmond (L. C. Zemboch, Is. deum minorum). It is the same word as the Esk. Skupa (Old Pers. Sko), which means 'good,' 'blessing;' and this meaning is found in derivatives from the root boy (e.g. bogaty), 'rich'; sko, 'eye,' 'spring'; sko, 'soup.' Procopius of Cesarea (11th cent.) seems to think it possible (de Bello Gothic, xii. 14) that the ancient Slavs had a supreme God dominating their pantheon, as Zeus dominated the Greek pantheon.

The Slavs,' he says, speaking of those bordering on the Byzantine Empire, 'believe in a God who causes thunder, and is the sole master of the universe.'

Halmold (Chronicon Slavorum, i. 83) makes the same assertion in regard to the Slavs of the Baltic and the Elbe:

'Among the various gods to whom they attribute the fields and forests, rivers and seas, they are all agreed that one God rules over the others from the heights of heaven. The all-powerful God attends only to celestial affairs. The others have their separate religions and obey Him; they are the offspring of His blood, and take precedence in rank according to their distance from this God of gods.'

Unfortunately, we have no text to confirm what Halmold says of the origin of the Slavic gods. A biographer of the missionary Otto of Dannberg tells us that the Slavs regarded their supreme deity as 'glorious and filled with all riches' (Ebbe, ii. 1). In the treaty concluded in 945 between the Slavs and Greeks it is said (supposed Russian chronicle of Nestor):

'May the Christian Russians who violate this treaty be abandoned by the all-powerful God; may those who have not been baptized get no help from God or Perun.'

But no other text mentions this anonymous god.

GOD (Teutonico).—1. The term 'god.'—The term 'god,' as used to denote anthropomorphic beings of a higher order, is found in all the Teutonic languages (Goth. god, O.N. god, A.S. and O.S. god, O.H. god in High German, Df. God, and Sell's Faith of Islam), p. 181 ff., of the Wahhābite idea of God: it is more or less true of what men of the other Muslim sects believe. The God of the Teutonic race realizes the greatness and grandeur of His power, but it does not tend to call forth the deep love of the human soul for the right of God in the individual, so also it hinder progress in the community, and prevents the formation of a national life. A practical fatalism settles sooner or later on all Muslim communities.

GOD (Teutonic)

2. The four pan-Teutonic deities. — The worship of anthropomorphic deities constitutes the final stage in the religious evolution of the heathen Teutons. It was, in the main, a development from the belief in souls and spirits. One of these innumerable creatures of the imagination was single out as representative of a whole group of souls and became the central object of the cult; it was worshipped by prayer and sacrifice, and gradually extended its sphere of influence, in harmony with the interests of the confederation whose members paid homage to it. Such was the origin of the deities worshipped by the Teutons and regarded as holy either by single communities or by nationalities. It sometimes happened that other deities surrendered their province to the god thus worshipped, became incorporated with him, and were then recognised as mere epithets of the chief deity; while, on the other hand, certain attributes of the latter were detached from him and became independent deities. There was no uniform cult common to all the Teutons. In many instances a cult migrated from one tribe to another, and so either superseded, or became amalgamated with, the indigenous cult (religious institutions). We, nevertheless, among the Teutons three specially prominent gods, who, moreover, are met with in all the different tribes, and must, accordingly, have come down from a period when the Teutons were still an undivided people. These three are: Wōdan, the god of the dead and of the wind; Ódin, the god of thunder and of the sky; and Frey, the god of wealth and the husband of Freyja. With him he is associated a female figure who appears in the O.E.G. sources as Frīa, in the O.N. as Frigg ("the beloved," "the wife"), and is always regarded as the consort of Wōdan. Roman writers identify Wōdan with Mercury; Donar—in the earlier period—with Hercules, and subsequently with Jupiter; Ziu-Tyr with Mars; and Frīa-Frigg with Venus; and thus, when the Roman calendar was introduced among the Teutons, the dice Martis was rendered "Tues- day," the dice Mercurius "Wednesday," the dice Joviarei "Saturday" (Norse Niflheim), and the dice Venus "Friday."
of the upper regions, who manifests himself in the thunder. In this capacity he bears the axe or hammer, which he hurls from the sky, and with which he makes the earth fruitful (Adam of Bremen, iv. 28). He is depicted as a strong man in the prime of life and with a ruddy beard, and he is accordingly worth on the votive stones of Teutonic mercenaries as "Hercules magnusmanus" or "Hercules barbatus" (W. Brimbach, Corp. Insocr. Hdb., Elberfeld, 1867, no. 130 ff., 655). During the thunderstorm he travels through the air in a chariot, which, according to Norse mythology, is drawn by two goats. The saga also tells us that his hammer, which he brandishes at the ghastly revels of the giants, is called Mjölnir, and, further, that he wears a peculiar girdle, which increases his strength when his anger is roused. By virtue of his hammer he is also the god of human fecundity, using it to bless the rite of marriage. He is attended sometimes by the youthful Jörm, pre-eminent in swiftness, and sometimes by Loki the cunning. His mother is Jörtr, "the earth," whom the skalds identify with Frigg or with Hlínyn (O. H. G. Hlidana). In the North, certain of his attributes are personified as his sons, Magni (power) and Mjöllnir (strength), or as his daughter Frigg (strength), and his abode is called Friddhimter (realm of strength) or Friddhaim (land of strength). His consort is Sif, i.e. simply the "ocean," or sea. In certain districts Thor came to be regarded as the son of Odin, but this took place only after the latter had advanced to the position of supreme deity. He, nevertheless, maintained his preponderance as the chief object of belief and worship among the peasantry of Norway and Iceland till the downfall of paganism. In all the Norse countries he is the friend of man, succouring him in his conflict with demonic powers. The latter being represented mainly as giants, Thor's battles with giants form the theme of numerous sagas, some of which were of a large extent furnished by widely diffused legends. In both Norway and Iceland temples were erected to him in large numbers; his cult has left traces in many place-names, while the naming as proper names formed with Thor are a further testimony to the prevalence of his worship among the Northern peoples. It is true that outside this area we find but few data bearing upon his cult; but such as we have are in complete agreement with the evidence of the Norse sources. Thor's sacred tree was the oak (cf. Ulf, Der Mythos von Thor, in Schriften v. St., Stuttgart, 1868).

(c) Ziu-Tyrs—The third pan-Teutonic god was the war-god—the O. H. G. Ziu, A. S. Týr, O. N. Tyr, whose name appears in the O. H. G. Dienstag, A. S. Tuesday, O. N. Týrday). He has often been regarded as a survival of *Tiwas,* the Teutonic sky-god of pre-historic times, but in our extant sources he is never anything else than the god of war. His worship was specially prevalent among the Western Teutons. Thus he is met with on the Rhine as "precipinas decurum Mars" (Tac. Hist. iv. 64); the Alemanni, in virtue of their being devoted to his cult, were also called Ciuwarti, i.e. "worshippers of Ziu." Bavarian mercenaries stationed near Hadrian's wall dedicated altars to him as Mars Thingus (Things, another appellation of Ziu; cf. Dien- in Germ. Dienstag, "Tuesday"), the god of the popular assembly (cf. Dan. Ting, "parliament"). Among the Saxons he was known also as Sahamot, and Er or Eriz. His symbolic weapon was the sword. Norse myths depict him as having one hand, his left hand, as a stragam of the Fenris wolf.

(d) Frjáa-Prjá—In addition to these three male deities, all the Teutonic tribes recognized the goddesess Freyja (A. S. Freg). The wife of Wódan-Odin. Her name (akin to Skr. prjá) means simply 'the beloved,' 'consort,' 'wife,' and she was, accordingly, the goddess of married women, and the attendants of the sky-god. She was associated with Odin his growing prestige, and became the mother of the gods; but she had no such position in the cult as was enjoyed by her husband or by Thor.

3. Local deities. — Beyond the four mentioned above, no other deity was acknowledged by all the Teutonic peoples. Among the Southern Teutons and the Norwegians we meet with the indefinite figure of Fria's sister, who is called Volva by the former, and Fulla by the latter—a name signifying the dispenser of wealth. But we should note that a large number of deities belonging to particular districts—in Germany chiefly female, in Scandinavia both male and female—and known to us mainly from legendary sources. The great profusion of such local deities is shown by the votive stones erected by German mercenaries and inscribed with the names of goddesses. One of the most prominent of these was the Nekermanns worshipped in the Rhine delta—the tutelary deity of fishermen and the bestower of fruitfulness. The Marsi accorded a tribal worship to Tanfana, whose festival was celebrated in autumn (Tac. Ann. i. 51). A goddess of seafaring, whom Tacitus (Hist. 9) identifies with the Egyptian Isis, was worshipped by the Suevi. A complex of the spirit of the coast of the Baltic or the North Sea offered sacrifice and worship to Nethus, who had her seat in a sacred grove, and travelled through the various territories in the beginning of spring (ib. 46; cf. Mannhardt, Wald- u. Feldkulte, Berlin, 1877, i. 567 ff.).

4. Deities peculiar to the Northern Teutons. — The deities of the Southern Teutons cannot compare in point of numbers with those met with in the Scandinavian sources. These Northern deities, moreover, are the more interesting figures among the Fens were also objects of worship.

(a) Frey, Njort, and Freydis. — At their head was Frey, whose principal sphere of worship was in the fertile plains of Sweden, his chief temple being at Upsala. His cult found its way thence to Norway (Trondhjem), and was then carried to Iceland by Norwegian colonists. The name Frey means simply 'the lord.' He was regarded as the god of the fertility of the soil, and thus as the dispenser of wealth and prosperity—the deity from whose hand came sunshine, rain, and favourable winds. In the Eddas he is represented as travelling in a carriage drawn by a boar with bristles of gold. He possessed a marvellous sword, able of itself to fight, and also the ship Skidbladnir, in which he travelled through the air. His father is Njort; his sister is Freydis. Njort is really the Norse form of the Northman name Njort, i.e. the older god Frey, and, like him, also the bestower of wealth—wealth, however, more in keeping with Norwegian conditions, i.e. as acquired by seafaring.

In Norway, where Frey was worshipped, Njort also was worshipped, and their names appear side
by side in the Norwegian form of oath. The female Norn, on the other hand, survived in Freyja's sister Freyja may have been derived from her brother's. A Norse myth speaks of Njörd ('place of ships') as the abode of Njörd, and says that his wife, Skötti, the daughter of a giant, stays with him only three nights in Njörd, while he spends nine nights with her in his mountain home. In Freyja, who appears only in the late-provincial sources, are combined attributes of her brother and of Frigg. She was the goddess of fecundity and love. As a chthonic deity she has a share in the slain. She has the elf-like power of flying through the air in the form of a falcon, while legend endows her also with a resplendent breast-ornament, the Brisingamen ('bride's jewel'),

(b) Balder.—Of the other Norse deities the most prominent was Balder, whose name signifies 'light,' 'the bright one.' Nothing is known of a Balder cult, and what is told of him by Saxo Grammaticus and the Eddas consists of mythical narratives which group themselves round the subject of his death. The Snorre Edda says that he was noted for his bosom appearance and his gentleness of nature. It is clear that, in the latest form of the myth, Balder has been endowed with certain attributes of Christ. His death, according to Saxo, was due to Hothern, Ho6r, who for the occasion availed himself of a magic sword; the object of the conflict was the winning of the beautiful Nanna, who was the lady deity whom Balder also had paid court (Hist. Dan. i. 110). In the Eddas, on the other hand, Nanna is Balder's wife, and Balder is the favourite of the gods, who were forewarned of his doom by evil dreams. His mother Frigg, accordingly, made all animate and inanimate things take an oath that they would not injure Balder, and only the mistletoe remained unfettered. It is not Ho6r, but Loki, who perpetrates the deed, Ho6r being a blind Aes who acts merely as the instrument of Loki. Thus, when the Aes cast stones and other missiles at Balder, as they were wont to do in play, Loki thrusts the mistletoe bough into Ho6r's hand and so instigates the throw which kills Balder (Snorre Edda, i. 172 E.). In both forms of the myth Balder was avenged by a brother, whom Odin sought for the purpose; this brother appears in Saxo as Bous, and in the Edda as All. According to the Norse sagas, Balder had a son named Forseti ('president'), who was the best of all judges, and is probably to be traced to the Frisian Forste (cf. S. Bugge, Studien üer d. Entstehung der nord. Götter- u. Heldensagen, Munich, 1893; Fraser, Götter, London, 1900, II. 358 E.; F. Kantimann, Balder, Strassburg, 1902; Schück, Studien i nordisk litteratur- och religionshistoria, Stock- holm, 1904, ii. 1 E.).

(c) Heimdallr.—Another of the Aes named in the Norse sources is Heimdallr, i.e. 'world-bleem,' 'he who shines over the world,' the sentinel of the Aes on the border of the Divine world, and as such provided with the Gjallarhorn, on which he sounds a blast at the outbreak of the last great battle between the gods and the demonic powers. In his musical career he requires less effort than a bird, and sees equally well by day and by night. His ears are so acute that he hears the grass growing on the earth, and the wool on the sheep's back. According to a saga in the Edda, he is the son of nine sisters, daughters of the female sea-deamon Rán, and derives his enormous strength from the latter. Night after night upon the foaming cliff he wrestles with Loki for the possession of Freyja's Brisingamen, and wreaths from him the stolen jewel.

(4) Minor and later deities: Odin, Hoenir, Viliar, Bragi.—(1) Still another figure numbered amongst the gods by the Snorre Edda is Ullr, whom Saxo calls Ollerus, making him the visiguard of Odin during the latter's absences on the field of battle. Ullr is highly skilled in fishing and ski-running, and is conspicuous for his beauty of form. (2) The figure of Hoenir, as regards both his character, is difficult to explain. In the sagas he is often found in alliance with Odin and Loki, the three being repeatedly associated in tales of adventure. So, too, the Vaisgar represents them as having created the human race, but here Hoenir never becomes prominent. He fills a peculiar role in the legend of the war with the Fews. After the treaty of peace he was given as a hostage to the latter, amongst whom he became notorious for his mental incapacity, leaving everything in the hands of his fellow-hostage Mimir. The only quality in which he excels is swiftness. (3) In the Eddas we read also of Viliar, the son of Odin and the giantess Grith, as one of the gods. He is the tactician Aes, and bears a striking resemblance to Vali. Like the latter, he is destined by birth to be an avenger. He avenges his father Odin by thrusting his sword through the heart of the Fenris wolf, and wrenching from the creature its upper and under jaws. He shares with Vali the sovereignty of the renewed world (Yofnpep, 53). (4) The latest group of the Aes who with Odin is the god of poetical art. He was really the skald Bragi, who lived in the 9th cent. and was accorded a place among the einherjar. In Valhall he acts as Odin's counsellor, and, with other einherjar, receives the kings who die in battle. As an Aes he becomes a son of Odin. He was noted for his long beard, and, according to the later sagas, was the husband of Idun, who bestowed the gift of youth.

(c) Loki.—A peculiar position among the Norse deities is assigned to Loki. He is the Aes who sometimes succours, sometimes works injury; he is sometimes an ally of Odin and Thor, and their comrade in travel, while, again, he seeks to overreach the gods. His double character makes him a favourite theme of poetic legend, and he became the nucleus of mythical incidents and Christian stories about Satan. Loki is in reality evolved from the chthonic character shows itself also in the blood-covenant which he makes with Odin, while his elfish nature is seen in his power of assuming at will the form of a woman or an animal, in his artistic skill, his dexterity in theft, and his malicious cunning. His beautiful and graceful appearance and his lameness are characteristics also found among elfish beings. After the process of development by which the elfish apppellative loki (related to lika, 'to look in,' as holda to helan, 'to hide') had become personified as Loki the Aes, the latter joins with Odin and Hoenir in the creation of man; he wanders with these gods in quest of adventures; he brings the apples of Idun to the giants, and in the form of an eagle takes them away again; in the shape of a mayfly after he has won the stallion of the archchet of Asgard, he gives birth to Odin's eight-footed steed Sleipnir; he cuts off Bif's hair, and then brings hair of gold for her from the dwarfs; he accompanies Thor upon the expedition in which the latter recovered his hammer from the land of the giants, and also upon his journey to Utgard. But Loki never forgets the death of Balder, and it was on this account that Norse poetry fastened upon him
GODAVARI—GOETHE

the saga of the chained monster, telling how he was fettered by the Aas. Among the latter his wife is Sigyn, and their son Nari.

A consequence of destructive propensities, Loki became the enemy of the gods, and thus also the giant who at the head of the demonic powers has a share in bringing about the dissolution of the gods and the world. In this, the latest, phase of the myth, his wife is the giantess Angrboða, 'the worker of calamity,' while his children are the Fimrifi, gods of evil, the queen of the underworld (cf. A. Orlík, 'Loke i nyere folkeoverlevering,' in Danske Studier, v. (1906) 163 ff., vii. (1906) 60 ff.; Næstvedt til Selander, Loke mytiske opsyn, Upsala, 1911).

(f) Female deities.—In the Norse poetic literature, moreover, we find the names of numerous female beings, the gods, but in most cases the name is all we learn of them. In addition to Freyja, the sister of Frey (see above), the Norse peoples recognized Gefjon, who was at one time regarded as the goddess of the fruit-bearing earth, and was even worshipped as such (cf. A. Orlík, in Danske Studier, vii. (1910) 1 ff.), and to whom the Danes ascribed the present position of the Island of Zealand. She typified eternal youth, and was the guardian of the apples which rejuvenated the gods. Later tradition made her the wife of Bragi. Female deities having specific functions are found in Gna, the messenger of Frigg; Sága, the goddess of wisdom, who in company with Odin drank wine from vessels of gold at Békhrabeck; Snorra, who imparts wisdom to women; Sjofa, who unites lovers; Lofn, who acts as intermediary between gods and men; Hlin, protector of flocks; Ein, custodian of domestic peace; and Vor, guardian of oaths and treaties.

GODÁVARI (Skr. godávarti, 'granting water or kine'; but the name is more probably a Sanskritized form of the original Dravidian name Gods (Telugu gods), 'limit,' 'boundary,' in the sense that it divided two regions of the Dakkhin.)—The great river of the central part of India, rises near the Nalk (or), flows E., and joining the Krishna and the Godavari, forms the boundary between the British District of Ahmmednagar and the Dominions of the Nizam of Bhaiderabad; thence flowing W. and forming part of the latter territory, and finally falling into the Bay of Bengal in two branches—the G. or Gauami Godavarti, and the W. or Vasiga. Its total length is 936 miles.

The Gauami ranks high among the twelve sacred rivers of India, its chief rivals being the Ganges and the Nerbada. It is associated with the story of the wanderings of Rama, who is said to have lived for a long time at a place called Panchavati, which is by some identified with Nasik, but was probably lower down the course of the river. The chief sanctuary attaches to the G. or Gauami branch, built on a sand island. It was reached by boat from the Gauami branch, and was associated with the goddesses. Another story tells that it flows from the same source as the Ganges, and this connection is shown by its name, Praksha-ganga, 'old lady Ganges.' Every part of its course is sacred, and bathing in its waters washes away the foulest sin. Every twelve years the great Pushkara bathing-festival is held on its banks.

The chief holy places is Trimbak (Skr. Trimbakeshwar, 'three-eyed,' a title of Siva), which contains one of the great lingas of India. This is the reputed, but not the real, source. Here a place is shown under the name of Gauami. Here also, where the sun sets, there is said to be a cleft in a certain stone which, when the sun sets, the water drips from a lofty cliff through a stone cow's mouth, which the attendant priest decorates with leaves and flowers. Here the god is paraded in a litter every Monday; and every twelfth year, when the sun enters the sign of Leo, a great bathing-festival is held, the reputation of which is so great that the word 'godavarti' is commonly used in Gujrat to express the number twelve (BG viii. 840 ff.). Nasik, close by, is held to be one of the sacred places of India. Lower down the course of the river comes Bhadrachalam (Skr. bhadrachalam, 'lovely hill'), also known as Rámamah, the sacred ford where Rama is said to have crossed the river. It contains a famous temple dedicated to the god, which is a place of pilgrimage. As the river approaches the sea, the chief holy places are Rájamundry (Telugu Rájamundry, 'land of the king'), and, further down, the king Mahendravada of the Orissa dynasty, and the village of Kottipal on the left bank of the E. month of the river.

FEMALE DEITIES.—(see above.)

GOETHE.——1. Life.—Goethe was born at Frankfurt-on-the-Main on 28th August 1749. The place was good and the time was great. For his was the great time that the world goddess is common used in Gujarát to express the number twelve (BG viii. 840 ff.). Nasik, close by, is held to be one of the sacred places of India. Lower down the course of the river comes Bhadrachalam (Skr. bhadrachalam, 'lovely hill'), also known as Rámamah, the sacred ford where Rama is said to have crossed the river. his romances, earlier, with Lotte, and his Weimar relations with Franz von Steal, there is neither space nor call to speak here, as we are concerned with the all-inclusive developments. Amid multiplying cares and distractions, Goethe maintained his interest in literary activities and plastic art; his official duties deepened his spiritual isolation. Then the death of his beloved mother in 1788, wherein his life was made up of Italian sojournings, of which more will be said later.

After an absence of nearly two years in Italy, Goethe returned, and soon afterwards married a humble but winsome maiden, named Christiane Sophie Vulpius, in whose love he was happy. The year 1790 was crowned by the birth of his first child; and 1791 was a fruitful year. But, once an interesting start was gained, it remained faithful and fruitful to the end. Their desperate detractors they scorned in the tasks that they did to their name; and their. quality. Goethe wrote to Schiller that their first cordial intercourse had been an epoch in his life; Schiller wrote of Goethe to the Countess Schimmel that he was the first of his life. Their. lofty integrity and truth, together with the highest earnestness on behalf of what is right and good. Their correspondence shows how each was the complement of the other. When their union of hearts was broken by Schiller's death in May, 1805, it was an irreparable loss to Goethe, and his grief was great. A time of political troubles and domestic distress followed, until the peace that was concluded between France and Prussia in July 1807. Goethe's activities continued, but his literary work lay dormant; but, by the death of his son, August, in 1831, however, his harrassed literary industry was proceeding. When he had put the finishing touches to Faust, he said to Eckermann: 'Now Nature's all is as if it would make of my life a free gift. In the following year (12th March 1825) he gently passed away. His dust was laid to rest in the churchyard of St. James, where lay his father and mother; and to him is a supreme excellence. The real ground of the profound impression which he made as a literary figure we shall see later. Meantime, we take critical account of many of his more important literary efforts. His Götze von Berlichingen, a juvenile but captivating drama, attracted the attention of Scott, and was not without influence on French. It sets before us the ideal of freedom, in rude and natural forms of active and heroic will, battling against circumstance, and asserting its independence, under a native sense of justice. A like cry for freedom—the freedom of the artist—marks Goethe's Prometheus, which contains passages of living interest.

Goethe's superab power as a writer of ballads, instances are seen in his 'Bride of Corinth' ('Die Braut von Koriath'), 'The Erl-King' ('Der Erlkönig'), and 'The God and the Bawdies'), which witness to his wide-reaching insight and subtle charm of expression, and abound in elements of beauty and mystery. Goethe's sojourn in Italy and his contemplation of Art and Nature, developed in him the spectatorial attitude rather than that of practical activity. This attitude, with its own ethical conceptions of the world, is reflected in his exquisite
drama *Iphigenie*, his refined play *Tasso*—neither of which, however, proceeded from a Shakespeare—and in his serious work, *Wilhelm Meister*. Of the last we shall presently speak, hence the meagre time of his *Tasso* that he found had to complete this fine and penetrative piece of work. But he said to Eckermann that the play was born with the last breath of his life. The *Tasso* of the drama, it should be said, is in certain respects not at all like the *Tasso* of historic fame. In the former, *Tasso* differs in many respects from the Egmont of history, and is ruined by his inability to read hospitality where it exists. There is something not quite admirable in Goethe's treatment of *Tasso*. It is a figure admirable and pathetic, drawn by Goethe's Hellenism with characteristic Greek reserve. Not less clearly drawn are the figures in his *Hermit von Dorchas*, which, while truly individual, are significant of the typical, sedentary, young spirit they may be, but they remain genuinely German. Artistically, the piece is perfect.

Goethe's ethical attitude, to which reference has already been made, is a rather difficult subject, as is seen in his resolving morality into systematised self-expression and self-realisation, even in the case of the self-development of Faust, wherein are incidents not easily brought within the ethical sphere. But Goethe's own moments of aggressive paganism are not to be forgotten, and they cast a significant light on his rather absurd impatience with what he regarded as Christianity's ascetic chastisement of man. This is not to overlook the fact that he felt the force of Kant's thought with respect to practical problems of ethics. It was in one of his later stages that he took up Christianity, but his religion, though it be a religion, is an inescapable reverence in three kinds—for what is above us, for what is below us, and for equals—and this Neo-Christianism, if it may be so termed, consisted in the fusion of three elements. The artistic view of life finds expression in Goethe's *Wilhelm Meister*, which has no lack of wealth of life and thought, though wanting in artistic finality. *Culture, or Bildung*, sums up his aim, and the work has been aptly styled an *Odyssey* of culture. The world is for him harmonised in cultivated society. In spirit and art the drawbacks not difficult to find, many have been able to learn much from it. It presents the world as a vast quarry of materials, which it is for us to reduce to an ideal form in virtue of the creative power within us. Thus a vague and formless idealism will be supplanted, under life's disciplinary processes, by definite and well-chosen activity. It is as a philosophical realist that Goethe so speaks, his own happiness being, in some sort, a religion to him. But the work insists that man shall develop his sentiments and perceptive powers, no less than his powers of moral culture, in order to the harmonious working of all the powers of his nature. All those teachings, as to the wisdom and strength of life, are set forth in a manner as far as possible removed from didactic or moralistic presentations, in the rich and varied guise, indeed, of animated description and thrilling romance. This is not to say, however, that the work is not dull and prosaic enough in places.

In *The Sufferings of Young Werther* (*Die Leiden des jungen Werther*), Goethe gave expression to that reaction against the domination of the understanding which marked the 18th century. He made the work expressive of the high sensibility, and the feeling for Nature, which were being in new ways developed. But his Werther was too given over to the sway of sensibility to have it, as in Goethe himself, controlled and regulated by a knowledge of himself. It is a little healthiness of tone, and it is infected with the melancholy of the age—the excessive sentimentality of the closing 18th century.

Goethe's *Egmont* (die Wahrheit in der Kunst) is a fine prose work, telling of the tragic significance of the relations which he calls *elektive Affinität*, or the given spiritual tendency. The book is marked by great feeling, high imagination, and deep knowledge of man and the world.

As in *Wilhelm Meister*, so in the *Poetry and Truth* (*Die Dichtung und Wahrheit*), the culture idea is emphasized. The work is an autobiographical record of somewhat unusual and informal character, but it presents, in light and graceful style, more of personal experiences of his early life; it even reflects the national currents of thought and feeling. Friend as Goethe was of world-literature, he here complains that national subjects and practical no treatment from the friends of his early days. It contains, too, in a noteworthy way, his scorn of the melancholy, mystical, and sublime, wherein Nature is viewed as more eternal and unaided movement of matter.

On the development of Faust we have already touched, but it remains to remark that *Faust*, as a work, is universally regarded, even in Germany itself, as an extraordinary work. *Faust* has been styled a world-epic, or Welt-epos, because of its vast range and wondrous universality. Great, however, as it is, it is scarcely the product of Goethe's genius, so marked by factual tendency and breadth, as of an inductive philosopher. But even in this work, knowledge of a true sort is used, direct, living, and wondering contemplation of Nature-looking "into the breast as into the bosom of a friend"—and not through dry thinking or analysis. To know life in its concrete variety, pressure, and fullness is to be able to appreciate *Faust*. Here Goethe's religion is the religion of the soul of the deed, which, in his pagan mood, he elsewhere describes as a kind of religion of healthy-mindedness, if that may be so termed, which consists in sheer absorption in the world and its joys. But his religious views are vague. In an advanced part of *Faust* we find the "religion of the deed" reappear, when it is announced that we have power to redeem "him who labours ceaselessly striving." It is to be noted that in *Faust* the problem of evil was what engrossed Goethe—whether to be regarded as an essential element of the universe or as a merely negative thing, a transient appearance to be overpassed. The attitude of Faust is that two souls dwell within his breast, the one fails to separate itself from the other. Should evil be destined to be overcome, Goethe would take Faust to represent the triumphant process. This is where the ethical worth of *Faust* is to be found, in its manner of typifying or embodying the modern spirit or tendency: Faust is set forth as the essential man—bold in aspiration, all-consuming in desire, hopeless in fallen condition and in ultimate resolution—so as to foreshadow the destiny of the human race. He expresses the desire to take him up himself what is portioned among the whole of humanity. The whole dramatic reason of the work has its source in practical experience. In its course the claims of the individual and the social spirit will mayhap be harmonized in an ideal of practical culture. His bald thought is that evil is not a positive power, but merely some-
thing negative—an interpretation of moral evil, it must be said, of too optimistic a character, and one which is not quite clearly and satisfactorily wrought out, so far as the Lessingweg (the purification or rectification) of Faust's character and development is concerned. The progress is wanting in inwardness of character. It is in the Second Part of Faust—only in the latter part of the poem, indeed, in its greater under-valued—that we see the triumph of humanity in Faust, mounting the heavens after his soaring ideal. The Second Part lacks, of course, the passion of the First; its erudite air is more felt; its philosophic intent and prolonged manipulation are more evident; its thought is less rapid and spontaneous; but, in spite of these and other defects, it has abundant genius, and does not fail to prove itself the completion of the First, as the present writer has elsewhere shown ('The Philosophy of Faust,' in Essays Literary and Philosophical). Goethe has contrived to introduce geology, optics, and chemistry into Faust; but such didactic attempts to combine science with poetry must always remain hazardous, if only because science cares nothing for the individual, while individuality is of the essence of art. Faust has, at any rate, given the world a supreme, unforgettable lesson as to progress and development being the essential mode whereby such conditioned beings as we are may hope to reach the ideal—the perfection of life.

The famous Zweigang, or dedication, now used as Introduction to Goethe's poems, is of unsurpassed loveliness in German literature, impressing one. It has been said, as a lofty vestibule, with the awe-inspiring grandeur of the temple to be entered. Its lovely message leads up to the self-revealing of the Divine form of poetic Truth, who gives him a vision of himself. Goethe's 'Italian Journey' (Italische Reise) was worked up thirty years after the journey itself, from journals and letters belonging to that time. The book presents, in a most vivid form, the features of delight and charm that mark Italian travel; but it is even more interesting for its personal experiences and reflections. On 6th September 1787 we find Goethe writing from Rome:

'Ve must be certain: the old artists had as great a knowledge of the ancients as we do. They knew perfectly (Begriff) of what can be represented, as Homer had.' And, further: 'These high works of art, so different, so strange, and as much mysterious works of Nature, produced by men according to their inner laws and the will of God, are a beautiful sight. Here is God' (Ital. Reise, ed. Dümmer, Berlin, 1877, p. 260).

The way to perfect Art, in form and content, seems to have lain for Goethe through looking into the deeps of Nature and Man. He held that in Art and Poesy personality is everything, and that the artist, to create something fit and capable, must be himself fit and capable. The comprehensive character of Goethe's interests and powers of observation needs no mention, but his strange limitations are not always clearly known and understood. His intense dislike of Byzantine and Gothic architecture; his huge indifference to the early art of Italy; his lack of interest in Medieval and Christian Rome; his supreme neglect of historical associations, as outside the realm of Geschmack, or intuition—all, in diverse ways, mark limitations due to a sense of form which kept from him the power of appreciation. Greek sculpture, Renaissance painting, architectural Rome—these were things that caught up, in significant fashion, his sense of artistic form. The Classicism to be found in Goethe was it seems warranteed to say, more the result of this Italian journey and his study of antique Art than of direct contact with the ancient Classical Literature. It is not meant, in saying this, that his Heiligenblatt had in it any thing of the nature of a literary pose. The chief result of his Italian sojourn on Goethe's work was the plastic quality imparted to it. When he says that Art and Nature are only one, that is because Art is for him the mystic manifestation of the working of Nature. Goethe's world is the world of the eye. His evoloutional instinct led him to view the single soul in the organic world, rather than to the organic whole. We find him writing to Herder from Naples on 17th May 1787, that the Urprünglichkeit—or grand type of all plants—is the most marvelous thing in the world, 'which Nature herself might envy me' (Ital. Reise, 260).

The 'West-Eastern Divan' (West-östlicher Diven) is concerned with the life of the East, and is not now to be dwelt upon; it must suffice to say that the work was largely a fruit of his study of the Persian poets, and is rich in its own varied metres, and wise, beautiful poems. It proved a well of inspiration to Rückert, Feuerbach, and other poets.

3. Influence.—We cannot now pursue the study of Goethe's works further, but must content to appraise his genius, work, and character in more general and comprehensive terms. The vitality of his ideas is very striking; the range of his activities was certainly extensive. His mind had been trained to a universal comprehension of man and universe. For he raised himself to comprehend the whole range and scope of man's existence, and pierced by his insight to the central core of reality. Thus he came to fashion the Weltanschauung which was his own (see the present writer, 'Goethe as Philosopher,' in Literary Essays). Single and discerning as a literary critic, prescient in genius and gifts as romancer, dramatist, and lyrical poet, Goethe yet did not escape originality in science, and in the criticism of Art. Emerson quaintly said of him that 'the old Eternal Genius who built the world has confided himself more to this man than to any other' (Works, vol. I., London, 1899, 'Goethe, or The Writer'). It seems to be just in the totality of his achievement that Goethe's power and fascination lie; his career embodied a deeper synthesis of life—more of his own ideal of life in the Whole, the Good, and the Beautiful—than men had before even dreamt of. The whole German nation, he exerts an influence hardly less strong on the cultivated classes of Britain and America. Still, his aims were too intellectualized; and his striving was really too restless. He thinks restless activity proves the man—neither restlos betätigt sich der Mann. One might almost apply to him what Marmontel said of Voltaire, that repose was unknown to him. Not even the calming power of Spinogism greatly helped him here. His will was not sufficiently invigorated by moral affections. He also lacked spiritualized unity of conception. But, in the sphere of intellect, he towers sublime, with amazing vigour and persistency in his intellectual performances. His ideal is reine Menschlichkeit or humanity purified of every hampering element. In his latest years, at any rate, he cherished a belief in immortality; and it seems to many, rather a fine thing that he declared the weightiest ground for that belief to be the fact that we cannot do without it.

GOKARN (Skr. gokarna, 'cow's ear').—A famous place of
pilgrimage on the W. coast of India, in the N. division of the
Presidency; lat. 14° 32' N., long. 74° 19' E. The name is
called on a legend that Brahma produced four sages to carry on the work of creation, which
they refused to undertake. He then formed Siva
from his forehead. Siva hesitated to create the
universe until he could devise measures to render it
imperishable. So he dived into the ocean and
remained for many ages in meditation. Brahma,
weary of the delay, moulded the earth and filled it
with life. When Siva, on the arrival of this creation, he
was wrathful, and, rising through the water, struck the
land. He attempted to force his way through it with his
trident, when the earth-goddess, taking the
form of a cow, begged the angry god, instead of
destroying her, to rise to the surface through her
ear. Siva accordingly passed through her ear,
and rose on the Gokarn beach, where a cave,
known as the Amrta-grotta, or 'Aurra's passage,'
marks the spot. A story of the same type tells
how the hero Parasurama, 'Rama with the ax,' by
his single stroke of his axe, destroyed the considera
tion of Varuna the sea-god and Bhumi Devi the earth-
god. Thus the sea's mouth was allowed to claim as its own as much land as could be
covered by his axe when flung from Gokarn,
which is then the Land's End, into the southern
ocean. Thus was created the land of Kerala,
reaching from Gokarn to Cape Comorin, which
now stands at the S. of the Peninsula. These
legends seem to embody a tradition of land eleva-
tion in pre-historic times, which is confirmed by
modern geological researches (Manual of Travers-
cors, 1906, i. 212 ff.).

The chief temple at Gokarn is that dedicated to
Siva under the title of Mahabaleshvara, 'the very
powerful Lord,' built of granite in the Dravidian
style. It contains the famous linga known as
Atma, or 'self,' which, in his wrath at the creation of
the world by Brahma, Siva created out of his
own essence, and long wore round his neck. There
are also numerous shrines named after various
gods and saints who visited the place and performed
austerities here, including Brahma, Vishnu, Siva,
the Agastya, Rama, and Viswamita. The place
is visited by hosts of pilgrims and religious mendic-
ants, as well as by those who bring the bones and
ashes of deceased relatives, which they consign to
the waters, believing that this ensures for them
eternal felicity. Bathing here cleanses from all sin,
even that of murdering a Brahman. The mention
of the place by Kalidasa carries back its sanctity to
the beginning of the 7th cent. A.D. (IGII. [1906]
17). It is also mentioned in the Mahabharata
and Ramayana (J. Muir, Original Sanskrit Texts, 3
73, iv. 205; E. T. H. Griffith, The Ramayana of
Valmiki, 1896, p. 64), the sacred books declaring
that he who spends three nights here and worships
Siva gains as much merit as if he performed the
horse-sacrifice; while he who remains twelve
nights becomes pure in heart. Dr. John Fryer,
one of the early travellers to India, visited Gokarn
in 1879, and has left an interesting account of the
place.

GOKUL (Skr. gokeula, 'a herd of kine,' 'a cow-
house').—A sacred town and place of pilgrimage
situated on the left bank of the river Jumna, in
the Muttara (Mathura) District of the United
Provinces of Agra and Oudh; lat. 27° 26' N., long.

77° 48' E.; sacred as the scene of many legends
connected with Krishna. It is in reality only the
water-side suburb of Mahabhan (q.v.), and all the
traditional sites of Krishna's adventures in the
Purânas are also shown at Mahabhan, which is the
place alluded to whenever Gokul is mentioned in
Skr. literature. But, as it retains its
ancient name, the suburb is considered as much
sacred as the original town. It is specially
important as the headquarters of the Vallabhâchârya
or Gokulâchârya Gosvine, the Emissaries of the East, who are not ashamed to avow
their belief that the ideal life consists rather in social enjoy-
ment than in solitude and mortifications. Such a creed is
naturally destructive of all self-restraint, even in matters where
indulgences are by common consent held criminal; and the
prophecy of which it has given rise is so notorious that the late
Mahârâja of Jaypur was moved to express from his capital the
ancient image of Gokul Chandrama, for which the cowherds
sacrificed a special veneration. He further conceived such a
prowess against Vaishnavas in general, that all his subjects
were compelled, before they appeared in his presence, to mark
their foreheads with the three horizontal lines that indicate a
votary of Siva. The mendicant practices of the Gosvin and the
unusual subserviency of the people in ministering to their
sacrifices raised a crushing appetite in a cause célèbre for
trial tried before the Supreme Court of Bombay in 1861 (Gowen, p. 294)

GOLDEN AGE.—See AGES OF THE WORLD, Fall (Ethnic).

GOLDEN RULE.—The Golden Rule, as it is called, is found
in two different connections, and in slightly differing forms, in Mt. 7\(\frac{1}{2}\) and Lk. 6\(\frac{1}{2}\). In Mt. it occurs in the Sermon on the Mount in the
form: 'All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets.'

In Lk. the saying runs:

'As ye would that men should do unto you, do ye also to them likewise.'

While in Lk. the maxim is found in immediate connexion with other sayings bearing on conduct towards our neighbours, in Mt. this is not equally the case; it follows on directions relating to instancy in prayer and on the promise that God will give good things to those that ask Him. It has, therefore, been argued that, while it being formed part of the original Logia on which, in this portion of his Gospel, the Evangelist is drawing, St. Matthew must have wrongly inserted it in this particular connexion; and that it may have been appropriately found a place among the precepts relating to our conduct to our neighbour in 6\(\frac{1}{9}\); or should follow on vv. 1-2 and v. 4 of the 7th chapter. In the latter case it would, however, that the intermediate verses and not the saying itself have been wrongly inserted. The argument that the saying has not a wrong place in Mt. is not very convincing; the connexion between it and the immediately preceding verses is not really very forced or unnatural. The train of thought would seem to be that, as God gives good gifts to those who ask Him, so we as Christians ought to render to others the sort of service, the good things, which we should wish them to render to us. That this is the connexion of which the earlier translators recognized in the passage is made probable by the fact that most of the early Latin versions, though not the Vulgate, render: 'Whatever good things, therefore, you
wish that others should do unto you, even such do unto them: for this is the law and the prophets.'

We may observe that both St. Matthew and St.
GOLDEN RULE

Luke, though they differ as to the precise context in which the words occur, equally regard them as a summary of the principles by which the conduct of any man, no matter what his position with respect to his neighbours is to be governed. And this is the position which the maxim holds in the earliest quotations of it which are to be found in Christian literature outside the Gospels. The earliest of them occurs in the well-known passage in the Western (Cod. D) recension of the decree of the Council of Jerusalem, in A.D. 15. It runs as follows:

"It is seemed good to the holy Spirit and to us to lay upon you no greater burden than these necessary things: to abstain from meats offered to idols, and from blood, and from fornication; and whatsoever ye do not wish should be done unto you; for ye keep yourselves ye shall do well, being born again in the holy Spirit—" (Acts 15:28-29).

Now, there has arisen a considerable controversy between Blass and Harnack whether the Western or the text of other great uncial MSS represents the earlier form of text in the Acts, and the controversy has especially ranged itself about this particular passage. Blass holds that Cod. D, originally composed probably at Rome, represents the first rough draft of the Acts put forth by St. Luke, while the ordinary text gives us the more polished and elaborated recension which he ultimately dedicated to Theophilus. Harnack, on the other hand, maintains that the text preserved in the non-Western MSS embodies St. Luke's original recension, and that Cod. D represents a later and comparatively ignorable recension, dating probably from early in the 3rd century. This, on the whole, is the view taken also by W. M. Ramsay. The question, however answered, is not, for our present purpose, of first-rate importance; for those who regard the insertion of the Golden Rule in this passage as the work of a later editor still assign to that editor a very early date—not later than the opening years of the 2nd century. But, in any case, the appearance of the saying in this connexion is a proof of the wide acceptance which the Rule, in this negative form at least, obtained in the early Church. And that, in spite of its absence from the received text, it continued to hold a place in this passage of the Acts down to a comparatively late date, we have interesting evidence from the 'Doones of King Alfred.' One of them, quoting this passage, runs as follows:

"It is seemed good to the Holy Ghost, and to us, that we should set no burdens upon you that which was needful for you to bear, now, that is, that you forbear from worshipping idols, and from blood, and from fornication, and that which ye do not wish should be done unto you; for ye keep yourselves ye shall do well, being born again in the holy Spirit—" (Acts 15:28-29)."

Thus emphatically, but reverently, does the king enforce our Lord's own comment on the principle: 'This is the Law and the Prophets' (see Ezek. 20:21, 25, 39:26 ff., Acts 15:40:21; and, for the reference to King Alfred's 'Dooms,' J. H. Carpenter and G. Harford's 'Composition of the Dooms,' ed. 1902, p. 10).

We observe, further, that in this earliest quotation the form in which the saying is presented is not the positive form in which it appears in both Mt. and Lk., but the negative form, i.e., as a prohibition, and not as a command: 'Do not do to others what you would not should be done to you.' We observe, also, that the same characteristic is observable also in the two earliest quotations in which the phrase is to be found in post-Biblical Christian writings. Thus, for the first of them is at the opening of 'The Way of Life' as presented in the Didache:

"First of all, thou shalt love the Lord thy God who made thee. Secondly, thou shalt love thy neighbour as thyself. All things, then, whatsoever thou wouldst not wish to be done to thee, do thou also not to another.'

The second reference occurs in the recently recovered Apology of Aristides, Towards the close (ch. 15), in giving a summary of Christian belief and practice, Aristides uses the following words:

"They [viz. the Christians] do not commit adultery, do not commit fornication, do not bear false witness, do not eat their neighbour's goods, honour their father and their mother, love their neighbour, judge justly, whatever they do to a man they also do to another; they seek those who injure them and make them friendly to them." (Aristides, Apology, 15).

Harnack considers that both these passages may very likely be taken from an early Christian catechism in wide use in different Churches; but, whether they are so or not, the appearance of the Golden Rule in two distinct summaries of Christian practice testifies to the importance attached to it in the early Church.

But the precept, at least in its negative form, is by no means confined to Christianity; it is to be found in the earlier Judaism, and on the lips of philosophers outside both Judaism and Christianity. For the first we may refer to the Teacher of Righteousness, who runs: 'Take heed to thyself, my child, in all thy works, and be discreet in all thy behaviour; and what thou shalt do, do not do so that when a stranger asks thee, do not do so that they shall say, it is better that he should have been elsewhere.' (cf. Bab. Shabb. 31a). For other parallels, see C. Taylor, 'Sayings of the Jewish Fathers,' Cambridge, 1897, p. 142 f., and cf. Hirsch, 'Golden Rule,' in J.B. v. (1904) 21 f.

Among the Greeks, Isocrates is mentioned as enunciating the maxim: 'Do not do to others that at which you would be angry if you suffered it from others' (Nicolaes, 616). Plato, in more than one passage in the Republic (e.g. iv. 443), lays down a rule of a similar purport. And, if we questioned how we should behave to our friends, it is quoted by Diog. Laert. (v. 21) as saying: 'Exactly as we would they should behave to us.' (cf. Nic. Eth. ix. 8). See also Epictetus, fr. 42.

In the wider world outside we find two further enunciations of the precept—one in a precise, the other in a less definite, form. Confucius, drawing, as he said, the maxim from the study of man's mental constitution, laid it down in the following terms: 'What you do not like if done to yourself, do not do to others' (cf. J. Legge, 'Confucius,' vol. i. 315, repr. Hongkong, 1881-72, i. 191 f.). This is the Golden Rule in its negative form, but he expressed it also in the positive shape of 'reciprocity' or 'as heart to heart.' This was embodied by him in a characteristically Chinese symbol, and is given in places as the ultimate rule of life ('EBr. ii. 4', art. 'Confucius,' p. 912). Something like the same thought appears in the writings of his elder contemporary Buddha; but here no precise words give expression to the apostrophe; his principle more nearly approaches to the maxim of St. Paul: 'Rejoice with them that rejoice; weep with them that weep' (Ro 12:15) and a certain self-centredness in his system, which makes the doing of kindnesses to others valuable mainly on account of the merit thus earned. To a man's self, makes it clear that such a principle as our Lord enjoins was not altogether cognate to his thought (Copleston, 'Buddhism: Principles and Present', London, 1929; but cf. A. J. Edmonds, 'Buddhist and Christian Gospels,' Philad., 1908, § 12).

It would appear, then, that as a negative or limiting principle, a principle of justice, man obtained a wide acceptance among the best and most enlightened intellects of the ancient world; but it was for them a restraining principle, a guide of what they ought not to do rather than of what they were to do.

jungle and sowing seed to the sabai— a process known as doyke—and collecting various kinds of jungle produce. All the seats are made in such a way that the people when they have not been corrupted by contact with the Hindus of the plains. Under British rule this practice has died out in the plains; in the old days, however, their chief seats, known as toris or shol, were usually situated on the backs of the allies, like the Majhwa and Koyis, the beliefs and usages are of a similar type (Crooke, TC, III, 415 ff.; Thurston, Caste and Tribes, iv, 37 ff.; Bilgrami-Watterson, Sketch of the Castes and Tribes of Bengal, ii, 230 f.; C. A. R. Revett, TC, 1891, i, 226 f.; Dalton, Descrip. Ethnol. of Bengal, 275 ff.).

5. Domestic rites.—The rites of birth, marriage, and death are of the normal Dravidian type. 

clay hearth, or axis, which is always placed at the front of each house. This is the point at which the fire is kept burning, and it is here that the sacrifices are made. The hearth is always kept clean and free from dirt. The fire is never allowed to go out, and it is the duty of the head of the household to see that it is kept burning day and night. The hearth is also used as a place for cooking food. The fire is lighted in the morning and kept burning all day, and the ashes are used as a fertilizer for the soil. The hearth is considered to be a sacred place, and it is never allowed to be trodden upon or stepped on.

Religious worship is also practised in the form of the worship of the sun and the moon, which are considered to be the chief deities of the people. The sun is worshipped at sunrise and at sunset, and the moon is worshipped at the new and full moon. The worship of these deities is accompanied by singing, dancing, and the blowing of trumpets.
GONGS AND BELLS

used in Egypt (HDB, art. 'Bell'). Then, too, there is evidence of the art of bell-making being practised in Japan during the 8th cent. B.C., at the time when large bronze castings were made for the temples of Buddha.

Such evidence, however, does not help us to find out the origin of these instruments of percussion, and we are not yet fully at sea. Quoit to boldly bells may date from the Iron Age. Fairies and witches were creatures belonging to the more ancient Stone Age which was passing away; and the new metal, iron, was considered hateful and harmful to them. The metal itself was a powerful prophylactic, but the sound of metal had even greater power for producing their evil influence. It would soon be found that by striking the edge of metal pots a more resonant note could be obtained than from an iron bar; and from this it is but a small advance to turn an iron basin upside down and fasten some sort of a clapper inside. Armed thus, man would feel himself fairly safe from the attacks of his spiritual foes. Such a possible explanation of the origin of bells and gongs has at least the merit of being simple and of complying with the stereotyped phrase, 'the origin of bells was lost in antiquity'.

3. Earliest use of bells.—Probably the earliest use of bells was, as has been said, prophylactic. Man, who believed the air to be crowded with demons eager to do him harm, used the most efficacious safeguards that came to hand. Among all peoples we find the bell used for this purpose, and even in the Christian era this superstition has survived.

The gong of Dodona mentioned by Aristotle (Suidas, s.v. κέλωνος ἄνθιστος) seems to have consisted of two pillars supporting respectively a dish (a kophina) and in the latter a large bronze vase with a spout, which was grasped by a tawny-coloured horse, and carried through the land ringing out a resonant sound which was considered to have oracular intent. Thucydides (ii. 86) refers to bronze as employed in all kinds of sacrificial ritual. Moreover, it was considered as itself potent, while the sound of it was an averter of pollution. From many Latin sources we know that bronze was beaten at eclipses to avert the evil. Bells were sometimes placed in tombs. A bell is mentioned in the Louvre (Fohrer, Cat. 545; S. Reinaich, Répertoire de la statuaire grecque et romaine, Paris, 1897–1901, i. 101) represents the sacrifice of a ram offered to Jupiter, and the material is from an 11th cent. church, where some suspended two bells. A coin representing Cybele enthroned with Atis at her side shows two bells are seen in the foreground. P. Guzman (Pompei, Paris, 1899, p. 146) gives illustrations of many little bells found at Pompeii, and speaks of them as used as cone moyen de protection. The British Museum possesses a small bronze bell (Cat. 513, fig. 11) from the temple of the Kebir at Thebes. The attendants of Dionysus are frequently represented as carrying tympana edged with a row of small bells. A small bell of gold found on the Esquiline has an inscription referring to the evil eye. Moreover, to avert evil influences, bells were attached to the heads of horses used in a procession of criminals led to execution.

Possibly the gongs or bells attached to the façade of the second temple of Jupiter Capitolinus have this prophylactic object. Triumphant generals hung bells on the heads of their eyes. This is found not only in Greece but also on sculptures in Assyria. 1

2 Taylor, P.O.I. i. (1893) 169.

3 R. Cook, J.H.S. xi. (1901) pl. 1, p. 8 ff.

4 For further illustrations of such usage, see Smith's Dict. of Gr. and Rom. Ant. ii., London, 1900, s. v. 'Dithymbalbus.'

Among the Greeks a bell was used at funerals to keep off the crowd and warn the fames Diialei lest he be polluted by sight or sound of funeral music. But there is evidence of usage of a prophylactic. Bells were used for the opening of market or the baths, and by sentries on night duty. The priests of Proserpine at Athens rang bells when calling the Hesperides. They were hushed, and their ears were closed with a cloth. Nor were they similarly used in the mysteries of Bacchus. But for the most part the Greeks had wooden rattles, such as are now used by Muslims. The use of bells for summoning to worship was the sound of the trumpet. The precise purpose of the bells attached to high-priestly robes seems debatable. Arabian princes have bells on their garments to announce their movements and warn people to keep out of the way. No one was allowed to enter the Persian court without giving audible warning, and perhaps the bells on Aaron's robe were intended to announce his movements to Jehovah. An alternative suggestion is that the stillness of the Holy Place was full of peril to intruders. The air became charged, as it were, with the Divine influence, and this was dangerous to mortals. In order to dissipate this noxious condition, the high priest's robe was decked with bells, and, as the air is laden with tars, made it possible for man to enter the Holy Place. More obviously the jingles are explained as useful to let the people know how high the priest was progressing with his sacred duties. The horse-bells in Zac 14 are inscribed 'Holy unto the Lord.' The object is not clear. It may have been intended to add efficacy to any magical powers the bells possessed, or else the noise of the bells have been thought of as sending far and wide the message of holiness.

4. Christian use of bells.—At the dawn of the Christian era bells were used, but the Greek and Roman style of architecture did not readily lend itself to the use of large bells in buildings. During the first three centuries the use of bells for summoning the faithful to worship was impossible, owing to the certainty of persecution; but it is probable that soon after the Edict of Milan (A.D. 313) the Christian Church, or else the adopters of this obvious means of calling to worship. The introduction of large bells is attributed to Paulinus, Bishop of Nola in A.D. 440; but, whilst omits any reference to bells in his letter giving a very full description of his church, the claim made for him seems to be doubtful. St. Jerome (In Jost. 90) quotes a passage from a Latin bishop, but our own times. Gregory, Bishop of Tours (573), speaks of bells as signify. This takes us back to Sidonius Apollinaris. Rather later the Gregorian Sacramentary (590) contains a form of benediction which came from Rheims. The canzoniere give fairly strong evidence of the use of bells before the end of the 8th century. That of Ravenna dates from the 6th century.

Quite early in the Celtic Church bells were used by the bishops as a symbol of the episcopal insignia. In the Life of St. Patrick the office of campanarius is mentioned, and in an illustration, given by de Fournier, in Le Mesne, St. Patrick is depicted as

K. Stitt, Archäologie der Kunst, Munich, 1896, p. 366. A few small bells have been found at Dusseldorf, 1818.
Gongs and Bells

handing a bell in a box to a bishop consecrated by him. The probable object of the bell was to command silence when the bishop was about to speak. In the museum of the Royal Academy of Ireland a castellated bell with a fairy spout is attributed to St. Patrick. Small hand-bells were often engraved with the name of a saint, and in later years were reverenced as relics. Bede (c. 672) mentions that after the death of Hilda at Whitby (680), Adamnan (Vita S. Columbae) has references to a cloaca which was used bell the brethren to pray. Egbert, Archbishop of York (740), in his "Exceptions" ordered his clergy to toll bells at the hours of service. We first hear of a peal of bells at Croyland Abbey in 852; but, as Ingham shows, the idea of this with others, it seems clear that many other churches had more than a single bell for summoning to worship. Early in the reign of King Edgar (960) the new canons provided for bell-ringing as a preliminary to prayer in church, and the clergy of the Church of England are still required to toll a bell daily for services.

Another use for bells is indicated in the Bayeux tapestry. In the illustration of the funeral of Edward the Confessor the corpse is accompanied by the clergy and a large number of hand-bells. This was a practice taken from paganism, but with altered intentions. The ringing of bells at funerals was the faithful to pray for the departed soul. The obvious purpose of this, contrary to means of which a number of elaborate tunes could be played by one performer on the bells by hammering which strike the edge of the bell. In England bells are chimed in this way and also rung. The bell is made to swing round through a complete circle so that the clapper strikes twice in each revolution.

5. Non-Christian uses.—To the Far East we must look for the earliest use of bells, but there is little evidence before the 8th cent. B.C. At that time large bells and gongs are found to have a definite part in ceremonial. Change-ringing is confined to Great Britain; it is the carillon takes its place. It is a mechanical contrivance by which a number of elaborate tunes can be played by one performer on the bells by hammering which strike the edge of the bell. In England bells are chimed in this way and also rung. The bell is made to swing round through a complete circle so that the clapper strikes twice in each revolution.

Indisputably, during the Middle Ages bells were chiefly valued for their prophylactic powers in warding off the evil spirits from doing harm ghostly and bodily. Most widespread was the idea that bells could dispel storm and lightning. Originally the object was to call the people to church to pray for deliverance from the dangers. Then the devil was thought of as hating the sound of bells, because they called the faithful to prayer; and, later, the original idea was lost sight of, and the mere ringing of the bells was effective. Largely owing to their popularity, bells escaped the destruction of things Roman in the Reformation. In order to increase their appeal, bells were 'christened' with elaborate ceremonial. Originally the bells were thought of as heathen, and were baptised to make them convert; but, later, the object was clearly to strengthen their powers over the spirits in the air. Charlemagne in 786 protested against this 'baptism,' but the rite found a place in most pontificates until the Reformation, and is still used on the Continent.

In pre-Reformation times it was rare to find fewer than two or three bells in one tower. Frequently a small bell was hung in a bell-cote over the chancel and rung at the elevation of the Host. This 'sacring bell' gave intimation to sick folk of the consecration of the elements. Distinct from this was the sacristy bell, a small hand-bell tinkled within the church at the 'Off Santorum,' and necessary in large churches, where the musicians were at a distance from the high altar. In the Middle Ages bells were often embroidered on bed-curtains and other hangings, as well as on ecclesiastical vestments. The fundamental idea was probably superstitions. For the many other religious and quasi-religious uses reference should be made to some of the excellent books mentioned in the Literature. The same underlying ideas seem to have inspired the ceremonial use of bells, the real difference being the method of striking. Change-ringing is confined to Great Britain; it is a mechanical contrivance by which a number of elaborate tunes can be played by one performer on the bells by hammering which strike the edge of the bell. In England bells are chimed in this way and also rung. The bell is made to swing round through a complete circle so that the clapper strikes twice in each revolution.

The supposed influence of the bell on the spirit world is further illustrated by the attempts to expel the demon of the dead. In India we find these usages supplemented by others.

1 I. Bird (Mrs. Bishop), Umbrian Tribes in Japan, London, 1900.
According to the Brahmins, two things are indispensible to the sacrificial—a few lighted lamps and a bell to wake the divinity from sleep so that he may consume the offering, while the whole ghost is scared away by the same sound. 1 The potar priest in Mirzapur and many classes of ascetics carry bells and rattles of iron which move as they walk, the objects being to protect the wearer from evil spirits. The Gonds have elevated the bell into a deity, in the form of Ghaghrapen, or 'Lord.' Probably the special class of their devil-priests, the marma odyades, devote themselves to making bells; and they themselves wear them continually. The Toda of Madras worship Hiruya Della, whose representation is the sacred buffalo-bell which hangs from the neck of the finest buffalo of the herd (Crooke, l. 164). The goddess Paravati, as Durga (q.v.), has certain insignia which are invoked in this manner: 'O maa to the bell (gandam) striking terror by thy world-wide sound into our enemies. Drive out from us all our iniquities. Defend and bless us, O Lord.' In Burma great bells are found at most of the shrines. The worshippers take a large deer antler and strikes it first on the ground and then the bell, to summon as witnesses beings and animals around, and to further make them join in the act of worship. 2

In West Africa some witch-doctors have a custom, when going their rounds, of ringing a bell before the houses of the heathen. Bells are often hung over doorways, probably for prophylaxis. 3 Very few bells are found in the rest of Africa, except among the Aztecs and tribes of similar culture. They hang bells around the necks of animals, but there is no evidence to show that these were worshipped, or that the bells were used to scare evil spirits. In Egypt there is little evidence. The eunuch was invariably used in the worship of Isis. Possibly small ornamental jingles were attached. In later times these small bells had lost their ritualistic purpose, and they are very rarely found in Egyptian religious proper. The same may be said of bells among the Assyrians. They had no religious use and very little in magic. Clappers took the place of bells. Layard (Monuments of Nineveh, London, 1849-53) illustrates some horse-bells, possibly importations for magical purposes.

Bells and instruments of percussion are not found in New Zealand. In the Tongs and Fiji Islands a rali is used. It is a form of gong made out of a thunbrum. 4 It is a favourite instrument among the Tongs and is named in the same way that we give names to our bells. It is chiefly used to summon worshippers to their religious exercises. In many parts of the world babies are given rattles to which jingle bells are attached. The underling object is probably prophylactic.

Although the religious value of bells varies considerably in different parts of the world, in Turkey alone there is found an aversion to their sound. The Mohammedans do not use them, because of their associations with Christianity, and the Pahja Muslims have a prejudice against gongs, as they are supposed to disturb the dead, who awake, thinking the Day of Judgment has arrived.

6. American bells.—(1) Bells of metal were used in use in certain regions of America long before the Columbian discovery. They were natural developments from, or modifications of, previously existing rings and like implements of clay best ornaments, and other materials. According to W. H. Holmes (Bull. & BE 22-24), metal bells were in common use in Middle America in pre-Columbian times, but they are rarely found north of the Rio Grande, either in possession of the tribes or on ancient sites; but bells were certainly known to the Pueblos and possibly to the mound-builders before the arrival of the Whites. The copper bells occasionally found in the south-eastern part of the United States may, some of them at least, have been introduced by the Aztecs or Mixtecs, and may be incidents of inter-tribal commerce or the like. Metal bells are also known in large numbers from the remains of the civilizations of the Pacific coast of South America and from the area of so-called 'Cahouqui culture' in the Catamarcan country of Argentina, etc. Bells of other materials, such as clay, are, of course, more widely distributed among aborigines of the South Plains than the Aztecs, Mayas, Peruvians, and others very close to them in matters of art and religion. Many wooden bells have also been found, e.g., in the Atacama region of Pacific South America (Boman, Antig.).

(2) Some investigators were formerly of the opinion that the bells found in the New World were all imitations of European models, and that no such thing as a genuine pre-Columbian bell of aboriginal manufacture existed. But both Mexican, Peruvian, and South American, the existence of bells of Indian make long prior to the coming of the Whites has been demonstrated. The variety in the forms of the bells of primitive America, their presence as ornaments on statues, figures of the gods (Mayan MIss and monuments; Aztec deities, etc.), their utilization as decorative motifs (e.g., eyes in the golden figures of reptiles from ancient Chiriqui), the situation and circumstances of their discovery in ruins of great age in different parts of the continent—all these facts make the theory of European origins impossible, and it has now been abandoned by the best authorities. The existence of bells of wood, clay, copper, and other materials led the evolution of a bell in primitive America from the rattle. According to Holmes, the genealogy of the bell is first a nut-shell or gourd, then a clay model, and finally, metal bells upon models, like those of the ancient Chiriquians. Doubtless some of the less civilized tribes imitated in clay or wood the metal bells of their neighbours of higher culture, which came to them in the way of trade, or in some other incidental fashion. The more or less civilized peoples, upon whom the Europeans intruded, may have also, at times, imitated bells of
Old World origin. There seems no doubt, however, that bells, used for several different purposes, were in existence in pre-historic times in various regions of North, Central, and South America.

(3) Both metal and clay bells were known in several parts of the ancient Pueblo region of New Mexico and Arizona. The small copper bells found in the old clothed ruins in the south are said by Fowkes to be 'identical in form and make with those used by the ancient Nahua Hale [Aztec] people' (47 REV., p. 2, p. 699). A clay clay bell was found in the clothed ruins of the old Pueblo of Awatobi, and in all probability pre-historic, is reported by Fowkes as 'made in exact imitation of one of the copper bells that have been reported from several southern ruins' (op. cit. p. 699). In this case the Pueblo clay bell would be modelled on the copper bell, and not vice versa. In Awatobi was also discovered a fragment of a copper bell of Spanish origin, such objects coming into the Pueblo country with the Catholic priests and their churches. In the Tusanay ruins immediately about the inhabited town, Fowkes found no copper bells of such great age that they could be called pre-historic. A fragment of one of the Spanish or Mexican church-bells was used for marking the诊断 point of the alpaca Indian priest (op. cit. p. 609). Hough found that bells of clay, like those from Awatobi described by Fowkes, were used in the great ruin of Kawahuk. They are undoubtedly pre-historic, and earlier than the bells, similar in form, used in trade. In ancient Mexico bells (txalinas) of the same general type were also used by the Indians to attach to the domestic llamas, or to suspend from their clothes or belts in dances and ceremonies, as the Indians of the Gran Chaco still do with fruit-sockets, the ancients did with the bell. In the pre-historic necropolis of Calima (Chilcan province of Antofagasta), in the area of Atacama culture, Count G. de Créqui-Montfort discovered in 1904 a wooden bell similar in form and peculiarity of style to the copper bells of the first sort described above (Boman, op. cit.).

(4) The uses to which bells were put in aboriginal America were various. Concerning the Pueblo Indians, Fowkes informs us: 'Copper bells are said to be used in the secret ceremonies of the modern Tusayan villages, and in certain of the ceremonial foot races metal bells of great age and antique pattern are sometimes tied about the wrists of the runners' (op. cit. p. 628). Many of the small clay bells from the Pueblo region were also used as pendant ornaments of some sort, as were doubtless also some of the smaller metal bells from various parts of the country. The majority of many of these, which are provided with holes or with perforated tongs, indicates their suspension to a cord or some similar object, and their attachment to articles of dress or ornament. One of the clay bells from Pueblo ruins still contained its pellet of clay, and 'on being shaken, produced an agreeable tinkling sound'; it was evidently used as a bell to produce musical sounds—a purpose likewise served by many other bells of metal and clay in ancient America. Here the bell lies close to the rattle. At ancient sites in New Mexico and Arizona, besides clay bells of this sort, copper bells with stone tinklers have been discovered. In various parts of Mexico and Central America little bells of gold were employed as ornaments, and as devices for suspension and attachment prove. In ancient Mexico such bells were attached to the ankles of important warriors and other important participants in ceremonial dances. They were also attached to the feet and wrists of victims of sacrifice, those who represented deities, etc. The gods Tezcatlipoca, Tlahuizcalpantecuhtli, in particular, were represented with little golden bells at their ankles (in the case of the first, at the number of twenty). According to Cogolludo, copper bells were to be found in the houses of the
GOOD AND EVIL

GOOD AND EVIL.—I. GENERAL DEFINITION.—When we collate instances of usage, we find that the meaning and implications of 'good' and its opposites are most varied. Let us take at random,'good measure,' 'a good beating,' (which, curiously, is synonymous with a bad beating), 'a good dinner,' 'good music,' 'a good knife,' 'a good soldier,' 'a good intention,' 'a good man.' In the series scarcely two will be found wherein 'good' means in the one precisely what it means in the other. In all cases, in pronouncing a thing good we are judging its value, and the meaning of 'good' is opposite in any particular case depends on the point of view from which we judge. It may be almost a purely quantitative judgment, e.g. 'good tea.' It may be a judgment of sensuous value, in which case 'good' is 'pleasant' or 'agreeable,' e.g. 'it tastes good,' 'a vile odour.' It may be an aesthetic judgment, e.g. 'a good view,' 'a good piece of music.' It may be expressive of the suitability or efficiency of tools, instruments, implements, etc., as means to particular ends, e.g. 'a good knife.' It may be a judgment of skill, e.g. 'a good markman.' Then come the senses of 'good' and 'evil' of most importance, and almost exclusive importance for our present purpose, good as well-being, good as well-doing, evil as the opposite of both.

It is possible to frame a broad general definition of 'good' and 'evil' which shall include all the above. Such a definition is given by Naville (Problem of Evil, ch. 1), who puts it: 'Good is what ought to be, evil what ought not to be.' To this two objections may be raised. (1) There is no thought of unthinking non-moral objects. In strictness of language, to say that an instrument such as a pen ought to be of a particular quality is absurd. (2) 'What ought to be' seems to imply better as a description of what is right. And, though the good and the right may largely be identical, the implications of the two are different, and the difference is worth marking and conserving. 'Right' means according to rule. 'Good' means valuable for some end, therefore desirable. Both in 'right' and in 'good' there is reference to a standard or ideal; but, while 'right' emphasizes the compelling, persuasive power of that ideal, 'good' emphasizes its attractive power. Hence, if we wish such a broad general definition, we should say that the good is desirable, the evil is undesirable (cf. Sidgwick, Methods of Ethics, London, 1901, p. 110 f.). This seems to be the summary of Royce's statement: 'By good, as we most often use it, we mean something that, when it comes or is expected, we sortively welcome, try to attain or keep, and regard with content. By evil in general as it is in our experience, we mean whatever we find in any sense repugnant and intolerable. . . . We mean [by evil] precisely whatever we regard as hostile, as to be resisted, as a thing to be gotten rid of, shunned from, put out of sight, of hearing, of memory, excoriated, expelled, damned, or otherwise directly or indirectly rejected. By good we mean whatever we regard as something to be welcomed, pursued, won, grasped, held, persisted in and possessed. And we show all this in our acts in presence of any grade of good or evil, some thing being esteemed ideal, or one grade of good as higher or lower than another, or as resembling or being dissimilar. Whether you regard us as animals or as moral beings, whether it is a sweet taste, a poem, a virtue or God that we take to be good; or whether it is a form or a temptation, an outward physical foe or a steadfast inward ideal enemy that we regard as evil' (Studies of Good and Evil, 16).

It may be noted that, in defining the good as the desirable and the evil as the undesirable, we are not committing a moral sleight of hand. The false psychology which maintains that the only object of desire, therefore the only desirable, is pleasure.

II. GOOD AND EVIL ACTIVE AND PASSIVE.—While the definition of good and evil as the desirable and the undesirable respectively would probably be universally accepted, it is certain that, as soon as individuals begin to fill in the immanent content of the general notion, there will be nothing approaching unanimity; and this fact constitutes one problem with which we must deal. When we come to the question of what it is to be a good or an evil act, and how approaching it, it is best to draw a distinction between two kinds of good and evil. There is good which comes to us, and good which starts from us. There is evil which befals us, which befalls us as the result of our conduct and to us as individuals; and on the other hand, there is evil which we do. This is not represented as an absolute distinction; the two kinds are inter-related in a variety of ways; still it is a convenient distinction. It is not easy to find appropriate names for the two kinds. Fairbairn designates them physical and moral (Philo., of Christian Religion, 134), but 'physical' must be used in a somewhat unusual and perhaps scarcely justifiable sense.

Physical evil is at the sufferings he may have to endure, whether bodily or mental, nervous or sympathetic, alike as a distinct individual and a social unit, alike as a natural being, fleshly and mortal, and alike as a member of the human family, as a part of the history of the race' (op. cit. 184 f.).

Now, as regards the good and evil that befall men there will be little lack of unanimity. Health, strength, abundance of friends, and a multitude of such like things will be classed as good universally. Sickness, accident, death, penury, destructive forces of Nature, and a host of other ills to which men are exposed will be classed as universally acknowledged to be ills. With regard to this kind of good and evil, men differ only in the number of goods and ills they know, and in the degree of importance which they attach to this or that particular good or ill. When we turn, however, to consider moral good and evil, the good or evil that men are and find altogether different in their situation. Here we find endless variety in the beliefs of men as to what is good and what evil. It does not lie within the scope of this article to set forth and discuss the various ways in which at different times and by different individuals the good has been more particularly defined. For that the art. Ethics and articles dealing with various schools of ethical speculation must be consulted. But here it is necessary to try to gather the signifi-

noblest among the Mayas. The Mayas also used bells as ornaments for their gods, etc., represented in the hieroglyphic writings. Brinton mentions that the god of death, whose body is propelled, presides over the river of that ideal, 'good' emphasizes its attractive power. Hence, if we wish such a broad general definition, we should say that the good is desirable, the evil is undesirable (cf. Sidgwick, Methods of Ethics, London, 1901, p. 110 f.). This seems to be the summary of Royce's statement: 'By good, as we most often use it, we mean something that, when it comes or is expected, we sortively welcome, try to attain or keep, and regard with content. By evil in general as it is in our experience, we mean whatever we find in any sense repugnant and intolerable. . . . We mean [by evil] precisely whatever we regard as something to be resisted, as a thing to be gotten rid of, shunned from, put out of sight, of hearing, of memory, excoriated, expelled, damned, or otherwise directly or indirectly rejected. By good we mean whatever we regard as something to be welcomed, pursued, won, grasped, held, persisted in and possessed. And we show all this in our acts in presence of any grade of good or evil, some thing being esteemed ideal, or one grade of good as higher or lower than another, or as resembling or being dissimilar. Whether you regard us as animals or as moral beings, whether it is a sweet taste, a poem, a virtue or God that we take to be good; or whether it is a form or a temptation, an outward physical foe or a steadfast inward ideal enemy that we regard as evil' (Studies of Good and Evil, 16).

It may be noted that, in defining the good as the desirable and the evil as the undesirable, we are not committing a moral sleight of hand. The false psychology which maintains that the only object of desire, therefore the only desirable, is pleasure.

II. GOOD AND EVIL ACTIVE AND PASSIVE.—While the definition of good and evil as the desirable and the undesirable respectively would probably be universally accepted, it is certain that, as soon as individuals begin to fill in the immanent content of the general notion, there will be nothing approaching unanimity; and this fact constitutes one problem with which we must deal. When we come to the question of what it is to be a good or an evil act, and how approaching it, it is best to draw a distinction between two kinds of good and evil. There is good which comes to us, and good which starts from us. There is evil which befals us, which befalls us as the result of our conduct and to us as individuals; and on the other hand, there is evil which we do. This is not represented as an absolute distinction; the two kinds are inter-related in a variety of ways; still it is a convenient distinction. It is not easy to find appropriate names for the two kinds. Fairbairn designates them physical and moral (Philo., of Christian Religion, 134), but 'physical' must be used in a somewhat unusual and perhaps scarcely justifiable sense.

Physical evil is at the sufferings he may have to endure, whether bodily or mental, nervous or sympathetic, alike as a distinct individual and a social unit, alike as a natural being, fleshly and mortal, and alike as a member of the human family, as a part of the history of the race' (op. cit. 184 f.).

Now, as regards the good and evil that befall men there will be little lack of unanimity. Health, strength, abundance of friends, and a multitude of such like things will be classed as good universally. Sickness, accident, death, penury, destructive forces of Nature, and a host of other ills to which men are exposed will be classed as universally acknowledged to be ills. With regard to this kind of good and evil, men differ only in the number of goods and ills they know, and in the degree of importance which they attach to this or that particular good or ill. When we turn, however, to consider moral good and evil, the good or evil that men are and find altogether different in their situation. Here we find endless variety in the beliefs of men as to what is good and what evil. It does not lie within the scope of this article to set forth and discuss the various ways in which at different times and by different individuals the good has been more particularly defined. For that the art. Ethics and articles dealing with various schools of ethical speculation must be consulted. But here it is necessary to try to gather the signifi-
GOOD AND EVIL

... and ideals; between the two differences may be no relation of strict proportion. Or, again, customs and institutions may be regarded as means to moral ends, means of realizing ideas. And, plainly, difference of view as to appropriateness of means does not necessarily imply divergence of ends or, in general, that one may identify themselves with the same end; but, because one has more power of insight and foresight, they may differ to any degree in their choice of means. Through lack of insight or foresight, one may adopt means which in reality more or less defeat the end in view—a fact of which all are painfully aware from their own experience. This is shown, too, by the degree to which, and the facility with which, individuals fall in with a more excellent way when it is represented to them. After all, there is so much ground, as it were, which constitutes goodness common to the South Sea Islander and the missionary of a vastly higher morality.

It is not here being argued that moral ideas and ideals as actually held by men do not vary after all. The point is that, in considering the significance of the manifold variety of moral belief and practice on which the ultimate good and evil bases itself, we have to bear in mind such considerations as have been adduced, which go to show that great varieties are possible without anything like the same divergence of ideas or ideal.

Coming now to differences as to moral idea and ideal, the existence of which we have no concern to deny, we may hold that a sufficient explanation of them also has been indicated above. The fact that men differ in power of insight and foresight explains not only why they adopt different means as appropriate to the like ends, but also why they identify themselves with quite different ends, and define their desirable in very different ways. This is just what truth there is in the Socratic identification of virtue with knowledge, and vice with ignorance. It does not require the genius of an Aristotle to perceive that the good man is not merely one who knows what is good, or that the problem of moral evil is far from solution when ignorance is abolished. The statement of Socrates is no adequate explanation of the fact that men do evil, but it is an explanation of the fact that they differ in their views as to what goodness is. To know what is really desirable requires insight and foresight, and men differ in their conception of what is desirable because they possess these powers in varying degree.

If thus the relativity of moral conceptions resolves itself into a relativity of moral knowledge, it may seem that the problem of the relativity of morality is on all fours with, is indeed simply part of, the problem of the relativity of knowledge, into which it is not our place to enter. There appears, indeed, to be an important difference between the two questions. A moral ideal, it may be argued, is not a real thing in the way that the world of fact with which physical science deals is real. It seems easy to hold that a certain scientific fact is true, whether any individual or any number of individuals deny it or not. About a moral ideal there is not the same objective constraint. On the other hand, it may be replied that the scientist will be puzzled to give an account of any of the 'real world, of a fact which is anything save a fact for his mind, of a correspondence between experience and a Reality whose case is something other than to be experienced or to be known. The stages on the path of progress of science are marked by the derelicts of abandoned—because, as advancing knowledge proved, erroneous—hypotheses, views which were held for truth at the time and served their purpose for a time. There lie,
GOOD AND EVIL

with all reality now denied them, "caloric," "epicycles," "corpuscles," and "vortices," and the like. Yet their V is a truth does not daunt the scien-
tist in his pursuit of truth. But it is as easy for a sceptic, by adstringing them, to adopt homo meusere as a question to the claim, What is truth? as it is for another to argue the pure relativity of moral conceptions from a comparison and contrast of views held in various quarters. To Homo meusere we reply: Beyond the truth and the good so regarded by any individual there is Truth and Good abso-
late; otherwise there is no meaning in speaking of progress; what you call progress is but change, and you will have difficulty in adding any rational ground for any one desiring to change the views in virtue of which he is already the standard of true and good for himself.

We come back to the psychological fact already referred to, viz., that we have an idea that an un-
conditional objectively valid moral Law or ideal exists. We must ask, Is this idea capable of justi-
fication? What are its implications?

IV. IMPLICATIONS. 1. God as Mind.—We have the idea that an absolute moral ideal exists. Where does it exist? Very simply, a moral ideal can exist only in some mind. It is as plain also that it is to be found complete in no human mind. We admit, with whatever criticisms we illus on a tendency which we think exists to exaggerate the facts or their significance, that men do think differently on moral questions. We may also admit with Raah-
dall that "there is no empirical reason for suppos-
ing that they will ever do otherwise." (loc. cit.). The conclusion to which we are led, then, is that we must postulate a Mind in which the absolute Moral Law or ideal exists.

"Only if we believe in the existence of a Mind for which the true moral ideal is already in some sense real, a Mind which is the source of whatever is true in our own moral judgments, can we really think of the moral ideal as no less real than the world itself. Only so can we believe in an absolute standard of right and wrong, which is independent of this or that man's actual idea and act and desires as the facts of material nature .... Our moral ideal can only claim objective validity in so far as it can be rationalized as the revelation of a moral ideal eternally existing in the mind of God .... The existence of God is essential to that belief which vaguely and implicitly underlies all moral beliefs, and which forms the very heart of Morality in its highest forms .... Moral obligation means moral objectivity. That at least seems to be implied in any legitimate use of the term .... Such a belief we have imperfectly to distinguish from that of the Universe and which which recognize the existence of a Mind whose thoughts are the standard of righteousness. That belief is involved in the conception of God and Man .... The belief in God is .... is still a postulate of a belief which shall be able to satisfy the demands of the moral consciousness" (Rashdall, op. cit. II. 212).

An alternative to this view is, of course, possible. It is to deny the validity of the idea of an absolute moral distinction. This is the only course open to those holding materialistic and naturalistic views of the Universe. The idea in question must be classed as an illusion, or set down as meaningless and inexplicable, the mere freak of a mindless, purposeless Nature, which somehow has superim-
posed on material phenomena consciousness as an epiphenomenon. This is not the place to offer a criticism of Materialism (p. e.) or Naturalism (p. e.). We must hold it sufficient to say that, in our view, the Universe and morality require far other theories adequately to account for and explain them. It is a short and easy way with ideas to set them aside as illusions. But, if one thinks the matter out, one will find that, after all, it is not an easy way to accept the idea, and though it is implicit in every moral judgment. Hence we hold that it is not to be set aside, but accepted with all its implications, all the postulates it can be shown to require. There exists, in the universe, a reality in the

2. God as Will.—This is not a postulate in the

same immediate sense as that of God as Thought. It is not at once apparent that, if there be an absolute idea, to be Willed and in realizing it. As we shall soon see, when one con-
templates the world, one might be excused for resting, before coming to the sentence I know what is to be Willed, in the realization that there is no superhuman Will active in realizing an Ideal of absolute Good. Nevertheless we hold that God as Will is an implication of our first postulate, God as Thought—and for this reason, that thought apart from will does not seem to be a thinkable conception. To distinguish between Thought and Will is convenient and neces-
sary enough. "To regard them as really separate or separable is a very different matter. As we know them, the one always involves the other. To suppose that anywhere there exists Thought without Will is to hypostatize an abstraction. So, if we are to postulate a Mind in and for which the absolute Law or Ideal exists, it must be a Mind which wills as we think; as nothing can be said to be willed which is not thought of as good, it follows that God must will the absolute Good, the Ideal of which exists in His Mind; and the Universe must have a purpose, an end con-
ceived of as good by the Mind which wills it.

It may be noted in passing that we do not re-
gard the above as a definition of a Theistic position or set them forth with that aim. It is possible for one to hold that there is a rational principle in or behind Nature, a funda-
mental rationalism, which is more or less short of Theism. Thus in Buddhism we find a profound belief in Samsara (q.v.), an in-
exorable, intelligible, impersonal principle, combined with an explicit denial of a will and in Theism. We are not concerned here to justify Theism. We justify our use of terms which seem to have theistic implications, by saying that they seem the best terms to use, if not, indeed, the only terms that can be used. We are not coming nearer adequate expression of the truth of things in as much as our thought and language become vague.

Now, if there be a superhuman Mind which thinks and wills absolute Good, the question arises, is that God realized? If we admit that such a Good must be realized—and we cannot do otherwise—we are immediately confronted with some of the most perplexing and painful problems that have occupied the mind of man, and we must now consider them.

V. PROBLEM OF EVIL.—It is common to speak of the problem of evil, and there is no objection to that, provided we understand that under the name are grouped a number of separable problems; for evils are of different kinds and raise different questions; and of all kinds two questions may be asked, What is the terminus a quo, and what the terminus ad quem?

It is to be noted that the problem of evil of any kind exists in most acute perplexing form only for those holding a Theistic view. Just in proportion as God is held to be omnipotent, all-wise, all-loving, the blessed and only Potentate, the

Creator, the Disposer of events, and so on, does the existence of evil become an ever deeper mys-
tery. Only if there be a God, and a God in some sense outside of, superior to, or for the world, can any complaint against what is to be entertained. It is meaningless to criticize and protest against the scheme of things as we find it, if there is no One responsible for it, who, we con-
template rightly or wrongly, might or should have made it other than it is. Of this God, to whom the problem of evil with us, has clung:

'0 that I knew where I might find him; that I might come even to his seat! I would order my
GOOD AND EVIL

cause before him, and fill my mouth with arguments. I would know the words which he would answer me, and understand what he would say unto me." John xxxvii. 5. In this way, indeed, all problems of evil merge into one—the problem of theology; "Is there a bonus eat, unde malum?"

A REALITY OF EVIL.—As men survey the facts of experience and the world about them, they come to varied views as to the extent of evil. So little do ill and evil bulk in the view of one that he regards all the talk of evil as a gross exaggeration, and for the evils that he is compelled to admit he finds simple and adequate explanation lying on the very surface; and he is prepared to pronounce all things very good. Another finds everywhere evil in one or other of its manifold forms triumphant: the world is full of misery; Nature is blind, reckless, indiscriminating; human life with all its pains, sorrows, defeated hopes, thwarted aims, and brief span, which indeed is, after all, too long considering what it brings, seems not worth the living.

"Life which ye prize is long-drawn agony."

To the optimist who says "no world could be better," the pessimist replies "no world would be better light over all because of personal evil; and that there should be such a world as we have, is the question as to the extent of evil, men will give different answers. Something has to be added to this temperamental and personal experience. But it is clear that, if any one takes anything more than the merest superficial and the most contracted view, it will be impossible for him to take the optimist's view that, as a matter of fact, all things are very good and quite as they should be. Take no more than external Nature as we find it. We have Wordsworth's stanzas:

"One impulse from a vernal wood
May lead the young to manhood;
Of evil and of good
Than all the sage can.

On the other hand, we have J. S. Mill's violent indictment of Nature:

"In sober truth, nearly all the things which are hanged or imprisioned for doing to one another, are Nature's everyday performances. . . . Nature impales men, and has hundreds of other hideous deaths in reserve, such as the cruelty of a ... Domitian never surpassed. All this, Nature does with the most supercilious disregard both of mercy and of justice." (Autobiography.)

In Mill's statement there is an element of rhetorical exaggeration, but for all that we may feel that it does more justice to the facts as we know them than the verse quoted. Pessimism is an advance on optimism, and is nearer truth, since it recognizes the facts of the case, that there is disorder in Nature, and that there are serious contradictions in the external world, and in human experience ill which, by their number and the extent to which they can blight happiness and mar and stunt life, constitute an almost overwhelming perplexity. Reviewing the facts of life, we may say with Schopenhauer:

"To me optimism, when it is not merely the thoughtless talk of such as harbour nothing but words under their low foreheads, appears not merely as an absurdity, but also as a really wicked conception in the view of the unavoidable suffering of humanity. "(The World as Will and Idea, Eng. tr., i. 21.)

Yet it has to be observed that, as there may be a shallow, self-centred optimism, which spreads a rosy light over all because of personal well-being, so there is such a thing as a no less shallow, in-sincere pessimism, a megalomania not unknown to youth, a pose deliberately adopted, a morbid sentiment for gloom and pestilence. And this is certainly as absurd as, and probably more wicked than, the optimism referred to. The Weltanschers, so frequent at the stage of adolescence and not uncommon with physical changes, represents only the difficulty felt by an individuality taking

its first independent steps, and normally soon passes.

Optimism and Pessimism, however, are not merely estimates of the extent to which evil exist; they are theories of the origin, significance, and final issue of evil. One who can adopt the pessimist's estimate of the extent of evil may yet be an optimist as holding that "Good is the final goal of ill"; that

"Good shall fall
At last, far off, at last to all,
And every winter change to Spring."

To accept the pessimist's estimate of the magnitude of the problem does not involve the acceptance of a pessimistic solution of the problem.

The problem as noted is, If God is good, whence comes evil? and we must consider—

VII. THE MAIN THEOLOGICAL SOLUTION THAT HAVE BEEN OFFERED. —It is easy to see how one might adopt the position: the world and life being what they are, either (1) God is not good; or (2) He is not omnipotent; or else (3) evil is not what it seems to be, it cannot be anything but good, and we must try so to interpret it. Each of those positions has been adopted as an explanation of evil, and we may group the theories we consider.

X. The view that God is not good.—This is a convenient way of grouping some theories which have little enough in common save that all hold that God (using the term in a wider than the Theistic sense, to denote the fundamental Principle of the Universe, the World-ground, or however else He or it may be named) is not good, or, what comes to the same thing, that the goodness of God is something essentially different from what we in every other case understand by goodness.

(1) First we consider Pessimism. Its estimate of the extent of evil we have seen to be not unjustifiable. We must now look at its general account of evil. In brief, Pessimism holds that existence itself is evil, that non-existence is preferable to existence, that the root of all evil is the desire for existence. Pessimism, both as a temperamental attitude of mind towards the world and as a philosophy, is native to the East rather than to the West. In modern times, however, there has appeared in the West a popular and more or less vague pessimism in poetry, and even in the philosophy of the street-corner; a political pessimism (Nihilism); and, what we are concerned with, a pessimistic philosophy.

(2) Eastern (or ancient) Pessimism has its best known and fullest expression in philosophic Buddhism. Buddhism grew out of the current Brahmanism, and so far accepted its teaching. In that system the old simple Theistic Aryan faith had given way to a belief in an impersonal Neuter (Brahma, Atman, or Paramatman), the source and goal of all existence, which in some dim way had willed existence in order to realize itself. A vast interval separates source and goal, and through it the wheel of existence turns, involving for souls innumerable changes till at last they escape back into Brahma whence they sprung. The soul passes through one incarnation after another, each state of being with its conditions being determined by merit or demerit acquired in the preceding state. It is easy to see how to Buddha it was only a making explicit of what was already implied to say that the wheel of existence itself is an evil, the evil. The soul craves for rest, and will never find it so long as it is turning with the wheel. Rest means escape from the wheel. And even a thong which binds the soul to the wheel. Hence a good deed is only a less evil for the soul from a bad one, for it maintains the soul in being. Existence, then, seemed to Buddha to be evil. Life means sorrow, and the only escape from

Vol. VI.—21
GOOD AND EVIL

Sorrow is to escape from life. There is no God, only an impersonal inexorable Law (karma), which attaches to things and persons to merit and demerit. Escape from evil is possible just in proportion as we retire from the world and suppress the very desire to live, and stifle that will to act which by impelling us to action binds us, not by merit or demerit, to the wheel of existence. When we have ceased to desire, we shall escape and attain Nirvana.

In thus holding that escape is possible, Buddhism may be said to be, after all, an optimism. At the best it is a negative optimism. The final Good is one ever to be desired, never to be enjoyed; though it may be attained, never to be possessed and enjoyed. We are not concerned with practical Buddhism, which on the whole may be as optimistic a system as Christianity, or at least comparable with it (see the art. on NIRVANA and KARMA).

(b) Western (or modern) Pessimism is represented in the systems of Schopenhauer and von Hartmann.

Schopenhauer (1778-1860) was a student of Oriental philosophy, and his pessimism is largely influenced by, if not borrowed from, Buddhism as we have outlined it. We find in his Die Welt als Wille und Vorstellung the same estimate of life and existence as evil, and the same doctrine that the desire to live must be mastered and destroyed by working towards as we find it in Buddhism. Instead of karma, Schopenhauer finds behind and causative of all existence Will. Will is the Ding an sich which is absolute, unconditioned, unknowable, and is the innermost essence of everything and of the totality of things. This Will is blind, stupid, and goading; hence a world of such misery as we find.

If we know that life is so, we have the work of a conscious Creator, 'he would be the greatest of all wrong-doers. He must have been an ill-advised god, who could make no better sport than to cheat mankind out of the happiness of man.' Hence Schopenhauer rejects Theism, and finds in the transition from Theism to Pantheism a process from what is indemonstrable to what is absurd. In his view the world is so bad that non-existence would be preferable (The World as Will and Idea, Eng. tr., l. 488, et al.).

Von Hartmann is so far a disciple of Schopenhauer, though his originality is conspicuous. He develops more fully the a posteriori argument for the universal extent of evil. He comes to an 'inscription of the possible pain and evil' as existing, even in the case of the most fortunately situated individuals. Nor is there any prospect of anything better in the future. Due to the development of human intelligence and sympathy there will come an ever keener sense of the preponderance of pain. The practical conclusion is that we must aim at the extinction of the will to live, must work towards the end of the world-process. But von Hartmann's view is neither so simple nor so intelligible as that. Like Schopenhauer, he posits an unconscious Principle, but he differs from his predecessor in making it a Principle in which a dualism is inherent. There is not merely unconscious Will from which all existence with its miseries has sprung; there is an unconscious Intelligence which is striving to undo the mischief wrought by unconscious Will. The Universe then becomes a game of the intellect in which the Absolute is good as seeking to realize it. And this end must be the end for us also. We are told that the only right course for us in the present time is to retire from the world and suppress the desire to live, to reduce all its arts, and not through cowardly renunciation, can we play our part in the world-process (Philosophy of the Unconscious, t. 488). That source of universal suicide which seemed the only rational thing must be postponed, indefinitely it would seem. For, if it took place, the Absolute which has produced the existing number of men would immediately produce another place (Das sittliche Bewusstsein, Berlin, 1879, p. 470). Hence von Hartmann's pessimism is the most absolute of all.

(ii) The view has been expressed that evil largely at least disappears as a problem, if we hold that the distinction of good and evil is different from God to from what it is to us. In various forms this view has been held by, e.g., H. L. Mansel, F. H. Bradley, A. E. Taylor, and in a sense by von Hartmann. And it has become a kind of fashion to talk of a super-moral sphere. This view is quite well worked out in Bradley's Appearance and Reality (London, 1897), and Taylor's Problem of Conduct (do. 1801). (It has to be noted of the latter that to a great extent it has been disowned by the author.)

Without entering into detail, we may state the position shortly. The view is that the distinction of Religion and Morality are distinct. Morality, the lower, is concerned with human action alone. Moral distinctions applicable enough to men are inapplicable to God. Owing to the limitations of human nature we present some things to ourselves as bad. Religious faith reveals a perfect world. There is ultimately nothing which ought not to be. Acts and principles of action which seem to us immoral are in God perfectly good. To some extent the human mind can see that it is so already, and, what is the task of faith to trust in that in all cases it is so.

Now there is considerable plausibility in such a view. It may seem to humble piety to be simply a comment on the text 'the heavens take their higher place' (Is 55). We all realize that God's view of good and evil must differ in great measure from our own. Hence Schopenhauer rejects Theism, and finds in the transition from Theism to Pantheism a process from what is indemonstrable to what is absurd. In his view the world is so bad that non-existence would be preferable (The World as Will and Idea, Eng. tr., l. 488, et al.). In his view the world is so bad that non-existence would be preferable (The World as Will and Idea, Eng. tr., l. 488, et al.).

Von Hartmann is so far a disciple of Schopenhauer, though his originality is conspicuous. He develops more fully the a posteriori argument for the universal extent of evil. He comes to an 'inscription of the possible pain and evil' as existing, even in the case of the most fortunately situated individuals. Nor is there any prospect of anything better in the future. Due to the development of human intelligence and sympathy there will come an ever keener sense of the preponderance of pain. The practical conclusion is that we must aim at the extinction of the will to live, must work towards the end of the world-process. But von Hartmann's view is neither so simple nor so intelligible as that. Like Schopenhauer, he posits an unconscious Principle, but he differs from his predecessor in making it a Principle in which a dualism is inherent. There is not merely unconscious Will from which all existence with its miseries has sprung; there is an unconscious Intelligence which is striving to undo the mischief wrought by unconscious Will. The Universe then becomes a game of the intellect in which the Absolute is good as seeking to realize it. And this end must be the end for us also. We are told that the only right course for us in the present time is to retire from the world and suppress the desire to live, to reduce all its arts, and not through cowardly renunciation, can we play our part in the world-process (Philosophy of the Unconscious, t. 488). That source of universal suicide which seemed the only rational thing must be postponed, indefinitely it would seem. For, if it took place, the Absolute which has produced the existing number of men would immediately produce another place (Das sittliche Bewusstsein, Berlin, 1879, p. 470). Hence von Hartmann's pessimism is the most absolute of all.
GOOD AND EVII

2. The view that God is not omnipotent.—The second is a God who creates, but who is helpless in various ways to make God omnipotent. They hold that God is absolutely good and means good, but cannot carry out His purpose of good immediately. There are obstacles that thwart and retard His purpose.

(a) Those which postulate two equally original and eternal Principles which have been in rivalry, and con God. The evil principle can create, and throws his works among the creations of the Good Principle: hence all evil (Iranian dualism).

(b) Those which postulate the eternity of matter. God did not create matter. He made the world out of matter He found, and He made it as perfect as the intricable material would allow (e.g., Theophrastus of Plato). What imperfection exists, therefore, is due to the matter, not to the Maker, of the world. In various quarters this belief developed into the view that matter is inherently evil. In some Gnostic systems the world was represented as the outcome of the evil, originally subsisting in chaotic matter, organizing itself into a Kingdom. And man is a microcosm: the enemy of the highest principle within him is the material, sensual element, which is not merely, as we all hold, often the occasion or instrument of sin, but in itself is inherently evil. Cf. art. Gnosticism.

(c) Those which postulate the original dualism in God. We have noted this in von Hartmann’s system. It appears also in the view of Boehme (1608-1684). God must have two constitutive elements, a soul that is in God which is not God, if we understand God love only. Yet it is a Divine element, broken away from the original harmony to become the world (Boehme, xiv. 70). It appears also in certain Gnostic systems in which we have a representation of a fall within the Pleroma. A product of this fall is a Demiurge who is in other ignorant of or hostile to the supreme God.

Dualism of type (a) is on the whole optimistic in outlook. The evil principle is destined to be at last vanquished and destroyed. Type (b), on the other hand, tends towards a pessimistic or at any rate a gloomy view. Existence in this world is evil, and we must seek deliverance through asceticism (so notably the Essence, Plotinus, many Gnostics), or vindicate it by antinomianism (Opitien and other Gnostics).

Dualism is just the assertion that what we find now in the world has been there all along. The world is dualist for each of us as we find it. Two streams of influence beat upon us. We feel the conflict of two tendencies within us. And Dualism explains the conflict by saying that it has always been so. It is an ultimate fact. Dualism in any of its forms cannot be expressive of the final truth of things, and thought cannot rest satisfied with it.

(lt.) We have next Pluralism, a philosophy which has in recent times come into great prominence, expanded by, e.g., W. James, Howison, and F. C. Bache. Pluralism, when thoroughgoing, asserts that God is limited ab initio by other beings, among whom He is only primus inter parnas. Souls are uncreated, eternally pre-existent. In the world we find no trace of the souls that in this case belong to the soul of God. Thus God is in no way, near or remote, responsible for evil. Pluralism (q.v.) is a Weltanschauung, not a name given in a sentence. As to pre-existence (q.v.), if we are Pluralists,

*For one difficulty which the theory of Pre-existence removes is creates a hundred. . . . The theory is certainly not capable of positive disproof, but it is unsupported by the obvious and strong evidence of experience. It is impossible to disguise by some mythological structure which itself is the greatest difficulty of all (see ed. H. Buxtorf.

The Pluralist may reply in Ward’s terms: "The theory of pre-existence involves a "mutation" of assumptions unquestionably; but it is "certainly not capable of positive disproof," the objector is bound to show, because the assumption of the whole is worthless. As regards this particular hypothesis of pre-existence, its complexity is no advantage to it; but even so the disadvantage is reduced in proportion as the separate assumptions are analogous with actual experience and consistent with each other (The Realm of Being, 'Pluralism and Theism,' p. 185.)

It is, however, a strange doctrine that the burden brought with any theory should be primarily a burden of disproof for the objector. The existence of a race of intelligent beings in the interior of the moon is a hypothesis not capable of positive disproof, its assumptions are all analogous with actual experience and quite consistent with each other, and the objector may be unable to show that the result of the whole is worthless. In spite of all that, the hypothesis is still in want of a singlejustifying consideration.

The theory of pre-existence must certainly be treated with respect. It is the belief of a large proportion of mankind. It has ever appealed to those who grapple with the problem of evil, and many names may be mentioned in support of the mountains: Pythagoras, Plato, and Origen, to Kant and J. Müller. Admittedly no theory of the origin of souls is free from difficulty, but, obviously, to explain the faint of soul in this life, to create or emanated souls in a former life leaves the problem of evil exactly where it was. To gain anything we must hold our own soul, and the soul that is in God which is not God, if we understand God love only. Yet it is a Divine element, broken away from the original harmony to become the world (Boehme, xiv. 70). It appears also in certain Gnostic systems in which we have a representation of a fall within the Pleroma. A product of this fall is a Demiurge who is in other ignorant of or hostile to the supreme God.

Pluralism of type (a) is on the whole optimistic in outlook. The evil principle is destined to be at last vanquished and destroyed. Type (b), on the other hand, tends towards a pessimistic or at any rate a gloomy view. Existence in this world is evil, and we must seek deliverance through asceticism (so notably the Essence, Plotinus, many Gnostics), or vindicate it by antinomianism (Opitien and other Gnostics).

Dualism is just the assertion that what we find now in the world has been there all along. The world is dualist for each of us as we find it. Two streams of influence beat upon us. We feel the conflict of two tendencies within us. And Dualism explains the conflict by saying that it has always been so. It is an ultimate fact. Dualism in any of its forms cannot be expressive of the final truth of things, and thought cannot rest satisfied with it.

The metaphysical difficulty of Pluralism may be put thus: if the monads are absolutely separate, it is not obvious how a cosmos can arise; while, if they are inter-related, there is no intelligible sense in which they can be ultimate.

(iit.) That the omnipotence of God is inherently limited is implied in all theories which represent evil as necessary. In some sense the necessity of evil must be an element in every attempted solution of the problem; and hence in some sense it is true that evil exists because God, though perfectly good, is not omnipotent. What kind of limitation of omnipotence is compatible with an adequate Theism? Only the limitations necessary to make omnipotence a thinkable conception—limitations without which omnipotence is a totally absurd notion, meaning power not only to do all possible things, but to determine what is possible; an omnipotence which absolutely excludes impossibility. This is the foolish notion of omnipotence argued upon by, e.g., Schopenhauer and J. S. Mill.

The Creator is the author not merely of the world, but of possibility too. He might accordingly have devised this such a way as to admit of a better world (Schopenhauer, Parerga, ii. 189; cf. Mill, Theism).

This meaningless omnipotence is denied as soon as God is conceived of as a definite Being at all, with any stability of intelligence or will. Omnis determinatio est negatio. To find that derogatory to God is to abuse language.

Plainly God is limited by His own Being (He cannot deny Himself), by His own purpose, and by His own works. It cannot be otherwise. We should else have a Being whose possibility could be attached, of whom nothing could be firmly hoped.

Hence in many quarters evil is represented as necessary; and, as noted, it must in some sense be so. The thought is not free from difficulty. For, if evil be necessary, is it not justifiable? Can we
condemn what must be? If a thing is necessary, is it not in a sense good? Even if we say, 'Evil must be, not in order that it may be for its own sake, but in order to be thwarted, fought with, destroyed, and made as good as possible,' the evil-doer may still justify himself. If we say to him, with Royce,

'Man's will is your will. Yes, but it is your will thwarted, snubbed, overthrown, defeated... And that is the use of the world... to be willed down in the very life of which you are a part' (Studies, p. 268), he may reply, 'Your argument is irrelevant. It remains true that on your own showing I am fulfilling a useful and necessary function in the scheme of things. Without me you can do nothing; your goodness were impossible without me to contend with. In your interest it is necessary for me to exist, and it is goodness in me to choose to constitute myself a round in the ladder of your ascent. Evil if justifiable in the abstract is justifiable in the concrete; in the abstract it does not exist. If there must be evil, there must be evil-doers.'

The possibility of evil is clearly necessary; it is no true limitation of omnipotence to affirm that.

And, as Royce himself shows the possibility of evil (Studies, iv.), the presentation of moral choice is all we need for knowledge of good and evil. It is a delusion that we have more knowledge by yielding to temptation than we have in resisting it. Hence the difficulty remains, why did not God prevent the actualization of evil? It is not an adequate answer to say, God cannot prevent moral beings from choosing evil rather than good. For, if God can govern moral beings now, as it must be admitted He can and does, He could have done so all along without depriving them of their moral freedom. Besides, the other difficulty remains as to why moral beings should will evil. After all, there is much to be said for Lotze's view:

'Of all imaginable assertions the most indescribable is that the evil of the world is due to the validity of eternal truth; on the contrary, to any unprejudiced view of Nature it appears to depend upon the definite arrangements of reality, besides which other arrangements are thinkable, also based upon the same eternal truth. If there were retained the separation... between necessary laws and the creative activity of God, in a non-evil world would undoubtedly belong not to that which must be, but to that which is freely created. Let us therefore... say that whereas there is not an irreconcilable contradiction between the omnipotence and the goodness of God, there our finite wisdom has come to the end of its tether, and that we do not understand the solution which yet we believe in.' (International Ed., 1860, p. 717).

The view that evil is not really evil.—The view that what is to us evil is not evil to God we have discussed above. Here we deal with various arguments which attempt to show that what at first sight appears evil are not, when better examined, evils to us. The characteristic formula of all such theories is, 'Partial evil is universal good.' The most familiar expression of it is in Pope's Essay on Man, which is a summary of Deistic optimism as represented by, e.g., Bolingbroke. The view is, 'Whatever is is right,' i.e., there is really no evil. Suffering is to be borne with content because the evil suffered is serving a great universal end. Nature is not to be rebuked for enforcing her laws at the expense of an individual.

'Respecting man, whatever wrong we call, bad to the relation to all.'

A similar view was to some extent accepted by the Stoics, who grasped earnestly with the problem of evil—not in Pope's dilettante manner—and in regard to the bearing of evil and the good that comes out of evil said nearly all that can be said. The Stoics, too, regarded the world as perfect. 'The nature of evil exists not in the Universe' (Epictetus). Evil is conducive to the best of the whole. Chrysippus and M. Aurelius compare evil to the coarse jest in the comedy, which, though offensive by itself, improves the piece as a whole (Aur. Med. vi. 49). 'God has fitted all, evil with good, in a whole great, so that in all things reigns one reason everlasting.' (Cleanthes, Hymns to Zeus). In reply to this position that partial evil is universal good, we say that it does not make the evil any less or any less real. The individual afflicted for the good of the whole may well ask, Why select me? As Voltaire in Cato says, Why should Libanon perish while Paris escaped? Was not Paris sunk in evil too? However true it be that evil leads to good and to greater good, the problem remains as to its distribution. And, whatever its effects, near or remote, evil is still evil.

'It may be said that evil appears only in particular, but that when we take a comprehensive view of the great whole it disappears; but of what use is a conclusion the power of which depends on what happens to the individual? For what becomes of our conclusion if we convert the sentence which contains it thus—'The world is filled with harmonious as a whole, but if we look nearer it is full of misery?' (Lotze, Micronessis, ii, 750).

Another point emphasized by the Stoics, and in many quarters since, is that evil is good as a disciplinary agent. On this point Seneca writes in almost a Christian strain in his De Providence: 'Fragile are the plants that grow in a sunny valley.' And so Epictetus (Disc. iii. 24): 'God sends me thither and thither, shows me men as poor, without a remedy, an enemy, and not because He hates me... but with the view of exercising me and of using me as a witness to others.' This is all fine and true, but the problem of evil remains.

For this does not explain the suffering of the innocent, that stirs the very possibility of moral improvement, e.g., by reducing a mind to imbecility, or the fact that the evil of others is a great distraction; the old question is, in fact, raised in acute form, Is God not good to His own, or is He powerless, that this is the only way in which He can educate them?

Still another consideration is urged by the Stoics which has also played a great part in explanations of evil, viz. Evil is the necessary condition, the correlate, without which good and evil are not discernible. 'No evil, no good.' This gives rise to different views. (a) Evil is a merely negative or privative conception, meaning only the absence of good; (b) evil is the condition of knowing or doing good. In answer it is easy to point out that evil is no mere negative. It is something quite positive which attempts to usurp good. Evil is not merely good-less, but anti-good, if we may use the words. A man may fail to exhibit a virtue without being guilty of the contrary vice, or, as we say, have only negative virtues. As to our knowledge of good:

'Things are known to us only in relation to their opposites. But the law used not be so interpreted as to require that these opposites must be absolute contrasts. In order to consciousness, we must have changes... But which does not necessarily mean transition to the entirely opposite state... We should be conscious of good without experience of the positive sin or evil. If there were within good itself changes from one degree to another, if there were varieties of good' (Davidson, Ethics, p. 377).

The position that evil is necessary if moral beings are to be good and do good has been in our view already.

VIII. Conclusions.—We have seen that every proposed solution either leaves the old question unanswered or raises new ones. The problem is a problem for the human mind insoluble. However far we may get with an answer, ultimately 'There is a thing which we cannot see;' and the final and complete answer to 'Si Deus bonus, unde malum?' lies within. There are, however, considerations which so far lighten the problem.

1. Metaphysical evil (the fact that we are finite) is no evil at all. 'To be finite is unsatisfactory,' says Royce, but it is scarcely a thing to complain
GOOD AND EVIL

about, if, as we actually find, the finitude is capa-
cable of indefinite expansion, and if, as we have
ground for hoping, this is destined to be immortal.
As I have pointed out, when possi-
bilities of discovery and invention have been
exhausted, it may be time to find our finitude an
evil. When our world is conquered, we may
weep.

2. Physical evil, the evil we suffer. (a) If one
argues, We can conceive the world and the con-
ditions of life as better than they are, why are
they not better? The answer is: As a matter of
fact they are becoming better, our demand for a
better world is God's demand, our purpose to make
it better is His purpose, and in improving it is
His task. To demand from God a better world,
to complain that it is so imperfect, is to demand
for man an easier task, that there shall be less
which man has any share in producing. The
demand for a perfect world is the demand
that man shall have no task, no function in the
world at all, and makes the creation of a world needless
and unintelligible. As Iversen says, 'the
world is not yet made, it is only in the making' (see
also Fairbairn, The Philosophy of the Christian
Apostles). A man is called to play a part in the making
of it. He is not at home in the world as he finds it; by his labour he
has to make it more of a home. Hence it seems
inexplicable that there should be so much
indifference and want of interest in various
forms for him. Which is preferable—a world in
which man has nothing to do in making it a better
world, or a world which calls him to be a worker
along with God?

(b) Physical evil has been the good which has
impelled men to most of those achievements which
make the history of man so wonderful. Hardship
is the stern but fecund parent of invention. Where
life is easy, because physical ills are at a minimum,
we find men degenerating in body, mind, and char-
acter. Better to fight for our life; better in impres-
sion, being different from man as we know him, i.e. not
man.

(c) This indicates that the demand that the
world should be other than it is in this or that
particular leads us whither we know not. It is
not one thing which has to be changed when one
change is proposed, but ultimately all things;
and a world totally different from the world we
know cannot be thought out. It is not possible to
foresee all the changes necessitated by one change
made, or appreciated how it would be for
us. It is conceivable that we should find the last
state worse than the first. Leibniz's formula, 'this
is the best of all possible worlds,' does not admit of
demonstration, but neither does its denial. We
cannot prove that there is no more suffering in the
world than is necessary for any good purpose,
neither can we prove that there is more. And the
burden of proof seems fairly to rest on the critic of
Providence.

3. Moral evil.—There are ultimate questions
that cannot be answered, e.g. the origin of sin,
and its universality (see art. Sin). Here it is in
place to state that we may hold that it was God's
purpose that man in man not merely an intelligent
follower, but a moral being who should be
partly the architect of his own character and
worth. Again we ask which is preferable—a
being who cannot do evil, or a being who with full
power to do evil abates? A non posse peccare, or a
posses non peccare? We note that Huxley answers
that he would prefer the former:

When knowledge cannot be extended, when pos-
ses non peccare, or a non posse peccare? We note that Huxley answers
that he would prefer the former:

If some great Power would agree to make me
always think what is true and do what is right, on condition of baring
me from ever attempting to do anything with the office ("Method and Remulla,") Collected Essays, Lond.
1883-84, i. 193.

But it may be doubted if many will agree with
him. Once again it is a demand for no task, no battle;
and what is the worth of such a char-
acter? The wine of life would be drawn under
such conditions; man would have no share in
working out God's plan. Which is preferable—a
grim fight, with the possibility of splendid triumph,
or no battle at all?

The possibility of evil is necessary for a moral
being. And the actuality of evil is the only
ground we can see on which there arises any need or
any possibility for the manifestation and de-
velopment of some human virtues, and the revela-
tion of some Divine excellences, which we regard
as among the best. Nor, though we might have
knowledge of evil, could we have knowledge of the
consequences of evil, were evil not actual.

It will appear that we might go on to say that
God wills not merely the possibility, but the actu-
ality of evil. If we admit that He has perfect
foreknowledge and wills a possibility which He
knows will be realized, manifestly it might seem
His responsibility is not different from that of
willing its realization (cf. Rashdall, ii. 94). We
prefer to say that here we are in a difficulty which
shows, in Lotze's phrase, that our thought is at the
end of its tether.

4. Connexion of physical with moral evil.—The
problem of evil would be far less acute if we saw
that suffering was proportionate to wrong-doing.
The greatest problem of all is why suffering is not
proportionate. The apprehension of the un-
discriminat with which good and evil fortune are
assigned. Three considerations must be regarded.

(a) We see but in part. Could we see the whole,
it is not inconceivable, to say the least, that the
apparent disproportion would wear a very different
aspect. As Royce puts it, we see things in the
temporal series; the problem may be quite another
sub specie aeternitatis (World and Individual, ii. 338 ff.).

(b) For then, in particular, we should see how
God's government of the world is a demand of
the individual. God has the race to
govern, and the race can be disciplined only in
individuals. Hence there is vicarious suffering,
and it is difficult to hold that what is reasonable
in man, who in various circumstances must and
dare punish, causing vicarious suffering, is unreasonable
in God.

(c) If we believe in immortality, the whole
problem of evil, and this one in particular, is
profoundly modified. And this problem is one
point of view from which it is shown that
immortality is a postulate of morality. If we
believe that the conflict with evil shall result in
final victory for good, that evil shall at last find
its place in Reality only as trampled on and
triumphed over, and further, that we who have
striven and suffered and been perplexed shall see
the triumph of what we fought for, and the good
meaning of our burdens, and the explanation of our
problems, then at the worst life is full of interest;
it is good to be, worth while to suffer and to
fight.

In brief, our view is: God is good and means
only good, but His purpose is to realize His ends
with our co-operation; and in some some evil is
necessary that they may be revealed to us, and
striven after by us.
GOOD NATURE—GOODNESS

GOOD NATURE.—That quality of temperamant which is evinced, outwardly, in easy and agreeable accommodation to the social environment, and, inwardly, in aptness for adaptation without irritation or undue disturbance. Two types of good nature are to be distinguished.

(1) The first and more austere type consists in an attained orderliness of the sensibilities and a consciousness of harmony with nature. In its pagan interpretation it is the virtue of temperament sought in the Stoic ideal of wisdom as pious accord with nature, and can be attained by reasoned self-discipline; psychologically it is marked by evenness of mood, avoiding both exuberance and depression, and it is generalized as right feeling (sôraùés), at finer fortune than mere patient endurance. In its Christian interpretation good nature is the innate innocence and right inclination which are conceived to have been the original endowment of man (Paul, Rom. 7: 19; 1 Pet. 3: 2), and is therefore a relict of the shipwreck which Adam made, or, more precisely, the proper and immediate disposition of the soul. Hence it is the source of natural morality and innate apprehension of the good.

(2) A second type of good nature, more lively and spontaneous, is the element of pleasing, genial, and genial—no sense a product of discipline. Kindliness and easiness are its salient traits, health and sound nerves its primary conditions. Over and above these is implied a mental constitution mobile and powerful enough to meet change without friction or strain (ill nature is as likely to be a result of lax and somnolent as of hyper-sensitive nerves). It is to be noted that such good nature is susceptible of cultivation, suggestion, and auto-suggestion being apt agents for its induction, and that it usually results in physical benefit. Many of the cures of ‘Christian Science,’ ‘Mental Science,’ etc., are of its nature, the result is probably attained by inhibition (through suggestion) of irritations arising from local strains, and the process is, in effect, a centrally induced rest cure.

In its moral aspects good nature favours certain perils, such as over-readiness to be persuaded, or too facile a readiness in abstaining or concurring what should be morally repugnant. ‘Weak good nature’ is a manifestation of deficient will (cf. Aroula), shown either in extreme susceptibility to suggestion or to that temptation which appears in disinclination to fortify moral resolution in leisirious directions. It is this aspect of good nature which has chiefly impressed itself upon the modern use of the term, where it is largely given a derogatory turn, as implying what is morally slack. As a social virtue it should properly be cultivated between individuals and in the social consciences scrape on the one hand and lax compliance with social expediency on the other.

H. B. ALEXANDER.

GOODNESS.—The story of the Fall has a profound truth embedded in it. Science regards it as the legend of the awakening of man from a merely animal to the consciousness of good and evil, his transgression of temporality the result of a purpose virtual or deliberate vise, of the introduction of a new sense into the world, the sense which is named conscience. ‘A fall it might seem, just as a vicious man sometimes seems degraded below the beasts, but in promise and potency a rise it really was’ (O. Lodge, Man and Nature, London, 1900, p. 91). Later, for all that, people of history, there has somehow or other, come a time of reflection, and with it there has arisen a conception of good things of the soul, as having a value distinct from and independent of the good things of the body, if not as the only things truly good, to which other goodness is merely relative” (F. H. Green, Prolegomena to Ethics, Oxford, 1884, p. 261).

1. The Greek conception.—The good (δόσις) was made the subject of reflection in all the philosophical schools of Greece, and it is to Socrates and his successors that we owe our chief moral categories. The Platonic and Aristotelian conception of virtue is final in so far as it defines the good as goodness.

‘It marks the great transition, whenever and however achieved, in the development of the powers of the human mind in which it is conceived as a well-being more or less independent of what a man is in himself, to that in which it is conceived as a well-being constituted by and seen (Green, op. cit. p. 80).

As a concrete idea, however, the Greek conception of virtue, limited as it necessarily was by the moral progress of the nation, is inadequate. For us, as for Aristotle, the good is the realization of the powers of the human nature of the individual as the good of man; for us, as for him, the good for the individual is to be good; but the idea of human brotherhood, which no meaning for the philosophers of Greece has achieved, and is destined to achieve, results of which they did not dream.

In opposition to the moral asceticism of the Sophists, some of the most radical elements of ethics are brought to a matter of private caprice. Socrates held that virtue is one and may be taught. Following out
GOODNESS 327

this thought consistently, Plato was led to 'the Absolute Good,' or 'the Idea of Good' (τὸ ἀποκεκαλυμμένον), which is the source of all truth, and the ultimate end of all human knowledge and action. The ethical code whose doctrine he adopted was the Pythagorean, and he is sometimes referred to as a Pythagorean philosopher. He was also influenced by the work of Socrates, who taught that knowledge is innate and that the soul is perfect and eternal. Plato was the first to articulate the idea of a perfect ethical ideal, which he called the Good, and he argued that it is the ultimate goal of human endeavor. This thought was later developed by Aristotle, who coined the term 'virtue.'

Socrates further taught that 'virtue is knowledge.' Himself blessed with a will which obeyed all the behests of reason, he fell into the error of ignoring its operations. Assuming that all motives are rational, he held that practical wisdom (σοφία) is the sole condition of well-doing. No man, he was wont to say, knowingly chooses the evil and rejects the good—a statement which owed its plausibility to the double meaning of the word 'good,' virtue and interest. He taught that the various forms of goodness are wisdom in different spheres of action: to be pious is to know what is due to god; to be just is to know what is due to men; to be courageous is to know what is due to be feared and what is not; to be temperate is to know how to distribute what is due to the one and what is due to the other. The principle that wisdom is the sole good and ignorance the sole evil became the basis of all subsequent discussions of the ethical problem. For Plato, the philosopher was a statesman, and the good man, Plato was, indeed, too clear-sighted and fair-minded to suppose that virtue is the exclusive possession of a few choice spirits. He admits that there is much to good, whether in men or in things. He believed that men are not philosophers. Ordinary citizens who are brave, temperate, and just must have certain true notions of good and evil; their right opinion comes partly from nature or 'divine allotment,' and partly from custom and practice. But for the perfecting of character and conduct, for the adequate preparation of men for good citizenship and especially good government, there is needed the discipline of philosophy. True knowledge, and with it true virtue, can be imparted only to the soul that has undergone a long course of training. Practical excellence of character is the finished product of a liberal education.

Aristotle's famous formula that virtue is a mean, or a choice middle course, between two vices which are related to it as excess and defect makes goodness synonymous with prudence. The Epicurean sage, for whom pleasure was the sole good and pain the sole evil, counted all virtues conduct empty and useless except in so far as it ministered to his happiness. He determined the only real (or reasonable) goodness by a careful measurement of the pleasant or painful consequences of men's actions. The Stoical wise man was free from passion, unmoved by joy or grief, sufficient unto himself (εὐχάριστος), living in harmony with the all-controlling law of nature. The strength of Stoicism lay in the heroic severance of virtue from interest. This stern creed had a natural affinity with the Roman mind, and under the Empire almost every noble character, every effort in the cause of freedom, emanated from the rank of the commons. But all the latter days have not hitherto been of great the gulf between the ideal sage and the actual philosopher. 'Ah, show me a Stoic!' says Epicurus. 'By the gods, I long to see one. Show me at least one who lies in the cradle in order to be cast. Pray do me this kindness. Pray refuse not to an old man, from ill-will, the sight of a spectacle that I have not seen new' (Diotrib, II xix. 24 ff.). Experience proved that this type of goodness could not be realised. It was too violently opposed to nature, and the passionate sage was nowhere to be found. The ethical code whose doctrine it adopted was the Pythagorean, and he is sometimes referred to as a Pythagorean philosopher. He was also influenced by the work of Socrates, who taught that knowledge is innate and that the soul is perfect and eternal. Plato was the first to articulate the idea of a perfect ethical ideal, which he called the Good, and he argued that it is the ultimate goal of human endeavor. This thought was later developed by Aristotle, who coined the term 'virtue.'

2. In the Old Testament.—The Hebrew prophets and poets do not analyze abstract ideas, but give unimpassioned utterance to the spiritual truths by which the moral life is generated, fostered, and perfected. For them the energy of goodness lies in the will behind which stands the character, of God. They teach, exhort, and rebuke their nation with an authority which is justified by their inner assurance of being called to speak for a God of absolute righteousness and uprightness. Isaiah says (Isaiah 59), requiring men to depart from evil and do good (34), condemning all who obliterate moral distinctions (Isaiah 59), and requiring men to depart from evil and do good (34), condemning all who obliterate moral distinctions (Isaiah 59). He is good to all (147), and the moral ideal which He sets before men is beautifully simple: 'Trust in Jehovah, and do good (37):' 'He hath showed thee, O man, what is good; and what doth Jehovah require of thee, but to do justly, and to love mercy, and to walk humbly with thy God' (Micah 6).

The Old Testament conception of goodness is vital and therefore progressive; dynamic, and not still after the Exile merely static. The morality of the Hebrews, like their religion, had a history. The ideal of conduct cherished by the prophets was very different from that of the rude nomad who swarmed from the desert into the land of the Canaanites. Under the discipline of events, interpreted by the genius of spiritual leaders, less and less importance came to be attached to outward righteousness, more and more attention was directed to the hidden springs of action in the soul. But the prophetic sense of the weakness of human nature stirred a longing for the inspiration of a new supernatural power. Jeremiah's hope of the triumph of goodness lay not in the self-amendment of Israel and Judah, but in Jehovah's making a new covenant with them, putting His law in men's inward parts, and writing it in their heart (Jeremiah 31:31-33).

3. In the New Testament.—Jesus both extends and deepens the prophetic conception of goodness. Absolute faith in the goodness of God is the keynote of all His teaching. He refuses to be lightly called good (Mt 108), not because He is conscious of any evil in Himself, but because He has to be perfected by struggle and temptation. He has a sense of the immeasurable contents of human, as well as of Divine, goodness. For Him no action has value apart from motives and dispositions; He seeks the source of morality in the inner spirit of conduct; He goes back beyond the legality of His time to the fundamental moral ideas of the Law and the Prophets, disengaging the principle upon
GOODWILL—GORAKHNATH

which they rest. To Him the only real good is the good self: make the tree good and the fruit will be good (Mt 7:21). He has an optimistic assurance of the triumph of good over evil, rejoicing even in revilings and persecutions as part of the process through which evil is to be vanquished. In His view nothing can permanently withstand the power of love. Man’s soul, or virtue—involved through which, in all respects, is opposed to that which leads to success in the cosmic struggle for existence; he in fact denied the possibility of identifying the power which makes for righteousness with the power behind natural evolution (Evolution and Ethics, London, 1893, pp. 12, 33). Nietzsche, on the other hand, hailed the ethics of evolution as a kind of new gospel; he glorified brute strength, superior cunning, and all the qualities that secure success in the struggle for life; he demanded, in the name of development, a revaluation of all moral values, a demoralization of all ordinary current morality; and he thought he foresaw, as a new Messiah, the "superman who is jenesis of our own"

It is possible that there is much more real goodness in nature than either Huxley or Nietzsche allowed; that she is not so red in tooth and claw as she has been painted; that there has, since the very beginning of life in our planet, been a principle of altruism (p.e.), a struggle for the life of others (R. Drummond, The Ascend of Man, London, 1894, p. 39 f.). Science cannot disregard the principle of continuity, and the future evolution of humanity will be as much a part of the cosmic process as the past. But that which is natural is first, and afterward that which is spiritual. We are allied to that which is above us as well as to that which is beneath us. Nature is so imperfect that the Bioclical doctrine of life in conformity with her—sentimentally accepted by Rousseau and fiercely by Nietzsche—is not enough for the moral guidance of man. As Matthew Arnold says in his sonnet: 'In Harmony with Nature':

Know, man hath all which Nature hath, but more,
And in that more lie all his hopes of good.

GOODWILL and its opposite, illwill, denote by their etymological roots, qualities formed by voluntary effort in contrast to the instinctive disposition or temperament described as good nature or ill nature. But the latter is fluidity in the use of the terms, so that, like their Latin equivalents, benevolence and malevolence, they are readily applied to the instinctive impulses of nature as well as to creations of will. Thus good will expresses one side of amiability (p.e.). It is the disposition or willingness to love, though it does not, like amiability, suggest that this is calculated to evoke a return of love in good will.

GOOD WORKS.—See MIRTH.

GORAKHNATH.—The traditional founder of the Indian sect of Kānpāṭha, or split-sacred, Yogis (see Yogī). The name is a corruption of the old Indian Sūrya, 'the sun', Sūrya standing for 'the Jacob's ladder', or, possibly, 'Lord of Gorakṣa' (see below). His date is unknown, the three most circumstantial legends concerning him being so contradictory that nothing certain can be derived from them. In Nepal he is associated with King
GORAKHNATH

Narendra Deva, who reigned in the 7th cent. A.D.; in Northern India he is represented as a contemporary and opponent of the reformer Kabir, who flourished in the 15th cent. In Western India, one Dharmnath, who is said to have been his fellow-disciple, appears to have introduced the Kāṇṭha philosophy into Kāśi at the end of the 14th century. The relationship between Dharmnath and Gorakhnath can be established as a fact, the last-mentioned date is the most probable one.

The Kāṇṭha Yogis trace the origin of their tenets far beyond Gorakhnath. All authorities agree in making him one of the twelve (or, according to some, twenty-two) disciples of Maheśvarachārya, a disciple of Adinātha and a Yogi saint whom the Nepalese identify as none other than the Buddhist deity Aryan Avatārā. Some make Adinātha the founder of the Yogas, while others carry the list much further back. All traditions state that the disciple Gorakhnath was greater than his master, and that it was he who introduced the custom of splitting the ears of disciples and founded the sub-sect of the Kāṇṭha. The Kāṇṭhas themselves fall into two groups—those of Hindu-station, who trace their descent directly from Gorakhnath, and those of Western India, who refer their immediate origin to his fellow-disciple Dhrāmānath. Several Sanskrit works are attributed to these latter, which may not be genuine; but the most authentic account of the tenets of the sub-sect will be found in the Gorakhnath-kī Goyāṭā, a kind of Hindu work reporting a controversy between him and Kabir, and written by a partisan of the latter. These do not differ from those of other Sāiva ascetics; for an account of them, see the last-mentioned date is the most probable one.

In Indian legend Gorakhnath is ubiquitous and all-powerful. He was the patron saint of the State of Gorākh (Sk. Gaurīk), for many years the rival of and containing the State of Nepal, of which the protector was Mātayāndrāk. It is from Gorākh that we "Gurkha" soldiers take their name. Tibetan tradition claims Gorakhnath as a Buddhist magician, and states that his Kāṇṭha disciples were also originally Buddhists, but became followers of Siva (i.e. Śiva) in the fall of the Sog dynasty, and at the end of the 12th cent., as they did not wish to oppose the Muslim conquerors. Another Nepalese legend makes Gorakhnath cause a drought lasting twelve years, by the simple expedient of collecting all the sources of water and sitting on them. Buddhist and Brahmanical traditions differ as to the method by which the water was released, but the episode is one of the most important in the cycle of old stories which forms a prelude to the sober historical notices of the country.

Gorakhnath has long been deified in India proper, and legend gives him omnipotence. He can cure evil, make men mad, turn the god of Fate, and command him to alter a person's destiny. Sometimes he is shown as greater even than Siva himself. His principal shrine is at Gorakhnath in the district of Gorkhpur in the United Provinces. The best account of this is given by Buchanan-Hamilton. The local tradition is that Gorakhnath is identical with the Supreme Being. In the Satya Yuga (or Golden Age) he lived in the Panth, in the Treta Yuga (or Silver Age) at Gorakhnath, in the Dvapara (or Iron Age) at Harmajun (I Hormus), and in the Kali Yuga (or present Age) at Gorakhnath in Kāśi. He also for some time resided in Nepal.

In a cyclic poem, entitled The Song of King同心 Chandra, current in the Rāngpur District of Bengal, his immediate disciple, the Hāḍi Siddha, a magician of great power, was a kind of domestic chaplain to the terrible queen Mayānā, and induced her son, King Gopachandra, to abandon his kingdom and to become an ascetic for twelve years. During this time Gopachandra had to sink to the lowest depths and perform menial offices to a common harlot. The Hāḍi Siddha was himself a deeper by caste—a fact which, in the locality in which the poem is current, implies nameless abomination. Rāngpur lies outside the traditional Aryan pale, and the whole group of circumstances points to non-Aryan traits. The poem, when read over, contains numerous traces of Buddhist influence.

The legend of Gopachandra is also met with in other parts of India. A popular, and widely spread, version makes Gorakhnath himself convert the famous King Bṛhtrihari and induce him to adopt an ascetic career. According to others, the name of the hero is Gopachand, and sometimes Gopachand-Bṛhtrihari. Indeed, the association of Gorakhnath and Bṛhtrihari forms the theme of a drama by Harilala, the Bṛhtrihari-sundara (tr. Gray, J.A.S. xv. (1904) 187-230).

3 According to D. Dobson, Outlines of Pandit's Ethnography, Calcutta, 1893, § 126, the Kāṇṭha Yogas are specially strong in the higher Pandit Himalaya, where Siva is worshipped. There they perform semi-medicinal functions.
4 Cf. 8th (1804) 164, 454 ff.
6 So, Gorakhnath slants up the rain for twelve years, and was one of the twelve disciples of Mātayāndrāk.
7 Cf. Dinesh Chandra Sen, Hist. of Bengali Language and Literature, Calcutta, 1911, p. 56 ff.
8 Cf. 8th (1892) 11, 154 ff.
9 Cf. 8th (1899) I. 247 ff.
10 Cf. 8th (1899) I. 247 ff.
11 This is a Buddhist story, see D. Wright, History of Nepal, Cambridge, 1877, p. 149 ff. and, for both, Levi, i. 243 ff., 261 ff. 12 W. Crooke's note to the story of Gogā, JA xxiv. (1896) 81.
It is difficult to sift any grains of truth from this heterogeneous mass of fable. If Gorakhnāth is not a purely mythical personage—a reflection in the popular mind of the great Šaiva doctor Saṅkarācārya—it is probable that the literary account of him is correct, and that he did convert Nepal from Mahāyāna Buddhism to Saṅkayān. He may himself have been a native of the Himalayas, where, alongside or in spite of Buddhism, the worship of Śiva has always been prevalent. We have seen that in the western Himalaya, north of the Panjāb, his followers, the Kānphaṭa Yogi, still perform sacerdotal functions. If, on the other hand, his name merely means the ‘Lord of Gorakṣa,’ it may simply represent Śiva as the guardian deity of that State; and the conversion of Nepal may refer to the historical fact of the Gorkha conquest of the country, which was under the protection of the Buddhist Ārya Avalo-

GORGON (from Gr. Ἴγόργων, ‘terrible,’ ‘wild,’ ‘fierce’; cf. O.Ir. gorg, ‘wild,’ ‘rough’; M.H.G. hserc, ‘strong,’ ‘violent’; Russ. огнй., ‘angry,’ ‘quarrelsome’; Slav. гроза, ‘horrid’; It. grida, ‘agile’; see Prellwitz, Etymol. Worterbuch, Göttingen, 1896, and Boissac, Dict. étymol., Heidelberg, 1907 [f. n.]).—The Gorgons are to the modern mind three mythical beings of hideous form and evil character, one of whom, Medusa, was slain by Perseus. Her terrible face, later conceived of as beautiful, had power to turn men into stone. Her head, cut off by Perseus, was put by Athena in the centre of her shield; it was called the Gorgoneion. We now know that the Gorgons took their rise not in mythology but in ritual, and that they are expressions (‘projections’) of a very primitive religious emotion. It is unnecessary nowadays to spend time and space in examining bygone attempts at interpreting the

Fig. 1. Gorgon on Ephesian Plate.

kitevāra (Matsyendranāth). Such an explanation, though well suited to the state of affairs in Nepal, will not account for the prominent position occupied by Gorakṣā in the folk-religion of the plains of India.

No connected account of Gorakhnāth has hitherto been written. The subject is well worthy of further investigation, for it is of considerable importance in the religious history of India. But such a study must be undertaken on the spot, by a scholar conversant not only with Indian literature, but also with ethnology and folklore.

Gorakhpānthy.—A name sometimes used in Northern India for the Kānphaṭa Yoga, as disciples of Gorakhnath. See art. Gorakhnath and Yogita.

Gorakhpānthy.—A name sometimes used in Northern India for the Kānphaṭa Yoga, as disciples of Gorakhnath. See art. Gorakhnath and Yogita.

mythological Gorgons, as, e.g., storm-clouds. Such attempts were possible only when it was supposed that the concept as well as the name of Gorgon was confined to the Greeks. We now know it to be world-wide. What the Greeks did here, as so often elsewhere, was by their fertile play of fancy to conceal a simple fact—the use of ritual masks for magical and especially for apotropaic purposes. The Gorgon as monster sprang from the Gorgoneion, the terrible face or head; not the Gorgoneion from the Gorgon.

The primitive Greek had, in his ritual, a grinning mask, with glaring eyes, protruding beast-like tusks, and pendent tongue. He called it gorgoneion. He used it, as the savage does today, to scare away evil things—his enemies in the flesh and his ghostly enemies. He wore it on his shield; he placed it over his house; he hung it on his oven; doublet, though here precise evi-
GORGON

It is evident, from the long drooping ears, that the 'ugly face' is that of a beast—and not a human monster. Art has been at work to make it more hideous: the staring eyes are surrounded by a pattern in spots; the protruding tongue, which sometimes develops into snakes, is well shown, and the tongue protruding from the wide grinning mouth; the mouth grins in order the better to show the teeth. The gesture of putting out the tongue to show aversion survives in the street-boy of to-day. The origin of the gesture seems to be not so much to show disgust as to eject some hurtful substance from the mouth. The religious content is the same as that of spitting—at first to get rid of evil, then to avert it. We may compare the Greek word for winnowing-fan, wire, or the spitter, i.e. the rejecter of chaff (see art. Fan, vol. v, p. 764). If we were to give such action a specialized name, we should have to call it not apotropaic but apotropeic.

Fig. 2. Gorgon on Corinthian Vase.

In fig. 3 we have a Maori staff in the present writer's possession decorated with a Gorgonion. With such staffs held horizontally, the Maori advance against their enemies to frighten them by showing the 'ugly face.' The protruding tongue forms the front of the staff; the tongue is elongated out of all proportion, and at first sight the Gorgon-head is not easy to recognize. But all the usual features are present: eyes filled in with enamel, overhanging brows, nose, mouth, and, inside the latter (invisible in fig. 3), a row of teeth. The face is, however, so subordinated to the long, highly decorated tongue that its meaning might easily be lost.

Finally, it is of interest to note that the the-
GOSAIN

GOSAIN. — 1. Name and description. — The name in its varied forms (Gosain, Goswānt, Gosānt, Swānt, Sānt) comes from Skr. gosāna, 'master of cows or herds,' with the secondary senses of 'one who has brought his passions into control. It is used to designate an Officer of Hindu ascetic or beggar, while from 182,646 were recorded at the Census of 1901, being most numerous in Bombay, Rajputāna, Bengal, the Central Provinces, and Berar.

2. Classification. — The term is ill defined, and its import varies in different parts of India. The most convenient distinction is between the Saiva, or worshippers of Śiva, and the Vaiṣṇava, or worshippers of Viṣṇu.

(a) Saiva Gosainas. — The most respectable members of this Order are the spiritual descendants of the great South Indian teacher, Saṅkarañcara, the very incarnation of the strictest Brahmanism, who lived in the 8th cent. A.D. He is said to have had four principal disciples, from whom are divided the ten divisions of the Order—hence called the ten-named, or Dasāṃgī Dasāñgī—ordinarily called These are: Thrtha, 'shrine'; Āgrama, 'order'; Vana, 'wood'; Aranyā, 'forest'; desert; Saravatī and Bhāratī, the goddesses of learning and speech; Purī, 'city'; Girī and Pārvata, 'a hill'; and Sāgara, 'the ocean'. Each member adds to his own name that of the group to which he belongs—e.g. Anandā-girī, Vidyā-āranyā, Rāma-ārāma.

There are but three, and part of a fourth mendicant class, or jñādā, called Pārītha, or Jñādā, Vāman, Saravatī, and Bhāratī, who are still regarded as really Saṅkara's Disciples. These are sufficiently numerous, especially in and about Benares. They compose the main variety of characters, but amongst the most respectable of them are to be found very able men among the sects or sects of the Fāñdu works. Other branches of Saṅkara literature owe important obligations to this religious sect, and the permanently devoted are also members of this Order. Their contributions are levied particularly upon the Brahmanas, as they are given to the Daṇḍin of this description present themselves as unbidden guests. Many of them practise the Vases, and profess to work miracles. The remaining six and a half members of the Daṇḍas class, although considered as having fallen from the purity of practice necessary to the Daṇḍin, are still, in general, denominated Asī (Skr. āṣī, 'passed away, liberated from worldly cares and passions'); R. H. Wilson, Religious Sects of the Hindus, 1. 306 E. The Daṇḍa derives his name from the fact that he is a small wand (daṇḍa) with several projections from it, and a piece of cloth dyed with red ochre, a colour which comes down as the garment of religious personages from the Brahmanas and Vaiṣṇava periods (A. Weber, Ind. Hist. of India, literature, Eng. tr., London, 1882, p. 72). In this cloth his Brahminical cord is supposed to be embroidered. He shaves his head and beard, wears only a patch of cloth round his loins, and holds himself like a sage. He is, in the first instance taken from the sacrificial fire, with which he purifies himself, repels evil spirits, and acquires mansā (cf. J. E. Harrson, Progress, 1906, p. 129, and 1908, p. 130). The Evolution of Religion, Oxford, 1906, p. 100). His usual occupation is agriculture, and he is normally a submissive man, and as a mark of his caste he wears a white hand-knot, and his Order, a triple transcendine line, made with sacred ashes. His appearance is peculiar, and he gives himself to the Brahmin once a day only, and thus he receives in a small clay pot, which he always carries. The main distinction between the Daṇḍa and the Ath is that the latter does not carry the staff, possesses clothes, money, and ornaments, prepares his own food, and admits associates from castes other than the Brahminas.

Saiva Gosainas fall into two classes—monks, known as Maṭhādīrī (Hind. māṭha, 'a monastery'), Ādī, 'occupying', as contrasted with the Māṭhā, or laymen (Hind. gharātā, 'house and home').

The true Dandi should, in accordance with the precepts of Maṇu (Laws, vi. 41 ff.), live alone, near to, but not within, a city. Many of them, however, at the present time, particularly at holy places, like Benares and Hardwar (e.g.), specially devoted to the cultus of Śiva, live in monasteries. The lay members of the Order follow trade and other secular occupations, marry, and have families. While the true Dandi Order is recruited only from Brāhmans, the Gosain receive not only children devoted by vow or those born to lay members of the Order, but all classes of Hindus, except the very lowest and most polluted castes. In the Deccan they are drawn chiefly from the Kaurā (cultivators) or Māli (gardeners) (BG xvi. 490). In Benares, according to M. A. Sherring (Hindu Tribes and Castes in Benares, Calcutta, 1872-81, i. 256), the admission of a novice usually takes place at the festival known as the Śiva-rātri, or night of Śiva. Water brought from a tank in which a Śiva has been deposed is poured over his head, which is then shaved. The gṛuṣa, or head of the Order, whispers one of the usual Saiva formulae (mantra) into his ear—mama Śivedyo, or om mama Śivedyo, 'in the name of Śiva, or Śiva, Śiva.' I am He, embodying the Sāṃskāra principles that man's spirit is identical with the One Spirit (ātmā, Brahman), which is the essence and substratum of the universe, and cognizable only through internal meditation and self-communion (M. Monier-Williams, Brahmanism and Hinduism, London, 1891, p. 96). According to J. Grant Duff (Hist. of the Mahārattas, Bombay, 1873, p. 7 n.), in the Deccan those castes which wear the loin-string destroy it, and substitute a piece of cloth, any covering he deems necessary. Up to this stage the novice may change his mind; the irrevocable step by which he becomes a Gosain for ever is the performance of the homa, or fire-sacrifice, when the butter and milk are poured on the holy fire, and, while sacred texts are recited, the candidate vows poverty, celibacy, and a life spent in constant pilgrimages to the holy places of Hinduism (cf. BG xv. 1, i. p. 360 ff., xix. 118).

(b) Vaiṣṇava Gosainas. — The term Gosain is also applied to the heads of the Vaiṣṇava communities in Assam and Eastern Bengal (see EFE ii. 136 f.; E. A. Gait, Assam Census Report, 1891, i. 80 ff.; B. C. Allen, 46, 1901, i. 39). The adoration of the quartz is the essence of Vaiṣṇavism in Bengal, and it has been extended among the Val- labhāryas, the 'Epics above the East', until among the Bombay leaders, known as Mahārājā, 'great king,' it became a cause of shameful scandal (J. Wire, Notes on the Races, Castes, and Tribes of Eastern Bengal, 51; [Karmanā Māl]), Hist. of the Sect of the Mahārājas or Valabhabhāyās, London, 1885; Report of the Mahrārāja Listed Caste, Bombay, 1882; F. B. Growse, Mathura, a District Memoir, Allahabad, 1883, p. 283 ff.). J. Wire writes: "The Gosains are a comparatively pure stock, and fair specimen of the higher Bengal race. As a rule they are of a light brown, or when older, tall and large-boned. Muscular they ought to be, but indolent and good living stamp them as at an early age with a look of commonness and listlessness, and they become large fat men, with unpleasant dress consisting in holding out the foot to be kissed by adoring followers. Their lives are spent in sensual pleasures, and the boundaries influence they wield among thousands of the middle classes is, when despised from the house-top, that of a man who has fastened with a blind and unquestioning adoration, they quite content, if it lasts during their lifetime; to disregard the possibility of agitation and revolution (pp. cit. 150)."
On the other hand, B. C. Allen thus writes of the class in Assam:

"The leading Vaisnavite Gosains, who live in their Betras or in the Brahmaputra valley, are men who exercise great authority over their numerous disciples, and on the whole the community is stable and well managed. Unlike many presbyters, these Gosains have always been conspicuous for their loyalty to Government, their freedom from bigotry, and the liberality of their doctrine. This Ramakrishna movement presented in a more attractive form than that which is found in the Vaisnavite or the Brahmanical sects of the Mahabali, the island which is focal for the unity of the Brahmans and the Loophi (Ganges Delta, 1901, p. 41)."

It is on all sides admitted that the wandering Gosains are a prigliss class, that consort with prostitutes and women who have deserted their husbands (BG xiii. pt. 1, p. 198, xx. 138 ff; H. Risley, Tribes ii. 244 ff). In former times they were notorious in many parts of the country for their violence and rapacity (see numerous references in BG xiv. 135 n.). Later they joined the Mahratta armies, garrisoned many hill forts, and were reconverted in large numbers in the service of Mahadji Sindia (Grant Duff, 478 f; BG xviii. pt. 1, p. 463)."

GOSAAL.—See ASITIVA.

GOSPEL.—This word (from Greek, i.e. "God's story" or "Divine word") has since Anglo-Saxon times been the translation of εὐαγγέλιον. In Homer the Greek term denotes the reward given to a messenger for bringing good tidings: εὐαγγέλιον μι μέσροι (Od. xiv. 252; cf. 160). In Attic Greek, εὐαγγέλιον means to present a thank-offering to the gods for good tidings. In the LXX the plural denotes a messenger's reward for good news. David relates with grim irony that, when a man came to him to announce Saul's death, expecting to be welcomed as a bearer of glad tidings, his reward (εὐαγγέλιον) was death (2 S 18:9). In 2 S 18:35, where the idea of a reward for good news is unsuitable, it is probable that εὐαγγέλιον (noun fem. sing.), signifying "tidings," should be read instead of εὐαγγέλιον. No explicit references to the preaching of Divine good tidings—a gospel intended for a whole people—occurs in Deuteronomy (40:41-41:16). The priestly sacrifices represented an ideal band of heralds sent to announce to Zion and Jerusalem the glad tidings that Israel's sins being now forgiven, the exiles are to be delivered from Babylon and restored to their own land. Is 49:9—

"How beautiful upon the mountains are the feet of him that brings good tidings, who is to comfort Zion! (v. 6).

(2) What is the basis of the apocalyptic hope of the speedy coming of the Christian Church? In all Galilee (Mt 4:17), "all the cities and the villages" (Mt 9:35), publishing it. He sent His disciples to proclaim it (10:1, Lk 9). It was called 'the gospel of God' (Mt 4:17), i.e. the good tidings sent from God to men through Jesus, and the "good tidings of the Kingdom" (Mt 4:23; Lk 24:46), i.e. the gospel which prepared men for the immediate founding of the Heavenly Kingdom, as seen in the eyes of the disciples. The Christian Church was known as 'the gospel of God' (Rom 15:19), 'the gospel of the grace of God' (Ac 20:24), "the gospel of Christ" (Ro 10:14 etc.), simply "the gospel" (Ro 10:16 etc.). The teaching of the grace (manifested presence) of Christ (2 Co 4:6), "the gospel of your salvation" (Eph 1:12), "the gospel of peace" (6:15), an eternal gospel (Rev 14:6).

1. The content of the gospel. In both points there have to be kept distinct. (1) What did the evangelex signify for Jesus Himself, and for the disciple whom, in the course of His Galilean ministry, He sent to preach it? (2) What did it mean, after His Passion, in the Church which was founded on the fact of, or at least the belief in, His resurrection?

Pursuing the historical and method of investigation, scholars have obtained a definite answer to both of these questions. They agree in the conclusion that the good tidings preached in the very earliest Apostolic circles was a gospel regarding the incarnate, suffering, and glorious Christ. It was the Church's first confession of faith that Jesus was declared (or determined, αποκαλεθηκεν) to be the Son of God with power by the resurrection of the dead (Ro 1:4, cf. Ac 2:22-24).

There was never a time when the Church merely honored Him as prophet, hero, or saint; she always worshipped Him as Lord and Redeemer.

In the course of the history of the Christian Church, no one was able to decide, for nearly two thousand years, what was the substance of His teaching. What were the glad tidings which He gave to His disciples—whom also He named apostles? (Lk 6:13) Who was the man to the lost sheep of the house of Israel? In other words, What was the spiritual legacy which He personally wished to bequeath to mankind? To this question the most diverse answers are given by living scholars.

(c) Some say, with Harnack, that 'the whole of Jesus' message may be reduced to these two heads—God as the Father, and the human soul so ennobled that it can and does unite with Him' (What is Christianity?, p. 65).

In the combination of these ideas—God the Father, Providence, the position of man as God's children, the infinite value of the human soul—the whole Gospel is expressed (p. 70).

The gospel, as Jesus proclaimed it, has to do with this world, and not with the Son (p. 157). The "sentences, "I am the Son of God," was not inserted in the Gospel by Jesus Himself, and to put the sentence there aside by the others is to make an addition to the Gospel (p. 161). According to Jesus, it has to be admitted, is connected with an "imaginary view of the world and history," and tends to the connection is indismissible. 'The man to whom the Gospel addresses itself is "timeless," that is, addresses itself to men, who, in spite of all progress and development, never changes in his innermost constitution and in his fundamental relations with the world, and therefore that the gospel remains in force for us too' (p. 125).

(b) Others follow Johannes Weiss, Loisy, and Schweitzer in identifying Jesus' gospel with the apocalyptic hope of the speedy coming of the
Heavenly Kingdom. The 'Weissian theory' is that the Kingdom of God was not, as has generally been supposed, partly present and partly future, but wholly temporal and transcendent. It is in this hope or nowhere that the historian should see the New Testament, as no other idea holds so prominent a place in the teaching of Jesus (Today, The Gospel and the Church, p. 92). The thought of Jesus was entirely different. He was a child of the world (ibid., p. 55). The impulse to human nature which is, historically, the form taken by the gospel (p. 51). "Nowhere does Jesus uncharitably define the kingdom of God, and God's power acting in the heart of the individual" (p. 88). The new order which the gospel announces is objective, and consists not only in the holiness of the believer, nor in the love that unites him to God, but implies all the conditions of a happy life, both the physical and the moral conditions, the external and the internal conditions, so that the coming of the kingdom can be spoken of as a fact in the present history, and is no way confused with the conversion of those who are called to it" (p. 88).

On this theory the moral teaching of Jesus was not so much the Ethics of the Kingdom as teaching which prepares for the Kingdom. It is an Interimethik, designed for a world which is expected to be brief (Schweitzer, Von Ressourc aus, p. 220). Jesus was not found a Kingdom; He only announced it. He exercises no Messianic activity, but He waits, with the rest of the world, for God to bring in the kingdom supranaturally (ibid., p. 228).

(e) Others, like Wellhausen (Einleit. in die drei ersten Evangel), prefer to say that what Jesus taught was not 'the gospel, but the kingdom'. We must make a distinction between the historical Jesus and the Christian conception of Him which has existed since the foundation of the Apostolic Church. What the first knew, the second knew, we can only surmise. Even in the earliest Christian record which has been preserved—The Memoria of Mark—he stands transfigured before us. The most Christian part of the narrative—Mk 8:11 to 10:18—is the least historical. The Christian Messiah does not represent Jesus' own conception of His messiahship, but rather the idealized conception which the nascent Church threw back upon His lifetime after His Passion. Divested of the attributes in which dogmatism has clothed Him, Jesus would be a very different figure from the Christ of 'the gospel, Could we get 'back to Christ', we should probably find that He was not a Christian but a Jew, who more prophetically taught a new and better way of serving God. But He is the Great Unknown. It may be well that we can never discover the truth of what He was, as we should only be disillusioned. If He did not reveal all of himself in the gospel, the Church dreamed it, and she cannot now abandon her dream. Jesus is irrecoverably lost, but the ideal Christ of Paul and the体会到. With their evidence we must be satisfied. Wellhausen ends his investigation with these remarkable words:

"It had not been for his death, Jesus would never have become a subject for history. The impression of his career depends upon the fact that it did not run to a conclusion, but was broken off, when it had hardly begun."
